A MONTHLY PUBLICATION

W. J. BALTZELL, Editor

PUBLISHED BY

OLIVER DITSON COMPANY

SINGLE COPIES.....$ .15
SUBSCRIPTION PRICE, PER YEAR 1.50

The Subscription Price of $1.50 per year applies to subscribers residing in United States, Mexico, Panama, Hawaii, Philippines, Alaska, Cuba, Porto Rico, Guam, Tutuila, and the city of Shanghai. The price to Canada is $1.75; to Great Britain and the British Colonies, 9 shillings; to Germany, 9 marks; to France, 11 francs. To all other countries the yearly subscription price is the equivalent of $2.20 in American money.

The entire contents of this magazine are covered by the general copyright, and articles must not be reprinted without special permission.

REMITTANCES should be made by Bank Draft or Check, Post-Office Money Order, or Express Money Order. *Where none of these can be procured,* money may be sent in a Registered Letter.

NEW SUBSCRIPTIONS may commence at any time during the year.

EXPIRATIONS AND RENEWALS.—When a subscription expires a notice is sent with the request to renew. Renewals should be sent promptly as subscriptions are not continued after the time for which they are paid.

NOTE.—Customers with charge accounts in good standing may have their subscription charged to their regular account, if desired.

COMMUNICATIONS ARE WELCOME from all interested in the teaching and study of music, and in furthering the success of THE MUSICIAN. All articles or communications submitted for publication should be clearly written on one side (only) of the sheet. Those which cannot be used will be returned. These communications must invariably be addressed to the Editor of THE MUSICIAN.

We decline to be responsible for unsolicited manuscripts. We shall always be glad to consider them for publication in THE MUSICIAN, and we will return them if postage and full address are enclosed.

SPECIAL NOTICE: The publishers should be notified of a changed address before the 5th of the month. Otherwise the next month's issue will be sent to the **old** address.

All REMITTANCES should be addressed and made payable to

NEW MUSICIANS LIBRARY VOLUMES

Forty Songs by Adolf Jensen. Edited by W. F. Apthorp. Low voice.

THE songs of Jensen have been increasingly gaining the high place among German *Lieder* which is theirs by right; for it is by his songs that this composer will permanently be known. In this volume are gathered the finest of his lyrics and they form a collection of rare excellence, and do full justice to his sharply defined musical individuality. Their conspicuous qualities are great elegance, charm, and spontaneity of melody, harmonic subtlety, warmth of emotional expression, and a southern richness of coloring; indeed the glowing euphony of his piano writing has never been surpassed. New and excellent translations, a readable monograph by Mr. Apthorp, and an excellent portrait are features of this well-equipped volume. Every teacher of singing who wishes to be ready with works of the classic song repertoire, and every concert singer will find the Jensen songs an essential and most useful part of the song library.

The price is the regular one for MUSICIANS LIBRARY volumes, $1.50 in paper covers, $2.50 in cloth, gilt. In advance of publication we will accept orders, the books to be sent when ready, at $1.00 for paper covers, $1.50 for cloth covers, postage included, unless the price is to be charged on our books, in which case postage is additional.

SPECIAL SUBSCRIPTION OFFER:—One copy with The Musician, one year, paper covers, $2.25.

Anthology of German Piano Mus. Volume I. Classic Composers. Edited by Moritz Moszkowski.

IN this volume of THE MUSICIANS LIBRARY the editor has indicated the field from Frohberger, who brought the best traditions of Italy into Germany, down to Beethoven, in whom the classic culminated and the romantic school was born. This great period of German art produced masterpieces in the contrapuntal style of Bach and Handel, and in the homophonic forms of Haydn and Mozart, and the Editor has chosen wisely from this rich storehouse, bringing together pieces of conspicuous excellence to form a collection of general significance. As past master of the pianist's art, Mr. Moszkowski's helpful editing, annotation and fingering leave nothing to be desired.

SPECIAL SUBSCRIPTION OFFER:—One copy with The Musician, one year, paper covers, $2.25.

NEW PIANO WORKS

Isidor Philipp: Exercises for the Development of the Higher Pianoforte Technic. Ditson Edition, No. 196.

ISIDOR PHILIPP is known to pianists as one of the most distinguished teachers of piano playing connected with the celebrated Paris Conservatoire. His system, which has been the educational basis of the training of many of the younger French pianists, consists in using exercises to give drill in variations of intensity of tone, or duration of tone; practising passages in legato, detached and portamento styles; changing of key; special practice with one finger; alternate extension and contraction of the fingers; modifications in all possible forms, scales, arpeggios, repeated notes; exercises for acquiring suppleness; passing under of the thumb; velocity in scales; the use of the fingering of C in all keys; studies in double notes, octaves, octaves with intervening notes, etc.

The price has been fixed at $1.50; until published we will accept orders at 50 cents per copy.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $1.85.

Orvil A. Lindquist: 100 Exercises for the Weak Fingers. Ditson Edition, No. 195 $1.00.

MATERIAL of a very useful character such as every teacher needs in his work with pupils. The weaker fingers require special drill and specially prepared exercises, a need which the author has admirably met and filled. Try this work in your efforts to develop strength of attack in your pupils' fingers. It can be used with any method or course of studies.

SPECIAL OFFER:—With The Musician, one year, $1.65.

NEW ORGAN WORKS

The Organ Students' Bach. Edited by James H. Rogers. Ditson Edition, No. 193.

THE title of this work indicates, in a general way, the purpose of the editor, which has been to make a selection from the organ works of J. S. Bach, of such pieces as will serve as an adequate introduction to the study of the greater works of the master. The different numbers have been arranged in progressive order in respect of difficulty, and will offer most excellent material for practice and systematic study. The editor has adhered to the accepted text, but has simplified the reading and execution by placing on the upper staff all notes which are to be played by the right hand, on the lower staff notes for the left hand. The pedaling has been marked according to the method which assigns notes in the upper octave to the right foot, in the lower octave to the left foot, heel and toe.

The selections consist of preludes and fugues, movements from large compositions, choral *vorspiele*, etc., and in themselves constitute an admirable collection of the easier organ compositions of the great master.

The retail price of the book has been fixed at $1.25. Until publication we will accept orders at 50 cents, postpaid, cash with orders. If a charge is to be made on our books, postage is extra.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $1.85.

30 Offertories for the Organ. Ed. by Jas. H. Rogers. $2.00.

A NEW volume uniform with the popular 30 *Preludes* and 30 *Postludes*. The editor has drawn upon the best works by European composers, and has made a number of admirable transcriptions especially for this work. It is to be bound in cloth with gilt top, and is in every way a distinct addition to the organists' collection.

SPECIAL OFFER:—With The Musician, one year, $2.50.

30 Organ Pieces for use in Christian Science Churches. Edited by Walter E. Young. $2.00.

THIS is the first collection of organ music published expressly to meet the needs of organists in Christian Science churches. The author, who is organist of the Mother Church in Boston, has a full knowledge of what is suitable. The book contains ten preludes, ten offertories, and ten postludes. It is bound in cloth, with gilt top.

NEW VIOLIN WORKS

Cecil Burleigh: 12 Short Poems Op. 18. Ditson Edition, No. 94. $1.25.

A SET of fine pieces for the use of advanced pupils and in concerts. While they have exceptional value for teaching use in the matter of training for style and interpretation, they were composed primarily for purely musical ends, are poetic in conception and content, and thoroughly violinistic in form and expression.

SPECIAL OFFER:—With The Musician, one year, $1.85.

SYDNEY LLOYD WRIGHTSON

SYDNEY LLOYD WRIGHTSON

MR. WRIGHTSON, who is president of the Washington College of Music, is the leading exponent of Wm. Shakespeare's method of teaching as presented in the latter's splendid work *The Art of Singing*. Through Mr. Wrightson's representations, Mr. Shakespeare has twice visited the United States, in 1912 remaining at Washington for ten days, giving lessons and appearing with Mr. Wrightson in lecture recitals.

Musical heredity is exemplified in Mr. Wrightson. His maternal grandfather, James Harris, was a well-known orchestra and opera director, and a great uncle, Sir Joseph Harris, was celebrated as an organist and composer. Mr. Wrightson was born in London, in 1869, and sang, as a boy, in the choir of St. Paul's Cathedral. In 1889 he first came to the United States, and remained here for ten years. He then returned to England to study with Shakespeare, and thus entered upon relations with the Master which have been of a very intimate character ever since. During 1901-02 he was in Chicago, 1902-04 dean of the School of Music, West Virginia University, and since 1904 in Washington, where he founded the Washington College of Music. He is a baritone singer of marked ability and exceptional artistic temperament. As a teacher he has had fine success and has pupils who have made good in the church and operatic fields. Below we give a statement of Mr. Wrightson's experience with Shakespeare's *Art of Singing*.

WHAT MR. SYDNEY LLOYD WRIGHTSON, THE LEADING EXPONENT OF MR. WILLIAM SHAKESPEARE'S METHOD IN AMERICA, THINKS OF SHAKESPEARE'S "ART OF SINGING"

In the early summer of 1897, having heard a great deal of the teaching of Mr. William Shakespeare in London, England, I decided to go abroad and take a short course of lessons, expecting to return in the Fall to resume my teaching in America. I stayed until the Fall of 1899, prolonging my visit for two years because I realized that I had met a master, who up to that time was the only one who had apparently grasped and had put into a concrete method the teaching of the old Italian Masters, which, strange to say, had never been handed down in writing, consequently the *real art* had become so distorted that from it had arisen the so-called different methods of tone production.

At the time of my beginning to study with Mr. Shakespeare, he had just commenced to write *The Art of Singing*, which was originally published in three different parts, but which in 1905 he rewrote entirely and revised again in 1910, so that it appeared as it does now in one complete volume. It was my pleasure and honor to take down in long hand from dictation by him much of his original writing of the first edition, consequently I feel that I am entitled to give a comprehensive opinion of what I consider the most remarkable work that has ever been published on the treatise of the voice.

From years of experience in teaching I am thoroughly convinced that were every student of singing to read this work not once but a hundred times, so as to retain a comprehensive knowledge of what Mr. Shakespeare means and then practise the principles and exercises, the percentage of throaty, nasal, contracted and harsh voices among many who think they can sing would be decreased fully seventy-five per cent.

To Mr. Shakespeare must be accorded the credit of having found the key to and the vital point of *correct tone production*. The singer who accomplishes the art of producing every tone on a noiseless and imperceptible breath, eliminating all thought of the register idea entirely and treating the voice as one voice and not as a collection of registers, can then claim that he has mastered the art of tone production. This can only be accomplished by following Mr. Shakespeare's inimitable breathing exercises and the absolute elimination from the mind of all thought or mention of the word *throat*. I quote from his book "that is the right tone that responds to the rightly controlled breath and reveals the unconscious tongue and the unconscious throat," and I add to that a pet quotation of mine "that technic in singing is hitting the note right, in the right place, at the right time, with the right breath." I once heard Mr. Shakespeare say something which at first appeared to be somewhat illogical, until I took the trouble to decipher clearly what he meant, "While singing be conscious of the fact that you are unconscious of your throat."

I should say to every student who contemplates studying the greatest of all arts, *singing*, to keep clear of every teacher who does not make a specialty of breath control and who is anxious to give songs, instead of exercises, to encourage the pupil. There are many so situated that they cannot afford to take a course of lessons from any teacher. *The Art of Singing* fills that want.

SYDNEY LLOYD WRIGHTSON,
Washington, D. C.

November 12, 1913.

JUST ISSUED
TWO IMPORTANT WORKS

New Rhymes and Tunes for Little Pianists

By H. L. CRAMM Op. 20. Price, 75 Cents

A most interesting book for elementary students which may be taken up in connection with any primer or instructor, and be used while the young students are still learning the staff notation. The pieces are as simple and as tuneful as it is possible to make them; most of them have verses accompanying them which may be sung. The music throughout is pleasing and appropriate and at the same time the book is really helpful and instructive.

Two-Part Songs

For Women's Voices

Price, 50 Cents

A collection of bright, melodious and singable numbers for women's voices, adapted for use in schools, seminaries, for high school choruses, and for women's clubs. The very best possible material has been drawn upon in the making of this book, our resources for this purpose being unexcelled. The best standard and contemporary writers are represented. It is a book of convenient size in the usual octavo form.

Complete Catalogues and our unique system of dealing upon application. Accounts solicited.

FRITZ KREISLER'S

Classical Manuscripts and Original Compositions

Newly revised and edited in exact accordance with his own concert interpretations by Fritz Kreisler.

Admirers of Fritz Kreisler as well as all players interested in violin literature will welcome the news that Mr. Kreisler has at last consented to publish the CLASSICAL MASTERPIECES of his repertoire, which for many years have proved such remarkable favorites at his concerts.

The entire series has been freely transcribed and Mr. Kreisler has conveyed his own concert version to paper as faithfully and exactly as his own artistic instinct, coupled with the most careful revision, fingering and phrasing would permit.

This set comprises his best known compositions, which, with four exceptions, are all originally composed for the violin.

EDUARD HOLST'S GRANDEST COMPOSITIONS

ALL NUMBERS NEWLY FINGERED BY LEON LABORI

"REVEL OF THE WITCHES"

¶The demand for this splendid Concert and Teaching piece has surpassed Holst's famous "Seguidilla," "Demon of the Wood," and "On to the Battle," and is unquestionably Holst's Grandest Composition. Every pianist should possess this famous number, and for a limited period we offer any of these famous pieces at 30 cents postpaid. The four for $1.00.

A SPLENDID GIFT FOR ANY OCCASION

REVEL OF THE WITCHES

Hexentanz
Morceau fantasque

¶A very brilliant, characteristic piece, melodious, fluent and dashing. Every bar of this fascinating composition is bewitching to the ear. The title fully explains the character of the composition. Grade 4.

DEMON OF THE WOOD

Der Waldteufel
Grand Galop de Concert

¶A bright and effective piece and sure to please. Spirited and of incomparable elegance and full of the most brilliant flashes of melody. A famous and popular composition and a grand exhibition piece. Grade 3.

SEGUIDILLA---Spanish Dance

Spanischer Tanz
Danse Espagnole

¶In this composition the Spanish dance is delightfully portrayed. It is excellently suited for concert performance, especially when accompanied with castanets, triangle and tambourine. Grade 3.

ON TO THE BATTLE

March Triumphale
"Muthig zum Kampf"

¶A stirring patriotic Military march of which the title is suggestive. It is highly animated in spirit and movement, while the leading themes are beautifully melodious and catchy, introducing octave passages. Grade 3.

PIANO STUDIES

PUBLISHED BY

The Willis Music Company :: :: Cincinnati, Ohio

Material for the Study of Pianoforte Pedals

BY

ALBINO GORNO

PART I—First (loud) Pedal

The first nine exercises consist in connecting chords by means of the first pedal. The next four, in connecting tones of the melody by the first pedal.

Exercises 15 to 24 show effect of sustaining a note or chord with pedal, while the hand is removed to play accompanying chord.

Exercises 24 to 30 are exercises in **superlegato.**

Exercises 30 to 33—Pedal effects produced by hands.

Exercises 33 to 36—Pedal used to sustain acciaccaturas.

Exercises 37 to end—Left hand used in complement with first pedal.

Price, $1.50

PART II—First and Second (soft) Pedal

This second book treats of and explains how to vary tone-color by use of first or second pedals both used together, or how to obtain this variation by use of both pedals and sustaining notes or chords with the hands. For example, "The hand and pedal together can produce the greatest possible contrast in volume of tone.

"Legato impossible by fingers alone, therefore use the first pedal."

"Louder effect than fingers alone can produce."

"Notes of melody sustained by First Pedal, repeated softly in the accompaniment." "Effect to be imagined."

"Right hand alone, left hand alone—a study in contrast of tone coloring."

These and many other points are exemplified—giving a complete system of material for pedal study.

Price, $1.50

Material for the Study of Pianoforte Technic

BY

ALBINO GORNO

I. Exercises for the Wrist

A complete and exhaustive series, to be used in practising every possible use of the wrist—staccato, legato—in all positions and with all fingerings.

Price, $1.50

II. Minor Thirds. Chromatic Exercises

First with right hand alone, in various figures—then the left hand alone first ascending, then descending. Then in free variety, combining single chromatic figures with minor thirds in the other hand—furnishing a satisfying text-book for all the higher grades.

Price, $1.50

Exercises for the Fourth and Fifth Fingers

BY

ALBINO GORNO

As thorough a series of exercises as the Wrist exercises. Utilizing figures to place the hands in every possible position, and then developing exercises to gain strength and flexibility therefrom.

Price, $1.50

The Organist's Journal

The Largest, Best, Most Useful and Most Practical Organ Periodical

Each issue of The Organist's Journal contains sixteen large pages of Pipe Organ Music, selected from the latest compositions of the leading English, French, German, and American Organ Composers. There are also many transcriptions from the scores of the world's greatest masters.

The music is edited in the most careful manner, special attention being given to the phrasing, pedal marking, registration, etc., etc.

It is printed from specially engraved plates in the finest style of engraver's art. The lithographing is exceedingly clear, and the paper of the best quality.

None of the pieces are too difficult for the amateur or the organ student, while the professional organist will find an abundance of choice material exactly suited to his requirements.

There are 196 of the largest size music pages in 12 issues, with an average of about 80 pieces. This music cannot be bought in sheet music form for a dozen times the cost of a year's subscription.

Subscription price $3.00 a year. Sample copy 25c.

Tales of Dolls from Many Climes

Told in MELODIES and RHYMES

14 Easy Pieces, INSTRUMENTAL or VOCAL — **Especially Adapted for VERY YOUNG PUPILS**

Words by JESSICA MOORE — **Music by GEO. L. SPAULDING**

Composers of "Children Treasure Every Measure"

This collection of song-pieces will be found instructive, entertaining and beneficial to beginners in Music. Teachers appreciate the fact that young pupils take keener interest in the lessons if the music to be practised has the semblance of a story or, in other words, a happy poem to which appropriate music has been set.

These little song-pieces are of this character; each composition tells a bright, attractive story and in such an agreeable manner as to fairly draw the pupils to the piano of their own free will. The entire idea of the volume is novel and ingenious.

Teachers will readily recognize the usefulness of this collection for recital programs.

The cover is beautifully printed in colors, representing the Dolls in the costume of the various countries,—and artistically bound with red silk cord. An especially ***large*** note has been used in engraving the plates which are full sheet music size and each piece carefully fingered and edited.

A handsome collection in every way and bound to attract and interest the little player.

Manual of the Art of Singing

By EMIL TIFERRO

$1.25

THOUGH there have been many books written on singing, there is always room for a new one which is the practical outcome of experience in teaching, supplementing an honorable career as a public singer. This is the equipment which amply qualifies Emil Tiferro to issue his Manual of the Art of Singing. Born in Cologne, Germany, of an Italian father and a French mother, both possessors of good voices, all the chief musical influences of Europe may be said to have united in his youth. After earlier studies in Munich and Vienna, he finished his vocal training in Milan, and has sung since as first tenor in the leading opera houses of Europe. He is now the foremost teacher in Denver, and he presents his material in the *Manual of Singing* in an admirable manner. The seventy-five exercises contained therein range from the easiest to the most difficult, and are arranged for all voices. They have been tested by constant use, and while the written word can never take the place of personal teaching, the explanations here given, taken with the vocalises, give an excellent understanding of the subjects treated. Singers and teachers can both profit by a close study of this work; the author's directions are very clear and his exercises undeniably helpful.

OLIVER DITSON COMPANY, Boston

A NEW VOLUME OF THE MUSIC STUDENTS LIBRARY

THE INTERPRETATION OF PIANO MUSIC

By MARY VENABLE

MARY VENABLE

A book for piano teachers and students, consisting of studies in the notation of piano music, the meaning of the various signs on the printed page, and the means of realizing the effects called for through the various forms of piano technic. The book is full of helpful suggestions to teachers and advanced students, and prepares the latter for intelligent study of the classical and modern repertoire, and artistic interpretation. We recommend it as a text book for class study.

Price, bound in cloth, $1.25

I have read "THE INTERPRETATION OF PIANO MUSIC," by Mary Venable, with unusual interest. It is a capital volume! A book for those who are not adverse to or afraid of having their gray matter put into action in an attractive and telling manner.—**John Orth.**

We shall make use of it in our Spokane School of Music this coming season.—**Francis Walker, Spokane, Wash.**

A Shropshire Lad

Song Cycle for
Medium Voice

By
CHARLES FONTEYN MANNEY

Op. 22

Price, postpaid, $1.25

THE text of these songs is by A. E. Housman, the verses being subjectively connected, in that they set forth a sequence of emotional experiences, as indicated by the titles:

1. Youth
2. Heart Wounds
3. Exile
4. Home Longing
5. Grief
6. Disillusion

These songs are of true concert character, varied in mood, modern in musical thought, spontaneous in melody, and will strongly appeal to artistic singers in search of a novel recital number.

"This new song cycle by Charles Fonteyn Manney, whose work in composition has won a place among American creative minds, is an exceptionally fine work, and each of the six songs has individuality and considerable to commend it to concert singers."—**Musical America.**

Five Intermezzi for the Piano

By DR. F. MORRIS CLASS
Op. 6. Price, $1.25
SHEET MUSIC DISCOUNT

MORRIS CLASS comes of old New England stock, and spent the earlier years of his life in the vicinity of Boston. His serious study of music was begun at Harvard under the late J. K. Paine, and continued under Professor Spalding, the present head of the department of music. After removal to New York, Dr. Class studied medicine and is now a practicing physician; but his work in composition is pursued with uninterrupted ardor, and his musical activity takes many forms. His *Five Intermezzi* are real mood pictures, displaying a sensitive impressionism. They are modern in treatment and harmonic feeling, but the note is not forced nor so radical as to be ungrateful to more conservative ears. In point of technical demands the pieces are of a practical moderation, though their poetic content may, of course, be most successfully expressed by the comprehending musician. Distinctive, refined, and withal charming, these pieces will go far to make the name of their composer respected among music-lovers.

Testimonial from

William Hatton Green

I have just received your "Five Intermezzi for the Pianoforte" and hasten to tell you what a fine addition I think they are to modern pianoforte literature. They will be unusually useful for teaching purposes, particularly because of their beautiful melodious quality which makes them excellent also for training tone quality, the melodies sounding really inspired --- so rare in these days --- and not banal. I have not run across any new works lately which have so thoroughly pleased me. Two of the Intermezzi will be put on my next recital program, and as soon as they are on sale I wish to give them to a number of pupils. The "Quasi Berceuse" and "Siesta" are particularly captivating.

RUDOLF FRIML

Op. 84
FIVE NEW COMPOSITIONS
For Piano Solo

1. Reminiscence .60
2. Lagoon ..... .60
3. Vagaries ..... .60
4. Shepherd's Lullaby .60
5. Frolic..... .60

Mr. Friml is fast acquiring a name as one of America's most versatile and prolific composers. In these Five Pieces are evident again the composer's melodic gift, his command of individual rhythmic effects, and his ability to write pianistically. In point of difficulty the pieces are all about Grade 3.

(Catalogue, giving first-page reproductions of Rudolf Friml's piano compositions, sent on request.)

Cantata-operetta for Women's Voices

Libretto by EDWARD OXENFORD and VICTOR BEDE
Music by CHARLES VINCENT, Mus. Doc., Oxon.

Price 50 cents. (Time of Performance 50 minutes)

Daniel Gregory Mason

Op. 5
SONATA IN G MINOR
For Violin and Piano
Price $3.00

A serious composition by an American musician pre-eminent as a composer and authoritative as a writer on musical subjects, this Sonata for Piano and Violin represents the highest musical achievement of its writer. In structure the music is modern in the freedom with which Mr. Mason has treated the subject, but it could not be called "ultra." It contains, too, passages of great lyric beauty.

CLASSIC SONATINA ALBUM

Piano Solo

Library Nos. 1141-1142. A collection of easy sonatas of diversified character and miscellaneous pieces, classified. Compiled, revised and fingered by *Sigmund Herzog.* (Vol. 1141, Easy; Vol. 1142, Intermediate.)

Each volume, paper $1.00; cloth $2.00

The collection is divided into two volumes, the first containing easy music the second comprising pieces of the intermediate grade. The titles afford plenty of variety in style and character; and from a technical point of view they cover a wide range, including broken chords, characteristic pieces with octaves, characteristic pieces with sparing use of octaves and staccato, pieces to develop sense of rhythm, and pieces to develop refinement of touch.

JOHN ALDEN CARPENTER

Improving Songs for Anxious Children

Words, Music and Pictures by JOHN and RUE CARPENTER
Price, net, $1.50

It does not often happen that a composer possessing such extraordinary attainments as does Mr. Carpenter is equally successful in writing for children. Yet this is just what has been accomplished in the Improving Songs for Anxious Children. For in these seventeen songs the composer has by no means lowered his standards, but is still serious and sincere, never trivial; while from the child's point of view the music is extremely singable and sufficiently easy, the melody usually confining itself to easy skips or to intervals of a tone. It is in the accompaniment that one feels the touch of a master hand. Here Mr. Carpenter, though confined within the narrowest limits, reveals now and again a deep poetic insight and a sympathetic understanding of the child's moods; and in some cases he sounds, even within such limitations, a note of great lyric beauty.

CECIL BURLEIGH

Op. 40
FIVE INDIAN SKETCHES
For Violin and Piano

1. Legend ..... .60
2. Over Laughing Waters..... .60
3. To the Warriors..... .60
4. From a Wigwam ..... .60
5. Sun Dance..... .60

These five pieces for violin and piano represent the latest musical output of a young musician who, until recently little known, has made a place for himself among the leading American composers. His work reveals a "poetic and true musical impulse and a fine balance of melodic and harmonic interest. The harmonic structure, especially, is rich and telling."

EIGHT-BAR STUDIES

IN PIANOFORTE TECHNIQUE

for the

INTERMEDIATE GRADES

(Schmidt's Educational Series, No. 115)

Price, 75 Cents

The eight-bar study is of prime importance in providing material for strengthening the weak places in the pupil's technical equipment. It is also in much favor with teachers who find it necessary to use the minimum amount of technical material to obtain the best results from their pupils. The 75 Eight-Bar Studies comprising this collection have been selected from the works of standard and modern writers and each serves to develop rapid finger action as well as to illustrate actual technical difficulties occurring in piano music.

Progressive Studies in Octave Playing

With Special Preparatory Exercises

(Schmidt's Educational Series No. 37)

Price, 75 Cents

A collection of Octave Studies selected from the works of **Gurlitt, Parlow, Wolff, Eggeling, Biehl, Foote, Lynes, Spindler, Bach, Mozart** and others. The preparatory exercises and a number of new studies have been specially written by the Editor for this collection. The work forms a unique and comprehensive course in octave playing for pupils in the medium grades. By the melodious character of the contents all suggestion of dryness in the study of this important department of pianoforte technique is avoided.

FOUR SONATINAS. Op. 36

No. 1 in C (2 a) **50c.** — Allegro risoluto; Andante con moto; Allegro giocoso

No. 2 in G (2 a) **50c.** — Allegro vivace; Semplice; Allegro con spirito

No. 3 in E Flat (2 b) **50c.** — Allegro non troppo; Grave; Allegro con spirito

No. 4 in B Flat (2 c) **75c.** — Allegro marziale; Andante espressivo; Allegro giocoso

"Mr. Dennée has distinguished himself in these sonatinas; he has written within the form as left us by Kuhlau, Clementi, and others, and has created simple, melodious themes that are refined in character."—Musical America.

Velocity

AND

Finger Equality

A Practical Course of Progressive Studies for the Pianoforte

Two Books **Price, 75 Cents Each**

(Schmidt's Educational Series, No. 112 a-b)

The Study of Velocity through the development of control and strength of the fingers is here presented in a thoroughly practical manner and arranged to meet the requirements of the young pupil. Book I may be applied as soon as a working knowledge of scales and time signatures has been acquired.

Systematic Finger Technic

Progressive Pianoforte Studies for the Earlier Grades

By CARL CZERNY

Selected, Arranged and Augmented with Studies after Motives from Czerny

By H. R. KRENTZLIN

Three Books **Price, 50 Cents Each**

(Schmidt's Educational Series No. 97 a-b-c)

BOOK I. 50 Short Studies for first grade velocity, phrasing, rhythm, simple double-note passages, etc., in easy keys.

BOOK II. 40 Studies progressing through second grade material. This book deals chiefly with velocity in its various branches, and trains both hands equally. Keys employed include more difficult signatures.

BOOK III. 24 Studies for technical advancement, leading to preliminary third grade work. New material is introduced, and more advanced treatment of the subject matter of Books I and II is given.

FANNIE BLOOMFIELD-ZEISLER

WITH A STUDY OF HER HANDS

By G. MARK WILSON

AMERICAN music owes much of the progress which has been made and is still being made to the splendid achievements of American artists, prominent among them being the subject of the present sketch who has won not only national appreciation but also international recognition as an artist of the first rank among pianists.

Fannie Bloomfield-Zeisler was born in Bielitz, Austria, in the year 1865, but was brought to America when but two years old, so that to all intents and purposes she is an American. She began the study of piano playing at the age of six. In passing, it may be of interest to mention that the first melody mastered by her was *Annie Laurie*, a rather cosmopolitan combination when viewed from an international point of view. She, an Austrian by birth, an American by adoption, makes her initial bow with a Scotch tune.

Relative to youth and music, Madame Zeisler said, "I am positive that an early beginning is absolutely essential to the making of virtuosi. Music is too big a subject and technical progress too slow to compass when study is commenced in middle age or even early youth. Personally I have never known of an individual who proved an exception to this rule."

Speaking of there being any special method capable of universal and successful application in teaching, the artist exclaimed:

"There is no such thing. Leschetizky is spoken of as having originated a system of this nature, a sort of 'specific cure-all,' but this is far from being the case. What Leschetizky really does is to discover the student's weak points and then build them up by a systematic course of study, especially prescribed for that particular student's requirements, be it fingering, phrasing, pedaling, chord, scale, octave or passage work. These exercises are selected by the master from Czerny, Loeschhorn, Köhler, etc., or, as is frequently the case, may be taken from his own admirable collection of études. To me this seems the only consistent way of instructing, and I have followed it in all my studio work with the most flattering results.

"In music, as in everything else, to attain proficiency, one must ever be a severe critic of one's own achievements, must appraise that which is faulty or laudable with strict and unbiased judgment, all the while striving to eradicate shortcomings and at the same time improve upon that which is deemed worthy of comment.

"There is no royal road to success in music, except it be long hours of conscientious work and strict attention to detail, which reminds me of a story I once heard: It seems that a sculptor invited a friend to see a statue on which he (the sculptor) was working. Some months later this same friend was permitted to look upon the finished marble. Upon inquiry, the sculptor explained that he had employed the intervening time in strengthening certain portions of the figure, softening an outline here, altering a vein there, etc.

"'But,' said the visitor, with a deprecatory wave of the hand, 'these are but trifles.'

"'Aye,' said the sculptor, 'trifles they are, but trifles make perfection and perfection is no trifle.' So it is with music, we must ever be after the trifles, strengthening, softening, altering and smoothing the tone and the technic, with an eye always on the perfection molded by our ideals.

"While it is by no means my intention to lay too much stress upon mere technic, yet technic is a necessity and a concert pianist should be capable of achieving much more in this line than he will be called upon to use in actual playing, thereby allowing a wide margin to overcome nervousness, attend to the interpretation, as well as attain breadth, power and freedom of expression. Technic being simply the medium through which a virtuoso tells the composer's story, should therefore be subservient to the emotion, conception and musical meaning of a work. It is simply a 'means' and, furthermore, we must remember that one of the primal precepts of true art is to keep the 'means' as far as possible in the background."

Speaking of developing sympathy and understanding, Madame Zeisler said: "To foster and develop these essentials in addition to individuality and mental outlook, nothing can compare with travel and reading. As for myself, I am an inveterate reader, having read practically all the German and English classics.

"It may surprise you to learn that I can and frequently do employ my time working along mechanical lines. Paperhanging, upholstering, and carpentering are trades in the practice of which I often indulge. For aside from relaxing the mind and muscles, this sort of employment has always been intensely interesting to me. Moreover, it gives me the advantage of knowing how a thing should be done and when it is done right. To be sure, I do not cultivate these hobbies at the approach of, or during the concert season, on account of the ill

FANNIE BLOOMFIELD-ZEISLER

2. HAND RAISED AT END OF ARPEGGIO
3. PLAYING OCTAVES

1. MME. ZEISLER'S HANDS

4. RIGHT HAND PLAYING HEAVY CHORDS
5. CROSSING HANDS

effect it would have on my hands, but when not restricted in this manner I thoroughly enjoy manual labor.

"Into my work I throw my every effort; forgetting self, fatigue and time. To me this seems the only consistent and effective way of studying. My advice to pupils is, secure a competent instructor and pursue this plan. Forget the clock, give your work undivided attention, and always maintain high ideals by which to judge the result of your efforts."

Madame Zeisler is very decided in all her actions and opinions. She is quick to condemn that which does not please and equally quick to praise that which meets with her approval. The piano has affected the outlines, structure and texture of her hands to a very marked degree, the muscles on either side of the fingers being like wonderfully tempered rods of steel; the finger tips are covered by thick callous skin and are extremely flat.

"I do not believe that the technical demand made by the compositions of modern composers detracts from their musical qualities," continued the artist, "for the reason already given, that is, a virtuoso should be capable of accomplishing twice as much in the field of technic as he will be called upon to use in concert work.

"It is my conviction that technical demands and achievements will continue to advance as time passes. Since the law of progress is at work in every other branch of art and science, it would therefore be strange indeed, if piano virtuosity were to be left out in the cold, while the various professions, trades, etc., climbed onward and upward, round by round, as the years roll by, toward that will-o'-the-wisp perfection. In furtherance of this theory, I argue that the average child of today seems to possess a birthright of more intuitive knowledge than did the child of one hundred, fifty, or even twenty years ago. Therefore he learns more rapidly, and the surplus time thus saved is employed in delving into new studies and gaining a deeper knowledge of the old ones. This being true of general education, then why not of piano technic which differs from general education in only that it specializes in one study?

"Having spoken so much of technic, I fear, lest I be misunderstood, so let me again emphasize the fact that technic is simply a 'means,' and should be looked upon only as a vehicle for the expression of musical thought. In brief it is striking the balance, with technic and control on one side, emotion and understanding on the other, that produces a true artist.

MUSIC STUDY IN EUROPE AND THE UNITED STATES

(Some months ago Mr. H. E. Krehbiel contributed an article to the New York *Tribune* on the subject of music study abroad, from which we have taken a portion which has especial value to those ambitious young musicians who think their artistic salvation depends upon going to Europe for study.—Editor.)

EVERY music student, every music student's parent and every music student's patron in America, for generations, has been confronted with the question whether or not it is advisable to pursue music study in Europe. There was a time when the answer of every person of knowledge whose opinion was asked had to be in the affirmative. But that time is passed, and now an honest adviser takes the circumstances of each individual case into consideration before deciding the momentous question.

Much depends upon the moral stamina, sound sense and artistic capacity as well as zeal of the student. Provincialism and ignorance, masquerading under the guise of patriotism, have too often been ready with the reply that Europe offers nothing which cannot be had in America, except, possibly, an advertisement. That answer never was wholly true, is not now and never will be. It lies in the nature of art that its manifestations must be studied under many climes by one who desires seriously to become its practitioner. If the best teachers in Italy, France and Germany were all to open studios in New York, Boston and Chicago it would still be a good thing for their American pupils to make wise and intimate acquaintance with the musical institutions of Europe.

The part which art generally plays in the public and private life of European peoples, its effect upon their minds and manners, their thoughts and conduct, is an essential element in artistic culture, and this cannot be acquired from teachers, or books, but only from individual experience, by contact with the people themselves and observation of their institutions.

This "artistic atmosphere" is something very different from the thing which haunts the minds of the majority of young persons who plead with their parents or patrons for the privilege of studying in Europe. In a great many cases the real desire, mixed with artistic ambition, is to escape the restrictive influences which surround them here. For many students the "artistic atmosphere" means Bohemianism as it has so often been pictured in fiction and as it is so often illustrated in the lives of artists.

For reasons which they would find it difficult to explain, this Bohemianism is widely supposed to be essential to an artistic career, although the fact known to sober observers is that its destructive influence is a thousandfold greater than its creative. That many American students seek it and little else when they go to Europe, ostensibly to study, is indicated by the circumstance that in Paris, Berlin, Milan and Florence they are now studying with the same teachers whom a short time ago they might have had in New York and Chicago. A dozen or more American teachers are vastly successful abroad because of their large classes of American pupils, who, by the very fact of going to the same men with whom they studied here, show that their purpose in going abroad was not to imbibe the traditions of foreign countries, but to enjoy a life denied them by American conventions.

Study under foreign conditions, involving a thorough knowledge of foreign languages, with all the drudgery which that implies, vigorous technical training, mastery of routine and all the other things which are a weariness to the flesh is too irksome for them, and they are relieved of it by associations which enable them to use their own language, consult their own comforts, pursue their old and own methods and habits and still live abroad.

It is this kind of study abroad, with its oftentimes awful consequences, which ought to be discouraged. In fact, there is no excuse in nine hundred and ninety-nine cases out of a thousand for anybody to go to Europe to learn to sing, play the pianoforte or violin or compose. All that can be learned in New York as well as anywhere. Purely technical study has nothing to do with learning to *live* art, to breathe the atmosphere of art, to which attention has been drawn —the principle which leads the French government to send the winners of the *Prix de Rome* to Italy for a period of years and encourage them to travel in Germany.

European countries—Germany more particularly, Italy in a smaller degree—offer advantages in the way of an apprenticeship in operatic work, which heretofore American cities could not hold out. Their many small theatres in which opera is cultivated (exclusively in Italy, together with the spoken drama in Germany) have given American singers opportunities to acquire a practical knowledge of their art. The value of these opportunities was inestimable, as has been disclosed in scores of cases, and never so forcibly as within the last decade.

MODERN MUSICAL TENDENCIES

BY ARTHUR ELSON

II

SCHOENBERG

ARNOLD SCHOENBERG is the musical "bad boy" of the present in Germany. He wrote a text book on harmony, so his experiments would seem entitled to respect; but on several different occasions audiences have wondered whether his compositions were not meant as a joke at the expense of those who accept what they do not understand. In some places his works have aroused laughter, in others they have been met by hisses, and only a few applaud. Like Strauss, he had an earlier period, but even this was marked by excesses, his *Gurre Lieder* demanding an orchestra of 180 players. In his recent pieces his harmonic and melodic skips seem at times wholly without plan or reason. If Debussy is considered to have written "music of the future," then Schoenberg must be aiming to be understood in about the year 3000. The principle, however, is only the detached effects and "musical stippling" of the modern school carried to their extreme results. For piano, Schoenberg has introduced the device of holding high notes in silence, playing a low note, and letting the upper notes vibrate in sympathy with the overtones.

BUSONI

The example of Busoni shows the ease with which a composer may shift from the old styles to the new. When young, Busoni devoted himself enthusiastically to counterpoint, and wrote some remarkably effective fugues. But, after seeing the warm reception that the modern French school received in certain quarters, he adopted the modern style for his own works. He has composed operas in an advanced harmonic style, but his most successful work at present is probably the incidental music to *Turandot,* which at least one English critic considers the best example of modernism yet produced.

THE RUSSIANS

Russia, too, now boasts her advanced composers. The vitality of the earlier school in Russia has carried it practically up to the present, and Glazunov is still with us, even though Rimsky-Korsakov, the leader of the nationalists, died a year or two ago, after a long career. The grace, beauty, and variety of the Russian folk music gave to this school a broad foundation, upon which the composers erected an impressive musical edifice. Now, however, it would seem that there are to be no additions to it, and the younger men are going over to the camp of modernism. Stravinsky writes ballets, such as *The Bird of Fire* or *The Consecration of Spring,* in the most approved chaotic style of the present, and he handles the style brilliantly enough, as his *Feu d'artifice* will show. Scriabine adopts a system of chords based on fourths, and gives his new harmonic effects with a large and loud orchestra. There has been a movement for the suppression of needless noise in large cities; and the wits at once claimed that it started just after Scriabine had produced his *Prometheus.* That work has not yet crossed the Atlantic, but the blaring brasses in his *Poeme de l'extase* certainly give point to the joke. Rachmaninoff is more artistic, and his *Isle of the Dead* is one of the best works of the present.

MODERN ENGLISH COMPOSERS

England, too, has come into line rapidly. It is a long step from the sugary style of *The Bohemian Girl* to the modernism of a Delius or a Holbrooke, but the change has taken place in comparatively few decades. Holbrooke is a great admirer of Poe's writings, and has written a symphony and other compositions inspired by that author's subjects. Holbrooke has composed also some ambitious operas, of which *The Children of Don* is one; but if a Hammerstein could not make that work a success, then probably it deserved to fail. Delius has written large tone pictures, such as *Paris, A Night Piece, A Mass of Life, Brigg Fair* (on English folk tunes), and *The Song of the High Hills.* These have won some attention in England and Germany, but are not unequivocal successes. In common with many other works of today, they seem to represent a period of experiment. When the genius of the modern school appears, he will have all the present composers' mastery of effects, but will use these bits of originality in a more artistic, if not more coherent, way. Just now composers show much cleverness in the search for novel styles; but, as stated above, they do not often see that these novelties of utterance are only a means, to be used for the end and object of an artistic whole. Cyril Scott has devoted himself chiefly to piano works, and, as in Debussy's case, their blurred and blended harmonies have been used to create effective *genre* pictures.

THE DEMAND FOR NOVELTY

All this search for novelty may have its foundation upon a true artistic principle. It is possible that we outgrow what we are used to, and unconsciously demand more striking and unusual effects, for which familiarity has not as yet bred contempt. If this is so, we must also admit that composers must proceed more rapidly than audiences. The hearer of a composition is not steeped in music. He may listen to a new work that demands several performances for a full appreciation, but for him these performances come at long intervals of time. Meanwhile the composer, who makes music the chief interest of his daily life, grows at a much quicker rate than the listener, and very soon, perhaps, outstrips his public. Time is the only thing which will show which composers are on the right path. It is said that ridicule is the test of truth; and if the modern works can hold their own in the face of the many attacks made on them, they will prove their worth. At present, however, few of them do hold their own; too many are heard a few times, as curiosities, and then shelved.

THE MODERN PROGRAM STYLE

As to the second chief quality of modernism, the program style, it certainly seems much in evidence at present. Form did not at once develop with the introduction of harmony and the monodic school in 1600. It took two centuries for the sonata and the symphony to reach their greatest growth. For another century the tendency has been to cast form aside in favor of a plastic freedom of style suitable for descriptive music; but this period has been comparatively short, and form has not yet been banished from music. Robert Franz used to say that no one should attempt a symphony after the perfection shown in that field by Beethoven; yet enough such works have been written since classical times to form the subject of a sizable book by Weingartner.

There is nothing to prevent program music from existing side by side with the so-called pure, or absolute, music. At present the program school is in the ascendancy because program music is easier to write, and because the complex effects of the modern orchestra lend themselves well to the effects of the pictorial style. Here, again, we have not yet exhausted the possibilities. Art is greatest when its capabilities are fairly well understood, and its limitations not yet reached; and this is the situation of program music today. Mathematics will show us that with a doubled number of different kinds of instruments in the orchestra, there will be much more than double the number of possible combinations. Where a Beethoven score shows only about a dozen staffs at most, that of *Ein Heldenleben,* for instance, has at times as many as thirty, with forty-six actual notes to an orchestral chord. This great increase in complexity has occurred in a century when form had already reached its full development; so that it would be surprising if composers had not applied themselves to exploiting the program effects of varying orchestral color. The possibilities are so great that we have a long way to go yet before reaching the limits of the field. The great diversity of composers' styles will show this. The broad power of a Strauss, the refined delicacy of a Debussy, or the sombre impressiveness of a Rachmaninoff are widely different from one another, and yet all sprung from modern orchestral conditions. The present writer thinks that the program school will remain supreme for many decades to come, and that only when it has reached its full growth will there be anything like a desertion by composers in favor of form. The musical form of the future, too, may be something wholly new. It is possible that coming composers will enrich the symphony with larger orchestral resources; but it may also be possible to develop some form which will have more to do with regulating and contrasting orchestral color.

Meanwhile the symphony holds its own, and Beethoven is not abolished by Debussy. Brahms, too, is now universally appreciated, and his example shows that noble music can still be written in the absolute school and in strict form. Bruckner and Franck brought to the symphony a more modern style, as well as a deep earnestness, and if this has led as yet only to the abstrusities of Paderewski or Elgar, who sometimes grow dull when trying to be symphonically earnest, there is no reason why the future should not bring forth better results.

In opera, Wagner is still the one god, and Puccini is his prophet. That is not saying that Puccini is a mere imitator, like Kistler or Schillings; but Puccini has seen the worth of the music drama, and his scores support the action and echo the sense of the dialogue in his librettos. Here pure music is entirely out of place, unless in an overture, and program music the only proper thing. There were times when this was disregarded. Handel wrote operas that had a set number of characters, with prescribed arias for each; but these works did not outlive their century. Rossini and his school wrote florid melodies to display their singers; but except with those who care more for such display than for artistic principles and expressive music, this school, too, is largely out of date. At present it seems as if the music drama had come into its own, and if Puccini does not give us grand orchestral scenes, like the *Ride of the Valkyries* or the *Magic Fire Music,* he still sets worthy subjects in a thoroughly artistic manner.

On the whole, then, music seems at present in an experimental phase. The search for novel effects, combined with a certain lack of the emotional expression that comes only with the greatest inspiration, has given the modern school a somewhat dry and artificial character, and earned it the title of cerebral music. But modernism is not to be put aside as a mere fad, in spite of the ease with which anyone may indulge in it by simply introducing queer effects. If it does not last in its present shape, it will certainly bring about some valuable results, and it has already succeeded in enriching the range of harmony, even for those composers who are not bent on a radical search for what is new and strange.

JOSEF STRANSKY

A Talk on Orchestral Conducting and Training for Conducting

Reported by A. Walter Kramer

IN the recesses of his study, seated among his pictures—masterpieces, many of them—you will find, these winter afternoons, one of the most distinguished of the conductors of today. It is the New York Philharmonic's present conductor, Josef Stransky.

Mr. Stransky is the most genial of men, ever gracious, affable, and, above all, sincere. Two winters has he spent in New York, and in that time he has made the English language his own, with peculiar success. So that he may converse with you in an idiom very close to "the King's English," not in a dialectic English such as most European musicians who come to these shores employ for many years after their arrival.

Pictures play a very important part in the life of this noted musician. For the eminent conductor is one of those broadly cultured men, who believe in the correlation of the arts. Let no one suppose even for a moment that Mr. Stransky is a *dilletante* in his appreciation of pictures. He is versed in this art as he is in music; and if you speak with him he will tell you that the former is the more difficult of the two to understand.

Last fall the conductor and his charming wife—who, it may be mentioned, before her marriage was Marie Doxrud, and was a member of the soprano contingent of the choir of St. Bartholomew's Church, New York—on their return from Europe moved their household goods. Not far from Carnegie Hall, the place of concerts and rehearsals innumerable, the Stranskys have their abode, which looks out on an expanse of Central Park, a view that it is difficult to surpass in New York. Everything is arranged in a manner artistic and dignified; the dwelling breathes culture and refinement. And the walls of several of the rooms are hung with pictures. If you ask Mr. Stransky anything about these he will wax enthusiastic, will tell you many, many things, so that should you be one of those numerous ones whose knowledge of modern painting is limited you will be considerably the wiser when you have listened to him and reflected.

Modern German painting is Mr. Stransky's particular *forte*. You will see masterpieces of this noted school on his walls, in fact, pictures by every important living German painter. Max Liebermann's *Cobbler Shop* and *Synagogue in Amsterdam;* Franz Von Stuch's *Pan;* Ferdinand Hodler's *Wandering Jew*—a world-famous picture; *The Annunciation,* by Heinrich Vogeler; Hans Thoma's *Twilight on the Lake of Garda;* six pictures by Wilhelm Trubner and Heinrich von Zügel's *Cattle* are some of them. And they are worth studying. Mr. Stransky sits among his pictures quite as he does among his orchestral scores; he studies them and he has an unusual library of works on modern art. In leisure moments he is engaged in writing a book on the subject.

That the present conductor of New York's oldest symphonic organization has taken the land of his present official calling to his heart is generally known. He believes very much in America and Americans. Accordingly his advice, opinions, in fact all his ideas on the subject of American musical growth have a sympathetic note in them which is not frequently found in the expression of foreign conductors. Mr. Stransky had much to say recently on the position of the orchestral conductor in America as contrasted with that of the musician occupying such a post in Europe.

"It is quite a different state of affairs, I assure you," said the conductor. "You must first realize that in Berlin or Vienna the great orchestras are conducted along other lines than here. They are not managed by anyone, but are co-operative organizations in which the members are shareholders. The ambition of the players then is to be busy every evening if possible, for the more they play the more money they make. They do not have any regular conductor as we have here.

"For example, take the Berlin Philharmonic. There is a series of ten concerts which Nikisch conducts each year. Only ten times then does this orchestra play under him and the rest of the year—they play *all year*—they are led by other men, some of note, others absolutely of no account. The position is exactly this: Anyone can come and engage the orchestra for a concert, be he pianist, violinist, tenor, composer or what not. The individual arrives, announces the number of rehearsals he wants, arranges the price. The orchestra plays for him. Thus the orchestra is engaged every evening throughout the year, playing under any and every one who has the necessary amount of *marks* to engage it. And

JOSEF STRANSKY

the price is not prohibitive as it is here. Consequently, many mediocre artists arrive in America with the report that they have played with the Berlin Philharmonic. Ask them the date on which they played and you can determine whether they were engaged as soloist with the orchestra or whether they engaged the orchestra to play with them. If the date was not in the series conducted by Nikisch you may know that it was the latter.

"Then, too, the orchestra has no regular rehearsals. For Mr. Nikisch may be conducting in Leipzig a few days before and arrive in Berlin just in time to have a rehearsal or two before the concert. Of course the men take the greatest interest in the concerts which he conducts. That is but natural. The attitude of the press is different from in America too. In Berlin the critics expect the best work only when the regular conductor is at the head of it. And if a solo wood-wind is not so good they forgive the conductor and charge it up to the player, who is also excused to a certain extent because of the vast amount of playing he has to do under the order of things there.

On the other hand, in America, the conductor is placed in entire charge of the orchestra. This year I made fourteen changes in the *personnel* of the Philharmonic, replacing the weak spots by the best obtainable material. I am to engage the best and only the best. And, this being the case, the responsibility for everything that happens in connection with the Philharmonic rests on my shoulders. If something goes wrong I am to blame and no one else. Do I think it the better arrangement? Most assuredly. It is a healthy way of working and makes for the best results. The orchestra that has its regular conductor, its scheduled rehearsal, its *personnel,* constantly improved, cannot fail to become a more and more formidable body with the completion of each season's work."

Before coming to America Mr. Stransky was conductor of the Blüthner Orchestra in Berlin. Conditions similar to those mentioned as existing in the Berlin Philharmonic obtained there. This orchestra, which under Mr. Stransky's baton reached a high plane of excellence, also "hires itself out" (if the homely phrase may be employed) and plays almost nightly in Berlin. It, too, has the problem to meet that the Berlin Philharmonic has. And Mr. Stransky feels the difficulty under which these organizations labor all the more keenly now that he has accustomed himself to the American way of building orchestral bodies. Also rehearsals are *few* under the Berlin conditions.

There has been a cry from time to time for the acceptance of the American symphonic conductor. Music lovers, in whose hearts the patriotic note throbs, have wanted to know why the American musician was not more often chosen as conductor. Someone has suggested a "training school" for conductors. Hear what Mr. Stransky has to say about its chances.

"You may know that for several years I was the head instructor of the conducting classes at the Stern Conservatory in the German capital, and therefore I can tell you from actual experience how impracticable it is to attempt to *teach* conducting. It is the custom at the Stern Conservatory to have the student orchestra assemble and have various students, who have ambitions as conductors, take up the baton and conduct a piece.

"Frankly I want to tell you that it was not productive of very much in the long run. Those who had talent among those who tried conducted well from the start, while the others who had no gift for conducting could never hold the players together at all. And they probably never would had they had an orchestra to rehearse with all day. I do not believe that the art of conducting can be taught in a school, as can the piano or violin. My idea of the preparation for conducting is, first, to become a well-trained musician; study harmony, counterpoint, an instrument, piano or violin, and then take the baton and conduct. If you have the gift for conducting you *will,* if you haven't you *won't.* That is, you will show at once, from the moment you pick up the baton that you can conduct or *vice versa.*

"The course that I believe American musicians, who wish to win their spurs as conductors, should pursue is as follows: Go first as conductor or chorus-master with a light opera company if the other is not available. Then to a regular opera house, where the routine is to be gotten. You can't learn to swim out of water, can you? Everybody can beat four quarters to a measure, it is true, but *how?* And the opera house, where one is made to follow the singer, where one gains freedom, where one must control not only principals and orchestra but also the chorus, is the place to learn. There, too, one gets the dramatic instinct, the feeling for atmosphere, for a scenic picture—which is of such great importance.

"After all this is acquired one may take up the post as conductor of a symphonic orchestral or-

ganization. First the opera house, then the concert hall, is my theory! And that I am right in my contention is proved by the fact that nearly all the great conductors of symphonic orchestras in the world today were first opera conductors."

Mr. Stransky himself was conductor at the opera in Hamburg for many years, and his readings of Wagner there won him fame in that city and in Germany in general. He is of the opinion that the conductor who goes from the opera to the concert has all the advantages in his favor, and for this reason he recommends it as the path to be pursued by American aspirants for recognition in this field.

American audiences interest this master musician intensely. He is one of the few conductors who have come to us from abroad who do not assume an attitude of unreasonable and egotistical superiority to their audiences. In fact, he finds an eagerness among American music lovers which he does not believe exists anywhere else in the world today.

"The audiences here," declared the Philharmonic *chef d'orchestre,* "need now to be interested in the great masterpieces. That is the main fare which they should be given. Of course I believe in novelties as my programs show, but novelties are to a program what dessert is to a dinner, you must remember. The people abroad are satiated with the great master works for they have heard them for many decades already. Here, on the contrary, the sound of an orchestra was unknown to old persons alive today until they were almost forty. In Europe young children are taken to orchestral concerts and have been for years, so that by the time they have reached maturity they know the masterpieces of symphonic literature quite well. That condition does not exist here and therefore the classics must be played regularly. I strongly hold that the way to create the truest love for music is to inculcate it in the child as early as possible. The growth comes readily enough when the seed is sown in this manner."

And that the conductor is not a narrow classicist is proved by the novelties he has listed for this year's concerts. Already there have been produced by him Richard Strauss's new *Festival Prelude,* Op. 61, Max Reger's *Ballet Suite,* which the great German modern has dedicated to him, while the winter will see a *Suite* by Victor de Sabbata, a young Italian, and works by Sibelius, Rachmaninoff, Gottlieb-Noren, Enesco, and Glazunov. About the much-talked of Max Reger the conductor spoke as follows:

"Reger is now coming into his own. I do not mean that his works up to the present time have not been worthy and in many ways extraordinary. But there has been a certain justification in some one's calling him the 'modern Bach.' Reger is now not satisfied with being the 'modern Bach,' he wants to be the 'modern Reger'! That is, he has worked on the strict polyphonic lines although always with modern harmonies, long enough, and today he feels the emotional in music more than he did before. Incidentally he is now conducting the private orchestra of the Duke of Meiningen and in this way he is constantly becoming more and more familiar with modern orchestral works and more closely associated with orchestral colors. His two recent suites, the *Romantic,* which I did last year, and the *Ballet,* this year, have been commented on as typical of a new *Regerish* personality. Now that he has done the two suites he feels that he is ready for his first symphony. And he recently wrote me that he was beginning to work on it already."

It will be remembered that the great Johannes Brahms approached the symphony with fear and dread. He wrote some *Serenades* first, works which are virtually in the *sinfonietta* form. But he showed judgment, and when he set down his first monumental orchestral work, the symphony in C minor, he wrote what was hailed as the *Tenth* symphony, implying of course that it followed on Beethoven's *Ninth.* Might not Max Reger count himself happy should his first symphony prove to be a *Fifth,* following the *Fourth* of Brahms?

The geniality of Josef Stransky is only paralleled by his genuine modesty. He has written orchestral works, it is learned, but they have not appeared on the Philharmonic programs, in the two seasons in which he has been at the head of the orchestra. Last year Mme. Schumann-Heink sang his superb *Zwei symphonische Gesänge* (Two symphonic songs) with orchestra, winning much success for herself and the composer with them. This summer they were issued by one of the leading German music publishers and stand high in the list of modern German art songs. It is not an easy matter to resist the temptation of producing one's own works when one has at hand so admirable an orchestra as the New York Philharmonic. Yet Mr. Stransky is unnecessarily modest about his compositions.

As a conductor he has endeared himself to music lovers wherever he has appeared with his orchestra, has been recognized as a chosen disciple of the art of interpreting orchestral music of all schools, classic, romantic and modern, his remarkable versatility astounding numerous persons. And it is the inherently poetic nature of the man—that which gives him his love for all the arts, painting, literature and music—that has produced in him a master of emotional utterance, a conductor of compelling distinction. And what is more to the student of humanity as well as of music, who goes in his estimate beneath the surface, Josef Stransky is a personality,—a master of his art,—a leader among men in civil life as well as on the concert platform.

THE HOME MUSIC CABINET

BY CHARLES N. BOYD

In some homes where music students are to be found the music is piled on top of the piano This custom does not, however, find favor with the careful housewife, who prefers to crown the piano with a couple of tall, slender vases, that forever menace the player. Neither does the owner of the music always favor this disposition of the sheet music library, for in the process of the daily dustings the music becomes most extraordinarily transposed and inverted. Pupils have even been known to come from such homes to their lessons with the cover of one piece, the body of another, and the last page of a third. In the home of the professional musicians the care of the music is a different matter, and even the most punctilious wife or housekeeper may be taught, in the course of years, to leave music where and as it is found, whether on the piano, a table or a chair.

So it comes about that many students invest in a music cabinet. If it be bought in a furniture store, the chances are that its designer evidently chose a refrigerator as his model. There is a large space, probably intended for ice, and various smaller compartments in which music may be placed under certain trying conditions. In order to find any desired selection it is usually necessary to remove at least half the contents of the case, tearing one or two sheets from end to end during the process. This removal cannot be accomplished without kneeling at the shrine of the cabinet; it is impossible for one in either a standing or sitting posture.

The vicissitudes of life finally lead one to visit a home decorated with one of these remarkable pieces of furniture. The charming daughter of the home is devoted to her piano, and she appreciates the interest taken by the visitor in her music.

"Certainly, I shall be glad to play something for you. Let me see, I think you would like a piece I was trying over the other day." She falls on her knees before the cabinet, the door of which is ornamented with a much more imposing lyre than can be found in the pages of Praetorius or Engel. After some fumbling with the lock the door swings open and Alys surveys the contents. "Let me see; I think it was on this shelf." She begins to pry among the corners of a handful of music which completely fills the shelf space, but a hurried investigation fails to disclose the desired sheets. With a regretful sigh, as for a task from which there is no escape, Alys removes the whole handful and lays it on the floor.

On top of the pile are two or three songs: *Es hat nicht sollen sein, Nazareth,* and *Oh, dry those tears.*

"I ought to return those songs to Jennie Smith —she forgot them here the day she came over to practice for the Ladies' Aid Society affair." They go to one side, on the floor, and the next item appears, a piano solo minus its first page.

"There is that Beethoven sonata. I'd like to play it for you, but the first page has been lost for months, and I've nearly forgotten the rest."

Several gaily-tinted covers announce the next items as "popular hits." "It's a shame to have such stuff here, but the boys don't like any other pieces, and I just have to have a few ragtime things to please them."

A dilapidated copy of Bertini exercises follows suit. "Horrid old things—I just hate them. I never could get them as fast as they ought to go, but the teacher said most of the metronome marks were too high anyway."

Durand's waltz in E flat, a Godard mazurka, and Chaminade's *Scarf Dance* were laid on the left with a disapproving sniff. Two or three monthly musical magazines, of rather ancient date. "I must tear the music out of them and throw the rest away—the music is the only good part of those tiresome papers." More bright colors, each cover requesting or commanding, "Try this over on your piano." Indian songs by Charles Wakefield Cadman.

"Don't you think *The moon drops low* is just exquisite? But his accompaniments are so hard." The lot is complete with a book of Mendelssohn's *Song without Words.* "There is a pretty piece in that book called *Consolation,* but since we sing it as a hymn in church I hardly ever play it."

The futile quest is continued through all the compartments and mazes of the cabinet. Always a source of trouble, the metronome falls out of the ice-box section.

"Really," Alys laments, "I haven't the slightest idea where that piece could be. Let's see, did I lend that to Susie? No, for she has one of her own. I couldn't have forgotten it at the teacher's, for she is awfully fussy about me playing things she hasn't taught me. I've just loads of things here that she gave me for lessons, but I don't think you would like any of them. Well, of all things! If that isn't here on the piano rack, in between the pages of something else! What, must you be going? I'm sorry it took me so long to look through that cabinet; really I must learn to keep my music in better order. Next time you come I'll have something nice to play for you."

What would many of us suffer without the faithful music cabinet?

THE MAKING OF A MUSICIAN

As Shown in Reminiscences of Constantin von Sternberg

II

TO return now to my chance acquaintance in Berlin. He was a young music student by name of Moritz Moszkowski. At my first visit to his house I found my impression of his wonderful talent still further strengthened, although at that time he had not yet started to write. (It was on one of my first concert tours several years later that I succeeded in interesting the first publisher, Hainauer in Breslau, in Moszkowski's talent.) What he saw in me I know not, but we became very much attached to each other and one fine day, when my engagement to the aforesaid theatre was nearly settled, he introduced me to his master, forgetting, however, to tell me the gentleman's name.

I was asked to play something and as my plea of not being a pianist was unavailing I played some operatic reminiscences, improvising all but the subjects at the spur of the moment. The elderly gentleman said that there was something in my touch which predestined me to be a pianist and offered to teach me. It was not until then that I learned his name.

"They call me old Kullak," he said.

My hesitation on the score of lack of means he brushed aside by saying that he was not in the habit of inviting people to let them starve. And for two whole years he not only supported and taught me, but actually gave me pocket money to boot until, in the second year, I could earn it as a head teacher in the Academy.

Kullak was the most perfect opposite of Moscheles. Modern to the core, despite his sixty years, he kept abreast, if indeed not ahead, of his time and knew, in piano literature, the very latest creations of significance by memory. His father had insisted upon his becoming a jurist, and in filial obedience he had made his LL.D., studying music all the while under pretext of an accomplishment; but after his father's death he changed saddles at once and in a very few years was appointed court-pianist to the King of Prussia, besides becoming known far and wide as the greatest teacher of his time.

Among my classmates were Moszkowski, the two Scharwenkas, Grünfeld, Pirani, Emil Liebling (of Chicago), Arthur Mees, Adele aus der Ohe, Martha Remmert, Johanna Zarembski, and others of less renown. When I visited the dear master eight years later — it was after my first season in America—he told me with great sadness that neither before nor after my time had he with him such a large gathering of talents.

In the course of my two years I had asked him several times to tell me the amount of my indebtedness. These inquiries occurred always in those moments of despair when a particularly difficult task made me lose heart and doubt my talent. He invariably replied with a serious tone: "The day of reckoning will come, be sure of it!" Well, it did come!

One day in September, 1874—my second year with him—Kullak told me to hire the hall of the Sing-Akademie for some good date in the following February. To my utter astonishment he added: "for your pianistic début." I had hardly any repertory to speak of, but he meant that this was a mere detail to which we could easily attend in the meantime. I hired the hall, went to work on my repertory and when February came round and I was all primed and ready—imagine my horror and dismay—the papers announced that Rubinstein would give two recitals, one right before and the other right after my date, in the self-same hall.

Poor me! Sandwiched in between two *Rubinstein nights!* I was heartbroken! I knew at once that not one of the critics would come to my recital, that there would be no audience and that the whole preparation was made, and the money spent, in vain. I walked about as in a daze, ransacking my almost paralyzed brain for an escape from such a gigantic neighborship. Nothing, however, would suggest itself. Rubinstein's first night was on Monday.

On the day before I found myself in the lobby of the Hotel St. Petersburg where he always stayed when in Berlin. How I came to be there I knew no more than I knew what I wanted there. In my dazed condition I must have sent my card to Rubinstein, for presently the bell boy told me that I was invited to come to his rooms. I went, though still totally at a loss what to say, what to do, what—well—what I wanted with him. A sort of dumb, dark instinct had led me to think that an escape from my difficulty—if there was an escape—could only come from him.

There he sat at his desk, occupied with some orchestration, and there was I, at the door, turning my hat between my fingers, unable to say a word. He asked in a kindly voice what I wished.

"I do not know"

Eyeing me with curiosity he asked something else to which I remember having again replied: "I don't know."

Then he rose and approached me with his big, elephantine steps, saying: "Young man, you seem greatly distressed. What is it? Poverty—or what? Tell me!"

His kindness restored my self-possession somewhat and when, in a barely audible voice, I told him of my trouble, he—laughed.

"What," he said, "you, a strapping young fellow are afraid of an old man like me? Go to! Come here, sit down and tell me all about yourself. Where did you study?" Being told, he remarked rather seriously:

"If Kullak stakes his great name at your début, you have no right to question his judgment. He knows what he is about."

Then I had to play something which seemed to please him, for he looked very seriously at me, but did not comment upon my playing. After a minute's walking thoughtfully across the room he invited me to accompany him to his concert the following night.

At the appointed time I was in his rooms, saw him finish his dressing and when his carriage had brought us to the hall he told me to sit on the stage behind the raised lid of the grand piano. After each group of pieces he retired with me to the greenroom where a crowd of people overwhelmed him with compliments and thanks. He introduced me to everybody and told them of my appearance on the following night. As a matter of course it was soon known all over the hall that the young chap behind the piano was a protégé of Rubinstein — which accounts for my crowded house on the next night. I had to escort him back to the hotel where he kept me for supper.

Before leaving I asked him—nay, I implored him to stay away from my concert. I feared that his presence would take my nerve away. His reply, however, was uncertain. He thought that some private invitation would prevent his attending, but promise to stay away he would not.

The next night was bitterly cold, and as in those days Japanese pocket stoves were not yet known I arrived at the hall with my fingers frozen to a nice, heavenly blue. Something or other had prevented me from arriving at the hall early enough to warm my hands and as it was time to begin I had to go on the stage, fingers or no fingers.

At my first shy glance at the audience I felt as if the ground had opened under me, for there sat Rubinstein in the front row, as big as life, right in front of my piano, smiling cordially at me and calling loud enough for me to hear it:

"Eh bien, mon chèr—courage! Allez y!"

Well! A sort of desperation seized me, fortunately; the first group, three études by Chopin (Op. 10, No. 12, Op. 25, Nos. 6 and 11) went with such dash as to bring me four recalls, after which I decided to play the whole three over again. It was a rather athletic venture, but it succeeded so well that at the end Rubinstein's voice was heard all over the hall shouting: *"Donnerwetter!"* while he reached up and shook hands with me.

Such an endorsement, which, in various ways, he upheld through the entire program, could not help prejudicing the audience and also the critics in my favor and the next morning's papers told me that I had "arrived." The large number of engagements which followed quickly proved it. Before the recital was ended Kullak's servant told me that "Master" wished to see me as soon as I was through. (I learned subsequently that on account of his nervous condition he never attended the débuts of his pupils, but that this time he had delegated one pupil for each group of pieces to bring him an immediate report.)

I rushed to his house and found him pacing the room in a state of great agitation. For some moments he did not speak; at last he stepped close up to me, saying in a tone of pretended austerity:

"You have asked me repeatedly how much you owe me"—and then he took my head tenderly between his hands—"why, you brave boy, we are quits, *quits* and QUITS! God bless you! And now quickly run over to Rubinstein; he was here today. I know he wants you."

What words could describe my feelings of that moment? I was overwhelmed with emotion. I kissed the dear old Master's hands; I hugged him till he cried for mercy and—oh, well—of the moisture in my eyes I have never been ashamed.

Need I say that it was not the liberation from a monetary debt that made my heart run over? Ah, no, it was the gratitude, the admiration of his ideal unselfishness and the unspeakable bliss of having "made good" as we say; of having justified the Master's trust in me and my talent.

I ran post haste to Rubinstein where the rest of the evening lasted well into the third hour of the morning. My happiness was superhuman. I doubt if anyone but an artist can ever experience that utter felicity. Why, "the world was mine"! Kullak had said so and Rubinstein, too. What right had I to doubt it? Yet, it was not a fierce triumph that I felt, but rather a sense of honor, a blushing sense of being now admitted to the ranks of "artists," a joyous gratitude to my beloved Master and no less to that noble, generous soul, Rubinstein, who had so lavishly befriended an utter stranger, merely because he surmised some talent in him, and the strength of character to develop it. For the end of the repast I had primed myself to give the fullest expression to my gratitude, but Rubinstein immediately cut me short, rose to go and said:

"N'eu parlous pas! Vous avez beaucoup de talent et puis," and he extended his hand to me, *"vous êtes bon garcon. Au revoir!"* And with a

smile and a wave of the hand to my comrades (whom he had also invited) he left.

I called again the next day but was not received. Assuming that there was a purpose in his denial to see me, I modestly refrained from calling at the greenroom on the same evening, hoping for some other opportunity of proving my gratitude and appreciation. To my never ceasing regret this opportunity did not come. I had to travel a great deal; so did he, and while, on my travels, I met a great many of my former classmates, friends, and acquaintances, it never happened that I should cross Rubinstein's path again.

As I think of him, of Kullak, and of Liszt—whom I met three months later—my admiration and my affection waver constantly between the two great qualities these men united in themselves because of the perfect harmony of the artist and the man in them; their musical genius claims precedence because of their great achievements, and yet it seems as if their musical achievements were but the visible and audible manifestations of their great personalities, of their regal way of thinking, feeling and doing, of their *soul caliber*.

Has that caliber died out? As the saleswomen in the stores say: "They don't come that size any more." Alas! As the true violinist cannot see a fine violin without feeling an irrepressible desire to play upon it, just so these men could not see a boy or girl with pronounced talent without doing for them all that was in their power; they just *had* to teach them, without a thought of reward—material or otherwise, direct or indirect—evading even the pupil's gratitude, satisfied with their affection and their success, with the joy of a gardener nursing a sprouting seed into full blooming flowerhood.

In the spring Kullak sent me with a letter to Liszt. I mentioned the letter to Moscheles he had given to my grandmother in 1865, but he had not the faintest recollection of it. The young men and women who formed his closer *entourage* are well known and most of them have earned fine reputations in the musical world; but they were, after all, only few. The majority of those who beleaguered the kind old Master were there for the unmistakable commercial purpose of establishing a sham claim upon the right of henceforth posing as "pupils of Liszt." He knew it, no doubt, but thinking that it may be an incentive to them to make themselves worthy of such a title he tolerated them all.

Desiring a closer approach to him than could be hoped for under these conditions, I stayed only two weeks; but before leaving Weimar I had obtained his promise that he would receive me in Rome, where, two years later, I spent six delightful weeks with him.

Returning from Weimar to Kullak who quite approved of my course, he told me to try my wings now and to "fly" a little. A tour through a number of watering places and summer resorts followed. Financially the success was varying, but artistically I had good reasons to feel gratified. When I came to Ludwigslust I heard that the Grand Duke of Mecklenburg was summering there, and at once I went to the palace to invite him to my concert (in which, by the way, I was assisted by Eugene Hildach and Miss Schubert, whom he subsequently married). The Grand Duke with his wife and mother—the sister of William I of Germany—as well as the entire Court came to the concert, at the end of which I was invited to play some more at the palace "if I were not too tired."

Well, I wasn't! It turned out, however, that I had to do much more talking than playing. My natural and, I fear, a little informal ways seemed to afford the Court a sort of pleasant relief from the formality-laden atmosphere of Court life. I was kept for the late supper, during which Frederic Francis II (Colonel General of the German army and conqueror of Orleans in the war of '70, the Grand Duke of Mecklenburg) suggested that I should "anchor" in his capital city of Schwerin. Acting upon his suggestion I soon became pianist at the Court and enjoyed the fatherly protection of the sovereign in many ways.

I found a number of interesting men in Schwerin: Kücken, the composer, to whom the song *How could I leave thee* is ascribed; Josef Gungl (the waltz rival of Johann Strauss), whose daughter was prima donna at the Court opera there; Carl Hill, who sang the first *Alberich* in Bayreuth and often rehearsed the part with me—the *Ring* was not yet printed at that time and the handwriting of Hill's part looked very much like Anton Seidl's; Anton Schott, the tenor, who was the star of the Metropolitan Opera in New York in the nineties; Aloys Schmitt was the conductor; Fritz Scheel, who conducted the Philadelphia Orchestra when it was first organized, was among the violinists of the Schwerin Orchestra at that time and played many a sonata with me. The three years I spent there were among the happiest of my life; the more so as my occupation as pianist and teacher left me ample time to make short concert tours and fill many engagements in Hamburg, Munich, Cologne (under Ferd. Hiller), Frankfort, and other centers.

This happy period terminated through an offer to make a whole year's tour with the celebrated singer, Mme. Desirée Artôt, the great pet of the Emperors and Empresses of Germany, Russia and—before the *débacle*—of France. We went over most of Europe, also to Egypt, and finally through the entire empire of Russia, into Asia Minor down to the border of Persia, and up through Siberia almost to the Arctic regions, if I judged by the temperatures we encountered. The experiences of this tour, both serious and comical, might make no uninteresting reading; for we were the first artists to go beyond the borders of western civilization—but I may speak of these experiences at some other occasion. In St. Petersburg we played at the "Winter Palace" before Alexander II, who began the liberation of the serfs six years before Lincoln freed the slaves and who, alas, was repaid for his humaneness in the same coin as was Lincoln—an all too precise and sad repetition of history.

Our tour ended in Berlin, where, two days after my arrival, I was summoned to play before William I on his birthday (22d March, 1880). Several ladies and gentlemen of the Court told me that such pronounced graciousness as both the Emperor and the Empress showed me was of extremely rare occurrence. At the supper after the concert, the old Emperor came to the artists' table in the center of the marble hall, where I sat with the other participants in the program—among whom, by the way, was the song writer Taubert (acting as accompanist) and Mme. Artôt, Padilla and Lilli Lehmann. In a pretty little speech the Emperor apologized to the ladies for depriving them of (as he thought) an interesting companion and invited me to his little table of four covers to give him and to "Augusta" a report of our "wild Asiatic" concert tour of which he had heard. The magnificent fee I received on the next morning was augmented by a beautiful pin bearing his initials in diamonds. It was not to be mine for long; after a few weeks it was stolen, but the loss has not deprived me of a lovely and much treasured memory. As the kindly old monarch spoke to me with his soft, mellow voice, I could hardly bring myself to realize that this same man was just as well versed in the thundering language of cannon, and that he had felt the responsibility for the harrowing sights of blood-soaked battle fields; it seemed so utterly incongruous that my heart, vainly of course, but strenuously, tried to controvert my reason.

[The third section telling of Mr. von Sternberg's experiences in the United States will be printed in THE MUSICIAN for February.—Editor.]

CREDIT IN SCHOOL WORK FOR OUTSIDE MUSIC STUDY

Report from Junction City, Kansas.

(The following circular has been issued by Mr. J. W. Shideler, Superintendent of the Public Schools of Junction City, Kansas. We are glad to give it space here as it contains valuable suggestions to persons interested in music in the schools, and shows a method of meeting a very serious problem, namely, how a boy or girl shall be able to study music seriously and yet keep up in school work. To our readers we say that if your school department is not using such methods you can do splendid service to the cause of music by bringing this report to the attention of your local superintendent. It points the way in accordance with the best thought of the best educators of today.—The Editor.)

THERE has been a growing demand among the pupils of the Junction City High School to take some form of instrumental music outside of school. To do this they have had either to run the risk of overwork or postpone their musical training until later in life. The school authorities have arrived at the conclusion that a serious and thorough study of singing or playing any musical instrument is as truly a part of education as any regular school subject. Hence, one unit credit a year will be granted toward graduation for music taken outside of school on the basis of the requirement of thirty-two credits for graduation, provided the work is taken under specified supervision.

The requirements are as follows:

1. For instrumental music (piano), the following points will be emphasized: (*a*) bodily poise—position of hands; (*b*) correct rhythm; (*c*) tone coloring; (*d*) correct pedaling; (*e*) phrasing; (*f*) expression. (Violin) Omit latter part of (*a*) and (*d*) and substitute correct handling of bow.

2. For voice culture: (*a*) vocal poise; (*b*) tone quality; (*c*) tone placement; (*d*) articulation; (*e*) pronunciation; (*f*) smoothness of vocalization; (*g*) phrasing; (*h*) expression; (*i*) interpretation.

3. Application for such credit must be made by parent and must be accompanied by written recommendation of private teacher.

4. No pupil will be accepted who takes less than one lesson a week and practises less than six hours a week.

5. The teacher must report to the superintendent the first of the following months: October, December, February, April, and May 15, the character and grade of the work, the progress made by the pupil since the preceding report, and the compositions studied, with remarks concerning the scope and quality of the work done on each composition. The teacher will report a grade in per cent on the basis of 75 per cent for passing work. These reports are to be made in duplicate.

6. The parent will report to the superintendent, the first of every month, the number of hours of practice of the pupil.

7. The pupil will be required to pass an examination at the close of the year, under a board of examiners appointed by the superintendent. The examination will be planned on the basis of the unsigned reports of the teacher.

THE PORTRAITS OF BEETHOVEN

BY J. CUTHBERT HADDEN

"WAS this the force that launched a thousand ships,
And burned the topless towers of Ilium?" asks Marlowe, writing of the vision of Golden Helen. A similar question has been asked in regard to the diverging portraits of Mary Stuart. Was this the force that turned so many heads some 350 years ago? The Queen of Scots was assuredly bewitching. Knox admits it, Knollys asserts it, Ruthven lost his heart to her in Lochleven Castle. Whoever saw her desired her. Yet not one of Mary's portraits represents her as beautiful.

Romney has sufficiently explained the fascination of Nelson's Lady Hamilton. But Mary Stuart's charm remains unexplained by her portraits. So also with her descendant, the romantic, the "bonnie Prince Charlie." We are told, too, that not one of the portraits of Robert Burns is true to life; that Flora Macdonald was not as she has been painted. And so on. The point I wish to make is, that the old portrait painters are not to be depended on for strict fidelity to their originals.

With regard to Beethoven, it has been rightly remarked that the very excess of hero worship has done much to deprive the world of a clear idea of what he was really like. Many portraits of him are to be obtained, or seen in books and collections, "but the majority of them suffer from the defect of having been designed to make the outward seeming of the man conform to the spirit of his music. Just so did Nasmyth represent Burns when the poet came to Edinburgh straight from the plow in 1786. No plowman could ever have looked like that! Nasmyth must have purposely strained for a poetic effect, ideal rather than real—must have desired to produce "a form of mingled mist and light," as in Longfellow's vision. He refines the face till Burns looks like a lisping Corydon, instead of the large-eyed, amorous-mouthed minstrel of Caledonia.

In like manner has Beethoven been travestied in his portraits. A really authentic portrait of the composer (and there are several authentic portraits) has about it a feeling of the unfamiliar, so diversely has he been "tricked up" by the artists. As Sir George Grove puts it, most of the portraits "either idealize him into a sort of Jupiter Olympus, or they rob him of all expression"; but he is right in adding that it must have been a difficult face to take, because of the constant variety in its expression, as well as the impatience of the sitter.

Before going farther it will be well to know what Beethoven was like, as described by contemporaries who had seen him or knew him intimately. Modern "popular" descriptions are not always to be trusted. Mr. Bernard Shaw's Beethoven is short, thick-chested, dirty, pitted with smallpox, with "a rugged, resolute mouth, a short nose, marked nostrils, dark eyes, and black hair which curled over his low, broad forehead."

Beethoven was "meanly dressed and very ugly to look at," says one of his admirers, the Countess Gallenberg. The face may indeed have been ugly, but all admit that it was remarkably expressive. When lost in thought and abstracted, he would naturally look gloomy, but on recognizing a friend, his smile was peculiarly genial and winning. He had the breadth of jaw which distinguishes so many men of intellect; the mouth firm and determined; the lips protruding with a look almost of fierceness.

But the special feature of the face were the eyes. It was in them that the earnestness and sincerity of his character beamed forth. They were black—not large, but bright—and when he was in what Madame von Breuning called the *raptus*, they dilated in a peculiar way. The head was large, the forehead both high and broad, and the hair abundant. It was originally black, as already stated, but towards the end of his life, though as thick as ever, it became quite white and formed a striking contrast to the red color of his complexion. Beard or moustache he never wore. His teeth were very white and regular, and good up to his death; in laughing he showed them much. He was below the middle height—not more than five feet five, but broad across the shoulders, and very firmly built; "the image of strength," said one. His hands were covered with hair, the fingers strong and short (he could barely span a tenth), and the tips broad, as if pressed out with long practising from early youth. Such is the Beethoven we *read of*.

The earliest known portrait is a silhouette, done when Beethoven was a boy of 16, showing him in what was evidently the gala uniform of the Electoral Orchestra at Bonn, of which he was a member. One divines the powdered hair, square-cut coat, and large lace cravat of the 18th century. The artist was a certain Nessen, of whose professional career nothing seems to be known.

The miniature by Chr. Hornemann, painted on ivory in 1802, when Beethoven was 32, comes next in point of chronology. Hornemann was a Dane (born at Copenhagen in 1776), and traveled much in his capacity of miniature painter. Settling for a time in Vienna, he received many commissions from notable people connected with the Imperial Court. His portrait of Beethoven (which, by the way, bears a striking resemblance to certain of the portraits of Burns) is declared to be one of the most trustworthy likenesses. Here the thick and frowsy hair of later life already begins to figure as a leading characteristic. The features are, on the whole, very pleasing. But what about these nice little side whiskers in the Prussian or English style?

Beethoven himself considered the Hornemann to be one of his best portraits, and he presented it 24 years afterwards to his old friend, Stephan von Breuning as a reconciliation gift. This accounts for its being photographed in Breuning's *Schwarzspanierhaus*. Beethoven was continually quarreling with his best friends, but in forwarding the Hornemann to Breuning he wrote in a tone of deep penitence, making a most manly confession of his error. Here is what he said: "Beneath this portrait, dear Stephan, may all that has for so long gone between us be forever hidden. I know how I have torn your heart. For this the emotion that you must certainly have noticed in me has been sufficient punishment. My feeling towards you was not malice. My portrait has long been intended for you. I need not tell you that I never meant it for anyone else."

Many portraits of Beethoven were painted during the first five or six years of the last century, and some of the most widely-known were by amateur artists connected with the Austrian Civil Service. Willibrod Mähler, who, in 1808, painted the familiar portrait of the master in a sitting position, was one of these government officials. His is the first large portrait of Beethoven of which we have any knowledge. Mähler did it to the commission of a niece of the composer. The figure is life-size, three-quarters length. Beethoven is represented with an extended right hand (not too well drawn), as if, in a moment of inspiration, he were beating time. It is a specially interesting portrait as being the first which shows practically the whole figure. But undoubtedly it is over-idealized, especially as regards the expression of the eyes. The rugged Beethoven could never have had that refined appearance.

Curious, in a different way, is the next recorded impression of Beethoven. It is a pen and ink drawing, made by Ferdinand Schnorr of Carolsfeld, now, I believe, in possession of the music publishers, Artaria, of Vienna. "While the features," says one, "remain somewhat the same as in the Mähler picture, and the rather fetching side whiskers still persist, the costume is a little more genteel; the expression of the face seems somewhat animated and mirthful. So that, on the whole, this is a totally different impression from that given by any other picture of the Master, although, if we compare it with the Hornemann miniature, it will be seen that the two are by no means inconsistent."

The authority thus quoted goes on to say that Schnorr's design looks very much as if there might have been an attractive girl in the background! We *do* know that Beethoven was extremely sensitive to the charms of woman. It is recorded how he used to "stare amorously at a handsome peasant girl and watch her working in the garden." His pupil, Ferdinand Ries, who had exceptional opportunities for observation, describes him as a sad flirt. "Beethoven," he says, "had a great liking for female society, especially young and beautiful girls." But Beethoven was incurably deaf by the time Schnorr painted him, and was not likely to be paying attention to pretty girls.

Two years later, about 1814, a life mask of the composer was made by the artist Fr. Klein, as a study for preparing a bust. Beethoven was characteristically impatient under the mask process, which consists of pouring wet plaster on the face while the "subject" inhales his breath through a couple of quills stuck in his nostrils. Finally, however, after several trials, Klein got what he wanted.

Now a painter may fail to reproduce his original exactly. But a life mask cannot lie. And so this work of Klein's is really our first absolutely certain guide as to Becthoven's appearance. The nose, it will be seen, is "rather straight, wide at the base"; the lips are full, and the forehead is of that width to which later portraits have accustomed us. By the aid of this mask and his own studies, Klein produced a bust, which was, however, not considered by Beethoven's contemporaries a good likeness. It once formed part of a collection of busts of celebrated composers in the salon of Andreas Streicher, the pianoforte manufacturer of Vienna. After Beethoven's death a mask of the face was taken which essentially agrees with Klein's life mask. The latter, it may be added, was used for the bust of Beethoven made by Johannes Gelert for the Lincoln Park, Chicago; but the sculptor has here given the head a slightly idealized expression by the upturned countenance.

About the time that the Klein mask was done, a pencil drawing was made by Letronne, which Grove classes among the few really trustworthy likenesses of the Master. It is "a full face, and gives us the same features as the life mask, but with more distinctness. The bushy hair also appears, but in this instance it is allowed to fall somewhat over the forehead."

Stephan von Breuning already mentioned, expressly testified to the accuracy of the little full-length sketch from life made by Johann P. Lyser (born Flensburg 1804, died 1860). To one detail only did Breuning object: the hat, he said, should have been set straight on the head, instead of all on one side. Lyser probably listened to the critical advice and remedied the defect in his next venture—a pen and ink drawing, also full length. Here Becthoven is walking on the street in Vienna, a couple of figures being in the near distance. The perspective, it has been observed, is perhaps a trifle strong as between Beethoven's stature and the height of the buildings behind, but the impression of the composer is quite real and suggestive. The picture was published originally in the Hamburg *Cecilia* in

1833. Lyser was not only a clever amateur artist, but he achieved some success as a writer on music and was one of the original contributors to Schumann's *Neue Zeitschrift für Musik*. Gustav Lyser, the distinguished German author, was his son.

A famous portrait, in which the composer is represented with a pen in his hand writing the words *Missa Solemnis* on some music paper, was made by Stieler in 1820. This was considered by many of Beethoven's friends to be among the best of the authentic portraits. Moscheles, who frequently met Beethoven in Vienna, said: "It is excellent, and the likeness faithful, but it has not the air of vigor and animation portrayed in that of Schimon." As a matter of fact, it seems to be the foundation for most of the idealized portraits. The aspect of the face is such that its characteristic formation makes less impression than usual, but the bushy hair, now somewhat gray, is especially striking.

The Schimon mentioned by Moscheles is an oil painting of 1819, differing somewhat from other portraits. The features are pretty much the same, but the facial expression is less lively. A year before its date is the portrait, also in oil, done by F. A. von Klober, and now in the birth house at Bonn. It has the appearance of a reasonably faithful representation, but, like the Stieler, is obviously idealized.

It is not easy to pronounce upon the strange portrait taken from a lithograph made by an artist named Tejeek. It is said to represent Beethoven about 1825, two years before his death. If we are to trust it, the composer was not always attired like a shabby Bohemian, for his dress here would certainly not disgrace a fashionable gentleman of the period. However that may be, it is impossible that Beethoven could have presented so smooth an appearance as in this figure. Compare it with the rugged pen and ink impression of the face made by Moritz von Schwind.

Two very curious representations of the Master are those of Joseph D. Böhm, which seem to have been done somewhere about 1823. They have something of the aspect of caricatures, but are at the same time very realistic and lifelike. One gives a side view of Beethoven as he appeared on the street; the other a back view, with a sketch-book in his hand. Later on, the artist executed a medallion of the composer for Councilor Radnitzky, of Vienna. Böhm, it may be noted, was a relative of the famous sculptor, Boehm. Early in the century he enjoyed a considerable reputation in the cultured circles of Vienna, and after a tour in Italy, slightly altered his name and called himself Gius. Daniele Boehm.

There are many other portraits of Beethoven which space will not allow me to deal with in detail. There is the so-called Brunswick, discovered by D. Alfred Nagl. It was first printed some 70 years ago in the Leipzig *Illustrirte Zeitung*, and shortly afterwards reproduced in the London *Musical Standard*. It has found many admirers among the music lovers of Germany, but certain authorities do not consider it of much merit. Another portrait, belonging to the princely family of Lichnowsky, was executed by J. Neugass in 1806. The composer's merry friend, Carl Holtz, a clever caricaturist and artist, who played violin and 'cello, also reproduced the well-known features. Other contemporary artists and sculptors who did the same were Anton Dietrich, Stephen Decker, Steinmüller, Kriehuber, Leopold Heuberger, and Dannhauser.

After all, we ought, perhaps, to admit that no painter could really have done justice to Beethoven in his youth, or when, in 1821, he reminded Weber of King Lear: "His thick, grizzly hair, white in places, stood up on his extraordinarily developed skull. His square nose, his graceful and gentle mouth, his large, round chin and powerful jaws, imparted to his face, which was broad and pitted with the smallpox, a perfectly leonic energy, lighted up by two brilliant eyes, shaded by thick eyebrows."

A DEFECT IN AMERICAN MUSICIANSHIP

BY LOUIS ARTHUR RUSSELL

[In a contribution to the New York *Tribune* Mr. Russell expressed himself very forcibly on the above subject. We quote here the closing portion of the article.—Editor.]

Cleverness is a constantly developing trait. Speedy accomplishment is the watchword of us all. The air is full of "haste." We demand immediate results in whatever we undertake; instantaneous processes alone satisfy our on-pressing spirits, and in consequence we are obliged in many things to be content with superficial results.

Parnassus should be deliberately climbed, but here we expect to be "lifted" up to the heights in an Otis car.

We are taught to play the piano through the study (?) of a Liszt rhapsody or a Beethoven sonata; we are taught to sing, through the use of the great operatic airs. Children in public schools are taught the love songs of the day as "class songs"; they sing opera choruses, oratorio choruses, classic songs of the "heaviest" nature in their public exhibitions. Classes of boys and girls sing the cantatas, etc., written for adults.

AMERICAN SUPERFICIALITY

Young vocal students, after a few lessons, are given to understand that the opera is their true destination, and a few weeks' instruction sets them hunting for a "job" for money. Unfinished singers and instrumentalists put themselves before the public in print and in performance on the same plane as the artist. The tendency of the day is to crowd hastily to the top. Modern advertising methods make it possible for the merest tyro to put himself alongside of the greatest of artists.

Incompetent teachers throng the music centers; talented men and women are hurried along by friends into a prominence for which they are not prepared, and they never find time to finish their education.

Serious study of music is the desire of but few of the hundreds of thousands of music pupils in the country. A course of study which should normally extend over a number of years is "done" at a summer normal session. Hence, the great majority of our music students emerge from the studio in any short space of time they may deem advisable, clad in all the "official" attire of professional make-up, brilliant to look upon, convincing in manner and speech, but in thousands of cases mere pretenders, with a reputation lacking any discernible means of support—a brilliant fiddler, an attractive player of light piano pieces, a singer with a voice only, a composer who whistles his melodies to a musician for transcription and harmonization, a teacher who dallies with a sacred vocation.

IMPERFECT CULTURE

Most of these people make a living, but cease to develop early in life; the singer loses his voice in a few years; the "composer" soon exhausts his sources of inspiration; the teacher never reaps the result of an artist pupil; yet in the ranks of the overcrowded and undercultured profession there are hundreds of men and women with every evidence of talent of a high degree, whose early days of music work were bright with prospective success, but their present stigma of mediocrity is the result of imperfect culture.

The studios, the schoolrooms, the academies, the home lesson room, the college lecture hall, everywhere, music is studied or taught upon principles differing widely from acknowledged truths. Imperfectly developed teachers find no difficulty in securing positions or pupils. Fundamental teaching is rare; patient working and waiting for results are not articles of general faith. We have many music lovers; many who "sense" music with astute discernment; singers who sing expressively; players who "get an effect" from their instruments; but musicianship, thoroughness, fundamental culture, mastery over technic, real knowledge of the theory and practice of their art—ah! these are the rarities.

Hence the superabundance of mediocrity, the early decay of voices and the few real composers. My prediction is this: America will never come to its own until a new dispensation arrives, a new way of "looking at the music question," especially a new way of music teaching and of music study. This new way will not be a searching for the "national idea" but rather the looking afar down to the root of it all, and a willingness to begin at the bottom, building upon a sure foundation a "thorough-and-through" musicianship.

When we cease to look upon music as a mere pleasure and cease to teach the art, beginning at the top; when our public schools come to the realization of the fact that singing pretty songs is not the whole of music study, and turn their attention to the making of prospective musicians; and when the good teacher will be known for his musicianship, his conscience, and his devotion to his art, then may we hope for the American musician to come into his own, which is no less than the world affords at its very best.

———*———

A CLASSIFICATION OF THE SCALES ACCORDING TO FINGERING

BY WILLIAM B. KINNEAR

A contributor to The Musician for August, 1913, gave rules for the fingering of the major scales. The following complete classification and grouping of the major and minor scales according to fingering has proved useful in my own teaching, and may prove interesting to others.

Abbreviations: L, means left hand; R, means right hand; 1st, 2d, 3d, 4th, 5th refer to fingers; simple numerals 2, 7, etc., mean scale degrees, reckoned upward from tonic as 1.

FIRST GROUP

Major and minor scales of C, G, D, A. E—L, 4th plays 2; R, 4th plays 7. F—L, same; R, 4th plays B♭.

SECOND GROUP

Major scales of B♭, E♭, A♭—L, 4th plays 4; R, 4th plays B♭.

THIRD GROUP

Major scales of B (C♭), F♯ (G♭), C♯ (D♭)—L, 4th plays F♯ (G♭); R, 4th plays A♯ (B♭).

FOURTH GROUP

Minor scales outside first group—C♯ and G♯—L, 4th plays 4; R, 5th plays 2.

F♯—L, 4th plays 1; R, 4th plays 2.

B♭—L, 4th plays 6; R, 4th plays 1.

E♭—L, 4th plays 3; R, 4th plays 5.

B—Both hands like B major.

These fingerings are for harmonic minor scale. The melodic minor scale, with major sixth and seventh (usually an ascending scale), and the "primitive" minor scale, with minor seventh and sixth (usually a descending scale), require fingering modifications as follows: F♯ and C♯, melodic- and primitive, R, 4th plays 6. G♯, primitive, L, 4th plays 7.

With these exceptions, the same fingering applies to all three minor scale forms in the same key.

LETTERS TO THE BEGINNING TEACHER

BY HELENA MAGUIRE

IV

THE WICK

"The new men lit up their little lanterns it is true; but they were like the glow-worms' lamps, giving no warmth and very little light."—Rolland on the new glories of French music in *Jean Christophe.*

Now the Wick is the soft and pliant part of the Candle, and is closely allied to "weak"; indeed our grandames called the "wick," in their tallow-dipping, "the weak part," and that is how it came by its name. And as, in their hard lives, anything "weak" was akin to wicked, it came about that an old woman who was believed to practise evil was called a "wich" (later we inserted the "t"). There was logic in this too, for, as the office of the wick was to "lead the oil to the flame," so the wick-ed work of the "wich" or witch, was, of course, to lead her victim into everlasting flames.

WHEN MUSIC TEACHERS WERE "HARD"

In the early days of music teaching softness was unheard of. Even up to the middle of the nineteenth century softness in the teacher was considered weakness. A ripple of laughter was caused the other day at a Russian musicale when a pupil read from her essay on Anton Rubinstein that slaps on the face and blows upon the head were of frequent occurrence in his lessons from Professor Villoing.

This hard method is so entirely unlike what the pupils of today are accustomed to that the thought of it occasions nothing but mirth. Fear is not dead in our children; it never lived in them.

Yet a report of an investigation into the educational methods of our country which has just been sent to Washington finds that years have been wasted and much youthful talent destroyed by the foolish, soft, experimenting teachers of the years just passed.

THE OTHER EXTREME

It is the old story of the pendulum, which swings just as far to the right side as it has previously gone to the left. Our ancestors believed firmly in the Rod and all it symbolized, and acted firmly upon the belief. The nineteenth century, by the aid of Charles Dickens and others, saw the many evil results of hardness in those who taught children, and, following the law of the pendulum, swung quite to the opposite extreme.

The child was made a fetich; given a quite unnatural place in society, and made the victim of a violent attempt at readjustment of the whole system of education. As a result we are all suffering, more or less, from the paralyzing influence of the wabbling uncertainties and muddled contradictions which are bound to accompany experimenting.

Our ancestors' hardness was wrong, but is our present softness right? We see our reform schools crowded with children; we see so much crime among children that the Juvenile Court is a necessity; we see the house so ruled by the child that music teachers must take their orders from children; lessons are attended or not, recitals played in or not, according to the whim of the child rather than the authority of the parent, and the Beginning Teacher has to learn humbly to *request* the Child to do his duty. She quickly learns that the only way she can "last out" is to accept conditions as she finds them, and be as "soft" as the modern school teacher, and the modern mother, and all the modern music teachers are. Some of the last are simply jelly-like in their efforts to propitiate and please "The Child," and it is only very occasionally that a Beginning Teacher has the courage to speak her mind on the subject as plainly as did Martin Dooley's little friend.

Mr. Dooley was of the old school, whose motto was, "Spare the rod and spoil the child." It puzzled him greatly, the unvarying "softness" of his little music-teacher friend with the "little villains" whom she had to teach. But his questioning always met with the same response—the children were all lovely, perfectly dear, she adored them, and everything was just as she would have it. Then, one day, she told him she was going to be married.

"But how can you bear to give up teaching your abominable little adorables?" he asked her.

"Just this way," she replied, and her eyes blazed as she went on. "Just this way. The day before I am married I am going to make a great fire and invite certain of these adorables, and I am going to sit by and watch these roast and stew and sizzle horribly over my fire for one long, glorious recompensing afternoon."

Then they laughed together, and Martin Dooley understood something of what that young music teacher had borne from "The Child of the Period."

Well, the other extreme from the "hardness" of Mr. Squeers has been certainly reached. People are realizing that while softness and silliness are not synonymous any more than are softness and weakness, it is nevertheless difficult, at times, to tell them apart. The revolt from hardness has done more for the teacher than it has for the pupil; the real gain to the pupil will come to him through the greater wisdom and understanding which have come to the teacher through this change. It has made the teacher understand that the slaps and blows could only have come from a teacher who is himself undisciplined. No teacher of today can strike a child and retain her self-respect, and the desire, even to do so, is indicative of a state of mind which is not a proper one for teaching, no matter how great the provocation. This makes better teachers, and the children will, in turn, profit.

On the other hand, to allow the child to rule his elders before he has learned self-control, is something which the music teacher can only meet with a gentle ridicule, an easy but persistent refusal to take orders from the child, and a constant insistence upon referring all matters to the parental authority for decision. And here the "soft" way is good. Anything that would savor of criticism or condemnation would be unwise; the sweet, soft, taking-it-for-granted that authority is vested in the head and not the foot of the family is the only way.

SNUFFING THE WICK

Her soft part is the most important part of the teacher; without it you are "as the glow-worm's lamp, giving out no warmth, and very little light."

This soft part of you which "carries the oil to the flame" is the heart of you, and I hope it will not be subjected to *too* much "snuffing." Snuffing every wick must have, because of the weakness of it, and its tendency to blacken and to bend, to dim the flame and make the Candle waste. Snuffing keeps us bright, and rids us of weaknesses which we could not get rid of ourselves. But, oh, how clumsy some of the people are who undertake to "snuff" us, and how spiteful others, and how they hurt! And always they tell us that it is only to make us burn more brightly, even though they quite put our lights out in attempting to do so.

THE PROPHECY

But sometime the little Candle will come into its own, and burn in a Temple which an enlightened people will build to the Art of Music, and the "snuffing" of the Candle will be as a reverent duty, at which will be used "snuffers and snuff dishes of pure and beaten gold" as in the temples of old. Some day.

———*———

THE SUBSTITUTE

In the orchestra attached to the theater of one of the smaller German cities were two trombone players. Every evening they played indefatigably in perfect agreement on their instruments, and the public often enjoyed watching the uniformity of the motions. Both were very fond of a fresh drink, and the first trombonist in particular had a big, big thirst.

It happened one day that a certain rich man of the city took it into his head to have a jolly party at one of the beer gardens. Among the guests invited to the affair was our first trombonist. But, oh, the irony of fate! That very evening had been fixed for the first production of an opera in which there was a solo for the trombone. Which should he

THE TWO TROMBONE PLAYERS

attend, the jollification whither his thirst called him, or the performance?

The pay for the latter was small enough to make the decision one easy to reach. He would send a substitute, and as he could not find a capable player he sent one who knew nothing of the instrument, telling him:

"You really do not need to play; just put the mouthpiece to your lips, swell up your cheeks, and push the slide in and out just like the second trombonist."

With a heart free of care he betook himself to the social affair. The substitute went to the theater and took his place in the orchestra with the resolve to keep his eye turned toward his fellow player.

The overture began, the two trombonists placed their instruments to their mouths, drew the slides in and out, but—was it because of the other instruments or was their hearing poor?—neither heard a sound from his neighbor's horn.

Then came the trombone solo! Behold, the conductor was making all kinds of wild gesticulations, but deep silence was all that resulted. He signaled to the trombone players; both put the instruments to their mouths, puffed out their cheeks almost to bursting, but all was still as before!

The second trombone player had also sent a substitute, who knew no more about playing the trombone than did the first substitute. He had been carefully instructed to keep his eye on his colleague and follow him.

THE IRON RING

A New Year's Fantasy

BY KATHERINE METCALF ROOF

HIGH up, upon the mountain top, was the temple of the Master, so high that it caught the first and last rays of the sun and of the moon. Down at the foot of the winding path that led to it stood four maidens.

They had heard that the path was steep and narrow, in some places set with sharp stones, in others overgrown with weeds and nettles, and that before they reached the top, many a dark night would close in upon them when they could not see the way. But though they had heard all this they did not think of it, for they knew that very soon the Master of that temple would pass, and they had determined to ask him how to reach the top.

Each young pilgrim who waited there bore with her the gift which, at the journey's end, was to be laid upon the altar in that temple. But though the gifts were of almost equal value, the maidens were quite different in aspect. One was beautiful, and one was dark and ill favored, and one was clad in rich garments. The fourth was neither beautiful nor ugly nor clad in rich garments, but she looked with fearless eyes.

And as they waited, without acclaim or sound of wheels, suddenly the Master appeared upon the path, and although he was very old he seemed young, and there was a light about him as he moved.

Then she that was beautiful stepped forth as spokesman. The Master paused and asked them their desire.

"Your counsel, oh Master," they cried in unison, "for our feet are set also upon this path. We are determined to reach the heights, and you alone can show us the way."

The Master looked at them in silence before he said: "What are the gifts that you would lay upon that altar?" And they held out their gifts that he might see them. But when he had looked upon them he said: "Do you not know that these gifts of yours are but as rough gold? There is a long and hard journey for each to travel before this gold may be wrought into a fair vessel to serve in that temple of art upon the mountain top; and that journey is so hard that many who undertake it perish or fall back by the way."

But as he spoke the beauty thought, "It will not be so hard for *me* because I am beautiful and others will help me."

And she that was dark and ill-favored thought, "It will not be so hard for *me* because my natural gift is greater than that of the others." And she that wore rich raiment thought, "Because I am rich I need not go by foot along that path."

But she who had gazed at the temple with fearless eyes looked down upon the path and thought, "If the path is so difficult I must keep my eyes upon it even while I remember the white temple on the mountain top."

Then the Master turned to the maiden who was beautiful and said: "Beauty may hinder as well as help, and neither beauty nor gift are sufficient to carry to the mountain top."

To the maiden who had no beauty he said: "Your great gift alone is not enough; neither will it carry you to that temple on the heights."

To the one clad in rich garments he said: "It is not in soft silks that you can travel that path, neither will cushions ease the way. Over each stone your feet must pass alone, else you will lose the way.

And to them all he said: "There is only one talisman that will carry you to your goal." But when with one accord they cried:

"What is it? Oh, Master, give it to us!" he raised his hand and said, "Wait."

Then he beckoned to him the fourth maiden who had not spoken, but who looked with fearless eyes.

"I have neither beauty nor riches, oh Master," she said; "and as for my gift I fear it is not so great as the gift of these others." When she paused there the Master asked her:

"How then do you hope to reach the top?"

And she answered: "It may be that I shall never reach the top; but, because I am poor I do not fear to work, and already I have learned to wait; so perhaps I may hold out upon that steep journey."

Then, with a smile, the Master drew from a golden pocket at his side four rings, not of gold or even of silver, but of dark iron, made with rough rivets; and they were harsh and unbeautiful to look upon.

Nevertheless, he beckoned the maidens to him and placed one upon the finger of each. "Wear this until you reach the top of the mountain, although it may become heavy and hurt your hand. Wear it until your journey's end; then shall you find your heart's desire." When he had spoken the Master started again upon his way.

But the fourth maiden, to whom he had spoken last, followed after him, stretching out her arms. "Oh, Master, shall we never see your face again?"

Gently the Master answered her: "Yes, if you reach the end of the path."

When he had passed the beauty cried: "I cannot wear this ugly band, already it has hurt my hand!"

And the one clad in rich garments added: "See how hideous it is beside my jewels!"

And she that was ill-favored exclaimed bitterly, "Upon his own hands he wore gold and precious stones!"

But the fourth maiden, she that had fearless eyes, set the ring upon her finger and said no word and together they set out to climb the path.

Now, when night began to fall, the beauty complained of the cold; and she that was richly clad said that her feet were bruised; and the brow of the third was dark; but the fourth maiden, who had spoken last, walked on, though her feet were cut and bleeding, and said no word. And on the second day the first three outstripped her, for her shoes were old and she was poorly clad. But on the third day, as she journeyed alone, she passed a dancing house from which came light and music. As she paused to look she saw at the window her companion who was beautiful, and her white hand rested upon the window sill. Then the fourth maiden, seeing it, exclaimed:

"Where is your iron ring?"

And the beautiful one replied: "It was ugly and hurt, and I threw it in the mud. I was too tired to journey on in the dark so I have stopped here. If you are wise you will stop also."

And the young pilgrim who stood outside in the dark and cold exclaimed: "And shall you never try to reach the temple on the mountain top?" The beauty shrugged and shook her head.

"If I had had money to pay for carriages I might have reached it—but on foot one has not strength to go so far."

But the fourth maiden, who stood outside the house of light and music, although she was very weary and longed to stop and rest, felt the pressure of the iron ring upon her hand, and did not take her feet from off the path. The next day she met her companion who was rich standing at the counter of a bazar buying silks and cloth of gold; and looking at the hand that clasped a gorgeous mantle the fourth maiden asked her:

"Where is your iron ring?"

And the rich maiden laughed.

"I flung it from me, for it was heavy and hurt. I met friends here who laughed at it and at my garments bedraggled by my climb up this ugly mountain. Here I shall buy new raiment and return with them tomorrow down the path."

"And you will never try to reach the temple at the top?" the fourth maiden asked sorrowfully. And the rich one replied:

"No, the way is too difficult. If I had beauty it would be different; but the gift alone is not enough. Besides I cannot wear that ugly iron ring."

The fourth maiden passed on with a heavy heart, wondering if she should ever reach the top of the mountain, for the night was cold, and a heavy storm had come on, and there was no place to lay her head. The evening of the next day, weary and spent, she overtook her remaining companion, she who had neither riches nor beauty but had the greater gift, and who so far had outstripped them all upon the path. Upon the earth she found her, her dark head bent upon her arm. "Why do you weep?" the fourth maiden asked her. "Is it that you have lost your iron ring?"

Then with passion the other answered

"I have not lost it, but with my heel I have ground it in the dust; for, although I wore it till my hand was bruised and bleeding, it was of no avail. If I had had wealth or beauty to help me on this path I might have reached the top. As it is, unless some one helps me down again I shall die here by the way."

"Alas, I cannot help you," the fourth maiden replied, "for I must still push onward toward the top."

"It is because you are stronger and used to hardship that you are able to climb this steep and cruel path," the other cried bitterly, "yet I see that you too have thrown away your iron ring, for the ring upon that finger is silver."

And the fourth maiden smiled. "No, it is the same iron ring; but with my blood and with my tears and with my laughter it has grown brighter day by day even while it was heavy on my hand, and now I feel that it grows lighter, the rivets no longer hurt; and I know that with its help I shall reach the end of my path."

And leaving her last companion bemoaning her hard lot she continued to climb the path which soon became less steep day by day until she stood upon a plain where the sun shone, and not far off she saw the shining gates of the temple that she had once looked upon from the foot of the mountain. And as she approached those gates they opened for her and she beheld the Master himself standing upon the white marble steps, and smiling at her he spoke:

"You may enter, oh young pilgrim with the fearless eyes, if you can show to the keeper of the gates your iron ring."

The maiden looked down at her finger upon which she had worn the iron ring that had become silver and saw that it was neither silver nor iron but gold; and that the coarse rivets which had cut her hand were become precious jewels even like those upon the hand of the Master.

Then the Master took her by the hand and said: "Enter, for by the power of the iron ring which turns to gold upon the mountain top and by that alone may you pass within these gates."

Then because she had worn her iron ring through the dark and the cold and the storm all the way up the steep and stony path, the young pilgrim who had neither beauty nor wealth entered the gates of the great temple, and laid her gift upon its altar

WHAT MAKES A TEACHER?

BY ARTHUR DE GUICHARD

II

SOME SINGING TEACHERS AND A FEW OTHERS

"Let me urge you to visit some of the other studios and judge for yourself; and do not restrict your inquiry to piano teachers, for you will find much worse than they."

These words rang in my ears incessantly for many weeks after they had been pronounced by my gifted colleague, whose studio is in that important studio building that is tenanted almost exclusively by teachers of music and that is situated in that city which is called by its somewhat short-sighted citizens "the greatest in the world."

And during many more weeks the advice to visit other studios haunted me, until it became an obsession, an impelling power that had to be satisfied. The preceding visit and its painful disclosures had impressed upon me so much pessimism about the state of musical pedagogy, that a species of dread, dread of the "worse than they," took hold of me. What if it should be so? But, no; no matter how muddy the water, some pearls would surely be discovered!

AN ADMIRABLE PEDAGOG

There was my adviser, for example. He was the very pink and perfection of pedagogs; a man of a certain age, no longer young in years, old enough to have acquired both by study and actual experience all that is needed to equip a safe and sure teacher of the difficult art of singing, yet so full of the sacred fire of musical and pedagogical enthusiasm as to appear fully twenty years younger than his age. In appearance tall and thin, with a physiognomy and bearing that, when illumined with the divine afflatus and desire to impart knowledge, made him look like a veritable Don Quixote, ever ready to break a lance against the overpowering windmills of pretense and charlatanry.

Yet was he so good and honest a teacher and so wholesouled in the expression of his opinions, that I determined at length to go again on a voyage of discovery, *not* in order to find the "worse than they," but to explore the tangle of the vocal wilderness and to acquire more precise information and data anent the professorial problem.

The first visit encouraged me greatly and made me think that my friend, Don Quixote, had mislaid his mirror of truth; for here was a teacher after my own heart giving most competent instruction to a rather throaty tenor, explaining and showing by his own voice how to sing the upper E, F and F♯ with covered voice, a free floating tone and complete absence from throatiness of any kind.

THE THROATY TENOR

During a pause in the lesson the teacher, a man of about forty-five, having a very sympathetic yet straightforward manner, explained that the pupil was one of several who had come to him to have their voices "repaired," after having been subjected to maltreatment from the incompetent "teaching" (save the mark!) of charlatans. The tenor pupil added that he had found it very difficult to discover the capable teacher. He had spent much time and money with three different "professors," each of whom had declared that the preceding "professor" was wrong and did not know his business, that HE was the only true exponent of the *bel canto* method, and all with the lamentable result that each individual had screwed up the poor pupil's throat a peg tighter, until his voice was almost done for.

"We are gradually conquering the tight throat," said the teacher, "and there is no doubt that we shall eventually obtain a free emission; but I am very much afraid that the continued maltreatment to which the throat has been exposed will result in a 'white' voice. It is not positive that it will be so, but that is usually the case. Mr. Liner (the young man in question) may think himself fortunate that he has not contracted a chronic congested throat! A few months more of the charlatan and the throat would have been irreparably ruined. You see, sir," he added, by way of conclusion, "there are so many postulants for singing honors and so very few competent instructors that there is a vast field for the vocal adventurer."

"SAWBONES, M. D.—VOCAL TEACHER"

The interview, which had begun so well, seemed as if it would be spoiled in its conclusion, for here was my host warning me *a la* Don Quixote! After exchanging a few words of encouragement, I took my leave to go in quest of other information. "Down the avenue of chestnuts,"—that is to say, down the corridor of marble I spied a door that bore the legend: "Dr. Raw Sawbones, M.D.,—Vocal Teacher." *"Diable!"* said I to myself, *"qu'est-ce qu'il fait dans cette galère?* I must go and see that. The chances are that he is a doctor and not a singer; if so—no, thank you! But he may be a musician and singer, who is also a doctor; in which case—all's well, that's the man we need."

But he wasn't. He was merely an ear, eye, nose and throat specialist, who had qualified as a doctor and who was an expert in the use of the laryngoscope (every singer may become one by using a special laryngoscope for self-examination, but it will not teach him how to sing!) but who was incapable either of breathing correctly or of producing a pure tone with his voice, as an example for the pupil's imitation. What "vocal teaching" could he impart?

He could show what takes place in the larynx, and in the mouth the changes of tongue position and soft palate tension, but he could not tell how to control those organs, he could not show the relation between face and voice; in short, he could only preach the hygiene of mouth, throat and nose—very valuable knowledge indeed, but having nothing to do directly with the art of voice training. Dr. Sawbones had nothing to teach in practical singing, but he could do himself and his patients a heap of good by studying the art of singing for himself.

THROAT DOCTORS SHOULD LEARN SINGING

There is a very good friend of mine, an M.D., who has been for many years a well-known specialist for eye, ear, nose and throat. I happened to be in his office one day when a woman came in to be treated for a sore throat. The case seemed to puzzle my friend somewhat, because he could not account for the congested state of the throat, for the patient insisted that she had not caught cold in any way, she had had no fever and her temperature was normal. Before giving her a prescription, my doctor-friend asked me aside what I thought of the case. I merely replied: "Ask her if she is taking singing lessons." In reply to the doctor's queries the patient said that she had been taking lessons for some time past, but that they did not seem to do her any good, because her throat always ached after them. It did not take me long to convince my friend that herein lay the cause of all the trouble. He was then able to treat and to cure her by operating on the singing teacher; he was cut out. When cured, the woman went to a competent teacher, and she has not had a sore throat since.

My friend was so impressed with the rapidity and correctness of the diagnosis ("How did you discover it?" he asked. "She spoke throatily, in the most approved Boston style; that was sufficient indication," said I) that he became a student of singing in order the better to understand his patient's throat disorders.

The moral of the whole story is that it is highly beneficial to doctors—throat specialists—and indeed, an absolute necessity for them, to learn *How to Sing.* They may never become singers, but they will become better throat specialists.

TEACHER MUST BE A SINGER

On the other hand, the throat doctor who is unable to exemplify correct breathing and who cannot emit a pure tone, is not qualified to teach "Voice" merely because he can see "the wheels go round." We cannot sing a certain note, or any note, by pulling a string or a sinew, because there is no string; and we cannot control the mechanism of the vocal organs in any other way than by power of will exercised indirectly. One might as well say: "Now, my boy, exercise your will-power on your Sciatic Plexus, set in motion the Posterior Tibial Nerve and the External Saphenous Nerve and perambulate to the post office." Even if you knew what it all meant you could not do it as directed. Neither can we act upon the separate parts of the vocal organs, except by the empirical instructions of the experienced singing teacher. He is the man to teach us; the man who can himself show us and tell us how to do it.

Many of these medico-pedagogs were met and interviewed in the course of my peregrinations, but I did not have the good luck to find one who was able to sing me a pure tone, or who could instruct me how to pass on the high tenor G, from covered voice to falsetto and back again to covered.

PRETENDERS AND OTHERS

Discouraged by my incursion into the domain of medicine and surgery, I resumed—Diogenes-like—my quest for an honest man; by which I mean a competent teacher. But I was doomed to disappointment, as far as the "most-important-in-the-world" studio building was concerned, and —I may add—as far as all similar agglomerations of studios were concerned. In each could be found two, sometimes three, highly capable and competent teachers quietly and earnestly pursuing their profession, occasionally in the face of serious disadvantages, surrounded and almost hidden by a horde of pretenders, incompetents and yet worse, who obtain their considerable following by a persistent system of big-drum, loud, noisy, blatant and nauseating advertising, which proclaims each to be THE ONLY ONE. Their professional life is short, because the time comes when they are inevitably unmasked, but before then they have amassed much ill-gotten gain, ruined innumerable voices and irremediably damaged as many trusting throats.

Though many of my observations were sad enough, a certain comicality and grim humor were not altogether wanting. There was the teacher of coloratura who instructed the pupil to stand on the right foot for an ascending scale and on the left foot when descending! There was the man with a rather pretty quality of voice, but with a tremolo that one might cut with a rolling-pin, endeavoring to show a pupil how to sing a note, while the unlucky pupil was unable to decide which note of the tremolo he was supposed to sing. This man's specialty was Interpretation; he should confine himself to sea songs—his voice is so wavy! There was the teacher with a loud, noisy voice, as hard as a xylophone, who advertises himself "late of X Opera Company." He neglects to state that he carried a banner in the last row of the chorus.

As a matter of politeness and forbearance towards the fair sex (or dark, as the case may be),

I refrain from disclosing all or any part of what I discovered. I will only say that matters with them were in just as bad shape as with the sterner sex. (Are they sterner? I do not believe it.)

HOW TO KNOW THE GOOD TEACHER

In conclusion: Must we be pessimistic and despair? Not so; for in every city of any importance there are a few admirable teachers, splendidly equipped for imparting excellent vocal instruction, from the rudiments to a degree of highest excellence. There seems to be quite a campaign going on just now in the special and daily press in an endeavor to claim that there is no need for our singers to go to Europe to study. It is very laudable but mistaken patriotism. The need does exist, because: (1) while there are just as good teachers to be found here as in Europe, there are not enough of them yet; (2) the dramatic training necessary for the interpretation of opera, is either not to be had or is vastly inferior; (3) the present need for foreign languages in operatic singing (a very contemptible kowtowing to fashionable "taste," in my opinion) cannot be adequately supplied in this country—if the diction and enunciation are to be pure, they must be acquired in the country of the language, Italian in Italy, French in France, and German in Germany.

The one all-important thing for parents and pupils to aim at securing is *the fully equipped and competent teacher,* who must be a thorough musician, a good singer, a correct and even elegant speaker, a practical scholar if possible (the more he knows the better will he teach) and one whose pupils attest his value. *"By his works ye shall know him."*

NOTES ON THE MUSIC IN THIS ISSUE

JANUARY marks the beginning of a new calendar year, and the opening of the mid-season period in musical work. Pupils should be thoroughly busy with their lesson duties, and teachers should be alert to see new material of possible value to them in their work.

A few weeks ago a caller at the Editor's office asked why we do not include in the music section a larger number of pieces of very easy grade. Our reply to such a query is that the great majority of teachers are generally oversupplied with music of Grade I, or just between I and II. Therefore we have usually selected our easy numbers from sets of little pieces, the one used in THE MUSICIAN being, in a measure, a representative of the others.

It is in the middle grades, III and IV, that we feel we can do the most useful work for our readers. Many pupils go no farther in their studies than these grades, and are continually looking for new music. Players who have reached higher grades find these easier pieces very useful as sight-reading or recreation numbers. And, finally, a variety of grades of difficulty help the teacher more than would a large number of pieces in one grade. We believe that our policy is the best for all.

Throbbing hearts (Schlagende Herzen), by F. Sabathil, is from the pen of a German composer who has won the appreciation of American teachers and their pupils. The piece is in waltz rhythm, rapid tempo, and the difficulty is therefore one of velocity rather than getting the correct notes. In the middle section in A♭, make the melody in dotted half notes sing, the accompaniment rather subdued so as not to obscure the theme; a little later this broadens by being taken in full chords. This piece will make a good number for use in the social circle.

Hungarian dance (Ungarischer Tanz), No. 6, by Brahms, is one of this master's most delightful easier pieces, and should be in the repertoire of every teacher and every player who reaches Grade IV. The theme is striking and characteristic of the music of the Hungarian gypsies and offers fine material for study in artistic playing as well as in clear delineation of melodies. It is a standard recital piece.

At the spring (An der Quelle), Op. 142, No. 4, by Gustave Lazarus, is included this month to place before the readers of THE MUSICIAN a piece of musical quality and unusual technical value, the piece being built on a six note arpeggio divided between the two hands, played very fluently and lightly. Mark clearly the difference between melody and accompaniment notes; the latter are sixteenths, the others longer note values, and therefore to be sustained. This piece affords useful drill in playing, all essential feature in modern music.

Zigzag (Intermezzo caprice), by Richard Ferber, has a rhythm akin to that of the modern gavotte. Note the contrast between legato and staccato, a characteristic of this style of composition; particularly does this direction apply to the middle section in B♭, the figure consisting of an eighth followed by two sixteenths. We recommend assigning this piece to a pupil whose rhythmic sense needs working out.

The merrymakers, Op. 5, No. 1, by Wilmot Lemont, is one of a set of six easy teaching pieces, pleasing in melody, lively in rhythm, and attractive in harmony. This particular one is in a sort of two-step rhythm, and should be especially pleasing to boy players. Once it has been well drilled into the fingers the player should deliver it with a fair speed and the feeling of being out in the open and "making merry" at some favorite sport or other diversion. Make the melody stand out clearly.

The dance of the dolls, by H. C. Gilmour, is an easy, graceful drawing room waltz which should prove acceptable to audiences and interesting to pupils. Note the alternation of short and long phrases, the latter, in many instances, requiring a staccato touch. Here is a piece with fine quality as a teaching number, and one well worth while working up to a considerable speed before playing it in public. It is brilliant and effective when properly played.

Awake! Awake! (Juvenile overture), Op. 34, No. 1, by Charles Wakefield Cadman, is the work of one of the most popular American composers of today. It is well named by the composer as it is a miniature overture in form and style. The main themes are well contrasted, and have quite different technical purpose. If the young player has a feeling for tone color, suggest that the first phrase is a fanfare of the horns; the second, marked *pp*, a phrase played by the strings; the longer phrase beginning on the last beat of the eighth measure may represent the violins; this alternation of stringed and brass instruments, with the use of the wood wind at certain points, will aid in fixing the delivery of the piece by a young player.

Laughing water, by Susan Schmitt, is one of a series of easy teaching pieces that is worth the attention of teachers. The technical value of this number consists in the use of the outer three fingers in playing a theme while the thumb plays one note reiterated in rapid succession, but subdued in power as compared with the melody. Here is a stimulating piece for young players.

At the inn (Au der Herberge), Op. 391, No. 2, by Friedrich Baumfelder, is the work of a distinguished German composer, who has written much and successfully for pupils in the lower and intermediate grades. *At the inn* is a good number for the ensemble class. A useful plan is to have the pupils learn both *primo* and *secondo* parts, changing about so as to have drill in reading a part in which both hands are in the treble, and also in the bass clefs; at the same time there is a difference in the style of the two parts, and pupils should have work in accompaniment as well as melody playing. Try this number on your next recital program.

A petition, by Louis Victor Saar, is a sacred song by a composer who is now living in Cincinnati. It has charm of melody, but more than that, a broad, rich musical texture to work out which both voice and instrument are called upon. The instrumental portion is not a mere accompaniment; it has real independence, the effect being based upon the union of voice and the supplementing instrumental support. An organist who is willing to experiment to secure the proper registration can aid the singer in giving a fine, effective rendering. It is written for medium voice, and can also be had for low voice in B♭.

Melody in E♭, Op. 42, No. 3, by P. I. Tchaikovsky, is a violin number of fine quality and exceptional teaching value for young artists. It has been carefully prepared for educational purposes by Mr. Eugene Gruenberg, of the New England Conservatory, and should be added to the teaching repertoire of the wideawake instructor. Notice the care with which the Editor has used the higher position so as to keep the peculiar tone color of the different strings; this is particularly the case near the end where the G string is indicated.

A road tune, song by Wm. Spencer Johnson, is a simple, straightforward vocal number, that can be used to advantage with young pupils, especially those for whom love songs are not desired. Sing it with a light, free attack, the speed being about equivalent to the pace at which one would read it. Do not place stress on every word or syllable, but only on those which would receive emphasis in reading.

Two *Bergerettes* are selected from the volume recently issued by the publisher of THE MUSICIAN, and advertised on another page in the present issue. *Maidens, remember* (Jeunes fillettes) has a most charming melody in the middle of the voice, and is a little song that will not fail to please an audience. In the burden, la, la, la, etc., do not pronounce the "n" in "lon" and "lan"; it is the nasal sound of the French language and is simply added to the vowel, giving it a nasal quality, just as in the name *"Chopin." Oh, shepherdess fickle* (Bergère légère) is a perfect gem in the pastoral style and will attract hearers by its delightful simplicity of melody and rhythm. The English translations are admirably done by Frederick Martens. Give these songs to your pupils and take the first opportunity to place them on a recital program. Edmond Clément, the famous French operatic tenor, has used these and other songs from the collection with great success in his recitals.

The Musician

A MONTHLY PUBLICATION

PUBLISHED BY

OLIVER DITSON COMPANY

Boston, Mass., U. S. A.

THE MUSICIAN aims to supply the members of the musical profession with practical aid on all subjects connected with music, to stimulate students to earnest work and artistic ideals, and to raise the standard of musical taste and appreciation throughout the United States.

EDITORIAL NOTES

ON BEING OBSTINATE

HOW to win success is a problem for most of us, one that occupies the thought with more than ordinary force this first month of the new year.

Year's resolutions has gone out of style.

Some tell us that the making of New Customs change with the years and to "turn over a new leaf" on January 1 is something to be smiled at.

Let us accept the fact. At the same time, we can, with profit, seek a substitute, some principle of thought or action that will serve the same purpose as the once popular making of resolutions. Here is the proposition of the present writer:

To win success requires steady, sustained effort along the line that holds out the best prospects. Paraphrasing we may say that the man or the woman who seeks success must have the power and the willingness to resist outside pressure which may tend to relax the effort or to direct it in other lines. Some persons call this obstinacy. And, in truth, it is not a bad name for the principle.

The writer of this note once asked a shrewd observer his impression of a man who had made a splendid success in business, just after the two had met in conference relative to a pending business deal. Each of the two men *knew* that his point of view was the right one. The reply to the query was, "He is the most mildly obstinate man I ever met. He wouldn't budge an inch from his position." And it is a fact that this mild obstinacy, this gentle persistence probably had much to do with the success of the man in question.

For the present teaching season it will be worth while for teachers to be mildly obstinate in holding pupils to the course of study marked out for them. The teacher is supposed to have a thorough knowledge of the material he uses and its bearing upon the progress of the pupil. He should, therefore, tactfully but firmly hold the pupil to that course of study and not yield to the suggestion, now and then, to relax and use other material of no definite educational value. There is a relation between progress and certain forms of obstinacy.

Pupils, also, will find it pays to be obstinate so far as yielding to the siren voice of social diversions of all kinds. The one who wishes to make progress must stick to the work, passing by those things which make heavy inroads upon time and attention.

One other direction in which obstinacy can help is in efforts to improve musical affairs in your community. If the wished for support has not yet come, keep at your efforts persistently, in a mildly obstinate way, giving the public to understand that you are in the work to stay.

Think out the best course for the present year and then persist obstinately, if needs be. The result will prove to be worth while.

—*—

TWO LETTERS FROM READERS OF "THE MUSICIAN"

WE have repeatedly stated in these columns that we look upon THE MUSICIAN as a medium for the exchange of helpful ideas in music education. A teacher in the Northwest may have had certain experiences which parallel those of a teacher in one of the Southern states; a student in New England, trying to work alone with such material as he can secure, may be greatly aided by reading of the experiences of a California student. Through THE MUSICIAN it is possible to pass such material on to the one who needs it.

This month we make quotation from two letters which were written by persons widely separated. The first comes from Nova Scotia and the part we select reads as follows:

HOW "THE MUSICIAN" HELPS

"I have planned many times to write to you but decided at last not to let this vacation go by without at least telling you how much I have appreciated your magazine. . . . From my experience of almost ten years of teaching and study the lessons that have come to me most strongly are as follows:

"First. The teacher's personality counts for more with the average pupil than any amount of skill and learning.

"Second. If one's work is really worth while one is bound to get along no matter what difficulties and discouragements beset the path.

"Third. No matter how much one knows or how well one may play he does not 'know it all.' If one is on the lookout for lessons he will always get them.

"Last but not least. To be up-to-date one must have at least one musical magazine in the studio where it can be picked up for a minute or two, if opportunity offers, either by the teacher or the pupil who happens to come a few minutes before lesson time. The latter will enjoy reading it if it is left open at the right place.

"I believe I have picked up most of my ideas from articles in THE MUSICIAN from time to time. If my thoughts are helpful to anyone I shall be glad to pass them on."

A HEROINE IN MUSIC

The other letter comes from New Mexico and tells a story which shows the heroic character of music workers, a story in which a brave little woman musician is the central figure. There is heroism, there is endurance, there is sacrifice among musicians as well as among other classes whose praises have been sung by the poet. Here is a part of the letter written by one who is familiar with the parties concerned.

"Last night a concert was given in the park by our band boys whose leader is Mrs. ——. The little woman stood bravely up and beat time for them. Few in the audience knew that out yonder in the hospital her husband lay dying of that dread disease, tuberculosis. The physician had told her that very day that the end was close at hand. It has been her efforts alone that paid the expenses of medical treatment; her efforts alone, as bandmaster and music teacher, that have furnished food and clothing for her children. All day long and into the hours of darkness this frail woman must sit at the piano stool to gain a livelihood for a dying husband and six children, yet no murmur escapes her lips. This is one of the glimpses behind the scenes, the bread-and-butter side of art."

The story of sacrifices and burdens by the musicians of this broad land would take a long time to tell. Many women and many men must draw to the fullest upon their store of courage and endurance to support the duties placed upon them. Yet through all, such is the uplifting power of the beautiful art, such the consolation it yields to its devotees, rarely does a murmur arise. The song of life still sounds on, sweet in melody and rich in harmonies, and art is enriched and beautified.

—*—

GROWTH NEEDS TIME

AN old Roman author, who was fond of writing in epigrams, is responsible for the following which is worthy the attention of musicians and teachers of music: "It takes a long time to bring excellence to maturity."

Is not that the problem which most teachers must meet, namely, bring to ripeness the excellent material offered them in their pupils? But the process is slow, just as growth usually is. A pupil's perceptive powers may be acute yet her ability to retain may be less than the average. In another case a pupil may have facile fingers and be able to play at a rapid tempo, yet be slow in fixing the piece in the mind. And so in other particulars. Knowledge cannot be forced in the mind and packed down, with the hope that it will stay. A small amount of new material at each lesson, properly related to what has previously been acquired, is much the safer and better method.

LAUGHING WATER

When the green woods laugh with the voice of joy,
And the dimpling stream runs laughing by,
When the air does laugh with our merry wit,
And the green hills laugh with the noise of it;

When the meadows laugh with lively green,
And the grasshopper laughs in the merry scene,
Come live and be happy and join with me
To sing the sweet chorus of Ha, ha, he!

The SINGER and HIS ART

MME. MATHILDE MARCHESI

MADAME MATHILDE MARCHESI

BY H. W. GREENE

To estimate the influence for good of a singing teacher, one must place a moral value on the art itself.

The art of singing is not usually viewed from the moral angle. It is customary to measure the success of singing by its power to give various kinds of pleasure, most of them relating to the senses, a few making a sincere appeal to the soul and spirit attributes of men.

Whether opera is a legitimate art-form has long been held as a mooted question; since Wagner chose to adopt it as his mode of teaching the world that vocal music was not trivial or only to be heard instead of being thought about, a new interest has arisen. A clearer differentiation as between light and serious opera is one of the many beneficent effects of the work of this remarkable man.

Opera as a school of ethics and morals is rapidly outdistancing the drama, especially when we consider the present trend of librettos and plays.

Opera is not possible without the singing teacher. Whether it be just or not, the singing teacher's success is measured by the number of pupils who eventually gain operatic distinction. The highest motive of the teacher may be obscured by the diverse exactions made by technic and interpretation, but it is unquestionable that a profound insight into the ulterior significance of singing is possessed by those whose mission it is to lead to great heights students impelled to careers as artists. Mathilde Marchesi had that insight.

To be well born socially is no mean advantage in a battle for artistic supremacy, but to be born with the special gift for imparting instruction is of commensurate importance. That gift she had. She began to teach singing almost as early as she began to sing. The firmness of her initiative was shown at the very outset. The earliest complaints by her pupils were of her harshness. Harshness in art culture points either to coarseness of fibre or an intolerance of the commonplace. In her highly developed nature there could be no question as to the cause of her uncontrolled earnestness.

When a great leader of men passes on, his words and works are topics for editorial comment in the countries where he was best known. When Marchesi died, the editorial pages of the entire civilized world gave space to do her homage. All of her pupils shine in part by the reflected glory of her greatness. In brief, a great personality has left an indelible impression upon our time.

Noted as she was for the exactions made upon her students along the lines of so-called method or voice placement, her work in the higher realms of interpretation was distinctly inspirational. Such names as Ilma de Murska, Gabrielle Kraus, Trebelli, Gerster, Calvé, Melba, Eames, Susanne Adams, Sybil Sanderson, and scores of others not so well known in America are monuments to the power of a great character exploited through other personalities.

The impress of sterling worth in character and of a consciousness of the dignity of the artist's calling upon her pupils was most exceptional.

Ideals are the common property of men. To project them persistently, vividly into other lives and through them into the great world of music lovers denotes a kind of greatness that few are blest with. To have known and studied with a woman who had gathered much of her inspiration from personal touch with such men as Mendelssohn, Moscheles, Meyerbeer, Liszt, Spohr, Rossini, Auber, Hiller, Berlioz, Rubinstein, Verdi, Brahms and Massenet is worthy cause for pride on the part of those who are so fortunate as to have been her students.

In the New York *Sun* is an editorial appreciation of Mme. Marchesi, presumably written by Mr. W. J. Henderson, the musical editor of that paper. We quote as follows:

"In the death of Mathilde Marchesi the world has lost its greatest pedagogue in the field she had so long adorned. . . . Mme. Marchesi was, through Manuel Garcia, with whom she studied, a legitimate descendant of the great teachers of the 18th century. . . . Her sojourn in Paris, where she taught first at the Conservatoire, was the golden period of her long career. . . . [Her pupils] were able to shine in the masterpieces of Rossini and Donizetti when she was active with them first When the earlier works of Verdi were in their flower her pupils reveled in the difficulties of ornamentation with which that composer enriched the possibilities of the singer. It was in the power to train them in the mysteries of coloratura rather than impart to them the secret of a faultless legato that Mme. Marchesi was most admired always. . . . Mme. Marchesi had penetrated the science of *bel canto*. So she knew that her pupils, once they had conquered its rules, need not be limited in the style of the music they could safely attempt to sing."

Mathilde Graumann was born in Frankfort, Germany, May 28, 1826. Her parents were well-to-do, but a sudden change in the family fortunes forced the young woman to earn her livelihood. She shrank from the life of a governess, and was enabled through the self-sacrifice of a sister, to study with Nicolai, and a year later made her first public appearance at Düsseldorf under the patronage of Mendelssohn. In 1845 she went to Paris to study with Garcia remaining with him for four years and making her dêbut in 1849. For three years she did concert work, and in 1852 married the Marquis Salvatore di Castrone, a baritone who had taken the name Marchesi (Marquis), which the pair used as a surname.

It was in Vienna that her career as a teacher began. She was attached to the Conservatory from 1854 to 1861, went to Paris in 1861, to Cologne Conservatory, 1865-68, again at the Vienna Conservatory, 1868-78, and then as a private teacher in that city until 1881, when she returned to Paris, where she made her home until she retired from active work and made her home in London with her daughter, Blanche Marchesi. She never taught men, and her work was done in classes. Her contributions to the teaching literature were extensive and very valuable.

THE ART OF SIGHT SINGING

BY ARTHUR DE GUICHARD

IV

It has been shown in Part III (see The Musician for December, 1913) that the quickest and easiest way to find the key in which a piece is written is by means of the key-signature, which is seen at the beginning of each line of music (called staff or stave). The keys should not be taught or learned parrot-fashion, like one learns an alphabet: one sharp, G; two sharps, D; and so forth. There is no reason why an alphabet should be ABCDEFG, etc.; it might just as well run DQPFRAT, or in any other order.

For the keys, however, it is quite another matter there is a *reason* for the position of the keynote, or *Do*. and an endeavor must always be made to acquire all our knowledge, not by arbitrary rule, which may be forgotten or misapplied, but by logical reason which, once understood, may never be forgotten

HOW TO FIND DO

Thus it is known that the sharpest note in a scale (or key—since the notes forming the scale is but the *spelling of the key*) is always the seventh degree or *si*, the note immediately below the keynote, or *Do*. The sharp which is the latest comer is the sharpest note or *si*; whence it is only logical to

conclude that the keynote, *Do*, is the note immediately above the last written sharp.

It is also known that the flattest note in a scale, or key, is always the fourth degree, or *fa*. The flat which is the latest comer is the flattest note, or *fa*. But observation shows us that the flats in a key-signature occur at regular successive intervals of a fourth (not as shown to the eye by position on the staff, because the short compass that is contained in the five lines will not allow an extended series of fourths to be written, but, as shown by their names: B.E.A.D.G.C.F.—B to E a fourth (BCDE), E to A a fourth (EFGA), and so on); whence it is logical to conclude that the keynote, *Do*, is the flat next to the last written one in a key-signature.

In short: When the key-signature consists of sharps *the keynote, Do, is immediately above the last written sharp;* when the key-signature consists of flats *the keynote, Do, is the flat next to the last written flat.*

The foregoing facts have been insisted upon at some length, because the whole art of singing at sight rapidly, or of ready and exact reading (with or without the voice), depends entirely upon knowing where to find *Do*, or, in other words, to determine the exact tonality of a piece, or of a phrase even, as will be seen later.

MAJOR AND MINOR

With regard to determining the exact tonality of a composition, or of one of its movements, we have to take also into consideration the fact that each key-signature possesses two *MODES*: major and minor. By *major* is understood that tonality which is based on a scale that has a major (or greater) third for its foundation, namely, from *Do* to *mi*, or an interval of four semitones. By *minor* is understood that tonality, which is based on a scale that has a minor (or less than major) third for its foundation, namely, from *La* to *do*, or an interval of three semitones.

The term *KEY* is indicative of the mode of the composition's tonality. For this reason it is altogether misleading to call the group of sharps or flats, at the commencement of each staff or stave, the "key-signature"—as we have done thus far; its logical name should be the *Do-signature*, because it shows only the position of the *Do*, and does not, by itself, indicate the key or exact tonality of the composition.

As a general thing a piece of music (herein briefly termed "piece") finishes in its key. The key is made evident throughout by its scale system, and this is condensed in its common-chord. As there are two Modes so there are two common-chords: *Major*, or *Do, mi, sol, do; Minor* or *La, do, mi, la*. Now the note upon which the scale is founded and, consequently, the note upon which the common-chord is built *is the keynote*; that is, either *Do* or *La*, as the case may be. Thus the so-called "key"-signature merely supplies us with the position for *Do* and leaves us to discover whether the key be major or minor. In other words this signature may stand for one of two keys: for the key of its *Do*, or for the minor key of the *La* belonging to that *Do*.

HOW TO FIND THE TRUE KEY

Having the same signature and the same *Do*, the major and minor keys, or modes, run in pairs. As the composition must end in its key (that is, upon its common-chord), all we have to do is to turn to the end and look at the last and lowest note *in the bass;* this note is the base or foundation note of the common-chord, hence it is termed the keynote. If this note and the Do-signature indicate one and the same note, then that is the keynote, and the composition is said to be in that note *major* (and its common-chord is *Do, mi, sol, do*). If that last note in the bass is *not* the note indicated by the Do-signature, it will be found to be a third, a *minor* third lower, or *La*, and the composition is said to be in that note *minor* (and its common-chord is *La, do, mi, la*).

For example: A piece has B for its last and lowest bass note; its Do-signature is a group of five sharps, the last of which is A♯; this, then, is the key of B, and, since the last bass note and the Do-signature both agree, it is the key of B major.

Another example: A piece has B for its last and lowest *bass note;* its Do-signature is a group of two sharps, the last of which is C♯, indicating that the *Do* is D; the last bass note and the Do-signature do not agree, since there is the interval of a minor third between them, namely, B to D. D is the *Do* and B is the *La*, and the key is that of B minor. One valuable observation must be made here: as they both have the same *Do*, the two keys are said to be related to each other; thus, D major is the relative major of B minor, and B minor is the relative minor of D major (and, being closely related, like father and son, they have the same signature: D major has two sharps and B minor has the same two sharps).

EXERCISES

PRACTICE XVIII. Examine all the exercises of the Second Series of *Melodia*, from page twenty-one to page forty. Compare the final and lowest bass note with the Do-signature of each exercise and state the key.

It must, however, be noticed that the bass of many of these exercises does not end on the keynote *Do*, but on the third of the key, *mi*: (see Nos. 4, 6, 33, 42, 43, 45, 50, 51, 52, 55, 60, 65, etc.) but if we examine the trend of the bass, as well as of the treble, we shall find that the notes of the part are woven round about the common-chord *Do-mi-sol;* also that the third note wanting to complete these final chords is *sol;* thus we have the notes of the major common-chord, *Do-mi-sol*, of the Do-signature key.

PRACTICE XIX. Page 24 of *Melodia*, No. 31. The last note in the bass is that in the measure which is closed by a double bar, just before No. 32. It is G. The Do-signature (f♯) also indicates G. The exercise is, therefore, in the key of G major: that is to say, G is *Do*. Practise singing the lines of the G clef on this page; then begin again and practise the lines of the F clef, keeping time as already indicated.

XX. Page 25, beginning with No. 38, there is only one flat, but, as we know this to be the fourth of the key, it is an easy matter to go down a fourth (*fa, mi, re, Do*) and find that the keynote is F—the same as the last note on the bass; and so on, for the entire page, as in the preceding exercise.

Be careful to give full value to all rests; but count only the rest as given, for example: No. 44, sing the treble notes as far as the rest, then say aloud *one, one* (that is, one count for each rest), then sing and, at the rests, count *one, one* and sing on to end. The bass must be counted in like manner.

XXI. Practise all the exercises in like manner to the end of page forty.

It is astonishing how very quickly the student becomes accustomed to read his *Do*, or scale and tonality, from any position on the stave. It *had* to be done in order to sing with the F clef, as well as with the G clef. Having accomplished so much, it is an easy matter and a habit rapidly acquired, by the most ordinary intellects (provided the music ear is acute), to sing by means of the movable *Do*.

SOME EAR TRAINING

PRACTICE XXII. On the piano, sound the three white notes, C-E-G, taking middle C for the lowest note.

This is a major triad—that is to say, three notes sounded together, the lower two of which form a major third. Play it over and over again, some twenty times, and endeavor to form a good idea of its sound and characteristics; how bright and substantial the sound, standing alone independently, as if requiring no other sound to support it or to show whence it comes. These notes are *Do-mi*-sol; *Do-mi*, a major third, hence a major triad.

PRACTICE XXIII. Now go up one step and play the next triad, *D-F-A*.

This is a minor triad, that is to say, three notes sounded together, of which the lower two form a minor third. Look at the D-F and see that it consists of only three semitones. Play it again and again and listen to its message. It is no longer bright and substantial like the C major triad of Ex. XXII; it seems to want to lean on some other combination, and it sounds mournful, like "notes that weep," as the noted French composer, Saint-Saëns, remarked at the age of nine.

PRACTICE XXIV. Play these two chords alternately: C major and D minor, until the ear really feels the different characteristics of the two—now bright, now mournful.

PRACTICE XXV. Play triads on all the white keys successively from C to A; examine them; distinguish between the major and minor, remembering always that the major is a combination of *Do-mi-sol*, and the minor is a combination of *La-do-mi;* repeat again and again until the ear can decide, at once which is major and which minor.

NEW REASON FOR MODULATION

It will be noticed that we did not form a triad on B, the seventh degree of the scale of C. The reason is simple: a triad consists of a third (major or minor, as the case may be) and a *perfect fifth* (seven semitones). The fifths formed on C, D, E. F, G, A by using the white keys only are all perfect (C-G, D-A, E-B, F-C, G-D, A-E). But the white key fifth from B is diminished—it has only six semitones; to make it perfect we have to introduce a sharp and make the fifth B-F♯. Thereby hangs a tale, for which we are not yet quite prepared. Suffice it to say that herein lies one of the reasons for modulation, a reason that has been overlooked by most writers. This weighty subject of *Modulation*—weighty in import, but most simple when properly treated—will be examined later.

PRACTICE XXVI. To complete our ear training in major and minor triads, and so pave the way for the study of the minor mode and its variants, the following exercise should be played frequently, the sounds analyzed, the triads named, and their relatives given. For example, the triad on C being sounded, it is found to be the triad of C major. What is its relative minor? Go down a minor third, to A, and the triad of A minor is found with C (or *Do*) for its third. Now take the triad on D, and it is found to be minor. What is its relative major? Why, it's *Do*. That is to say, the minor triad is *D-F-A* (La-*do*-mi); thus *Do* is the major keynote, or F.

Thus it is again seen that the *Do* is the foundation or keynote of the major triad and scale, and that it is the third (still *Do*) of the relative minor triad and scale.

Let the student thoroughly master all the exercises given thus far, and he will be able to pass almost imperceptibly through the seeming difficulties of modulation, which exist only in imagination.

(*To be continued*)

OPERA IN ENGLISH

BY KARLETON HACKETT

This is one of the vital questions affecting the development of music in America, a question that has been in agitation for the last two generations, a most complex question, involving racial characteristics, the prejudices of early training and long habit,

and about which there is endless misunderstanding. More than a generation ago there was a high degree of activity in the giving of opera in the vernacular, a movement that culminated in the organization of the American Opera Company by Miss Thurber and Theodore Thomas. With the failure of this attempt, through lack of popular support in spite of the high standard of art established and maintained by the organization, the impulse to do something for ourselves appeared to die away, and since that time no serious effort has been made to give grand opera in English on the scale demanded in the opera houses of America.

All over this country, by the New Century Opera in New York, by the Chicago Opera Company, by the Boston Opera, and by the National Federation of Music Clubs, wide-reaching plans are being carried out for the production of opera in English, with companies completely equipped, and for the encouragement of our native composers through large prizes for original works.

This brings us to the very heart of the matter; we shall never have opera in our own tongue until our American composers write works of such power as shall arouse the enthusiasm of the American public. This is a fact, established by the experience of all the great, art-loving nations of the world, and one which we must squarely face if we would have any true conception of the problem confronting us. The giving of opera in English translation is an altogether secondary question, and the main reason why we have thus far failed to make any great headway in the matter has been due to the fact that our American composers have not as yet produced enough works of telling power to gain the ear of the American public. As to the reason for this it is not at the moment necessary to inquire.

When Richard Wagner came upon the scene in Germany, the operatic stage of his native land was in pretty much the same condition as is our own today, with the opera houses in the hands of the Italians and French, giving opera in their own native tongues and ignoring the art and language of the people to whom they were singing. In course of time he took for his motto: "German opera, in the German language, for the German people, and drive out the foreign barbarians," and by the magnificence of the works which his genius produced he accomplished the result.

This is but one case from the history of opera, but it is so conspicuous, so recent, and so absolutely conclusive, that it tells its story without the possibility of misunderstanding. The same tale could be told of the opera in France, in Russia, in Bohemia, or wherever else opera has become a vital thing, were it necessary to make the proof more convincing. We here in America have not yet produced our Wagner.

Ever since opera began to be in this country, now a matter of something like a century, it has been brought to us from abroad, because only in Europe were the works of the first importance being written, and they were sung by foreign artists, or played by foreign players, for the same reason, that there was the place where the required artists were to be found. Consequently, and inevitably, the American public was from the first educated in the idea that art came from Europe, and that what grew upon that soil was of a finer quality than could be produced elsewhere.

This is a fact, whether gratifying to our national vanity or not, and no progress is possible in this world save as we look the truth straight in the eyes, recognize it for the truth, and adjust ourselves thereunto. No apology is offered for the American public, nor for its growth in the appreciation of art during these last two generations, for none is needed. We had a long road to travel and it is tremendously to our credit that we so soon found the pathway, and have already tramped by so many milestones on our journey. Still less is any apology needed for the artistic standard attained by the American artist, and for his recognition by his own people.

We are a young people, and our vital energy has been expended in establishing ourselves on a solid economic basis. This has now been accomplished, and the same qualities which have made so great a success in dealing with the practicalities of life will achieve like results when our national energy is free to employ its powers on the arts. Love for the arts is a plant of slow growth, which must sink its roots deep into the national consciousness before it can bring forth fruits or vigorous life indigenous to the soil, but many are now plowing, harrowing, and planting, and the harvest is sure.

Meanwhile, what are we of today to do in preparation; how can we best aid in the work; in what manner help the American public to gain a truer appreciation of the meaning of art, that they may be the better able to foster their own? The crucial question at this present moment, in the matter of opera in English, is the indifference of the general public. We hear a great deal said on the subject, the entire critical opinion of the country, as expressed through the public prints, is at one in the matter, and yet when this comes to the practical test of the box office, there has been a lamentable falling away. There have been countless instances where people have made impassioned talks for opera in English, yet when these same individuals came to the paying of their own money for a performance, they chose the master works of foreign importation, leaving disheartening rows of empty seats for the English production; nor did this mean that their previous speech was mere lip service, but that they wished to hear the works of which the world was talking.

Then there has been most unfortunate ignorance as to the hearing of opera in the vernacular, for so many people got the impression that once the performance was announced in English, they would understand every word without further bother. In this respect almost all of the performances of opera in English have been a shock of disappointment to the public, not because the performances were lacking in a high standard of art, but because of the failure of the public itself to understand conditions through the want of sufficient opportunity for adjustment. The people of the older countries, when they go to hear for the first time one of the complex modern scores, know well that they will not be able to understand anything like all the words, that this is possible only after several hearings and thorough familiarity with the libretto. If one stops to consider the matter the reason is plain enough. Think for a moment of the size of the auditorium in which the opera is given, the volume of orchestral tone over which the voice must carry, the delicacy of the mechanism which forms the words, and you cannot but comprehend the impossibility of the singers making them all come out clear to the audience, hearing it for the first time and all unprepared in the skill of listening. This skill of listening is a matter of great importance, and one in which the American public has had almost no practical experience, for it has become so habituated to hearing operas in tongues it did not understand, that it never thinks of listening for the words, so when it comes to a performance in its own mother tongue it cannot get half of what is actually there.

After many a performance of opera in English the audience has left the theatre disgustedly inquiring: "What is the use of all this fuss over opera in English, if when we get it, we cannot understand anything the singers say?" while in point of fact the enunciation from the stage was quite as good as it would have been in any European opera house. Of course our singers are not above reproach in the matter of enunciation, primarily because the public has never demanded distinct diction, being indifferent about it, and content to have its opera sung in any tongue, so the American singers have expended their energies in mastering German, French, or Italian to the best of their abilities, and letting the English go.

Then there is the distance. If you sit in the eighth or ninth row of an opera house, you are very close to the front, yet in the matter of actual distance from the singer it is about the same as though you sat at the extreme rear of the average theatre, and everybody knows how difficult it is to hear the actors satisfactorily from that place. As for those who sit far back, or above in the balcony or gallery, the problem cannot be likened to anything we have to deal with in the theatre, for those people who hear an opera from the gallery, would not find themselves in the theatre at all, but somewhere in the air above the roof.

Once in a while you hear a play given in one of the great opera houses, and then you have a practical demonstration of the difficulties with which the opera singers have to contend, for in many parts of the theatre it is quite impossible to understand what the actors are saying and this though they use the crispness of the spoken word, and have no orchestra to overbalance the tone.

There is, too, the law of singing the long sustained vowel sound, the thing which distinguishes song from speech, and gives the exquisite beauty to the human voice, but which, through prolonging the vowel, so separates the consonants the one from the other, as makes it difficult for the listener to form the sounds into words. It is the sustaining of the vowel sound that gives scope for the beauty of the voice, that makes singing, but it is the consonants which form the words.

The human voice, just as tone, will carry much farther than is possible to send the words. Everybody has heard people talking when the voices were perfectly distinct, but it was out of the question to understand what they said, and one can shout from a distance, making the tone travel with no trouble, yet it remains merely tone as the voice cannot project the consonants so far. There is no one but has had practical experience with these things, yet in the opera house they forget all about them, though they are entering into the problem every moment of the time.

These are not fine spun theories but the routine of opera giving, that have their part to play in every phrase sung on the stage, and which the audience must comprehend, adjusting itself to the actual conditions with intelligence, if it is to receive the full pleasure of the performance. When you wish to enjoy a fine performance of one of the plays of Shakespeare you usually brush up a bit on the text, while if you go to hear some visiting French artist you make a study of the play; yet think how much more complicated a work is a grand opera, and how little preparation most people make for intelligent hearing!

The American public has not approached opera in this spirit of adequate preparation for the comprehending of a great art work, where a drama of power has been interpreted through music. As it did not understand the language in which it was sung, it contented itself with the charm of the beautiful voices, and let all the deeper meaning escape. Now it is awaking to this fact, and in a manner which promises a great artistic advance in the future, but meanwhile it has jumped in without half understanding conditions, and has found itself in the midst of confusion, standing it hardly knows where.

The singing of opera in English, singing for us here in America in our own mother tongue, is a thing that is bound to come, unless we are willing to sit down with folded hands and admit that there is no artistic energy within us. But it will come only as a slow growth from within, a deepening of appreciation of the meaning of art, and the awakening of the creative impulse

CHILDREN'S WORK IN MUSIC

CONDUCTED BY HELENA MAGUIRE

"?"

BY VIRGINIA CARTER

I've very often wondered
If *my* voice will be the rage,
When I get to be a singer
On the operatic stage—

And if my voice will ever
Acquire such a skill
In singing florid passages,
Especially the trill—

As those of Tetrazzini
And Geraldine Farrar
Also of Frieda Hempel,
Who sings in opera—

Or if I'll sing contralto
And not have the leading part,—
Or whatever range my voice is,
If I'll excel in my art—

I sometimes think it's doubtful,
But I'll just wait and see,
For—"Nothing is *too* difficult,
If it were, it would not be."

———*———

NEW YEAR'S RESOLUTIONS

1. To spend some time each day quietly thinking about music.

2. To read something about music every day.

3. To say, on rising in the morning: "This day I am going to work well."

4. To spend a few minutes at the beginning of each practice period in recalling what "teacher" said at the last lesson.

5. To have the same respect for music as for geography or history. (Some boys appear to be almost ashamed of studying music.)

———*———

A NEW YEAR'S RECITAL

JANUARY is an ideal month for holding a pupils' recital. Having well recovered from the effects of vacation, we have had two or three months of good practice, and have not yet commenced to feel tired or suffer from the enervation and restlessness which come with the Spring. As it is the cold month of the year for our country, a recital of the composers of the cold northern countries, Russia, Norway, Sweden, Scandinavia and Finland would be most appropriate.

Incidentally it may be said that several of these were born in January—namely:

Scriabine, in 1872.
César Cui, in 1835.
Christian Sinding, in 1856.
Mili Balakirev, in 1837.
Adolf Jensen, in 1837.

A MUSICAL GAME---TO TEACH NOTES IN SPACES

BY LAURA ROUNTREE SMITH

(Book Rights Reserved)

THE children skip round in a circle singing to the tune of *Lightly Row.*

Can you tell, can you tell,
Notes in all the spaces well?
Do you know, do you know,
Added space below?
Can you see a little *face,*
Reading notes in every space?
Can you tell, can you tell,
Notes in spaces well?

The Leader stands inside the circle, holds up a large staff, and points to any space on the Staff, at the same time asking any child what note is in that space. The child called upon must reply at once or go out of the game.

If the Leader makes a mistake or fails to discover that a child has given the wrong answer, the other children clap him out of the game.

The children skip around the circle, and sing the song after each space is called for, or as many times as desired.

Notes may be called for on added space above and below the staff.

The bass clef may later be used in the same way.

HISTORY STORIES FOR CHILDREN

BY ELIZABETH A. GEST

II

CHILDREN, have you ever built a bonfire? You know when the sticks are damp it takes a long time to get the fire started, but then it burns very quickly.

Music grew just like a bonfire. It took it a long time really to get started; but soon after the troubadours and the minnesingers began to wander about, the musical fire broke out in all countries—in France, Germany and England, the Netherlands and Belgium and in Italy.

Most of the music was used in church, and in Italy a man named Palestrina wrote wonderful masses. In England Queen Elizabeth liked music and a great many composers wrote pieces for her to play on her virginal, which was something like an old-fashioned piano and was used long before real pianos were constructed.

In those olden times (about the sixteenth century), the people often acted Bible stories or stories from the lives of the saints, and as music became more popular they thought they would like to have some in their plays, therefore they sang and acted at the same time.

These plays were always religious and were given in the oratory, a place where the people gathered for prayer, and this is why they are called "oratorios." Little by little they did more singing and less acting. Some day you will hear a beautiful one called *The Messiah,* by Handel, who lived in the seventeenth and eighteenth centuries.

But the people became tired of having religious plays all the time. Therefore, instead of acting Bible stories they acted stories from mythology and set these to music and made wonderful scenery for them, and that was the beginning of opera.

They had orchestras which played at these old operas, but not like our orchestras. Their only instruments were lutes, flutes, and harpsichords, etc. These were something like small pianos, too. We would think those old orchestras were very strange, but in those days the people liked to hear them so much that they wanted them to play when there was no oratorio or opera; so some composers wrote pieces for them to play alone, and that was the beginning of the symphony.

Then when the instrument makers found

that the people liked to hear the orchestra music without any singing they tried to improve the instruments and made better ones. Especially did they make very fine violins. Nowadays musicians will pay very high prices for violins that were made in those olden days at Cremona. When the violins were so well made people learned to play them better, and the orchestras were very much improved.

Next we come to Haydn, who was born in 1732. He wrote a great deal of music for the orchestras to play, and has always been called "The Father of the Symphony." He did not spend all his time this way, though, for he wrote the beautiful oratorios, *The Creation* and *The Seasons,* and many other things besides.

But you will hear more about these wonderful men some other day, and about the beautiful music they wrote, and will learn to play much of this music, I hope.

ETHEL'S MUSIC LESSONS

BY HARRIETTE BROWER

III

ETHEL'S FIRST PIECE

I HAVE told you how Ethel began her music lessons, and how pleased she was with the first one. After it was over and the teacher had gone, she danced about the room crying:

"Oh, mamma, I think music lessons are lovely; I'm so glad you let me have them."

"I am sure, dear, that you will do your best to learn."

" 'Deed I will, mamma."

And she was true to her word. Nothing was allowed to stand in the way of the daily practice, which went on regularly like the clock. Mamma often sat beside her watching that all was done correctly. When she could not do this owing to other duties, Ethel did her practice with just as much care as though mother were present.

The lessons were eagerly looked forward to, and were two bright spots in every week. Mamma was always in the room, and thus learned about every exercise. She was even more interested in the work than Ethel was.

The little girl made good progress. She soon knew the lines and spaces of the bass staff, as well as of the treble, and could name those extra notes that are placed on the little lines above and below the staff. She could tell the names of many notes without seeing them, just by listening to them as she stood with her back to the piano, while her teacher touched the keys. She learned to play a number of finger exercises on the table, and when they were quite correct and were in perfect time with the time-beating machine called a metronome, she could play them at once on the piano.

Ethel thought it great fun to go to the piano with a new exercise all learned, one she had never heard the sound of, except in her mind.

But this was not all. She learned about chords too, first by reciting the letters and playing them on the table, then on the piano. She could recite scales too, though she had not yet begun to play them on the piano.

One day Miss Dudley brought a small roll of music for her. Ethel was so eager to see what it was that she could hardly wait. But she knew the right thing to do was to play her lesson with even more care than usual, so it would be finished sooner.

At last Miss Dudley unrolled the music sheet and placed it before her. It was called *Melodie,* and was composed by Thomé, Ethel wanted to hear how it sounded but did not ask, for she had already learned that her teacher always wished her to study out things for herself.

The first things she had to notice about the new piece were the key and time signatures. Then she called the notes in the right hand by their letters. There was only one note in each measure, a dotted half note; so they were quite easy to remember. After she had recited them six or eight times, she knew a half page by heart. Miss Dudley showed her that the second half was only a repetition of the first half; so she really knew a whole page. Only after it was thoroughly learned and could be recited with the metronome was she allowed to play it on the piano. It had taken barely ten minutes to learn a whole page, and Ethel was very happy over the result. The melody in those right hand notes was so pretty she wanted to play it all the time.

Miss Dudley then showed her how to study the left hand notes in the same way as she had done the right hand. These were more difficult, as there were two notes and a rest in each measure; but the little girl promised to study them with great care. By the next lesson she could play each hand alone and together, of one page of the piece, without mistake, and by heart. The second page was a little more difficult, and took quite a week to finish.

However, Ethel was soon able to play the whole piece correctly and with good expression. After she had played her first piece for her parents one evening, mamma said:

"You are making good progress along the road toward the Garden of Tones."

And Ethel went to bed that night very happy indeed.

A LESSON ON THE CARE OF THE PIANO

BY CLARA LOUISE GRAY

THE GRUMBLING PIANOFORTE

"OH, bother!" said the grumbling pianoforte, as it awoke from its nap, stretched and gaped, showing as fine a set of ivories as anyone would wish to own.

"I do not see how I can stand it; here it is raining again. What shall I do! In an hour I expect that Ethel will make me a visit and how I do dread it; she thumps me so hard. I am just ugly and I am going to act so, if I please. Last evening I was tired and sleepy and wanted to rest, but no one had any consideration for me, but kept me working until almost eleven o'clock. I feel all used up today. I suppose when she does appear and begins her hour of practice she will be very impatient over my throat, but it is all her fault for she never even thinks about covering me up for the night, cozy and warm.

"I wonder how she would like to have her mother forget to put her to bed without her flannel night-dress? Her long nails scratch and dig into my white keys so often I feel pretty blue about it. Does she think she is some kind of animal, I wonder?

"There is Mabel who loves me well enough to come with her tiny hands neat and clean. I wish there were more like her in the world of little people."

Just then someone came into the room and seeing the pianoforte open went over to close it As the young girl walked away she did not hear the weary sigh of discontentment which came from under the rosewood cover, as the grand pianoforte sank into silence, and there followed a dead calm.

———*———

EVERY child can do something for music this year by telling other children who do not study music how delightful the subject is.

STARS AND PRACTICE CARDS

(Some more essays on "Stars and Practice Cards," putting forth many and varied young ideas on the subject.—The Editor.)

I DO not get stars or practice cards, but I try to write this essay because I think they would be such a great help to little children who are trying to practise.

I have been taking lessons for nearly a year, and I do believe I would practise four hours a day to try to win stars if I could get them.

So, in this way, our teacher could see, at the end of the year, who had the most stars, and in this way know who had worked the very hardest.

Then you could feel so very proud of all your nice rows of stars.

And so you could keep them always, until you grew up.

PEARL MARIE CASHDOLLAR.

I THINK the practice cards are good in one way: it is to keep an account of your grades and also the amount of practising you do. But a pupil who is really interested in her music will go on if she has a practice card or not.

The second year I took music I did not have a practice card and I won a gold medal; the third year I did not have a practice card and I won a prize; and the fourth year I had a practice card and I won a gold medal, and I did not see that it helped me any more than the past years.

The only reason that I like the practice card was because a pupil can keep up with their grades.

As for stars I do not think that they are any better than the cards. There are some pupils who do not take an interest in music but just try to get the golden stars. Others will take an interest in music and they do just as well as the ones who do not take an interest and try to get the stars.

OLGA C. LINSENMEYER.

I BEGAN taking lessons on the piano when I was seven years old and am eleven now. I have always used the practice cards and received gold stars, and like that way of keeping account of the time I practise.

I will never forget the day I received my first star and how proud I was of it; how I liked to show it to people and tell them about it. I think that first star and the compliments people gave me did more to encourage me to practise my next lessons well than anything else could.

Of course, I still like to receive stars, but think I would practise just as faithfully now if I didn't have them. I think they are fine, especially for children who are just beginning to study music. I think it encourages them to put a lot of practice into each lesson so they can get the gold stars.

FAITH BURRINGTON.

I LIKE very much to keep an account of my practising on a practice card. I also think it right for the teacher to compare the amount of practising done, with the amount of progress made, and also to compare the practising of two pupils of about the same age.

I think the stars also are very nice. Looking over the work later it is nice to see which ones earned stars and which did not. I like very much, when I get a new piece, to see how soon I can get a star on it.

MARGARET MOIR (age 10).

SOME pupils like gold stars and some do not; but I don't think they are of any use.

The children who get time cards can fill them on the first day and not practise at all; but still they may get credit for more than they do. The children who don't get time cards, also, try to deceive their teachers. Most of the teachers, however, who do not give time cards and gold stars, know whether their pupils practise or not.

My teacher knows without my telling him whether or not I practise my full time. If I got gold stars, perhaps I would practise more; but, although I do not get them, I get something better, which makes me practise more willingly than gold stars.

My teacher gives me a nice piece when I practise "extra" well, or when I get one of those very hard written exercises done. When I am sure I know my lesson perfectly, and think of getting a new piece, I never miss my lesson.

I sit down on the piano bench and play for my amusement, not knowing how long I practise.

Some children who get gold stars run out and play, and afterwards tell their teachers they forgot the time.

When I learn my lesson thoroughly my teacher allows me to play my nice pieces at some entertainment or club meeting, which makes me happy. And that in itself is reward enough.

MANFORD HASKELL (age 11 years, 5 months).

STORIES OF THE GREAT MASTERS BY THE CHILDREN

BY RUTH PARLIN

West Newton, Mass.

ROBERT SCHUMANN

ROBERT SCHUMANN lived in a quaint little Saxon town in Germany. His father kept a book store. One of his grandfathers was a minister and the other was a surgeon. He was born the 8th of June, 1810. He was very happy when his father told him he could take music lessons from the organist of St. Mary's. He was seven years old when he had his first lesson.

One day Robert thought of a new game. He would sit at the piano and describe some person. One day he went to the piano and played a few notes, then turned to the children and they cried, "Franz." Then he played some more and they cried, "You are a capital player. You have described dear Gretchen."

When Robert was nine years of age he went to a concert given by an English musician. He had never heard such music before and he decided to be a musician. His motto was, "Each day I must do my best." No one in Robert's family was a musician, but still he loved music with all his heart.

While he was a young boy in school he formed an orchestra, which consisted of two violins, two flutes, a clarinet and two horns. He was conductor of the orchestra and played the piano. While Robert was in high school he set the 150*th Psalm* to music. His mother wished him to become a lawyer and he loved her too well not to do as she said.

He went to the universities at Leipzig and Heidelberg and tried hard to study law; but all the time he hated his lectures at the University and spent more and more time at the piano. While on a little trip into Italy and Switzerland he heard some of the greatest musicians of his time.

As Schumann listened to them he knew it was of no use for him to try to be a lawyer. He asked his mother if he might not devote all his time to music, and at last it was decided he should give up law and study music. When he was a young boy he did not like to practise exercises, but now he was willing to practise any length of time on the simplest pieces, although he could read difficult music at sight. The third finger of his right hand became crippled through trying to strengthen it.

Then he spent all of his time in writing music; so the world knows him as a composer rather than a pianist. He married the beautiful Miss Clara Wieck, daughter of his music teacher, and she was very fond of playing his music. All of Schumann's best music was written after his marriage. In one year he composed a hundred songs. One of his most famous songs is *The Two Grenadiers*. Some of his well-known compositions are: *The Pilgrimage of the Rose*, the music for *Faust* and the music for Byron's *Manfred*.

During Schumann's last years his health was very poor and for many years his mind grew weaker day by day. Up to the very last months of his life he spent much time at his beloved piano. He died in 1856, and was buried in Bonn.

THE DUET

THE VIOLIN

CONDUCTED BY RAY G. EDWARDS

THE HUNGARIAN GYPSY AND HIS MUSIC

BY HELEN WARE

(This study on the "Hungarian Gypsy and His Music" was written by Helen Ware, a Philadelphia violinist. Miss Ware is the first American artist to make a thorough study of this interesting subject, and is considered an authority on Hungarian and Slavic music, not only in America, but also in Europe, where she is recognized as the most powerful and poetic interpreter of Hungarian and Slavic music.)

A FEW years ago a number of "Royal Hungarian Bands" and "Hungarian Gypsy Bands" overran America. Nearly every one of these organizations was a barefaced fraud. Far from having royal or gypsy blood in their veins, the members were neither Hungarian by birth nor did they have competent Hungarian musicians for their leaders. Such organizations were merely small orchestras of mediocre calibre recruited for the most part in New York, labeled with the above high-sounding attractive trademarks, often accoutred in Hungarian garments and everywhere heralded as the genuine article. Excepting a few of Brahms' popularized Hungarian dances and potpourris by Kéler-Béla, their programs contained no Hungarian numbers and did no more to acquaint music lovers with real Hungarian compositions than the average performances of less pretentious orchestras. Especially have the so-called "Gypsy Bands" created an entirely erroneous impression of the Hungarian gypsy character and what the name stands for.

The Hungarian gypsies never read music when playing before the public. Nay, most of them do not understand one black dot from another. It is this very "bliss of ignorance" that gives so much abandon and spirit to their playing. They know naught of theoretical music. Occasionally one finds a leader who becomes modernized to that extent. In such cases the band can dispense with a tutor, a trained musician who does nothing more than teach the first violin parts in popular music and acquaint them with the other parts in overtures or compositions of more serious nature. But even so it is interesting to note how the harmony of the accompaniment as well as the leading parts will be changed by them once they have become acquainted with the composition and can assert their spontaneity *ad libitum*. This untrammeled freedom is carried to such an extent that every now and then the gypsy leader will walk away from his band while playing, stroll through the numerous halls of the café and, without any cues or formal warning, change from one song to another, causing no consternation whatever among his men left behind, for they will chime in in the most natural manner, never giving a thought as to the key the leader has led them into after a bit of modulation.

HELEN WARE

Speaking of the art of modulations, I have been astonished by Kocé, the king of gypsies, at the indescribable originality and thorough musicianship he displayed by putting his band through every conceivable modulation with the most dazzling extemporized cadenzas, never once causing them to falter in their accompaniment. Especially the czimbalom player shone in this fascinating pastime. His technic was dazzling, bringing forth most wonderful euphonistic effects from this weird instrument without which a gypsy band is as incomplete as a house without a roof. The "Hungarian Gypsy Bands" in our country lacked this melodious instrument, and also committed the ridiculous mistake of using brass instruments. Such a thing is unheard of among gypsies, for they only use string and reed instruments accompanied by the czimbalom.

Kocé, who won his title of "King of Gypsies," after wresting the laurels from over two hundred gypsy bands from all parts of Hungary, is a gypsy of most extraordinary musical qualifications. Though an early musical training at the Conservatory fitted him to take his place among the prominent artists of his age, the lure of care-free gypsy life and lack of ambition have caused him to remain with his own kind. This man is highly regarded by such men as Ysaye, Cassals and Elman as a wonderful genius in his own inimitable art. It may be said in truth that no artist in the concert field produced such an intense and powerful tone as this gypsy, and, as to his harmonics in double stops, trills or any other inconceivable form, he stands alone, a fact conceded by the greatest artists of our age. The farce of it all is that though I had an opportunity on numerous occasions to test his strings, they were never true. When questioned on the matter, he grinned from ear to ear and said:

"Oh, I don't worry about such trifles."

It is lack of concentrating power, ambition and fundamental intelligence that make it impossible for the gypsy to rise in the musical world. Although I know of numerous cases where young gypsy children were placed under able instructors who performed wonders in developing their most natural musical talents, yet, I know of but one case in which the gypsy in question did not return to his own kind, and finally take his predestined place at the head of a gypsy band in some smoky café or restaurant. "Once a gypsy, always a gypsy," remarked once a prominent Hungarian musician, and truly such seems to be true. The one exception referred to but strengthens the rule. Through acquiring an artificial culture, the artist in question loses the temperament and freedom of expression that so strongly characterized his musical expression prior to his transformation, and, in an attempt to hide the gypsy within him, he is forced into a blasé pose which also sadly affects his music to a degree that his playing lacks every sign of musical intelligence and spirit.

Classic forms and rules mean naught to the gypsy. They are untrammeled nomads in life as well as music. They are bards of the violin, a valuable element in musical life, and serve as a perpetual reminder to all thinking musicians as to what the source of music is and how detrimental some of the so-called modern tendencies have been in some musical compositions of these last few years, tending toward robbing music of its high ideals and noble mission. Epicureans in music may look down upon the gypsy and his music, and bar him from admission to the holy of holies in the temple of music, but they must admit that the gypsies, as a race, are a wonderful musical product of nature, who, even in their most primitive state use music as a mode of expression to portray their sorrows and joys with all the natural intensity that nature has bestowed upon them. In their music they carry us over the scales of human emotions from one antipode to another. Their wonderful spirit inspired such masters as Liszt, Brahms, Remenyi, Hubay, and every other musician to whom music means not an algebraic formula in black dots, but a living message expressed in the loftiest language of nature.

A WELL TUNED VIOLIN

BY RAY G. EDWARDS

WHY is it that some violins stay in tune a long time while others do not? A good violin, properly tuned, will stay in tune for days at a time if atmospheric conditions are favorable, while a student's fiddle will hardly stay in tune long enough to take a half-hour lesson.

Can it be the difference in the quality of the instruments; in the wood and workmanship? It certainly can. Why do you suppose one violin is worth a thousand dollars and another would be dear at ten dollars? It is the quality of wood and workmanship that make the difference in value. Mind, I do not say they always make the difference in price; that is another matter but there is actually a difference in value of hun-

dreds, and sometimes thousands, of dollars between two violins.

And what has the tuning to do with the value? This: A good violin responds in sympathy to every vibration of the strings. Its only musical value lies in this responsiveness. If the parts have been well chosen and fashioned by the hand of a master, there will be a uniform spring of the plates that tends to keep the whole instrument in tune, keyed to a certain vibration. Thus, it may readily be seen that an instrument of high quality keeps in tune with itself, and is so responsive to the strings as to be almost priceless in the hands of a master player.

Another violin, apparently just as good to the novice, is made of inferior wood, or wood of varying quality, and the plates, being well made, possibly, but not adjusted to each other, pull and haul in a very inharmonious manner. Such a violin cannot respond properly and with that delicacy and sympathy to be found in a good instrument. It lacks "life," or, as the violin makers say, it lacks "voice."

The poorly made violin, then, lacks adjustment of its parts, and therefore cannot respond to the strings. It even fails to stay in tune, because it is not a real musical instrument, each part working in opposition to every other part.

But even a good violin will not stay in tune, or respond to the strings so as to produce a fine quality of tone if neglected in any way. The very first thing about tuning is the manner of putting on the strings. Tune slowly, gradually increasing the tension. Do not pull at the strings if they are too high, or let the peg slip back to the pitch desired. The better way is to lower the pitch by unscrewing the peg and then bringing the string up to pitch again. You then know that you have taken up the slack, while to yank at the string or to lower it by loosening the peg and turning it back always leaves an uncertainty as to whether the pull on the string is equal in the lengths above the bridge and in the peg box. Unless this tension is equal throughout the pressure of the bow and fingers will soon throw the string out of tune.

Small gauge strings are to be preferred as a rule, epecially on a good instrument. I know the makers of strings will not thank me for this remark, for, if heeded by violinists, the dealers would have hard work getting rid of the "ropes." But the science of the thing is this: Small strings require less tension to bring them up to pitch and are more responsive to the touch. Therefore they give better satisfaction and last longer.

A thick A string and a thin E or D string will never get along harmoniously on the same violin. The difference in tension keeps twisting the bridge and makes perfect intonation impossible.

To leave a violin unstrung, or even out of tune, for months and years, will destroy to a certain extent its fine adjustment of parts and make it less responsive and resonant. Even to change the pitch of a violin repeatedly brings disaster to its harmonious adjustment. For this reason an experienced player, when called upon to play with a piano to which he is not accustomed, or one that he has reason to believe is not at the exact pitch of his violin, will immediately upon his arrival in the hall or room take out his violin and tune to the piano. although he may not be expected to play for some time. In this way the tension becomes equalized. If he has an opportunity to play a few scales after it is retuned so much the better.

Yes, the violin is a very delicate instrument; it is this that makes it musical. Stretch a fine Italian string over a broom handle or a soap box and the response is slight. Try it on a cheap fiddle and the improvement is marked, but the result is not truly musical. Adjusted to a valuable violin, the result is such tones as you hear when Ysaye, Elman, Kreisler, and Powell draw the bow.

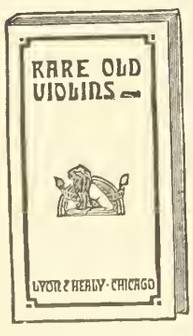
If You are in the Market for a
RARE Old VIOLIN



This Book Will be Sent You Without Cost

If you appreciate the time, money, travel, experience and work necessary to produce such a book; if you realize that we have bought and sold more precious violins than any other house in America, then we know this book will be treasured by you.

Within white and gold covers, in the highest form of the printer's and graver's art are faithful color-type plates of rare old violins we own. Many of them are world renowned masterpieces.

From Stradivarius and Guarnerius violins at $10,000, down to genuine old violins at $50 and $100, we show and describe rare old instruments which have responded to the bows of masters of greater or lesser fame.

In this book you feel and breathe the atmosphere of the violin world and if you wish to buy a good old violin this book is for you.

It goes without saying when you buy a valuable violin it is most necessary that you deal with a responsible house whose word and guarantee will protect you.

To those who are soon to be in the market for a fine violin we extend this invitation to write us for a complimentary copy.

LYON & HEALY, 19-31 E. Adams St., Chicago
The world's largest music house. Owners of the famous Hawley collection.

LA FAVORITA STRINGS
Italian Gut. Best in the World. Warranted
VIOLIN
E, 4 lengths; A, 2½ lengths; D, 2½ lengths; each in separate envelope; and single lengths tested, each string with tag "La Favorita." For sale by Leading Music Dealers. Ask your dealer but insist upon "La Favorita."

THE SELECTION OF A VIOLIN

BY FRANK WALDO, PH.D.

II

FOR USE IN THE SMALL ORCHESTRA

THE use of the violin in the small orchestra demands a special tone quality which may be described as penetrating, or, to use a very common expression, "cutting." The more sensitive violinists may resent the application of this latter term to the tone of really good violins, reserving it for the piercing and screechy toned cheap fiddles so customary among beginning pupils; nevertheless, one is constantly hearing orchestral players comment on the value of this "cutting" quality in their work; such a remark as "my violin cuts right through the whole band" being made with much satisfaction by the violinist of a small group of players who finds it his stunt to make his instrument the commanding voice in an ensemble in which each instrument, generally including a piano, is being played for all there is in it.

The rank and file of the professional violinists —those who chiefly compose the violin sections of the musicians' unions—earn their living in orchestral work; in such orchestras as furnish music for theatres, hotels, dance halls, restaurants, steamboats, churches, and social gatherings, with or without dancing in private houses. It is necessary for them to provide themselves with instruments which fulfil the special requirements of the uses to which they are put. No violins are employed so continuously and subjected to such a variety of conditions as those played in the small orchestras. Solos and solo effects must be voiced with a pleasing tone, and in the ensemble the richness of a vibrant tone is demanded.

The ideal tone for such purposes is a brilliant, loud, penetrating tone, sharp, strident and decisive; and yet, if possible, possessing a singing quality; moreover there must be plenty of backbone so that all the strength of the bow arm will not break the tone, and the instrument will not give out under the strain of five or six hours of constant playing day after day throughout the season. If, in addition to these qualities, the violin has a good *pianissimo,* a quick response, and a soaring tone, and plays easily, it will indeed be a treasure for the orchestra player to possess.

A violin that plays easily is a boon to an orchestra player, for it leaves him comparatively fresh at the end of an evening's work, whereas a violin which requires muscular force to bring out the tone exhausts the player.

In the selection of an orchestral violin for business purposes, usually tone and tone alone is the main feature to be considered; for the business violinist regards his instrument as a tool of trade which must meet the requirements; and since good tone and good looks in a violin both cost money, the good looks are sacrificed for a good tone. A prime requisite for an orchestral violin is that it shall be well wooded, that is, the top and back thick in wood; otherwise the violin may get weaker in tone after long continued playing, and the tone cannot be forced when necessary.

There are three types of violins that are, in general, available for business orchestra purposes, by reason of their tonal qualities and the prices:

Fairly well made violins, from 40 to 75 years old, manufactured at Mirecourt in France, Mittenwald in Bavaria, or Markneukirchen in Saxony, may be found by search in dealers' shops or in private hands; and when regraduated for thicknesses, provided with a new bass bar and new bridge and sound post by a competent repairer, many such violins are found to possess strong, firm tones of good carrying power and quite agreeable quality. The approximately half a century of age and the skilful rehabilitation transforms the violin of originally small value into one with a tone well adapted for orchestra work. Such a violin may be obtained in good playing order for from $35 to $75, depending on the make, tone, and condition.

The more ambitious orchestra players, who can afford the necessary outlay, find good orchestral instruments among the better class of Mirecourt Mittenwald, and Markneukirchen violins which are from 75 to 150 years old; and also among the instruments made by scattered individual English, French, German and Tyrolese makers of the 18th century. Not all such violins possess the qualities necessary for professional orchestra work, many of them being best adapted for parlor playing; but suitable orchestra violins may be found at prices ranging from $100 to $300. Some of these violins still carry the makers' labels, but many of them are unidentified and their values are determined entirely by the appearance condition, and tone.

Old Italian violins except those of the highest class (and which are consequently not to be considered here), seldom possess tones suited to the work of the small business orchestra.

Some of the present-day violin makers are producing new violins that serve admirably for orchestral uses. Such violins are made of the finest old wood obtainable, and, even when new, possess tones of fine quality, great strength or

power, plenty of resistance, and which carry well.

New violins in order to prove satisfactory must be selected with great caution, however, and each individual instrument chosen on its tone merits. There are now so many violin makers in this country who produce instruments of all degrees of excellence, that the selection of a new violin is made somewhat difficult owing to the difference in the standards of construction and the individual skill developed. It is not always safe to depend on the local reputation of a violin maker, and it is generally best to make a selection from among the instruments of several makers which may be available for comparison. It should be borne in mind that the violin is a work of art, and that the finest new violins are produced by makers in the great musical centers, or who are in touch with those centers, where the makers have the advantage of seeing fine specimens of old violins and where true artistry in violins is appreciated. Very fine new violins by individual makers may be obtained at prices varying from $100 to $200.

It must be constantly kept in mind that for satisfactory orchestra use the tone of the violin must carry well, not only in a large room but through a succession of rooms; and it should be tried out under various conditions of high and low ceilings and cold and warm crowded rooms. The carrying power of the tone through several rooms full of people and with the air heated should especially be tested, since reception playing occurs under just such circumstances. A very good test of the fitness of a violin for orchestra use may be made in a crowded restaurant, where the violin tone must be heard in all parts of the room above the din of dishes and tongues.

GOOD VIOLINS, OLD AND NEW

BY RAY G. EDWARDS

In a recent number of one of the musical magazines were two articles that would be rather confusing to most musicians and would still leave considerable doubt as to the relative merits of old and new violins. So much has been said on the subject, usually on the side of trying to prove the great superiority of the new violin, that I have no desire to write extensively or to add to the confusion. Bulk of manuscripts will never settle the matter.

One article recommended a new violin of penetrating quality for orchestra playing, warning the student against old violins with big tone. The writer went on to say that soft, dead tone will not carry, even if it is big, and advised against getting the old fiddle craze

On the same page was another article in which were listed the instruments used in a well known symphony orchestra. There were no real new instruments in the list, and most of them dated back to Gagliano, Amati, Guadagnini, Testore, Montagnana, and Maggini. There were a few French and English violins, but a large majority were made by the old Italian masters. The writer drew attention to the fact that there were no instruments in this orchestra from the workshops of Stradivarius, Guarnerius and Bergonzi. This could be accounted for by the fact that men who draw a pay envelope of $25 to $60 a week cannot usually afford to invest $2,000 to $10,000 in a great masterpiece. These naturally find their way into the hands of wealthy collectors, and the few artists whose incomes are between $25,000 and $100,000 a year. These artists must have the best instruments at any cost. They are the tone masters and are judged very critically by lesser artists and the musical public generally.

A list of the instruments in other great symphony orchestras would disclose a few new violins, but I venture to say that not five per cent of the violins in twenty of the greatest orchestras in the world are less than fifty years old, and that most of them were made in Italy.

Occasionally a new violin is found that has the required quality. This instrument will find its way into an orchestra of the symphony grade because it can be had for a few hundred dollars. Violinists do not always have all the money they would like, especially when it comes to investing in a violin, but they usually go their limit and get an old Italian. In many orchestras the players would not be allowed to use a new violin. The conductor and concertmeister are good judges of tone and know about as much about violins as the many magazine writers.

Granting, then, that new violins are often recommended and chosen by members of theatre and "business" orchestras, I will even agree that these are just the violins for the work: where penetration is a most desirable quality in an instrument, to cut the way through the noise and conversation. In restaurants and dance halls the new violin does just as well as the old; the fine shades of tone quality do not count. It is not even desirable that the performers display too much feeling, for that might destroy the regular rhythm. This is in no way a criticism. Regularity and forcefulness have their place. Business orchestras could not prosper if their members played like symphony orchestra players.

So there is a legitimate demand for good violins, new or old, and the need for good violins is greatly on the increase. The world would be better off if some millions of cheap, new fiddles were used to start fires some chilly morning, but a well-made new violin has its place. There will never be too many of them. Every student should have the best new violin he can afford. It will cost between one and five hundred dollars for the best. Fortunately the supply of old violins is about equal to the real need, among symphony orchestra players, soloists and members of chamber music organizations—trios and quartets.

VIOLE D'AMOUR OWNED BY MR. HARTMANN

ARTHUR HARTMANN AND THE VIOLE D'AMOUR

During the present winter Mr. Arthur Hartmann, the celebrated violinist, now located in Paris, will publish a series of original compositions and transcriptions for the now obsolete *viole d'amour*, of which he has a very fine specimen, shown in the illustration herewith. Mr. Hartmann considers the *viole d'amour* as a fine solo instrument and one which should be used in the orchestra.

Gemünder

When Artists discuss the subject of Violin Makers, the name "Gemünder" looms up as an undisputed authority because the name and the violin bearing Gemünder's signature have been known the world over for three generations.

"Gemunder Art Violins" and 'Cello and our collection of Old Masters cannot be duplicated in tone or price. Easy payment plan or cash.

ANY VIOLIN SENT ON TRIAL

We will send to responsible parties any of our violins for free trial and examination, with a guarantee. Send for our three richly illustrated catalogues which will safely guide you in selecting the kind of tone, make and price. Violins taken in exchange, as part payment.

The "Violin World" mailed free.

THE CHOIR & CHORAL DEPARTMENT

CONDUCTED BY H. C. MACDOUGALL

THE ORGANIST

(The following poem was handed to an organist by one of his choir boys.)

I wonder how the organist can do so many things,
He's getting ready long before the choir stands up and sings;
He's pressing buttons, pushing stops, he's pulling here and there,
And testing all the working parts while listening to the prayer.

He runs a mighty big machine. It's full of funny things,
A mass of boxes, pipes and tubes, and sticks and slats and strings;
There's little whistles for a cent, and rows and rows and rows,
I'll bet there's twenty miles of tubes as large as garden hose.

There are scores as round as stovepipes, and there are lots so big and wide
That many little choir boys could play around inside;
From little bits of piccolos that hardly make a toot,
There's every size up to the great big elevator chute.

The organist knows every one, and how they ought to go;
He makes them rumble like a storm, or plays them sweet and low.
At times you think them very near, at times they're soaring high,
Like angel voices singing far off somewhere in the sky.

For he can take this structure that's as big as any house,
And make it squeak as softly as a tiny little mouse;
And then he'll jerk out something with a movement of the hand,
And make you think you're listening to a military band.

He plays it with his fingers and he plays it with his toes;
And if he really wanted to, he'd play it with his nose,
He's sliding up and down the bench, he's working with his knees,
He's dancing round with both his feet as lively as you please.

I always like to take a seat where I can see him go;
He's better than a sermon, and he does me good, I know.
I like the life and movement, and I like to hear him play,
He is the most exciting thing in town on Sabbath day.—*Exchange.*

THE ORGAN DISPLACING THE ORCHESTRA

BY EDWIN H. PIERCE

THAT good orchestral musicians are being thrown out of employment here and there by the introduction of the organ in theaters (as commented on in various musical periodicals), is a most unfortunate fact, but one that has been paralleled in other professions and trades, by the adoption of new processes.

Regarded from a purely musical standpoint, however, the matter does not represent such a decadence in the support of music as an art, as many people suppose. These organs, which are taking the place of orchestras, are, in most places, genuine, legitimate musical instruments, played by highly skilled artists—not mechanical contrivances to pour out "canned music" from yard after yard of paper rolls or "records." Possibly the misconception arose from the fact that many of these instruments are now built by a firm whose name has been well-known in connection with various mechanical musical contrivances in time past.

In a recent trip to a neighboring city the writer took opportunity to visit two picture theaters of the better class, where the orchestral organ is made a feature. In the first of these was a very fine three-manual organ, differing but little from the most approved type of modern church organ, except that it had numerous accessories in the form of drums, bells, etc. The organist improvised in good organ style, during some of the pictures, and also gave a so-called "organ recital" of a rather light class of music, well rendered, but sounding somewhat incongruous with the character of the instrument.

In the other theater was a smaller organ, but one far more effective for the purpose in hand, and differing so radically from the conventional form of organ that a brief description seems in place.

The number of registers was not large, but the voicing was such as to simulate most perfectly string tone, flute tone, trumpet tone, etc., while diapason tone, which is the true glory and beauty of *church* organs, was conspicuous by its entire absence. Instead, were drums, bells, xylophone, harp, and many other effects at command of the player. The instrument was voiced on very heavy wind pressure (35 inches, so called) which caused the pipes to "speak" with unusual promptness, and, in the construction of the reed stops, made it possible to use very stiff reeds, which are less easily deranged and put out of tune. The whole is enclosed in a swell-box with enormously thick walls and heavy shutters, removing the coarseness of tone which would otherwise result from the high wind pressure. Notwithstanding the weight of the shutters, they are operated with great ease and lightness by the Swell pedal, and I noticed that the organist, who was really quite an able player, made constant use of the Swell pedal to bring out not only crescendo, diminuendo, and special accents, but even the regular accents of the measure. This was done in an artistic and almost imperceptible manner, and was the very thing needed to redeem the instrument from any remaining tang of organ-like monotony.

Understand, however, that it had absolutely nothing in common with that eccentric and irrelevant wiggling of the Swell pedal practised by some unskilled organists. Of course, the right foot being occupied in this way, all the pedaling had to be done with the left foot, and no elaborate pedal work was possible. Both manuals and pedals have double touch—the former, in order to make a louder tone when the keys are pressed harder, the latter, to operate the bass drum or kettledrums. The double touch may be shut off, at the option of the player. Among the most effective numbers I heard played were the *William Tell* overture, and Dvorák's *Humoreske.*

Through the courtesy of the organist, I was permitted, the next morning, to try the instrument for myself. I found it exceedingly interesting, but I am at a loss to give any really good description of its effect on the listener. In a certain Irish folk-lore tale, a young man who was supposed to have seen some sort of superhuman apparition, endeavored to describe it as follows:

"It was not just like an eagle, and not just like a tall young girl, and not just like a church steeple, and that's the nearest I can tell you." Similarly, this new instrument doesn't sound like an organ, and doesn't sound just like an orchestra, and doesn't sound at all like "canned music" of any sort, and that's nearly all I can tell you. I am convinced, however, that it is a legitimate and effective musical instrument, and has a worthy future before it, now or later on. It is as different from an organ, however, as the modern piano is from a harpsichord.

———*———

THE PROBLEM OF CHOIR ATTENDANCE

BY ORLANDO A. MANSFIELD

As occasion arises I often find it necessary to remind even the most diligent students that it is scarcely worth while to *obtain* knowledge unless we are prepared to make some serious effort to *retain* it. For the word "knowledge" substitute the expression "church choir." Permanence is one of the highest rewards of successful choral organization.

A serious hindrance to this permanence is a display of coldness towards newcomers. Only by a constant introduction of these can any choir be maintained. If, therefore, they are to be regarded as supplanters by the older members they will soon betake themselves to a more friendly and less frigid environment.

Another obstacle to church choir continuance is caste feeling. Affinities and attractions, musical or personal, are lawful enough. Certain members of a choir are bound to have more in common with some than with others. But caste feeling is altogether reprehensible, as it refuses not only to recognize merit but even to extend common courtesy to fellow-members less favored socially or less fortunate financially.

The rock of solo singing is one upon which many a good choral ship has been wrecked. As a general rule, the people most anxious to sing solos are those least qualified for so doing. Personally I should never select for a soloist any member of my choir who offered his or her services, unless in answer to my general appeal. Indeed, I have kept together not a few choirs by refusing to allow solos to be sung by any member, insisting upon the rendering of these by imported professional talent. But questions of this kind will never arise where there is a strong feeling of loyalty to the conductor and an even stronger feeling of *esprit du corps.*

But members of a church choir should be actuated

by even much higher motives than these, namely: the desire to "sing praises with understanding," and the remembrance of the fact that a church choir exists not entirely for its own glory, and not entirely for the glory of art, but faintly to reflect and to lead men's thoughts towards what Milton describes as

"That undisturbèd song of pure consent,
Aye sung before the sapphire-colored throne."

If a church choir be divided against itself, like a house similarly situated, it cannot stand. Musical persons are not more cantankerous than any others. Indeed, the *odium theologicum* and the *odium medicum* are far more deadly than the *odium musicum*. I speak advisedly, for I have had experience with the three. But if there be disaffected members in a church choir who cannot well be dispensed with, the best plan is to place a member between them who is pretty largely endowed with the charity that "thinketh no evil." The little leaven may thus leaven the whole lump. The plan is worth trying.

Apathy and talkativeness are two more distintegrating elements in church choir life. One writer gives as a recipe for breaking up a choir the following: "When the name of the piece of music to be rehearsed is announced, do not immediately find the place, but turn to your neighbor and have a chat. While you are thus engaged the singing will be started. You can then stop someone who has commenced in time, and inquire the name of the piece." Such practices are certain signs of an utter lack of musical appreciation and of very bad breeding.

The tactful enforcement of some admission test should prevent the progress and permanence of a church choir from being endangered by the incompetence of its members. There are choristers who refuse to cultivate their sense of *tempo*, and are eternally dragging behind the organ or the rest of the choir. Others retard progress by a fatal facility for forgetting at service or performance every hint given by the choirmaster at the previous rehearsal.

———*———

FROM TRACKER TO PNEUMATIC

BY WILLIAM BENBOW

WHILE we are adjusting ourselves to the new feel of the key and stop action in pneumatics and electrics, we shall soon meet with an experience like this: The registration of some piece will call for Sw. to Gt. coupler. We press the required piston or domino and play, but we do not see the Sw. keys come down as they did in tracker action. Nothing *visible* happens at the keys when couplers are manipulated.

Again, let us suppose we are to use Gt. foundation stops without reeds, coupled to Sw. full with reeds, and Gt. to Ped. That combination on trackers sounds massive and substantial. But we miss something when we try it on the new actions. We listen a moment and analyze the effect and notice that the pedal is weak. We add more 16 and 8 ft. stops in the pedals, and try again. But no, there is not enough "bite" in the pedal. Now let us play on the Gt. C (second space, bass), then play the middle C on the pedal board. Throw in all the pedal stops, but keep Gt. to Ped. You think you should get the same effect. But it will only take a moment to hear the Sw. reeds when you play on the Gt., and no reeds when you play the Ped. And yet you have Gt. coupled to Ped. Now add Sw. to Ped., and you will learn the lesson that on the newer actions Gt. to Ped. and Sw. to Gt. does not pull down Sw. to Ped., as it does on the tracker.

Along similar lines suppose we are arranging the registration for Guilmant's earlier D minor sonata. In the development of the first movement we find "Add mixtures." You look over the stops and find that there are no mixtures. To adequate the effect, you look again at the stops and find "Gt. super to Gt." or "Gt. 4 ft. to Gt." and try that. You find the effect too thick and top-heavy. As you already have Sw. to Gt., you find "Sw. 4 ft. to Sw." and try it. You play on the Gt. again—but not a particle of difference has been made. Shut off "Sw. 4 ft. to Sw." and try "Sw. 4 ft. to Gt." Now you get the effect you expected before. From these illustrations learn this. Do not expect a *double* effect from any coupler.

For every move of registration an organist makes at the console there is a corresponding mnemonic registration in his mind. This is emphasized when one meets the modern "suitable bass" feature. Sometimes this idea is carried so far that with every manual stop you pull there will be added automatically a pedal stop for its accompaniment. You pull Gt. Melodia, and the Ped. Lieblich Gedacht comes on simultaneously. More often this feature is used only in connection with combination pistons. It is often a convenience, but as the old saying teaches, "there's no advantage without a disadvantage."

Take this registration:

Sw. Soft 8 ft. and Oboe, cp. to Gt.
Gt. full without reeds
Ch. 8 ft. Concert Flute and 4 ft. Flute
Ped. *f* cp. to Gt. and Sw.

The average organist will pull the stops as indicated on Sw. and Ch. and push the piston "Gt. *ff*," then push in the Gt. reeds with his hand. The piece begins on the Gt., so he leaves the suitable bass in the Ped. as it came on when he pushed "Gt. *ff*." Then he adds the couplers. The first page of the piece is a sturdy, virile effect on the Gt., but on page 2 there is a jump to Sw., with the notice "off Gt. to Ped." But no sooner does he play the first chord on the Sw. with pedals, than he hears that the pedal is entirely too heavy. It may take him a while to puzzle out the reason, but eventually he will discover it to be the suitable bass which came on with "Gt. *ff*." This was not affected by the

New Octavo Music

(PLEASE ORDER BY NUMBER)

Anthems: Mixed Voices

ROBINSON, CLARENCE C.

No. 12,553. FOREVER WITH THE LORD - - - - - $0.16
Opens with a tenor solo, which is later accompanied by a four-part chorus, the effect being decidedly pleasing.

ROGERS, JAMES H.

No. 12,549. FOR AS THE EARTH BRINGETH FORTH HER BUD - - - - - - - - - - - - .12
A strong, vigorous anthem for harvest services, with soprano solo and quartet passage; has a fine climax.

STEWART, H. J.

No. 12,492. IT IS A GOOD THING TO GIVE THANKS UNTO THE LORD - - - - - - - - - - - - .16
For festival and general use; bass solo, *ad lib.*

WESLEY, SAMUEL SEBASTIAN

No. 12,527. LEAD ME, LORD - - - - - - - .05
A short, easy anthem, with solos for alto and soprano voices.

Catholic Choir Music

FALKENSTEIN, J.

No. 12,477. DICITE - - - - - - - - - $0.08
No. 12,474. PASCHA NOSTRUM - - - - - - .08
No. 12,475. QUI SEDES, DOMINE - - - - - - .08
The first two are short responses for communion services, the third a gradual for the third Sunday in Advent.

Part-Songs: Women's Voices

MARCHANT, ARTHUR W.

No. 12,514. SONG TO PAN - - - - - - - - $0.12
A two-part setting of an old English poem in gavotte rhythm, bright and tuneful.

No. 12,516. SPRING SONG - - - - - - - - $0.12
A three-part setting of one of Mrs. Hemans' finest lyrics; full of life and the spirit of the season.

No. 12,517. SUMMER'S GOOD-BYE - - - - - - - .12
A good piece for concert use, set for three-part chorus, rather quiet in style, with pleasing melody.

Part-Songs: Men's Voices

CUSTANCE, ARTHUR F. M.

No. 12,494. THE CONFESSION - - - - - - - $0.12
A humorous number, to be sung with mock dramatic delivery; one that will bring a laugh.

DENZA, LUIGI

No. 12,520. FUNICULI-FUNICULA. Arr. by Ross Hilton - .12
A favorite Italian folk song arranged for quartet or chorus of men's voices.

KITTREDGE, WALTER

No. 12,525. TENTING ON THE OLD CAMP GROUND - - .12
An effective arrangement of a popular song of the Civil War period.

RANDEGGER, ALBERTO

No. 12,490. HARK! THE HORN AWAKES THE MORN (with horn, *ad lib.*) - - - - - - - - - - .16
A hunting chorus, very popular in England; the accompanying horn part is an effective novelty.

ROBINSON, CLARENCE C.

No. 12,552. PHARISEE AND SADDUCER - - - - - - .10
A short, humorous four-part song, for chorus or quartet; a good encore number.

TOSTI, PAOLO

No. 12,521. GOOD-BYE - - - - - - - - - .12
A four-part arrangement of Tosti's famous song.

"off Gt. to Ped.," and was, of course, too heavy to be suitable bass to the Sw.

Another point about the suitable bass may be illustrated by the following example: Frequently we find, especially by German composers, a registration expressed in very general terms.

Sw. Soft 8 ft.	Gt. *mf*
Ch. *mf*	Ped. *mf*

The organist simply pushes in the pistons indicated, in the order given. The piece opens up on the Gt. The organist does not play far before he is aware that the pedal is too thin. If he will now push the "Gt. *mf*" piston again, he will see that there is a change made in the suitable bass. Why is there any change there? Because, at first, he pushed in the "Ch. *mf*" piston *last* and its suitable bass was weaker than the "Gt. *mf*" suitable bass. If you begin to play on the Gt., push its piston *last* in order to have the proper bass. Literally, the last shall be first, and the first shall be last, in this connection too.

It doth not yet appear how soon the principle of the "wireless" may be applied to the development of organ effects, but wire itself is so useful and obedient a servant that we can hope for endless possibilities of its use. We have heard of some modern organists who have gone so far as to electrify their audience. At any rate, this little wire can "rob" right and left, and we must not be surprised at anything we see in a modern console.

The first (?) public recital that Mr. Noble gave in America was on the fine new Haskell organ in the Central High School in Philadelphia. There you will find three stops in a row, marked Tuba 16 ft., Tuba 8 ft., and Tuba 4 ft. It is the little wire, "imitating at the octave" above and below, that does the trick. The advantage is that it gives you an 8 ft. stop with an independent sub and super. In its extreme application one can play any stop upon any manual. This, of course, means a re-arrangement of one's mnemonic card system.

———*———

THE ORGANIST'S REPERTOIRE

BY CARL L. GULICH

IT is with difficulty that the young organist, fresh from conservatory privileges, realizes that at least ninety-nine out of one hundred, in the average congregation, not only fail to comprehend, but scorn the Bach *Prelude and Fugue* and, indeed, compositions of much lighter vein. And, sometimes, becoming discouraged with the outlook before him, he subscribes to one of the cheap monthly or quarterly magazines of organ music which make up in quantity what they lack in quality.

Occasionally, however, there is one who feels his duty to be the elevation of the musical standard in the church he is serving. Having this aim in mind, the situation is examined to see how low he need stoop to reach the plane of the hearers.

The organ concert, although useful in this capacity, is not always practicable in a country church, hence attention turns to the service as a means whereby an end may be attained. Here, as a rule, two preludes, offertories and postludes appear; ample field for the accomplishment of good or evil.

Much has been written regarding the nature of the model prelude—"Of quiet, devotional character, disposed to lead the hearer to thoughts of worship"—and we all agree to this as far as it goes. But in the average country town the main opportunity for musical development is through the churches, hence it is that this view of the prelude becomes small and unsatisfactory. Something larger seems necessary that the full compass of music be conceived.

It is to meet this need that the evening prelude comes to our aid. All conditions, musical and otherwise, are at their best at this time. Taking the idea from the city, where twenty minutes before service is sometimes devoted to a brief recital, let the country organist select one good organ solo to be used at this period. The musical awakening accomplished will be surprising.

Not long since, I served temporarily as organist in a small town where the musical condition was lamentably low. Although giving care to the selection of every part of the service, especial attention was bestowed upon the evening prelude, with the result that when I left, at the end of two months,

the full scope of music was understood to such an extent that no more will that congregation be satisfied with the aimless andantes to which it had listened so long.

Among the compositions chosen for this purpose were the following: Lux's treatment of the Sicilian air, *O Sanctissima* (which proved the most popular of all); *Hosanna*, by Paul Wachs; *Fantasie de concert, Il Trovatore*, by Knäbel; *Marche solennelle*, by G. H. Loud, and by Gounod.

Variations on hymn tunes are always favorites with the average congregation. Spark has a pretty set on *Jerusalem, the Golden*, which I sometimes use.

There is little room for variety in the choice of offertory, the mission of which seems more to fill in an unavoidable gap than otherwise. Short selections alone are available here. Two compositions occur to me which seem especially popular in this capacity: *Hymn of the nuns*, by Lefébure-Wely, and Dubois' *Cantiléne nuptiale*.

Some one has called the postlude "an outward sign of an inward work." Certain it is that no other part of the service affords such opportunity for the use of the many grand marches with which organ music abounds.—*Choir and Choral Magazine.*

———*———

THE ECHO ORGAN

BY H. C. M.

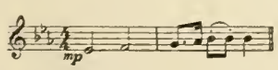
A NEGLECTED composer! Who? Eduard Silas. If one will turn to Novello's organ catalogue one will find a long list of works to the credit of this gifted man. Silas has been dead some four years and it would seem that his not too prosperous later life was to be followed by a forgetting of the man and his work. I have taken the trouble to look up twenty-five or thirty English organ recital programs, numbering over 250 compositions, and not once does Silas's name appear.

I met him once in 1886 in Messrs. Weekes & Co.'s music store in London, and I remember his telling me about arresting an insolent beggar and compelling him to go to the nearest police station, through the use of—a lead pencil! The story is too long to tell, but it was spicy.

THERE are, among a number of fine organ pieces, three or four that I feel to be unusually fine compositions. There is *Elegy* in B♭ minor. A dialogue between oboe and 'cello develops into a triumphant processional march for full organ, as if a hero's cortége were marching solemnly up the nave of some great cathedral. The duet is resumed and the piece ends in the minor, profoundly sad.

Quite different is the *Fantaisie* in D minor and major, introducing James the Second's march. This, too, is a piece some ten minutes long, in three distinct divisions, the last being the brilliant march. If played *alla breve* the concluding section will be found very vigorous and even imposing.

A piece of a not familiar type is *Meditation in a Cathedral.* Here we have a theme treated most interestingly,



with all the skill of the accomplished contrapuntist, with the lyric feeling uppermost. The piece rises bit by bit through a long crescendo to a splendid *ff* climax continued through the last page. With a large organ, the right building, the right people to listen, the effect would be awe-compelling. The piece, however, that, in a sense, I love the best of all the things of Silas's I know, is his two-movement *Fantaisie* in E minor and major; there is something so austere, so noble about this piece, that it is one of the few pieces I play when I want to play solely for my own enjoyment.

AN interesting review of American and Canadian organs is given in a recent *Musical Standard* by an English organist, Gatty Sellars. He finds the inventiveness of the Yankee builders rather trying, since it results in a bewildering variety of consoles.

"Regarding the consoles in the States, one rarely finds two builders with the same idea of the arrangement of even the draw-stops. The generally accepted arrangement is so far reversed in many instances that one feels one ought to be 'standing on one's head,' so as to view them in the position previously accustomed to. Even when tablets are employed (and these are now becoming very general), many different forms are used, one builder (an Englishman, by the way) having them arranged in circular form in varied colors, giving the effect of a rainbow. In one such instance the organist, who was a Durham graduate admitted that he did not feel comfortable in playing any of his solos publicly under two weeks' rehearsal, even though he was playing the instrument regularly. Most extraordinary of all was the abolition by one firm of both draw-stops and tablets, in place of which an extra manual was added above the others. Each white key of this extra manual represented a register, the name appearing on the end of the key facing the performer. To bring the register 'on,' the white key was placed down; to 'release,' the next black key must be pressed down. It is satisfactory to note that the firm in question is more generally now adopting tablets.

"When in Oregon I played on a fine instrument by one of America's largest firms; yet even then, the couplers were distributed between pedals (placed along the usual compositions), draw-stops on each side, pistons under the keys and tablets over—truly a "Chinese puzzle"! When, in addition to this, the stops are motionless when operated from the pistons, and one must look at a "disc" to see what registers are on or off, one may note that it is hardly a 'bed of roses' for the touring organist, especially if his train is late, which may be sometimes many hours, and he is compelled to appear without rehearsal. In such instances it is a *sine qua non* that his program must be rendered from memory, as his eyes will be fully required for emergencies at the console, especially when, in addition to all of the above, the couplers are operated by pistons (some under, some over, the manual), one of which brings the coupler 'on' and another takes it 'off.' It is pleasing to note that in the later organs things are generally progressing towards a regular system of tablets. Whether these are preferable to the draw-stops is open to question. Personally speaking, after nearly one thousand recitals on different American and Canadian organs, I still adhere to draw-stops placed at an angle of 45 degrees as being the simplest and most convenient arrangement."

Mr. Sellars thinks the actions of American and Canadian organs leave little to be desired and much of the mechanical work is magnificent. Frequently in small towns several churches have three-manual organs. English organists are recommended to go out to "the States" and prove that "they can deliver the goods"; they must have a moderate capital on hand in order not to be stranded in case of an emergency. "He must not, on arriving," says Mr. Sellars, "make the fatal mistake of 'hoisting up everything British' and 'crying down everything American,' but give them full credit for their work. He will find plenty to praise. He must be prepared to render an abundance of the light and tuneful style of composition sandwiched in between the heavier, and not be too assertive regarding his own opinions, a fault which may account for so many of the contracts not being renewed at the end of the first year.

"It would not be fair to close this article without acknowledging the great courtesy always extended to me by American and Canadian organ builders."

ALL ART IS BUILT ON NATURE

¶ The art of each **singer, organist, pianist,** or other instrumentalist can never flower so long as nature is interfered with in any manner.

¶ Why? Because every organ must be in a normal condition to secure control if the human instrument is to perform perfectly as the mind wills.

¶ Every woman musician must consider her corset as vital to her success.

¶ This corset is especially designed to make her successful.

¶ The foundation of all perfect tone production is correct body poise.

¶ ***The Natural Line Corset gives this.***

¶ The sustaining of all perfect tone production is **breath control.**

¶ ***The Natural Line Corset aids this.***

¶ The result of perfect tone production and sustaining is the winning of appreciation as a real artist.

¶ ***The Natural Line Corset affords its wearers such distinction.***

¶ Can you afford not to wear it?

TEACHERS' FORUM

CONDUCTED BY BLANCHE DINGLEY MATHEWS

Address all questions relating to the work of this department to Mrs. Blanche Dingley Mathews, 25 E. 18th Avenue, Denver, Colorado.

One of the most interesting letters received from a teacher during the last month, a letter too long and personal for publication, refers continually to the lack of interest in her following in "classical" music, and the injury the self-playing instruments are to her business.

My correspondent evidently feels that she is losing business because she is known to handle only "classical" material; that if she would give "popular" music her class would be doubled within a very short time. She writes me in despair, feeling that she must earn her living and, therefore, give the people what they want.

All teachers, whether in a large or small community, know the type of pupil who comes to the studio for the first lesson, saying, "I can't play any music except the music I like"; or the fond mother who prefaces the first lesson with her child with, "If my daughter loves you she will work for you"! Even though all of us have heard these remarks many times, we never cease to feel a certain discouragement in undertaking the first lesson under such conditions.

Is it possible for my correspondent, who started out with ideals and good training, to overcome the obstacles which seem to beset her on every turn, be true to herself, and at the same time earn her living?

Most certainly it is possible, and if I did not have faith in the power of Music to overcome such conditions I certainly would not want to spend my life in it.

Theodore Thomas used to say that popular music is, after all, only familiar music, and I rather think that if I were in such a community I should proceed with the educative process on this assumption. The self-playing instruments, instead of being a natural enemy, I should think might prove a salvation. How much easier it is to familiarize ourselves with not only the works of the great composers, but also the interpretation of the same by the greatest artists by listening to the records or rolls which are in use on the various self-playing instruments.

A book was recently published by Anne Shaw Faulkner which gives many suggestions for a course of study using the Victor Victrola for illustrations; and it seems to me that this teacher could hardly do better than to give a few evenings on good music using part of the illustrations from the mechanical instruments and part from her own class.

If the self-player attracts them use it and use it hard. Only give them the right kind of music and talk about it in the right way. Don't be lukewarm, but as if it were a part of yourself and a necessity to your well-being. I can't help but think that in a community where there is no symphonic music and but little recital work, these records might be a tremendous power in the upbuilding of a real music life, and might serve as a very powerful stimulus for young piano players using these interpretations of artists as models.

I was astonished this summer in passing through some lumber camps in Northern Maine to find, after the evening meal was cleared away, those woodmen listening to Schumann-Heink, Farrar, and Caruso with absolute silence and appreciation too deep for words. Years ago those same men would have used the fiddle in some jig or other, or have passed the evening swapping lies around the fire. Now they know the best and latest records and speak of the artists as friends.

Let us stop boasting that we teach only "classical" music—for that term alone is enough to raise the bristles on many persons—and confine ourselves to teaching that which we love and want other people to love. Find a meeting ground,—for we always can if we try,—and little by little we can raise the standards and Great Music will become the Popular Music.

* * *

I have a pupil in the fifth grade who is troubled with a cracking in the wrist, which is especially noticeable when the fingers are passing over the hand in arpeggio work. Will you be good enough to tell me what the trouble is and remedy for same?—S. A., New Mexico.

Answer:—It is very difficult to answer your question without seeing the hand. This trouble may come from several things, but I should say that probably it comes from strain, either from the way in which the hand has been trained in music or from some outside strain. It would seem that the pupil has what physicians term "synovitis," the inflammation of the synovial membrane. You do not mention whether there is pain or swelling in connection with the cracking, but I infer there is. There is undoubtedly a lack of the lubricating fluid around the joints, and that causes the cracking and pain, just as a lack of lubrication makes trouble in mechanics.

I should say that rest and only such exercises as tend to control of relaxation be given the student. Make sure that the entire arm is free from tension, that the whole playing apparatus is free from stiffness.

Such exercises as are given on page 51 in *Mason's Fundamental Technics,* Ditson edition, also "Bounding Arm," page 85, Ex. 149, and the fourth form of the Two-finger Exercise will be most useful in correcting faulty habits of hand and arm.

If the pupil were older we might think that there is some gouty condition to deal with, but I rather think you will find it is more from strain than from any other cause. Rest, hot applications, and constant vigilance to make sure that there is no tension in the wrist will, in my opinion, be the best treatment for the condition described.

* * *

I find it very hard to interest my pupils in technic. I have little trouble in getting them to memorize and to do careful work in their pieces, but they will not practise scales or other finger exercises. Can you suggest any method of giving this technic to make it more interesting?—C. G., New York.

Answer:—I have many methods of procedure for getting technical work practised intelligently, some of which may be new to you:

In the first place I have my work graded, by which I mean that I have certain standards which my pupils must live up to, and at the close of certain work, which they can cover as fast as their practice and talent will permit, they must pass these technical examinations before the faculty. This emphasizes the importance of the work and dignifies it very much.

Secondly, I prepare all pieces I teach by certain technical work which is to be used in the piece later. For instance, if I am giving a piece like Mrs. Gaynor's *Little Waltz* in C, I would precede the piece by at least two weeks with the broken chord of C in different rhythms and a three-finger exercise using the 3d, 4th, and 5th fingers in succession for the right hand, and the left hand would have the practice on the chord of F in arpeggio form. If the exercises did not succeed I should not give the piece. After a time the pupil wakes up to the fact that every exercise which is given is going to be used very soon in a piece and she practises it in order to get the piece.

Thirdly, I do not give scales or arpeggios at each lesson, but when I give them I practise them with the pupil and show exactly what I want corrected and why. I think most teachers give scales as a matter of course each lesson, and it is no wonder that the children grow to dislike them and merely practise them mechanically.

If the teacher varies the technic, giving chords when the pieces employ scales or arpeggios, or possibly pedal exercises or some tone production exercise, the pupil will take a more intelligent interest in technical work.

Try the exaaminations and you will find that competition will help where everything else fails, for the American girl, above all else, likes to Win!

* * *

I have lately been criticised in my home town for different things I have done in my work and very unjustly so I think. What should I do? Defend my position in the press or just do what I can privately? I would very much appreciate your opinion in the matter.—C. D. N., Nebraska.

Answer:—It naturally depends very much upon what you were criticised for, but in general I should say,—Do nothing! Criticism is the best advertising you could have! One of the first things a professional has to learn is to smile when called names. If you can profit by the criticism do so; but if it is merely malicious, forget it and by no means retaliate. If you are a good teacher time will prove it, you will not need to talk about it. Let your students do the talking for you, and they will, if your ideals are high and you work hard.

You can comfort yourself however by thinking that if you were out of business and just a plain married woman with Paris clothes going into society and playing bridge, all the criticism you would have in a month in music work wouldn't equal what she would receive in one afternoon of careless bridge playing. The "post mortems" which society women hold after each hand of auction bridge give rise to more personal criticism than professionals receive in a long time, and are no less acrimonious in expression.

BOOK NOTES

The Life of Ethelbert Nevin. By Vance Thompson. Boston Music Co. Price, $2.75 net.

Among American composers the name of greatest interest, perhaps after MacDowell's, is that of Ethelbert Nevin. The present volume is based on Mrs. Nevin's memories and upon her husband's letters. The book comes in answer to a constant demand extending over a period of years beginning before the death of the composer. Editors of musical papers were accustomed to being asked to supply biographical details concerning this very popular American composer, but found it impossible to give more than a few facts. It is a real service to the record of music in the United States that has been done by the author and the publisher.

The story of Nevin's life is brought out in narrative and by letters which he wrote to members of his family and friends. Incidents connected with the making of his compositions are recounted, furnishing a fund of material to program makers and to music study classes. For example, the stories of *Narcissus* and *The Rosary* are full of interest, and will give the public the true details of these wonderfully popular pieces.

Here is a book that will have a permanent place in our American musical literature, and one that should be in the library of everyone who has an interest in American music.

Beethoven. A critical biography. By Vincent D'Indy. Translated from the French by Dr. Theodore Baker. Boston Music Co. Price, $1.25.

This work by the famous French composer is not a mere biography. While the course of Beethoven's life is indicated the greater part of the book is devoted to a critical study of the music of the master, a task for which the author's splendid attainments as a composer, critic, and teacher have eminently fitted him. The student of Beethoven's compositions, who knows that interpretation depends most on things not set down on the printed page, will read D'Indy's comment with avidity and to his great advantage. This applies with special force to the sonatas and quartets. If you have no work on Beethoven in your library this is the one you should get.

A Manual of Music for use in Training Colleges and Secondary Schools. By T. Keighley. Mus. Doc. Longmans, Green & Co. Price, 50 cents, net.

This little book is intended for class work in the elements of music and prepares for examinations on the lines prescribed by the prominent organizations of musicians in England. It is a handy, compact book that should prove helpful to piano and singing pupils who are deficient in musical knowledge.

Rudiments of Music. By Arthur J. Abbott. American Book Co. Price, 20 cents.

A handy little book intended for use in work with elementary classes in the public schools. To the reviewer it seems admirably adapted to the purpose intended, the definitions and explanations being clear and readily comprehended by children.

Parsifal and Wagner's Other Operas. By Richard Northcott. Percy Lindley, 30 Fleet St., London. Price, 50 cents, net.

The book contains the story of *Parsifal* told in a simple, direct style with notes on its composition, making an interesting story for the musician and the general reader. Added to this is a bibliography, a record of first representations of Wagner's operas in Europe and America. A useful contribution to the Wagner literature.

Ueberblick über die Musikgeschichte und die musikalische Formenlehre. Von Dr. Hugo Löbmann und Karl Gast. Berlin, Trowitzsch & Sohn. Price, 25 cents, net.

The book is just what the title sets forth, "a survey of the history of music and the principles of form in music." It is intended for class use in schools of music and collegiate institutions. So far as we are advised it is published only in German.

Milton's Knowledge of Music: Its Sources and its Significance in His Works. By Sigmund Gottfried Spaeth. Princeton University Library.

This work was presented to the Faculty of Princeton University in candidacy for the degree of Doctor of Philosophy. Among the great masters of literature Shakespeare, Milton, and Browning are the most prominent in their references to music and the use of musical terms. Milton played the organ while still a youth and therefore had a practical knowledge of the art. "He stands alone among poets," says Mr. Spaeth, "in his unerring accuracy in the use of technical terms, in the sincerity and spontaneity of his enthusiasm for music, and in his broadly idealistic adaptation of the art to his accustomed methods of thought."

The author has searched out every reference to music in the works of Milton, and used this material in his study of the poet. We note with considerable interest the statement that Milton had a sincere conviction that music should form an important part in any scheme of education. Any club of students who are interested in literature and music will find most valuable study material in this book.

Chopin, the Composer. By Edgar Stillman Kelley. G. Schirmer. Price, $2.00.

The reviewer considers this one of the most valuable books of the year and a fine contribution to the existing Chopin literature. It is further a genuine satisfaction to those of us who are interested in American musical work to know that a book showing such splendid scholarship should be the work of an American.

The value of the book, as it appears to the present writer lies in the fact that the author has struck out on almost entirely new lines. This is not conceived from the point of view of biography, of pianistic or esthetic analysis. As the author says in his introductory comment, it is not "devoted to the expression of opinions concerning the import of certain compositions and their interpretation, but rather to the discussion of that which admits of little or no dispute—the musical structure."

Very interesting are two statements in regard to Chopin as a composer. A German, name not given, was enthusiastic about Chopin in a general way, but urged weakness in sonata form, orchestration, etc., adding that "in the eyes of a great contrapuntist like Kiel, Chopin would not have been regarded as a musician." The other statement was made by Napoleon Ledochowski, the author's teacher, whose family had been intimate with that of Chopin. He said: "After you have studied the

A Book about Pianos FREE

Will you accept, with our compliments the most interesting and instructive booklet ever written on how to judge a piano? ¶ It is so easy to be fooled about a piano. ¶ The case is all you can see—yet it is the least important part. ¶ It's the pith—the inside, that really counts; and that is why we have named this new book "The Pith of the Piano Problem." Written in a clear, simple, non-technical way, "The Pith of the Piano Problem" tells you how to avoid the pitfalls as well as how to find out the good points of a piano. ¶ Anyone can understand it, and apply the simple rules set forth—no matter how little he or she may know about music—and it is equally helpful to the expert musician. ¶ Your copy of "The Pith of the Piano Problem" will be mailed gratis. Write today—a postal will do.

laws of form and composition you will find that although they are much more complex, the works of Chopin are based upon the same fundamental principles as those of Mozart and Beethoven, and you will find them susceptible of analysis."

This indicates the problem which Mr. Kelley set himself to solve, and in doing so critically examines many of Chopin's compositions.

Clarke's Standard Organ Building, for Clergymen, Church Officials, and Organists. By William Horatio Clarke. Richard G. Badger, Boston. Price, $2.00, net; postage, 12 cents.

How often has it proved to be a fact that a committeeman or other church official uninformed as to the special conditions involved in the planning and purchase of an organ has unwittingly contributed to partial failure in the project The author has had practical experience which fits him to handle the subject in an authoritative manner. For some years he was the proprietor of an organ factory and every detail of construction passed under his inspection. In addition he had a high standing as a player, and has placed to his credit a number of volumes of organ music and literature. We can therefore most unhesitatingly recommend *Standard Organ Building* as a text-book by which church authorities may safely be guided in negotiating for the purchase of an organ. Of particular value are the last thirty-five pages in the book, which contain general information as to value, specifications, contracts, responsibility, tests of an instrument before acceptance, guarantee, and other details of a business character essential in the negotiations.

[Shortly before going to press with the above, word was received by the Editor of the death of Mr. Clarke, December 11.]

Part Songs for Female Voices. Designed for Colleges, Normal Schools, and High School Glee Clubs. By Shilo Shaffer Myers, Mus. Doc. American Book Co. Price, 20 cents.

This is a collection of favorite songs arranged as trios and three-part choruses, with some compositions by the compiler, twenty-five numbers in all. The book should meet with favor among school supervisors of music.

GENERAL NEWS ITEMS

WORK has been begun in San Francisco on a million-dollar music hall which will have a seating capacity of 11,000. This hall will be used for a continuous music festival during the Panama Exposition.

HILLGREEN & LANE, of Alliance, Ohio, have offered to the American Guild of Organists to provide a prize of $100 for the best organ composition. The competition closes March 15, 1914. All inquiries should be addressed to John Hyatt Brewer, 88 South Oxford Street, Brooklyn, N. Y.

MRS. KENNEDY-FRASER, a Scottish authoress, who has made a compilation of the old Celtic songs of Scotland, gave a lecture recital on the subject before the MacDowell Club of New York, early in December, assisted by her daughter, Miss Eilidth Kennedy-Fraser. These songs have recently been published by Boosey & Co.

GEORG SCHUMANN'S oratorio *Ruth* was sung by the Oratorio Society of New York, Louis Koemmenich, conductor, December 5. The soloists were Florence Hinkle, Mildred Potter, Putnam Griswold and T. Foster Why. December 26 and 27 the Society sang *The Messiah.*

BOWDOIN COLLEGE offers a prize of $50 for the best musical setting of the new college song, *Forward the White,* the contest to close April 1, 1914. Copies of the poem may be obtained by application to Prof. E. H. Wass, Bowdoin College, Brunswick, Maine.

SIR FREDERIC H. COWEN, the English composer, has recently published a volume of reminiscences under the title *My Art and My Friends.* It is full of interesting incident and comment upon musical matters.

THE Barrére Ensemble, of New York City, gave a series of expositions of classical and modern chamber music at different universities. December 1, at Yale; December 4, at Harvard; December 12, at Princeton.

HARVARD UNIVERSITY is building a new home for the Department of Music, the same being made possible through the anonymous gift of $80,000 from a graduate and an endowment fund of $50,000 raised by subscription. It will contain a hall with a seating capacity of 600, with large stage and organ.

THE *Musical Leader,* of Chicago, makes the announcement that Humperdinck is coming to New York City next season, and will teach composition at one of the schools of music in that city.

PRIZES for musical work will be offered at the Panama-Pacific International Exposition, San Francisco, in 1915. $20,000 will be contested for in the chief choral competition and $10,000 for male choral organizations in the International Eisteddfod. Other competitions will be in solo, recitation, musical, and poetic classes.

PITTSBURGH is to have a musicians' club. This adds another to the growing list of men's musical clubs. We hope to be able to report other new organizations during the coming year.

THE Marshall Field & Co. Choral Society, of Chicago, founded in 1907, now has a membership of nearly 200 singers. Heretofore one concert has been given each season. The number has been increased the present season the first having been given December 4, the second being set for April 16, 1914.

THE Aeolian Choir, of Brooklyn, Mr. N. Lindsay Norden, musical director, gave a concert of Russian music, November 19, the program consisting of *a cappella* music. Three other concerts will be given by the choir during the season.

MISS HELEN WARE, a young Philadelphia violinist, made her début at a private recital in the ballroom of the Bellevue-Stratford Hotel, November 18. Miss Ware has made a specialty of Hungarian music.

THE *Quartetto Triestino* sends THE MUSICIAN a set of their programs for the present season. Among the compositions unfamiliar to American audiences we note a quartet in G minor by Roger-Ducasse, one in Eb Op. 109, by Reger, a quintet in B minor. Op. 7, by Perinello, and a quintet in E major, Op. 2, by Giorgio Széll, a Viennese composer.

IN the eleventh annual competition for the W. W. Kimball Co. prize of $100, offered by the Chicago Madrigal Club, D. A. Clippinger, conductor, the prize was awarded to Mr. Louis Victor Saar, of Cincinnati.

THE Board of Education of New York City will continue its series of public lectures on music and recitals during the present season. Mr. J. S. Van Cleve, Mrs. Mary Gregory Murray, and Miss J Katherine Hand are among the lecturers announced at the beginning of the season.

BUSONI has accepted the position of director of the conservatory at Bologna, and will also be conductor of the symphony orchestra of that city.

THE Philharmonic Orchestra, New York City, will co-operate with the Wage Earners' League in three great concerts at the Madison Square Garden. The orchestra will be enlarged and celebrated artists will assist. The price for admission will be small on account of the great seating capacity of the hall.

GENERAL NEWS ITEMS

OPERA, seven nights a week, ten months a year, is the record of Berlin, according to one who claims to have gone over the figures carefully.

THE People's Choral Union, of Boston, F. W. Wodell, director, will include *Elijah* in this year's program.

PITTSBURGH is to have a series of concerts this fall and winter by a local orchestra of forty men under the direction of Carl Bernthaler. These concerts will be given in Carnegie Hall and will include local soloists.

THE following committee of the Illinois Music Teachers' Association is at work preparing an outline for examinations in the various branches of music: D. A. Clippinger, chairman; Rossetter G. Cole, Walter Spry, Herbert Butler, Victor Bergquist, F. W. Westhaff. Those who pass the tests will receive from the association a certificate of efficiency.

HAROLD BAUER will give a series of private recitals to students of the Institute of Musical Art, New York City, and will also conduct a series of criticism classes for advanced pupils.

A Verdi Choir has been established in Rome, growing out of the Verdi Centenary, for the performance of classical Italian music. For the education of its members the city authorities will provide a school in which promising pupils will receive free instruction in singing.

ACCORDING to the New York *Evening Post,* New York music lovers had an opportunity to attend 381 high class concerts and 300 lighter musical entertainments last season. The indications are for an equally busy season this year.

BERLIN is to hear *Parsifal* at the Royal Opera the present season, and Charlottenburg, a famous suburb of the capital, is also to have performances.

PROF. H. OPPENHEIM, a German specialist in nervous diseases, denounces the custom of having music in hotels and restaurants.

THE library of the New England Conservatory, Boston, recently received the gift of the entire music library of the Boston Singing Club, which was disbanded on account of the removal of the director, Mr. H. G. Tucker, from the city. The collection consisted of part songs and other choral works.

INTEREST in music festivals still holds good in some parts of England. The last Gloucester Musical Festival had a surplus of nearly $8,000. *The Messiah* and *Elijah* drew the largest audiences.

AT the request of the Emperor William the various choral societies of Germany are to include in their repertoires a collection of German folk songs recently made under royal patronage.

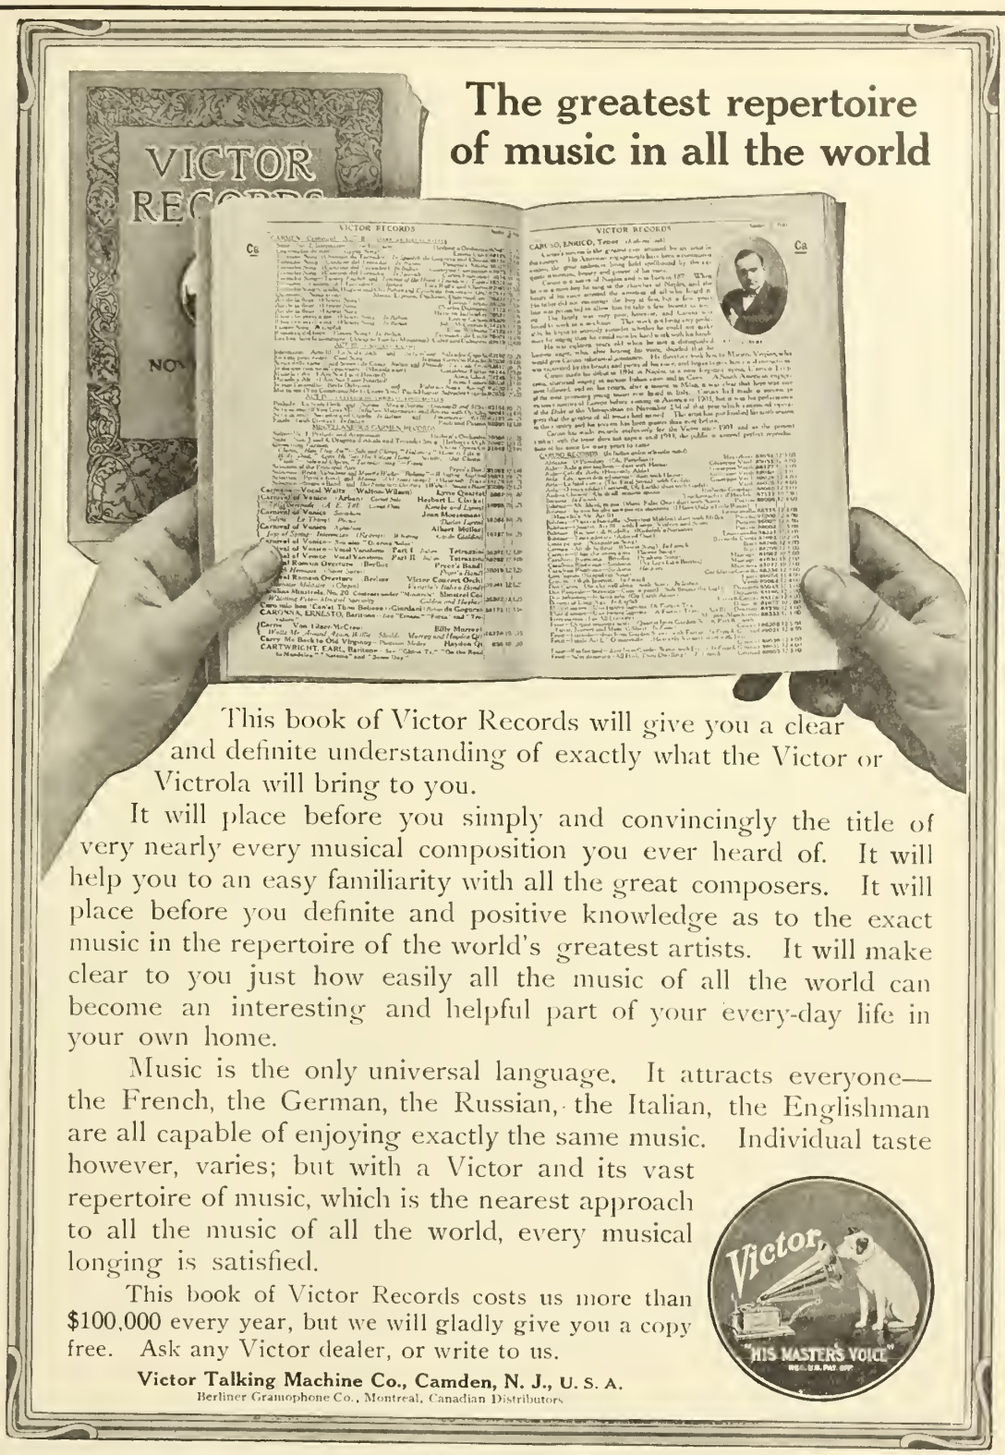
THERE seems to be ground for the hope that Felix Weingartner may be secured as conductor for the Boston Opera Company for a series of years.

THE Royal Philharmonic Society of London is now in its 102d season. There will be seven concerts during the present season.

TWENTY-EIGHT seasons is the record of the Kneisel Quartet. Among the numbers to be used this season we note a quartet in D minor, Op. 45, by G. W. Chadwick.

HENRY A. LANG, of Philadelphia, won the $100 prize offered by the Sinfonia Fraternity for the best piece of string quartet music. Mr. Lang was born in New Orleans in 1854, but after completing his musical education in Germany located in the North.

THE Modern Music Society, New York, Benjamin Lambord, conductor, has entered upon its second season and will give two concerts at Aeolian Hall and four matinée musicales at Rumford Hall, together with lectures given by Mr. César Saerchinger. These lectures are given as an educational factor, in preparation for the concerts.



The greatest repertoire of music in all the world
VICTOR RECORDS
This book of Victor Records will give you a clear and definite understanding of exactly what the Victor or Victrola will bring to you.
It will place before you simply and convincingly the title of very nearly every musical composition you ever heard of. It will help you to an easy familiarity with all the great composers. It will place before you definite and positive knowledge as to the exact music in the repertoire of the world's greatest artists. It will make clear to you just how easily all the music of all the world can become an interesting and helpful part of your every-day life in your own home.
Music is the only universal language. It attracts everyone—the French, the German, the Russian, the Italian, the Englishman are all capable of enjoying exactly the same music. Individual taste however, varies; but with a Victor and its vast repertoire of music, which is the nearest approach to all the music of all the world, every musical longing is satisfied.
This book of Victor Records costs us more than $100,000 every year, but we will gladly give you a copy free. Ask any Victor dealer, or write to us.

Book VI of Graded Studies
For the Piano
Compiled by MRS. CROSBY ADAMS

is now available. This book contains a wealth of good material. The list of composers represented:

MOSCHELES	KIRNBERGER	HANDEL	KESSLER	SCHMITT
JEAN VOGT	JENSEN	BERENS	SPINDLER	WOLLENHAUPT
STERNDALE BENNETT	LOESCHHORN	REINHOLD	CZERNY	BACH (Chorale)
KIRCHNER	PARLOW	GLUCK	BURGMUELLER	HABERBIER
				GURLITT

gives some indication of the scope covered.

Writings by the older masters largely predominate. The preparation for polyphonic playing is interestingly presented through a number of the simpler selections of that nature by Handel. The book contains many other fine examples of writing by the old masters, that adapt themselves fittingly to the grade of difficulty involved in this series.

The contents of Book VI is largely supplemental to Books IV and V, except that greater demands are made for musical interpretation. It is indeed a unique volume, one that teachers will thoroughly appreciate.

Price uniform with the other books ($1.00), subject to sheet music discount

In the Bottoms
A Characteristic Suite for Piano
By R. NATHANIEL DETT

Summy Edition, No. 61 - - - - - - - - - - Price $1.50

This Suite consists of five numbers—Prelude, His Song, Honey (Humoresque), Barcarolle, Dance (Juba)—and pictures scenes peculiar to Negro life in the river bottoms of the Southern Sections of North America. As "Program music," characteristically American, it is no doubt the most representative of anything that has been issued for some years. An ideal is portrayed through it all, which is significantly sincere, and it is done with a degree of musicianship that is not only fully satisfying but that commands admiration for its skill and finish. No attempt has been made at elaborate ornamentation consequently the difficulties are not beyond such as the average good pianist can manage. It is simply a free and spontaneous expression of a concept, masterfully done.

WITH THE SCHOOLS AND TEACHERS

MR. ALBERT SHERMAN HILL and his pupils gave an evening of music at Mr. Hill's studio, Greensboro, N. C., the program consisting of piano and vocal numbers.

THE Pennsylvania State College Male Quartet, under the direction of Mr. Clarence C. Robinson, made a trip to the Panama Canal Zone as guests of the U. S. government during the Christmas vacation, to give a series of concerts at the various Y. M. C. A. clubhouses.

PROF. H. C. MACDOUGALL, of Wellesley College, will deliver a series of Extension Lectures at Brown University, Providence.

MRS. ELISE FELLOWS WHITE, violinist, of Skowhegan, Me., is doing considerable work in concerts and recitals in Maine schools and cities.

MR. ALFRED PENNINGTON, organist, gave a "Twilight" organ and choir concert at Immanuel Baptist Church, Scranton, Pa., Thanksgiving afternoon, with the assistance of the choir.

MR. EDWIN ARTHUR KRAFT, organist of Trinity Cathedral, Cleveland, gave an inaugural recital in the First Presbyterian Church, Nashville, Tenn.

THE VON ENDE SCHOOL OF MUSIC, New York City, gave an invitation concert December 6, the program being played by Anton Witek, violinist, concertmaster of the Boston Symphony Orchestra, and Mrs. Vita Witek, pianist.

Two special musical services were held at the Church of the Covenant, Washington, D. C., recently. November 30 the music was selected from Wagner's works; December 7, Gounod's *St. Cecilia* mass was sung. The choir is under the direction of Mr. Sydney Lloyd Wrightson

MR. ROBERT E. AUCHENBACH, organist of St. John's Reformed Church, Reading, Pa., gave a recital and concert, assisted by the choir, November 18.

PUPILS of Mr. G. Frank Martin, Lynn, Mass., gave a recital of piano music November 22. Seventeen pupils assisted in the program.

AMONG the recent recital activities at the Faelten Pianoforte School, Boston, we notice one on December 6, when a number of pupils from the beginners' class gave a demonstration.

DR. ORLANDO A. MANSFIELD, director of the department of music, Wilson College, Chambersburg, Pa., gave his fourth recital at the college November 29.

PUPILS from the violin, piano, and singing departments of the Von Ende School of Music, New York City, gave a recital, November 14.

MISS PAULINE SIEGAL, of Orange, N. J., a pupil of Mr. Russell Snively Gilbert, played a successful piano recital several weeks ago at Mr. Gilbert's studio.

A RECITAL was given at the Normal Conservatory Indiana, Pa., in November, by Mrs. Edna A. Cogswell, pianist, and Mr. Orley See, violinist. An analysis of each composition was given by Mrs. Cogswell.

MR. WILLIAM JOHN HALL, of St. Louis, arranged a recital by a number of his vocal pupils November 15. American composers were largely represented on the program.

J. WARREN ANDREWS, organist of the Church of the Divine Paternity, New York City, assisted by John Barnes Wells, tenor, and Miss Estelle Harris, soprano, gave an "Afternoon of Sacred Music" November 16 at the church.

1834 **AUGUST MULLER** 1913

VIOLINS

FINE copies of the most celebrated models, artistic workmanship, selected stock. ***August Muller*** Violins are steadily advancing in public esteem and are attracting the attention of Artists and Amateurs alike. The Story Song Book

Words and Music by
Harriette Young Warner and Frances Porter Ross
10 Full Page Illustrations in Color by "Penny" Ross
Cover Design in Color. Bound in Stiff Boards
PRICE $0.75

This child's book of songs is published for the use of mothers and Kindergarten teachers in the hope that the child's everyday experience with flowers, trees, birds, insects, etc., may teach it, through harmony, lessons of cheerful obedience.

The natural expression of a child is through harmony and rhythm, and for this reason **"THE STORY SONG BOOK"** makes an immediate appeal.

AN ALL THE YEAR ROUND PRESENT
Price 75c. Special price in quantities.

VICTOR TALKING MACHINE RECORDS FOR JANUARY

THESE cold winter nights it's mighty comfortable to draw a big easy chair up close to the fireplace and listen to your favorite singer, player, or a band or orchestra number that you love. One gets the full benefit of music under such conditions, there is an intimacy impossible in the crowded, brilliantly lighted concert room or opera house. The January list offers some good things for a variety of tastes. Here are some that strike the reviewer most favorably:

Mme. Melba: *Old folks at home,* Foster, a song that never grows old; the great prima donna gives a superb rendition.

Mme. Gadski: *Annie Laurie,* Scott. Sung in English by a favorite opera singer.

Geraldine Farrar: *Alleluja,* from a motet, *Exultate,* by Mozart.

Mme. Schumann-Heink: *The Kerry Dance,* Molloy. The favorite contralto sings this in English.

Margarete Matzenauer, mezzo-soprano: *Return victorious* (Ritorna vincitor), from *Aïda.* A fine opera number.

Pasquale Amato, baritone: Scene and romance from *The Two Foscari,* opera by Verdi, *My beating heart.*

Clarence Whitehill, baritone: *Lord God of Abraham,* from *Elijah.*

John McCormack, tenor: *A farewell,* by Liddle, sung in English, and *Sospiri miei, andate ove vi mando* (My sighs are wafted on the breeze), by Bimboni, sung in Italian.

George Hamlin, tenor: *Siciliana,* from *Cavalleria Rusticana.*

Jan Kubelik, violinist: Two movements from Handel's sixth sonata, *Adagio* and *Allegro.*

Mischa Elman, violinist: *Meditation* from *Thaïs.*

Lambert Murphy, tenor, and Reinald Werrenrath, baritone: *Swear in this hour* (Solenne in questi ora), duet from *Forza del destino,* opera by Verdi; a powerful dramatic number.

Florentine Quartet: *Narcissus,* from Nevin's *Water Scenes.*

Neapolitan Trio: *La serenata,* by Tosti. These two pieces form a double-faced record. The Quartet consists of a very effective combination violin, flute, 'cello, and harp; the Trio of violin, flute, and harp.

LEARN TO ACCOMPANY without notes. CHORD-SYSTEM LUX teaches anybody how to accompany on the piano or organ WITHOUT NOTES. A great help to beginners and advanced players, with notes. Price, $1.00. Agents wanted.

SECULAR SONGS
HIGH VOICE

DICHMONT, WILLIAM
Such a li'l fellow. [G][d-g]..... $0.40
A simple, expressive setting of a favorite text; a good song for encore use.

GILMOUR, EDWARD C.
Off to the kingdom of dreams (A lullaby). [F][F-g]..... .50
A tender little song in the lullaby style for concert or recital; can be given to pupils in the first year of study.

HYATT N. IRVING
In two sweet eyes. [C][E-a]..... .50
An easy short love song, full of contrasting emotion, making a fine study in changing expression.

KRONOLD, HANS
The bride of Death (*Todesbraut*). Op. 40. [C minor] [(b) c-a> (c)] ..... .50
A song of broad dramatic character for concert or recital use.

Sweetheart's eyes (*Liebchens Augen*), Op. 43. [B♭][E♭-g]..... .60
Somewhat in the style of the German folk-song, except that the accompaniment is elaborated slightly more than usual.

MILLER, WILLIAM T.
The night has a thousand eyes. [G][F♯-F♯]..... .40
A simple expressive setting of this beautiful text.

PUTZ, EGON
Longing, Op. 27, No. 3. [F][d-g].... .50
A love song of expressive quality and an attractive air, good for sustained tone work.

STEINFELDT, JOHN M.
Furl your sail, my little boatie, Op. 42. [D][E♭-F]..... .50
A beautiful little slumber song in which exquisite effects are possible.

WOLF, HUGO
I'm not as other lassies are (*Ich bin wie and're Modchen nicht*). [G][d-g] .50
One of the lighter, easier songs of this great song writer, in the folk-song style.

MEDIUM VOICE

BERGH, ARTHUR
The fate of the flim-flam, Op. 16, No. 1. [A♭][c-E] ..... .50
An effective nonsense song used with success in recital work by well-known singers.

KRONOLD, HANS
Sweetheart's eyes (*Liebchen's Augen*), Op. 43. [C][c-E]..... $0.60
(For description see Secular Songs, High Voice.)

PUTZ, EGON
Enchanted, Op. 27, No. 2. [F][c♯-E] .50
An art song filled with color and atmosphere, and with a fine climax; for second year pupils.

SAAR, LOUIS VICTOR
The moon and the star. [D][b-F♯]... .40
A charming little song with fine climax, dainty in style and full of color; a good study in style and delivery.

WATTS, WINTTER
Blue are her eyes. [D minor] [d-D]... .50
A short love song, with some unusual lyric effects.

Green branches. [E♭] ..... .60
A nature song with a touch of the tender sentiment in it; the accompaniment forms a fine descriptive background to the song.

Hushing song. [D♭][b♭-E]..... .60
A lovely little lullaby, somewhat unusual in style and vocal effects.

Once only, love. [E♭][b♭-E♭(g)] ..... .60
A strong dramatic song for a good singer; requires good diction to make it effective.

WOLF, HUGO .50
I'm not as other lassies are (*Ich bin wie and're Modchen nicht.*) [F]
(For description see Secular Songs, High Voice.)

LOW VOICE

DICHMONT, WILLIAM
Such a li'l fellow. [E♭][b♭-E♭]..... .40
(For description see Secular Songs, High Voice.)

HYATT, N. IRVING
If love be dead. [D] [a-D]..... .40
A love song, tender and appealing in style, with good low notes for a contralto.

MONTAGUE, LAURENCE H.
For you. [D♭][b♭-C]..... .50
In the ballad style, a smooth flowing melody, with effective low notes.

THOMAS, A. GORING
My heart is weary (*Schwer liegt auf dem Herzen Nadeshda.*) [A♭][a♭-d♭] .60
A splendid aria for contraltos from one of the older operas; has both lyric and dramatic effects.

SACRED SONGS
HIGH VOICE

SPENCE, WILLIAM R.
The hush of night hath fallen. [C][E♭-g]..... .60
An effective song for the Christmas season.

YOUNG, WALTER E.
In heavenly love abiding. [F][c-F].... $0.60
A pleasing setting of a favorite hymn; not difficult.

MEDIUM VOICE

GRUBER, FRANZ
Holy night, peaceful night. (*Stille nacht, heilige nacht.*) [C][c-F]... .30
A new edition for single voice of the old German Christmas song.

SPENCE, WILLIAM R.
The hush of night hath fallen. [A][c-E]..... .60
(For description see Sacred Songs, High Voice.)

WELSH MELODY
Loving Spirit, Thou hast brought us out of Error's ways. (Air: "All through the night.") [F][c-D] ..... .50
An adaptation of a sacred text to a favorite air.

LOW VOICE

WOOLER, ALFRED
Send out Thy light. [Gminor] [b-E♭] .60
A big, broad song for the church service in the aria style, very effective, and pleasing to a congregation.

PIANO SOLO

KROGMANN, C. W.
Op. 103. No. 1. Daffodil dance (Valse), I .25
No. 2. The forest brook I .25
No. 6. Chatterbox I .25
Part of a set of six little pieces, both hands playing within a compass of five notes.

Op 104, No. 1. Princess coquette (Intermezzo), III-IV ..... .60
A charming piece in gavotte rhythm, by one of the most popular American composers of piano music.

STEINFELDT, JOHN M.
Country dance (*Danse champetre*). Op. 43, No. 2. III-IV..... .50
A very attractive piece in dance style (French), just the thing for pupils' recitals.

Village wedding procession (*Hochzeitzug im Dorfe*), Op. 43, No. 3. III-IV .50
The rhythm is that of the polonaise and the themes are bright and pleasing; altogether a good teaching piece.

Intermezzo in A♭, Op. 44, No. 1. IV .50
Broadly lyric in style and developed in a musicianly manner; a good piece for delineation of phrases and for pedaling.

VIOLIN and PIANO

ADAMOWSKI, TIMOTHEE
Polish dance (*Mazur*)..... .75
Medium in difficulty and available for teaching, in a mazurka rhythm, with pleasing tunes and sharp dynamic effects, easy double stops; bowed and fingered.

BOHM, CARL
Still as the night (*Still wie die Nacht*). Transcr. by Karl Rissland..... $0.50
An effective transcription of a fine song; good for tone production.

DEBUSSY, ACHILLE CLAUDE
Romance. Transcr. by Karl Rissland. .50
One of this famous composer's finest songs, adapted to the violin with splendid effect.

DVORAK, ANTON
Songs my mother taught me (*Als die alte Mutter.*) Op. 55, No. 4. Transcr. by Karl Kissland..... .40
A lovely melody in the Hungarian gipsy style.

FAUCONIER, B. C.
Reverie, Op. 114, No. 1..... .40
A new edition, fingered and bowed for pupils, of a standard piece.

GUIRAND, E.
Melodrame. From *Piccolino*. Transcr. by A. LeFort..... .40
A broad, melodious piece, fine for study in tone production.

HELLMESBERGER, JOSEF
Entr'acte valse. Transcr. by Karl Rissland..... .60
A dainty, effective composition, just the thing for recitals and home musicales; uses the upper positions.

NERUDA, FRANZ
Slavonic cradle-song (*Berceuse Slave*), Op. 11 ..... .50
One of the gems in the violin literature; carefully edited.

PIERNE, GABRIEL
March of the tin soldiers (*March des petits soldats de plomb*). Op. 14, No. 6. Transcr. by Karl Rissland.. .60
An easy piece except for going into the higher positions.

REHFELD, FABIAN
Spanish dance (*Spanische Tanz*). Op. 58, No. 1..... .75
A fine concert piece with various bowing and pizzicato effects, double stops, etc., all right for advanced pupils.

RICHARDSON, J. HOWARD
Meditation..... .75
A broad, rich melody, partly on the G string.

RISSLAND, KARL
Caprice caracteristique. Op. 15 ..... .75
For concert playing, and study by advanced pupils; it is full of characteristic violin effects, and will please an audience.

SIMONETTI, A.
Madrigale..... .50
A delightful little melody, moderate in difficulty; good for pupils' recital work.

STRAUSS, RICHARD
Reverie (*Traumerei*). Op. 9, No. 4. Transcr. by Karl Rissland..... .40
Full of feeling and quiet charm; one of the easier compositions of this famous composer.

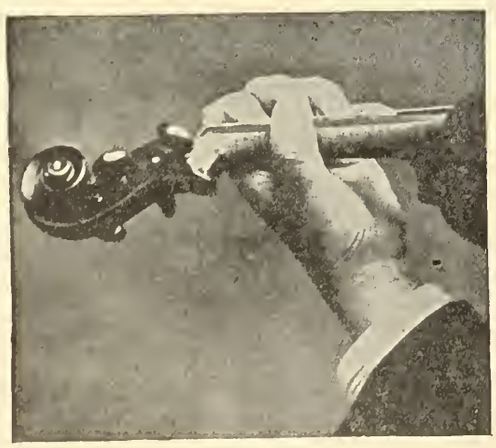

Figure III. Position of the Left Hand

THE PUBLIC SCHOOL CLASS METHOD FOR THE VIOLIN

By Albert G. Mitchell, Mus. D.
Assistant Director of Music, Boston Public Schools

DITSON EDITION, No. 176
Price, 50 cents, net; by mail, 5 cents extra

THAT the violin may be successfully taught to classes of beginners in schools has been abundantly proven abroad. Dr. Mitchell is proving it right here in Boston in the Lowell, Mary Hemenway, Prince, Norcross, Shurtleff, and Dillaway Schools, where this book is used.

By the aid of pictures, diagrams, text, and easily memorized exercises, the author presents his subject with great clarity, in a manner stimulating and unconventional. Though designed for class use, the work is also suitable for individual instruction.

BOSTON: OLIVER DITSON COMPANY
New York: Chas. H. Ditson & Co. Chicago: Lyon & Healy

Graded Material for the Left Hand

By H. C. MACDOUGALL
Professor of Music, Wellesley College

Ditson Edition, No. 112
Bound in paper **Price, postpaid, $1.50**

"If your left hand needs training send for 'GRADED MATERIAL FOR THE LEFT HAND,' by H. C. Macdougall, for students of the piano, and let him tell you just what to do and how to do it."—*John Orth.*

"I have given practical expression of my opinion by using the work in special cases amongst my own students, and by warmly recommending it to other instructors and students on both sides of the Atlantic."—*Orlando A. Mansfield*, Mus. Doc., F.R.C.O., F.A.G.O., Prof. of Music, Wilson College, Pa.

The MUSICIAN

FEBRUARY 1914

5¢ COPY OLIVER DITSON COMPANY, BOSTON, MASS. 1.50 YEAR

Greatest Subscription Offer of the Season

THE MUSICIAN has made special and unusual arrangements with the publishers whereby we are enabled to offer this entire combination of four splendid magazines.

Pictorial Review,	**monthly**	**(fashions) one year**	**$1.00**
Modern Priscilla,	**"**	**(needlework) "**	**1.00**
Ladies' World,	**"**	**(household) "**	**1.00**
and THE MUSICIAN	**"**	**"**	**1.50**
Total subscription value of these four magazines			**$4.50**

ALL ONE YEAR FOR . . $3.15

8 Fine Rose Bushes, value $1.00, additional. Free, if order is received not later than March 31.

These three great standard, national family magazines are of the very highest class. Each is a leader in its particular field. All are as good as money and organization can produce.

Something About These Three Standard Family Magazines

PICTORIAL REVIEW is a large magazine of ninety or more pages, profusely illustrated throughout---hence its name. Its fashion pages are justly famous ---in fact they lead the world in the showing of newest styles. Its Fiction, its special features and its departments are eagerly awaited monthly in over a million average American homes. The household departments are edited with just one purpose---to show you how to save money and make it go farther. Then, too, there are general departments on Embroidery, Home Dressmaking, Home Millinery, etc.

THE LADIES' WORLD is a thoroughly practical and up-to-date household magazine, and treats of every subject of interest to women and the home. Its household departments are as good as a course in Domestic Science. Its stories, verses and entertainments for children always please and interest, and at the same time convey some instruction that is of value. THE LADIES' WORLD is particularly valuable to the home manager. Its suggestions for saving expense and new ideas for doing things make THE LADIES' WORLD a practical guide for women everywhere.

MODERN PRISCILLA is recognized as the leading Fancy Work magazine in America. It is today the undisputed authority on all kinds of Embroidery, Crochet, Lace Costumes, Lingerie, and Home Decoration. There are several departments devoted to China, Oil and Water Color Painting, Stenciling, Pyrography, Leather Work, Basketry, and the like. No other magazine publishes anywhere near so many designs for all sorts of fancy work or gives you so many ideas for making dainty dress accessories, as MODERN PRISCILLA.

IF YOU ARE ALREADY A SUBSCRIBER to any one or all of these magazines, your subscription will be extended for one year from the time it is now due to expire. These magazines will be sent all to one address or to separate addresses as requested.

These are the Roses we offer FREE

EVERBLOOMERS

BESSIE BROWN:—Snow-white, delicately tinted pink. Flowers large and beautifully formed, lasting a long time after being cut. One of the finest roses of late introduction.

KAISERIN AUGUSTA VICTORIA: — Delicate creamy white. Buds are elegant, long and pointed; flowers full and double; very fragrant. One of the most beautiful of all roses for open ground culture, being perfectly hardy.

MRS. B. R. CANT:—A beautiful rose of splendid habit of growth, being very strong and free blooming, bearing large double flowers of a beautiful carmine red. Valuable for outdoor culture.

PEARL DU JARDIN (Pearl of the Garden): — Rich golden-yellow. Often sold in cut flower stores for "Marechal Neil," so close is the resemblance. Buds of immense size; flowers globular and very fragrant. Dark, thick, shiny foliage.

WELLESLEY:—Clear rose-pink, reverse of petals silvery rose. A vigorous grower and free bloomer, with extra large double flowers.

PINK MAMAN COCHET (the Queen of all Pink Garden Roses).—Such beauty and exquisite form as is possessed by this variety is well nigh marvelous. The buds are beautiful, large, full and firm and elegantly pointed; as they expand they show great depth and richness, sometimes measuring two and one-half inches from base to tip. Perfectly hardy in all sections of the country. The color is clear, rich pink, changing to silvery rose.

CLIMBERS

LADY GODIVA:—A new climbing rose. This rose is similar in habit of growth to the Crimson Rambler. Blooming in immense clusters it is a beautiful sight. Its color is most pleasing, being a pale flesh, the lightest of all the pink ramblers. The individual flowers are very large, borne in great clusters. A very rapid and free branching rose; hardy as an oak, deserving a place in every garden.

TAUSENDSCHON (Thousand Beauties):—The most sensational climbing rose yet introduced, blooming profusely from the beginning of June until the last of July; the double flowers appear in large clusters. The color runs from delicate balsam or tender rose through the intermediate shades of bright rose and carmine, with white and yellow tints showing. There is no other rose in cultivation like it. It is a strong grower, with but few thorns, and absolutely hardy.

To the above Combination of THE MUSICIAN, Woman's Trio and 8 Rose Bushes, add the following at prices given:

FIVE INTERMEZZI FOR THE PIANO

OP. 6—PRICE $1.25
(Sheet Music Discount)

By Dr. F. Morris Class

Class of Harvard 1903

Composer of "Why Does Azure Deck the Sky." Med. in E flat

One of the late Prof. John K. Paine's last pupils. Composer of the Hasty Pudding Opera of 1903. Leader of the Harvard Glee Club

Dr. Class is now a practicing physician; but his work in composition is pursued with uninterrupted ardor, and his musical activity takes many forms. His **Five Intermezzi** are real mood pictures, displaying a sensitive impressionism. They are modern in treatment and harmonic feeling, but the note is not forced nor so radical as to be ungrateful to more conservative ears. In point of technical demands the pieces are of a practical moderation, though their poetic content may, of course, be most successfully expressed by the comprehending musician. Distinctive, refined, and withal charming, these pieces will go far to make the name of their composer respected among music lovers.

I have just received your Five Intermezzi for the Pianoforte and hasten to tell you what a fine addition I think they are to modern pianoforte literature. They will be unusually useful for teaching purposes, particularly because of their beautiful melodious quality which makes them excellent also for training tone quality, the melodies sounding really inspired—so rare in these days—and not banal. I have not run across any new works lately which have so thoroughly pleased me. Two of the Intermezzi will be put on my next recital program, and as soon as they are on sale I wish to give them to a number of pupils. The "Quasi Berceuse" and "Siesta" are particularly captivating.—**William Hatton Green,** *Director of Conservatory of Music, Philadelphia.*

NEW MUSICIANS LIBRARY VOLUMES

Forty Songs by Adolf Jensen. Edited by W. F. Apthorp. Low voice.

THE songs of Jensen have been increasingly gaining the high place among German *Lieder* which is theirs by right; for it is by his songs that this composer will permanently be known. In this volume are gathered the finest of his lyrics and they form a collection of rare excellence, and do full justice to his sharply defined musical individuality. Their conspicuous qualities are great elegance, charm, and spontaneity of melody, harmonic subtlety, warmth of emotional expression, and a southern richness of coloring; indeed the glowing euphony of his piano writing has never been surpassed. New and excellent translations, a readable monograph by Mr. Apthorp, and an excellent portrait are features of this well-equipped volume. Every teacher of singing who wishes to be ready with works of the classic song repertoire, and every concert singer will find the Jensen songs an essential and most useful part of the song library.

The price is the regular one for MUSICIANS LIBRARY volumes, $1.50 in paper covers, $2.50 in cloth, gilt. In advance of publication we will accept orders, the books to be sent when ready, at $1.00 for paper covers, $1.50 for cloth covers, postage included, unless the price is to be charged on our books, in which case postage is additional.

SPECIAL SUBSCRIPTION OFFER:—One copy with The Musician, one year, paper covers, $2.25.

Anthology of German Piano Mus. Volume I. Classic Composers. Edited by Moritz Moszkowski.

IN this volume of THE MUSICIANS LIBRARY the editor has indicated the field from Frohberger, who brought the best traditions of Italy into Germany, down to Beethoven, in whom the classic culminated and the romantic school was born. This great period of German art produced masterpieces in the contrapuntal style of Bach and Handel, and in the homophonic forms of Haydn and Mozart, and the Editor has chosen wisely from this rich storehouse, bringing together pieces of conspicuous excellence to form a collection of general significance. As past master of the pianist's art, Mr. Moszkowski's helpful editing, annotation and fingering leave nothing to be desired.

SPECIAL SUBSCRIPTION OFFER:—One copy with The Musician, one year, paper covers, $2.25.

NEW PIANO WORKS

Isidor Philipp: Exercises for the Development of the Higher Pianoforte Technic Ditson Edition, No. 196.

ISIDOR PHILIPP is known to pianists as one of the most distinguished teachers of piano playing connected with the celebrated Paris Conservatoire. His system, which has been the educational basis of the training of many of the younger French pianists, consists in using exercises to give drill in variations of intensity of tone, or duration of tone; practising passages in legato, detached and portamento styles; changing of key; special practice with one finger; alternate extension and contraction of the fingers; modifications in all possible forms, scales, arpeggios, repeated notes; exercises for acquiring suppleness; passing under of the thumb; velocity in scales; the use of the fingering of C in all keys; studies in double notes, octaves, octaves with intervening notes, etc.

The price has been fixed at $1.50; until published we will accept orders at 50 cents per copy.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $1.85.

Orvil A. Lindquist: 100 Exercises for the Weak Fingers. Ditson Edition, No. 195 $1.00

MATERIAL of a very useful character such as every teacher needs in his work with pupils. The weaker fingers require special drill and specially prepared exercises, a need which the author has admirably met and filled. Try this work in your efforts to develop strength of attack in your pupils' fingers. It can be used with any method or course of studies.

SPECIAL OFFER:—With The Musician, one year, $1.65.

NEW ORGAN WORKS

The Organ Students' Bach. Edited by James H. Rogers. Ditson Edition, No. 193.

THE title of this work indicates, in a general way, the purpose of the editor, which has been to make a selection from the organ works of J. S. Bach, of such pieces as will serve as an adequate introduction to the study of the greater works of the master. The different numbers have been arranged in progressive order in respect of difficulty, and will offer most excellent material for practice and systematic study. The editor has adhered to the accepted text, but has simplified the reading and execution by placing on the upper staff all notes which are to be played by the right hand, on the

lower staff notes for the left hand. The pedaling has been marked according to the method which assigns notes in the upper octave to the right foot, in the lower octave to the left foot, heel and toe.

The selections consist of preludes and fugues, movements from large compositions, choral *vorspiele*, etc., and in themselves constitute an admirable collection of the easier organ compositions of the great master.

The retail price of the book has been fixed at $1.25. Until publication we will accept orders at 50 cents, postpaid, cash with orders. If a charge is to be made on our books, postage is extra.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $1.85.

30 Offertories for the Organ
Ed. by Jas. H. Rogers. $2.00.

A NEW volume uniform with the popular 30 *Preludes* and 30 *Postludes*. The editor has drawn upon the best works by European composers, and has made a number of admirable transcriptions especially for this work. It is to be bound in cloth with gilt top, and is in every way a distinct addition to the organists' collection.

SPECIAL OFFER:—With The Musician, one year, $2.50

NEW VIOLIN WORKS

Cecil Burleigh: 12 Short Poems, Op. 18. Ditson Edition, No. 94. $1.25.

A SET of fine pieces for the use of advanced pupils and in concerts While they have exceptional value for teaching use in the matter of training for style and interpretation, they were composed primarily for purely musical ends, are poetic in conception and content, and thoroughly violinistic in form and expression.

SPECIAL OFFER:—With The Musician, one year, $1.85.

LUTHER CONRADI

LUTHER CONRADI, distinguished among the younger generation of pianists, was born in Baltimore, Md., and comes of a prominent musical family. He showed exceptional ability at an early age, for he made his first public appearance in his native city at the age of ten. He studied with the best teachers in America, among them being the late Asger Hamerik, of the Peabody Conservatory in Baltimore. Afterwards Mr. Conradi continued his musical studies abroad, principally with Richard Burmeister, whose assistant he afterwards became. On his return to America, Mr. Conradi settled in Philadelphia, where he now resides. The last few years he has been especially active not only as a teacher, but has given many recitals, besides numerous appearances with the leading symphony orchestras. Mr. Conradi's abilities as a pianist are well known. His tone is noted for its fulness and inherent warmth, and with consummate technic, poetic qualities, and artistic perception of the highest order, his interpretations, always authoritative never fail to impress the listener. And in ensemble playing Mr. Conradi shows exceptional gifts for what is possessed by comparatively few pianists. That is, he is not only a pianist, but what is even greater, he is a true interpreter. Mr Conradi has been unusually successful as a teacher, and finds that in his extensive teaching repertory, the volume of Russian compositions published by the Oliver Ditson Co. in the *Musicians' Library*, has proved high in favor among his advanced pupils, many of whom have achieved distinction as pianists and teachers.

Comments of Educators and the Press on

OUTLINES OF MUSIC HISTORY

New and Enlarged Edition by Prof. Clarence G. Hamilton of Wellesley College

(See Advertisement Page 78)

Permit me to congratulate you on the splendid improvement you have made in your volume. Although I have often told you I have liked your book from the beginning, and as you know have used it in my own classes in history for several years, I feel that you have done a splendid thing in this revision. You met what seemed to me the weaknesses of your former work, and you have put out a book which in all respects is splendidly practicable. I shall take pleasure in using the book where I can in my own work and in recommending it to others.—*Osbourne McConathy.*

Let me congratulate you on the revision of your history of music. It seems to me admirable in every way. I am interested in your list of illustrative music, almost all of which is accessible to everyone who desires to get it.

Your suggestion about the phonograph has already been impressing itself upon my mind. I wish you or somebody could induce either the Victor people or the Edison people to fill in the gaps in their catalogues, so that we could make our students in the history of music settle themselves down to study the illustrations carefully by hearing; the next step being to prepare carefully questions upon the various compositions studied, the answers to which would necessarily call for familiarity with the music.

We are already doing something of the sort, but having no text-book as a lever, I have made no attempt to approach the companies, all the more so because I have for these two years given over my big courses into Prof. Griggs' keeping. In my own advanced courses I make them study the actual age of music. But even there it would save much time to have both records and scores at the students' service.

Where are you going to break out next? A history of singing, perhaps, or a new method of composition? Your versatility is delightful. —*Geo. C. Gow.*

This work is truly named *Outlines of History* for we have seldom or never met with a history so denuded of all superficial verbiage and so consistently true to its title. Baedecker at his best is diffuse and rambling beside this collection of irreducible facts.

We have often wished for just such a work as this to which we could turn in a hurry for a date or a fact without having to wade through a lot of gossip of secondary importance.—*Musical Courier.*

TWILIGHT

Sacred Duet for Soprano and Tenor in Db, Alto and Baritone in A, by George B. Nevin. Price 25c net cash with order. Published by Oliver Ditson Company.

George B. Nevin is a composer who has a natural flow of melody. The free canonic treatment between the two voices is effective when, as in this instance, it is used with discretion.

His work makes no attempt at profundity and merely carries out the simplicity of the general scheme. Duets of this class are none too plentiful as the workmanship is excellent.—*Musical Monitor & World.*

Duets

I have examined carefully the two anthems by George B. Nevin, entitled *If ye abide in me* and *Crossing the bar*, and find them exactly what I want. They are both beautiful, simply beautiful, and I shall lose no time in introducing them to my choir and congregation.—*Robert L. Schofield.*

The Organist's Journal

The Largest, Best, Most Useful and Most Practical Organ Periodical

Each issue of The Organist's Journal contains sixteen large pages of Pipe Organ Music selected from the latest compositions of the leading English, French, German, and American Organ Composers. There are also many transcriptions from the scores of the world's greatest masters.

The music is edited in the most careful manner, special attention being given to the phrasing, pedal, marking, registration, etc., etc.

It is printed from specially engraved plates in the finest style of engraver's art. The lithographing is exceedingly clear, and the paper of the best quality.

None of the pieces are too difficult for the amateur or the organ student, while the professional organist will find an abundance of choice material exactly suited to his requirements.

There are 196 of the largest size music pages in 12 issues, with an average of about 80 pieces. This music cannot be bought in sheet music form for a dozen times the cost of a year's subscription

Subscription price $3.00 a year. Sample copy 25c.

The Organist's Journal $4.50 / The Musician—value } Both for one year **$3.75** { Postage additional on Canadian and Foreign Subscriptions

Fifty Selected Songs by
FRANZ SCHUBERT

The appearance of this new edition of Schubert songs, revised by Mr. Max Heinrich, is an event of great importance to vocalists. In these revisions, Mr Heinrich perpetuates his own artistic ideals, his personal methods as well as his style and remarkable individuality.

Special translations of the text in which the true meaning, poetic beauty and rhythmic metre of the original German versions have been retained with remarkable success are provided by Miss Alice Mattullath.

MAX HEINRICH
THREE SONGS

In these original songs, Mr. Max Heinrich proves himself as accomplished a master in the setting as in the singing of a song.

Distinguished by individual originality and surprising melodic invention, these compositions are written with delightful consideration of vocal needs and effects, and may justly be hailed as a most important addition to the very best of modern concert songs.

ROBERT SCHUMANN, Op. 48
POET'S LOVE

This new edition of one of the greatest song cycles ever written, carries with it the same degree of importance and genuine interest which has attended the publication of a volume of Fifty Selected Songs by Franz Schubert mentioned on this page. With the utmost care as to detail, phrasing, breathing, enunciation, rhythmical accuracy, interpretation, tone formation, and a highly artistic new English version of the text by Miss Alice Mattullath, this new edition of Schumann's masterpiece, takes rank as the best one ever offered.

CONTENTS

When all the world was fair in May
Whene'er my tears are flowing
I once loved the rose and the sunbeam dancing
All grief and sorrow buried lies
My soul in a lily sleeping
The Rhine is peacefully flowing
I'll not complain, though torn my heart with pain
If only the dear little flowers
The music's festive and sprightly
Oft in my heart is ringing
A youth once loved a maiden
I wandered about the garden
and others

CARL FISCHER COOPER SQUARE NEW YORK

National Graded Course

THE ONLY METHOD OF PIANO INSTRUCTION

Illustrated by America's Most Distinguished Teachers and Pianists

A Practical, Comprehensive and Thoroughly Graded Course

The New Gradus ad Parnassum, Embodying the Latest and Best Ideas in Pedagogy

It Will Help You in Your Teaching

BECAUSE

It embodies the work of the most eminent pianists and teachers in America.

It can be readily adapted to your "method," no matter what that may be.

It is the LATEST work of the kind.

ALL of the studies are carefully annotated, fingered and edited.

It is the most carefully graded of any course before the public.

It begins at the beginning of study.

It saves the time that otherwise would be spent in laborious and often unrewarded search after that which is good and up-to-date.

It covers the entire field of piano literature in an eminently practical, interesting and stimulating manner.

Hundreds of your fellow teachers from all parts of the country have sent us, unsolicited, enthusiastic commendations of these very features.

The "National Graded Course," which is complete in eight books (Primary Grade and Grades 1-7 inclusive), will be sent to any School or Teacher for examination and comparison with other methods, **without any obligation to purchase.** A critical examination and a practical trial with your pupils will convince you that it is the **Only Perfect Method** of Piano Instruction.

NOTE—Facsimile editions (small size) of the Primary Grade and Grade One, complete, together with a pamphlet describing the advantages of Graded Courses and the "National" in particular, which is well worth reading, will be sent **Free** and **Postpaid** to any address on request.

The Willis Music Company :: :: Cincinnati, Ohio

Material for the Study of Pianoforte Pedals

BY

ALBINO GORNO

PART I—First (loud) Pedal

The first nine exercises consist in connecting chords by means of the first pedal. The next four, in connecting tones of the melody by the first pedal.

Exercises 15 to 24 show effect of sustaining a note or chord with pedal, while the hand is removed to play accompanying chord.

Exercises 24 to 30 are exercises in **superlegato.**

Exercises 30 to 33—Pedal effects produced by hands.

Exercises 33 to 36—Pedal used to sustain acciaccaturas.

Exercises 37 to end—Left hand used in complement with first pedal.

Price, $1.50

PART II—First and Second (soft) Pedal

This second book treats of and explains how to vary tone-color by use of first or second pedals both used together, or how to obtain this variation by use of both pedals and sustaining notes or chords with the hands. For example, "The band and pedal together can produce the greatest possible contrast in volume of tone.

"Legato impossible by fingers alone, therefore use the first pedal."

"Louder effect than fingers alone can produce."

"Notes of melody sustained by First Pedal, repeated softly in the accompaniment." "Effect to be imagined."

"Right hand alone, left hand alone—a study in contrast of tone coloring."

These and many other points are exemplified—giving a complete system of material for pedal study.

Price, $1.50

Material for the Study of Pianoforte Technic

BY

ALBINO GORNO

I. Exercises for the Wrist

A complete and exhaustive series, to be used in practising every possible use of the wrist—staccato, legato—in all positions and with all fingerings.

Price, $1.50

II. Minor Thirds. Chromatic Exercises

First with right hand alone, in various figures—then the left hand alone first ascending, then descending. Then in free variety, combining single chromatic figures with minor thirds in the other hand—furnishing a satisfying text-book for all the higher grades

Price, $1.50

Exercises for the Fourth and Fifth Fingers

BY

ALBINO GORNO

As thorough a series of exercises as the Wrist exercises. Utilizing figures to place the hands in every possible position, and then developing exercises to gain strength and flexibility therefrom.

Price, $1.50

Pedal Study at the Piano

BY

EDOUARD MAYOR

The easiest method to teach the pupil to listen.

The simplest manner of presenting the beginning of the study of damper ("loud") pedal.

Melodic studies requiring the least possible technic and demanding most accurate use of the pedal.

New Music Books of Quality for Music Lovers

A New Volume of THE MUSICIANS LIBRARY

Forty Songs by Adolf Jensen

Edited by W. F. APTHORP

For High and Low Voice

Bound in Paper, Cloth Back $1.50 postpaid
In Full Cloth, Gilt - - - - 2.50 postpaid

In this volume are gathered the finest of Jensen's songs, and they form a collection of rare excellence. Every teacher of singing who wishes to be ready with works of the classic song repertoire and every concert singer will find the Jensen songs an essential and most useful part of the song library.

SPECIAL OFFER:—This book, paper cover, with THE MUSICIAN one year, $2.25

"The Musicians Library might be called an aid to the survival of the fittest. The latest addition is a collection of forty of the one hundred and sixty or more songs of Adolf Jensen. Genuine melodies never become stale and in Jensen's songs there are many such melodies. It was his lusciousness which endeared his songs to the public. The sympathetic sketch of Jensen's pathetic life given by the editor will interest singers who use their brains as well as their vocal cords and will add zest to their interpretations."—Henry T. Finck, in *The Nation*.

Solos for Christian Science Services

Selected by HELEN A. HUNT

For High and Low Voice

Price, postpaid, $1.00, each voice

The compiler is well fitted by experience and authority to do this work, by virtue of her long connection with the Mother Church, as soloist. The 25 songs can be used in other churches as well.

Revised and Enlarged Edition

A Text-Book of Music History

For Classes, Musical Clubs and the Home Student

Outlines of Music History

By CLARENCE G. HAMILTON, A. M.

Author of the two successful works, "Sound and Its Relation to Music" and "Piano Teaching: Its Principles and Problems"

Illustrated. Price, postpaid, $1.50

1. The text has been thoroughly scrutinized, obscurities cleared up, and new data added.
2. The last chapter, regarding modern music and musicians, has been revised and enlarged, to include recent musical developments.
3. Several new portraits have been added, of living musicians: Max Reger, Cyril Scott, Rachmaninoff.
4. Three maps, especially drawn for this edition, give prominence to the fields of activity of the great musicians, and are each prefaced by a list of the musicians whose birthplaces are recorded.
5. A list of musical illustrations covering the entire field of the text has been added. These illustrations are of moderate difficulty and are readily accessible. They are designed for use in the class room or for reference by private individuals.
6. A new index has been compiled, topical in character, so that references to a great variety of research subjects are fully given.

Thus, while retaining all the essential features and text of the former editions, a large amount of additional matter has been inserted. Most of this matter has been compiled as the result of suggestions by teachers who are employing the book for classroom work.

OLIVER DITSON COMPANY, Boston

Chas. H. Ditson & Co., New York

New Music Books of Quality for Music Lovers

Eight New Ditson Edition Numbers

The Ditson Edition is absolutely the best among the so-called cheap editions. Catalogue free on request.

PIANO

Exercises for the Development of the Higher Pianoforte Technic

By ISIDOR PHILIPP
Ditson Edition, No. 196
Price, 75 cents net

This system of the distinguished teacher at the Paris Conservatory has been the educational basis of many noted pianists, and consists of valuable original exercises which deal with the advanced technical problems that confront the modern teacher and pupil.

Thirty Exercises for the Development of the Hand and Finger Muscles, Op. 80

By FREDERICK A. WILLIAMS
Ditson Edition, No. 201
Price, 50 cents net

The thirty exercises contained in this work are intended to develop the muscles of the hand and fingers, in the shortest possible time. The exercises are so arranged, that if practised correctly, every muscle of the hand will be brought into action. Special work is given to the fourth and fifth fingers in order to equalize the muscular action of hand and fingers.

100 Exercises for the Weak Fingers

By ORVIL A. LINDQUIST
Ditson Edition, No. 195
Price, 50 cents net

Material of a very useful character such as every teacher needs in his work with pupils.

First Studies for Young Pianists

Twelve Progressive Studies, Op. 112
By L. STREABBOG
Edited by Karl Benker
Ditson Edition, No. 192
Price, 38 cents net

Useful for development of style and technic. Grade III.

VIOLIN

Twelve Short Poems, Op. 18

By CECIL BURLEIGH
Ditson Edition, No. 194
Price, 63 cents net

A set of fine pieces for the violin for the use of advanced pupils and in concerts. While they have exceptional value for teaching use in the matter of training for style and interpretation, they were composed primarily for purely musical ends, are poetic in conception and content, and thoroughly violinistic in form and expression.

Scale Studies for the Violin

By HENRY SCHRADIECK
Edited by Franz C. Bornschein
Ditson Edition, No. 172
Price, 38 cents net

These splendid studies need no word of commendation. They have a distinct educational value recognized by all teachers. Mr. Bornschein has not only edited these studies in a masterly manner, but has also extended them.

The Violin

By BERTHOLD TOURS
Revised and Enlarged by Franz C. Bornschein
Ditson Edition, No. 198
Price, 38 cents net

A splendid new edition of one of the most popular violin methods ever published. New engraved plates are used, and the editor has greatly amplified the old material making this the best and the handsomest edition in the market.

ORGAN

The Organ Students' Bach

Edited by JAMES H. ROGERS
Ditson Edition, No. 193
Price, 63 cents net

The purpose of the editor has been to make a selection from the organ works of J. S. Bach, of such pieces as will serve as an adequate introduction to the study of the greater works of the master.

Organ

Thirty Offertories for the Organ

Edited by JAMES H. ROGERS
Price, $2.00, postpaid

A new volume uniform with the popular *30 Preludes* and *30 Postludes*. The editor has drawn upon the best works by European composers, and has made a number of admirable transcriptions especially for this work. It is to be bound in cloth with gilt top, and is in every way a distinct addition to the organists' collection.

Thirty Organ Pieces for Use in Christian Science Churches

Edited by WALTER E. YOUNG
Price, $2.00, postpaid

This is the first collection of organ music published expressly to meet the needs of organists in Christian Science churches. The author, who is organist of the Mother Church in Boston, has a full knowledge of what is suitable. The book contains ten preludes, ten offertories, and ten postludes. It is bound in cloth, with gilt top.

For the Children

Sixty Musical Games and Recreations for Little Musicians

By LAURA ROUNTREE SMITH
Price, 75 cents, postpaid

Teachers of children are constantly on the lookout for material in the style of little musical games, plays, and entertainment specialties, with and without stage setting and costuming, to use in their recitals and concerts. The present work meets exactly the want specified above and gives a very great amount of material, varied in character, using quite young children as well as girls of fourteen to sixteen. It is in every way the best book of the kind in the market.

Boosey & Co's Announcement:

"SPRING'S AWAKENING"

—BY—

WILFRID SANDERSON

Is conclusively proving our belief in it as

THE GREATEST FLORID SONG OF RECENT YEARS

The extended issue of five keys, from F (B-F) to B♭ (E-B♭) allows discriminating choice in the selection of a range suitable to each particular voice, and both Sopranos and Mezzos will find in "SPRING'S AWAKENING" a Waltz Song brimming over with possibilities for Coloratura work.

Our latest NOVELTIES include:

CUCKOO SONG Roger Quilter

By one of the foremost of our younger composers in England—this song has the added distinction of having been written expressly for and dedicated to

MME. MELBA

Two Keys: B (D-F♯) and D

OUT OF THE MIST—Another high-class song
By WILFRID SANDERSON
Four Keys: E♭ (B♭-E♭), C, D♭ and E♭

SWEET EYES I LOVE - - - - - - - - - - - - Haydn Wood
With its atmosphere of purity, pleasing harmonies and melodic freshness—possesses a rare charm.
Two Keys: E♭ (E♭-E♭) and G

GRATITUDE - - - - - - - - - - - - - - - - - Charles Marshall
Another song of great beauty by the famous composer of "I HEAR YOU CALLING ME"
Three Keys: E♭ (C-F), G and A♭

YOU should make a point of examining these songs, and if you prefer to look them over at home, we will gladly send copies ON APPROVAL.

Is There a Piano in Your Home?

If there is, you are probably buying quantities of sheet music—and paying a high price for it. This sheet music becomes torn and scattered and lies in ragged piles around the house: in this way you lose time and temper—and what is more you lose money, too. Why not buy music in volumes filled with the best selections and thoroughly indexed? THE WORLD'S BEST MUSIC will *double the value of your piano* for yourself, your family and your friends. The 10 volumes—sheet-music size—contain 2700 pages of the best music, edited by Victor Herbert, Reginald de Koven, Gerrit Smith; they are handsomely bound, keeping the music in permanent shape for a lifetime; and they are thoroughly indexed, so that any desired selection may be found in a few seconds. Furthermore, these volumes contain a biographical dictionary of musicians, a pronouncing dictionary of names, and a large number of beautiful illustrations. *It would cost you over $200.00 to buy, one piece at a time*, the selections that are contained in

THE WORLD'S BEST
10 Volumes **MUSIC** 650 Titles

IF YOU ARE A PIANIST, The World's Best Music is for you. It contains 300 instrumental selections, including all important forms of musical composition, by the best writers.

IF YOU ARE A SINGER, The World's Best Music is for you. It will place in your hands 350 of the best old and new songs arranged with piano accompaniment.

IF YOU ARE A STUDENT, The World's Best Music is for you. It is a musical education in itself.

IF YOU LIKE MUSIC, but do not play or sing, you could not make a better gift. It will make evening after evening of pleasure for someone.

The World's Best Music aims to be to music what a good encyclopedia is to the world's knowledge—the best of all, properly proportioned.

KARL RISSLAND

For Violin and Piano

Op. 15

By Karl Rissland

First Violinist Boston Symphony Orchestra

Composer of the successful Romanza in G

Price, postpaid, 38 cents net

Grade 4-5

THIS is a spirited Scherzo, bright of mood, piquant of melody. It is especially varied and rich in rhythm, and the practical quality of the composer's musicianship has enabled him to display the characteristic resources of the violin while remaining within the bounds of moderate difficulty. The buoyant humor and the scintillant tonal effects of this new composition will win instant appreciation from every audience

AFRO-AMERICAN FOLK SONGS

By HENRY E. KREHBIEL

Pp. vii and 176

Price, Cloth, $2.00 net

THIS "Study of Racial and National Folk Music" is the first serious and comprehensive study of this interesting and important subject. The book is an elaboration of a series of essays by Mr Krehbiel which appeared in the New York *Tribune* more than a decade ago. For those who have heretofore deplored the lack of a recognized American folk song, it is a revelation. Mr. Krehbiel has given this subject careful study, and proves conclusively that the American folk songs are the original negro melodies which were sung on the plantations in slavery days.

FAMILIAR TALKS on the

HISTORY of MUSIC

By ARNOLD J. GANTVOORT

Lecturer on the History of Music at the College of Music of Cincinnati

Pp. xvii and 285

Price, Cloth, $1.50 net

THE distinguished author's long experience in supervision and instruction in the Cincinnati College of Music has given him a peculiarly keen insight into the needs and capacity of the average music student. Well aware of the difficulty of gaining and holding the student's attention in historical matters of comparatively remote interest, he has sought and — let it be said without circumlocution — found a way, not merely to arouse interest, but to awaken a desire for further study of music history. It is no secret to the initiated that a broad survey and a comprehensive knowledge of the history of any branch of art or science are of the highest value in every way to its disciples. To the musician, in particular, such extended knowledge opens up fresh fields of delight and profit in all directions. The reproach of lack of perspective, or positive ignorance, should be especially galling to his sensitive nature. Let him take up this booklet and read it at leisure from beginning to end. He will discover, with pleasurable surprise, that these "familiar talks" on his musical ancestors are as refreshingly entertaining, and as full of human interest, as the "skeletonized" or "dry-as-dust" explications were prosy and wearisome. The juxtaposition of grand world-upheavals with the synchronous important events in musical history will be found remarkably illuminative. And, as the author remarks, in these days of extensive general education some knowledge of important events in the development of musical art, and some acquaintance with the lives of our greatest musical personages, have become almost indispensable. The author's clear style, the sensible treatment on broad lines easy to follow, and the abundance of admirable musical illustrations render the acquisition of this indispensable knowledge an agreeable pastime rather than an effort.

ALBERT SPALDING

Six Compositions for VIOLIN and PIANO

MUSICAL PERIOD No. 1, C♯ Minor..... .60
MUSICAL PERIOD No. 2, A Minor..... .60
PRELUDE, B Major..... .60
ROMANCE, C Major..... 1.00
SCHERZO GIOCOSO..... 1.50
SICILIANO..... .60

THESE compositions are strongly reminiscent of Mr. Spalding's long sojourn in Italy, two of them (a "Siciliano" and a "Scherzo Giocoso") being dedicated to teachers under whom he studied in that country, and another ("Romance in C Minor" being built on the cry of a street vender of oranges in Florence. The merit of these pieces, as attested by the cordiality with which they have been received when played from manuscript, is a fulfilment of the promise shown in Mr. Spalding's earlier compositions.

BERGERETTES

(Pastoral Ditties)

Collected by J. B. WECKERLIN

French and English words. English versions by SIGMUND SPAETH

Price net, $1.25

WECKERLIN'S collections of early "French Romances" and "Chansons populaires" have long been familiar to music lovers abroad; and though the music of these collections has been until now almost unknown in this country, interest in the songs has been growing so rapidly here that their advent into American musical literature may almost be said to mark the beginning of a new phase of American music culture. In the translation Mr. Spaeth has given us a singable version enhancing, rather than detracting from, the natural pastoral setting. This edition which has been awaited with unusual interest is now ready for distribution.

Each piece aims to portray a "picture in music"—or little story—an idea of which the composer is one of the leading exponents. The practice hour, so often a dreary one, may become with these compositions a time of study and pleasure.

Send for Descriptive Circular of Compositions by FLORENCE NEWELL BARBOUR

(Schmidt's Educational Series, No. 105)

These duets are designed for the earliest stages in piano playing, the pupil's part being written chiefly on five notes. The teacher's part provides interest and assists largely in cultivating a sense of rhythm on the part of the pupil. A valuable feature of the arrangement is that the parts for pupil and teacher alternate from treble to bass throughout the set.

Vol. XIX, No. 2 BOSTON, MASS., FEBRUARY, 1914 Yearly Subscription, $1.50 Single Copy, 15 cents

REMINISCENCES OF HAYDN IN VIENNA

By EDWIN HUGHES

VIENNA of the eighteenth century was the cradle in which were nurtured the seeds of that golden age of music which names Haydn, Mozart, Beethoven and Schubert its gods, and which marked the final breaking away of the German art of tone from Italian influences and the establishment of new ideals which were to culminate in a series of musical creations to which the whole world looks up to this day as the very pinnacles of the art.

HAYDN'S BIRTHPLACE IN ROHRAU, LOWER AUSTRIA

Early in the third decade of that century, in the ittle village of Rohrau in lower Austria, was born Joseph Haydn, son of a wagon-maker, and afterwards the creator of that form of musical composition whose later growth has made that greatest neans for the expression of musical ideas, the symphony orchestra, an artistic necessity in every center of culture.

The boy's talent soon exhausted the musical possibilities of Rohrau and vicinity, and being possessed of a particularly fine soprano voice, he was aken up to the metropolis by Hofcapellmeister Reutter, who had heard him sing and was astonished at his talent, and there installed as chorister n St. Stephen's Cathedral. Visitors to the famous ld church, whose single Gothic spire is surpassed n beauty by no second in Europe, will find little ifficulty when standing in the dimly-lighted nave nd looking into the choir, rich with heavy wood rving on each side, in imagining themselves back the time of powdered wigs and knee breeches.

In addition to Haydn's studies at the choir-school, hich included Latin, arithmetic, writing, religion nd his choir work, he found time for the study of either the violin or piano, but during his ten years at the choir-school he made good progress, putting the time when his companions were out at play to good use in the practice of the piano, particularly. The fact that he used to take his "piano" (evidently a table clavier) "under his arm" and march upstairs with it to the garret where he could practise undisturbed, gives some idea of the size and character of the instruments of the time.

From his first years in the choir-school he was constantly scribbling notes on every possible scrap of paper, and had later the "great pleasure" of giving music lessons to two others of his brothers who were also admitted into the school, thanks to the remarkable gifts exhibited by Joseph. Life at the school was not happy in every respect, as the food was so scanty that he went hungry more often than the contrary. This, however, was a great incentive to industry. He used every effort to make his singing as beautiful as possible in order to be invited to perform at houses where he might be sure at least of a good supper.

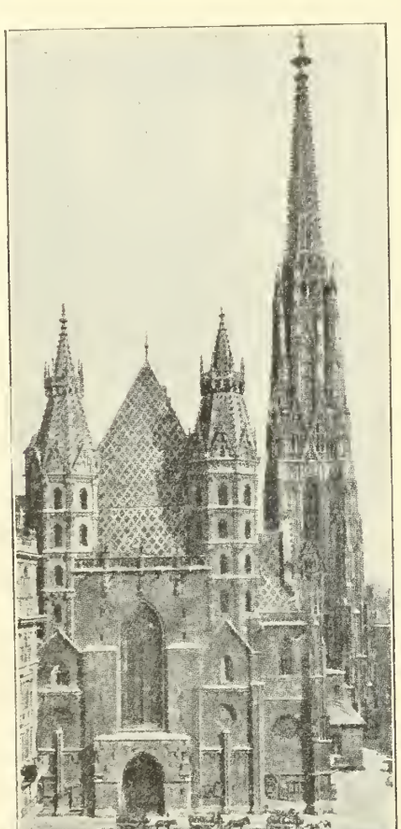
Schönbrunn, the Versailles of Vienna, has also its reminiscences of the choir-boy, Joseph Haydn. The palace with its adjacent French gardens and its green terraces rising to the Gloriette, where Maria Theresia used to hold her tea parties, was then in the course of building, and Haydn, together with the other choristers, was called thither for the Whitsuntide services. During their free time, Haydn and some of the other boys swarmed up the scaffolding of the building and raised a perfect bedlam on the loose boards of the flooring. Suddenly a fine lady appeared, who was no other than Maria Theresia herself, and who ordered one of her men servants to chase the boys out of the building and threaten them with a sound thrashing if they were ever found there again. This only roused Haydn's boyish daring to attempt the same feat on the following day, with the result that he was caught in the act and received his full measure of the promised thrashing. Many years afterwards, when Haydn was in the service of Prince Esterhazy, the Empress Maria Theresia was visiting the Prince at his castle in Hungary. Haydn placed himself before the Empress and with a most elaborate bow expressed his most obedient thanks for the thrashing at Schönbrunn. The Empress was greatly amused and, amid much laughter, Haydn was called on to repeat the story of the whole occurrence.

The choir-boy days were soon to end, however, for in 1749, when he was in his 18th year, Haydn's voice broke. The Empress hearing him sing on a festival day at Klosterneuberg said jokingly to Reutter, the choirmaster. "Haydn doesn't sing any more, he only crows!" There was no further use for him in the choir and he was compelled to step out into the big world that he knew absolutely nothing of, helpless as a child, without money, and with only three old shirts and a worn-out coat by way of wardrobe. An acquaintance, a tutor who lived with his wife and child in a small room under the roof, offered him shelter for the moment, and now began the most difficult time in the young artist's life, years of struggle and penury, relieved by little except the satisfaction which the practice of his chosen life work gave him. He resisted every effort of his parents to have him enter the church and bent every energy to his composition, giving lessons on the piano for his board at the house of a friend.

The years after his enforced departure from the choir-school are best characterized by his own description. "For eight years I led a most miserable life, giving music lessons to children to earn a bare existence. The genius of many an artist is killed by such drudgery, which robs the developing talent of that most necessary thing, time for study. I should never have gotten out of the rut had my desire to compose not made me continue my work until far into the night." And still in his later years he said to one of his friends, "When I sat

there at my old worm-eaten piano, I envied no king on earth!"

Haydn lived at the time in the Michaeler House on the Kohlmarkt in Vienna, and the building, although one of the oldest residence houses in the city, is still to be seen. Its end faces on the Michaeler Place, just to the left of the church of the same name and opposite the new Burg Tor (castle gate), the site of the old Burg Theatre, where, some fifty years later, *The Creation* had its first public performance. The house was in what was then the most fashionable part of the town, but



CATHEDRAL OF ST. STEPHEN, VIENNA

Haydn's quarters, which consisted of a tiny room just under the sloping tile roof, were anything but elegant. The room possessed not even so much as a stove, and often on a frosty winter's morning Haydn was compelled to run down the five flights of stairs and fetch himself water from the pump to wash, as that in the pitcher had usually frozen stone hard during the night. The lower stories of the house contained as elegant apartments as were to be found anywhere in the city, however, and one of the members of the Hungarian nobility made his Vienna home there, Prince Esterhazy, whose son, Paul Anton, was to become Haydn's first patron.

He composed constantly and such was his lack of knowledge of the world that he felt himself much honored when his pieces were accepted for publication, not knowing that the music dealers made quite good business out of them, and standing often before a show window where one or the other of his pieces was exhibited with the feeling of greatest pride and self-satisfaction over the fact. His inborn good humor led him to the playing of many practical jokes, and served at the same time to keep his spirits buoyant at a time when the realization of his artistic ambitions seemed infinitely remote.

Ph. E. Bach's *Essay on the Proper Method of Playing the Piano* became an inspiration to further study of this instrument, and his companionship with the composer and violinist, Von Dittersdorf, offered stimulation to work on the violin. Beethoven and Mozart later joined Haydn in his admiration of Bach's work as the most admirable method for the piano which had yet appeared. But it was not only as piano pedagogue that Haydn admired Ph. E. Bach. As composer his piano sonatas were for Haydn a great source of inspiration, that source, in fact, from which sprang Haydn's greatest gift to the form of music, namely, the sonata and the symphony as we know them today.

Besides Ph. E. Bach, the other great influence during these years of Haydn's musical ripening was the Neapolitan composer, Nicola Porpora, who belonged to the school of Italian opera writers which at that time dominated the whole of musical Europe, and who lived in Vienna from 1753 to 1757. Haydn's theoretical studies were elaborated under Porpora and he learned much also of the art of vocalization and the Italian language by playing accompaniments at the singing lessons which Porpora gave, earning his own violin lessons in composition by this means. Porpora was a gruff master, with all that contempt for German musicians which the Italians of the period had. "Donkey," "countryman," "numbskull," were the favorite expressions hurled at young Haydn, alternating with frequent pokes in the ribs, and, for a time, Haydn even occupied the position of servant in his apartment, blacking Porpora's shoes and doing other menial tasks.

BARNABITE CHURCH

He had already begun to try his hand at the composition of string quartets, which were everywhere well received, and, in order to eke out his meagre livelihood, obtained the position as organist at the Barnabite Church in the Mariahilferstrasse, in front of which a fine statue of Haydn now stands.

The manner of writing for the four instruments of the string quartet as we know it today originated with Haydn. Not only is the form of composition known as the "Quartet" a creation of Haydn, but the manner of handling the four voices of the quartet, giving to each a more independent melodic line than had hitherto been known, making each a complete individuality—in itself, this epoch-making novelty of treatment is one of Haydn's greatest claims to his position among the musical gods.

In 1759 Haydn finished his first symphony (in D major). There had been "symphonies" before Haydn's day; indeed, the introduction to the Italian operas of the time were usually known as "symphonies," consisting of an *Allegro*, an *Adagio* and another *Allegro* to close. Haydn elaborated each of these movements, as with his string quartets, gave to each an independent character, and added, as a fourth part of the cyclic form, the minuet. Here again, as in the composition of his string quartets, it was not only in the form of the work that Haydn's genius achieved such an advance over what had gone before, but it was especially in the freedom in handling the different members of the or-

STATUE OF HAYDN

chestral choir that he pointed out paths hitherto undreamed of.

At this time Haydn was "music director" of Count Franz von Morzin, a Bohemian nobleman who spent his winters in Vienna and his summers at his estate, Lukavez, where he kept a private orchestra. His position with Count Morzin would doubtless have been a permanent one had it not been for one stipulation on the part of the Count; his "music director" must be a bachelor. This agreement Haydn had perfectly complied with until he was twenty-seven years of age, but to this year belongs the sad tale of his unfortunate marriage, which brought him a great deal more unhappiness than the loss of his position with Count Morzin.

There lived in the Ungargasse a wig-maker by the name of Keller, who had often given Haydn financial assistance in his less fortunate seasons, and who now, in the fall of 1760, entrusted his two daughters to his care for musical instruction. The younger of the two exerted such a charm over Haydn that he fell desperately in love with her. To his great chagrin, however, she herself chose to enter a nunnery instead of marrying him, and shortly afterward the wig-maker said jokingly to Haydn, "Why don't you marry my eldest daughter?" And Haydn—did it! Why he let himself be led into such a situation will never be clear. Was it out of gratitude to Keller for his assistance in the past, was it from his ignorance in worldly matters or awkwardness in dealing with such a situation, or was it for the mere sake of being married?

In any case it was not long before he had good

reason to regret his rash step, for in the shortest possible time after their marriage Haydn discovered that his wife was a Xantippe and worse. She had so little appreciation of her husband's genius that Haydn once exclaimed to a friend, "It is all the same to her if her husband is a shoemaker or an artist!" Fights were of continual occurrence, as she often went out of her way to arouse the ire of her otherwise good-natured spouse, using, for example, some of his musical manuscripts to put on the bottom of her pans when baking a cake, whereby many of Haydn's older scores were probably lost. In spite of his good heart and his equable temper, Haydn could never overcome his antipathy for his wife, and as an old man, some years after her death, when he was showing an acquaintance through his apartment, he paused before the picture of a woman, pointing up to it with the words, "That is my wife; she used to make me furiously mad sometimes." Finally he could stand it no longer, and after trying over thirty years to get along with her, he sent her to Baden, near Vienna, where she died in 1800.

In 1761 Haydn became director of Prince Esterhazy's private orchestra, on the recommendation of his former patron, Count Morzin, and from this time on for many years spent a great part of his time at the Prince's country seat in Eisenstadt, just over the Hungarian border. Freed from all financial cares, he now had the long-wished-for opportunity to develop his talent under the most auspicious circumstances. The Prince kept a small but excellent orchestra, which was augmented, according to the custom of the time, by servants from his retinue, as well as by members of his clerical force. In addition there were a small chorus and several soloists.

Haydn was raised to the rank of an officer and placed at the head of the entire musical organization. He was required to appear daily in the Prince's ante-chamber for directions in regard to the musical productions at Eisenstadt, to compose music for the orchestra as it was wanted, and to give instruction to the singers. The orchestra immediately showed a wonderful degree of improvement under Haydn's inspiring leadership, and, on the other hand, the opportunity of working with such a band of musicians was in itself an inspiration to their director, whose symphonies soon began to be known far and wide as the finest works of the period. Of his work in Eisenstadt Haydn said in his later years: "The Prince was always highly satisfied with my compositions. As director of the orchestra I had the opportunity to make experiments, to observe what was effective and what not, to improve my own works, and to attempt innovations as much as I pleased. Cut off as I was from the entire world, my work could not be otherwise than original, for there was no one to hold me to the beaten paths of musical composition."

The Prince took Haydn to Vienna only for a few months during each winter, and, from spending so much of the year in the fresh, open country, Haydn became a profound nature lover. The effects of his close communion with the rural goddess showed themselves not only in his ruddy good health, but also in his compositions. The titles of his first symphonies, composed in Eisenstadt, *The Midday, The Morning,* in which he sought to give expression to the emotions aroused by the fresh countryside, indicate how large a part in his life this love of nature played, and many of the most beautiful passages in his last works, *The Creation* and *The Seasons,* owe their freshness, their closeness to nature, to the youthful emotions aroused in Haydn by his life in Eisenstadt.

As most of the pictures of Haydn in general circulation today are idealized beyond all recognition, along with those of Mozart, Handel, Bach, Beethoven, Schubert and other great composers who lived before the day of the camera, a description of his appearance may at least serve to bring the true Haydn a little nearer to present-day eyes. He was thin, but strongly built, somewhat under medium height, and the lower half of his body seemed too small for the upper, possibly on account of his old-fashioned mode of dress. The most pronounced of his features were his large, Roman nose and his thick, protruding under lip. The face was very brown in color, and covered with smallpox scars; but a pair of fiery brown eyes gave life and expression to the whole. His entire figure and physiognomy gave the impression of reserve and a mild seriousness, but in conversation his features took on a good-humored smile, which seldom, however, got so far as a laugh. He considered himself very ugly, and used to tell a story of a nobleman and his wife who could not bear him on account of his looks. During the whole of his long life he stuck to his powdered wig in spite of all the changes of fashion, a habit that in a measure detracted still further from his appearance, as the wig hid his broad, finely arched forehead in part.

He was a man of great amiability, fond of a good time and a joke, the very embodiment of eighteenth century Viennese *gemütlichkeit.* The simplicity of his manner of living insured him good health until his last years, and his rather limited intellectual horizon gave him that inner freedom and joy of living which belong to those who know not the doubt which comes with a closer contemplation of the deeper problems of life. Thus a certain lightness of spirit, a joyousness over the very fact of existence, was the keynote of his being from the time when his entrance upon his duties at Eisenstadt freed him from financial cares, and, needless to say, his music is full of the reflection of this spirit. Coupled with these characteristics was the fact that in spite of the fame which he enjoyed to such full measure throughout his long life, he never displayed any of that haughtiness which characterizes so many of those who have achieved position and honor in the world of music.

Of his method of composition it is related that he worked always at the piano, in contradistinction to the usage of many of the other great composers. He was a great lover of humor in music, the true forerunner of Beethoven in this as in many other respects, and he made frequent experiments in program music, not only in the well-known last oratorios, but also in his earlier works, depicting as he expressed it, "moral characters" in some of his symphonies.

During one of the winter months of 1781, while he was in Vienna with his patron, occurred his first meeting with the young Mozart, from whom comes the name "Papa" Haydn. Haydn was indeed a musical father to Mozart, who dedicated the six quartets begun in 1782 to his elder friend as an expression of the debt which he owed him for, "It was from Haydn," said Mozart, " that I first learned how to write a quartet."

The years of what was an artistic imprisonment from the world at large in the little Hungarian village began to grow more than irksome to Haydn, who longed for a closer contact with what was going on musically outside of Eisenstadt than a month or two of residence in Vienna each winter could give him. Prince Nicolaus, who was then the head of the Esterhazy family had, contrary to general feeling, an abhorrence for life in Vienna, and cut his visits to the metropolis as short as possible, in consequence. The lure of the *Kaiserstadt* had been ever a strong one for Haydn, but he had promised the Prince to remain in his service as long as he lived, and was as good as his word. Suddenly came the desired freedom, however. Prince Nicolaus died, and as a crowning deed to his relations with Haydn, left the latter a pension of 1,000 gulden a year, to which the succeeding Prince, Paul Anton, added 400 gulden, stipulating only that Haydn should retain the title of "Conductor to Prince Esterhazy," and giving him otherwise his full freedom to go where he liked.

Haydn's triumphs in London, which followed his nearly thirty years of service as music director to the Esterhazys, the bestowal on him of the doctor's degree by the University of Oxford and countless other honors by the nobility and the public of England, together with the story of the results of this new inspiration, the creation of a wonderful new series of compositions, do not belong properly within the scope of this article. Not only did it give Haydn's artistic ambition the greatest possible satisfaction, this triumphal series of concerts in London, but it also raised his fame to the highest pinnacle in his own country, and he was now looked on as the foremost German master of the art of tone. The financial outcome of his two London journeys was so gratifying that Haydn was placed out of all possibility of want for the remainder of his life. In 1793 he purchased the house in what is now the *Haydngasse* (then the *Kleine Steingasse*), in Vienna, part of which he occupied until the time of his death in 1809.

HAYDN'S HOUSE IN VIENNA

At the time of the purchase, and indeed for many years after, the house was far away from the busy life of the metropolis. One has to pay a visit to a present day Vienna suburb like old-fashioned Grinzing to be able to imagine how the suburb of Windmühle looked at the end of the eighteenth century. Now, of course, the *Haydngasse* is quite a part of the city; the ugly five and six story modern flat-houses have taken entire possession of this quarter, as elsewhere, and only here and there stands a low, two-storied house which dates back a hundred or more years.

The Haydn house is quite similar in plan and appearance to the Schubert birth-house in Vienna. In the middle of the ground floor a large double-door leads directly into the court around which the house is built. Originally the house had only the one floor, but during Haydn's second journey to London (1794-'95) an additional story was built, so that it was 1797 before everything was in readiness for the owner to move in. Within the court, stairways lead to the upper apartments, the one to the right to that portion of the house which was occupied by Haydn. From the windows of his rooms one still has a glimpse of a little green garden below, but the further view, which may have been a very pleasant one in Haydn's time, is now completely obstructed by the towering, dingy walls of apartment houses of later construction.

A thousand memories cluster around this little building. Here Haydn composed the Austrian national anthem, the world-famous *Kaiserhymn,* and from this same house came forth the two last works of the master, the oratorios *The Creation* and *The Seasons.* It is not difficult to picture the short, stocky figure of Beethoven trudg-

ing up the narrow street and entering the low doorway with a bundle of manuscripts under his arm to be looked over by "Papa" Haydn, although the visits were not to continue so very long, as Beethoven was already beginning to tread paths which led so far afield that his old friend and teacher soon found it impossible to follow his musical innovations, and dubbed him the "Grand Mogul" on account of his overweening self-assurance and his refusal to be bound by ancient customs of music making. The two occupations of the city by the French troops in 1805 and 1809 were witnessed with much sadness of heart by Haydn from this same house, and here he received many a famous caller who came to do him honor, such as Weber, Cherubini, Admiral Nelson and Marshal Soult.

SCHWARZENBERG PALACE, VIENNA

Still another monument which brings up memories of Haydn in Vienna is the Schwarzenberg Palace, still standing in all its beauty, one of the buildings of the city which is familiar to every traveler. Here Haydn's oratorio, *The Creation*, had its first performance, in 1799, before an invited audience.

Returning to the little house in the *Haydngasse*, the principal reliquary for Haydn memories in Vienna, we find much there of interest. The last bombardment of the city by the French, in 1809, found Haydn in a very poor state of health, and the excitement did much to hasten his end. On May 10 rang out the first heavy cannon shots from the nearby village of Mariahilf. A trembling seized the old man and he fell into convulsions. He recovered himself shortly, but the sight of the French troops within his beloved city brought about a state of heavy depression which he sought to shake off during the days which followed by playing over the *Kaiserhymn* repeatedly on the piano. On May 26 he played his beloved composition three times, one after another, with deep feeling; this was the last time he ever touched the instrument. On May 31 he was dead.

On account of the French occupation his funeral was a very simple one, although the French authorities accorded his death all due honor. He was buried in the Hundsturmer Cemetery, which has now long ceased to exist, and eleven years later, at the wish of Prince Esterhazy, his remains were removed to Eisenstadt, where they now rest, with the exception of his skull, which is on quite unnecessary exhibition in the museum of the Vienna Conservatory.

In 1840 a memorial festival was held at the little house, and the present tablet was affixed to the façade. The name *Kleine Steingasse*, which the narrow street had always borne, was changed in 1862 to *Haydngasse*. In 1899 the efforts of the Haydn House Society had progressed so far that enough material was collected to establish a museum in a portion of the master's former apartment, and in 1904 the house was purchased by the city of Vienna as a perpetual memorial to one of the city's noblest sons.

The two rooms of the apartment which have been set aside for the museum were those probably most used by the master. At any rate, the first which one enters is the room in which he died, and the attendant points out even the very spot where his bed stood. There are his desk and chair, his sofa, and one of his pianos, bearing the name of its maker, "Joh. Jacob Könicke, city instrument maker, Vienna, 1796." The color of the keys is just the reverse of what we are familiar with today, the black keys being white and the white keys black. The compass of the instrument is five octaves, beginning from the third F below middle C. The action is as light as air, so that one can almost get a tone by breathing hard on the keyboard.

Pictures galore of Haydn and his contemporaries adorn the walls, also of the second room. Both rooms seem of the tiniest dimensions when one is accustomed to the modern Viennese apartment house, but they would compare in size with the average rooms of a newly-built American flat.

The cases in the rooms contain some interesting relics; letters in Haydn's careful handwriting, two of his favorite snuff boxes, for Haydn was addicted to this manner of enjoying the weed, the original editions of a number of his compositions, among them the *Kaiserhymn*, the last quartet, *The Creation* and *The Seasons*. Also there is one of the visiting cards which he used in his old age, bearing his name in Roman letters and a quotation, set to music, from one of his vocal quartets, which runs as follows.

Hin ist alle meine kraft—alt und schwach bin ich; in English: "All my strength is gone—old and weak am I."

With this same phrase, also, he closed his last, unfinished string quartet, No. 83, feeling himself unable to complete the work.

In the museum of the Vienna City Hall are also several former belongings of Haydn, including a small colored wax bust of himself, evidently a quite good likeness, a pencil and case, two notebooks, and a writing box, bearing on its top a water color of the scene in the Festival Hall of the University of Vienna, on March 27, 1908, when Haydn's *Creation* was performed in Italian, under Salieri's direction. Already very weak and old, Haydn appeared at the production and was accorded a tremendous ovation. The picture represents Princess Esterhazy, next to whom he sat, throwing her shawl over his shoulders to protect him from the draft. He was so touched and overcome by the enthusiasm with which his appearance was received, together with the splendid performance of his work, that he had to leave the hall after the end of the first part of the oratorio.

In the museum of the Vienna Conservatory, besides the skull of the composer, so tastelessly displayed, are the manuscripts of six quartets composed in 1771, also of six composed in the following year, also a piano of Haydn's of an earlier date than that in the house in the *Haydngasse*. The compass includes the usual five octaves, and the hammers and strings are so tiny that one hesitates almost to touch the keyboard, for fear the whole instrument may fall to pieces. There is not even a damper pedal, and it would take fully nine of the lower keys, which are black, according to the custom of the time, to make the stretch of an octave on a modern piano. The whole affair is much smaller and lighter than a practice clavier, and it would really not have been so very difficult to carry such a piano under one's arm to the garret. It is impossible to imagine the wonderful *Andante con variazione* in F minor being given its full worth on such an instrument.

To those who wish to examine the works of Haydn, as well as of other Viennese masters, in the original manuscript, the Royal Library on the Josefsplatz offers an unequaled source of research, which is open to every visitor on application.

MUSIC TEACHERS' NATIONAL ASSOCIATION---35TH ANNUAL MEETING

COLLEGE OF MUSIC, CINCINNATI, O., DEC. 29--JAN. 1

BY W. J. BALTZELL

For the fourth time in the history of the Association the meeting was held in the metropolis of the Ohio Valley in a city which has, in its record, many events of signal interest to music in the United States. And it is quite fitting that the meetings should be held in the College of Music, because that institution has had, through members of its faculty, a considerable part in shaping the policy of the Association and in carrying out the lines of work selected, not only in recent years but during a considerable part of the history of the organization.

It is natural that there should be differences in policy during these thirty-six years. The present writer has heard former members of the Association deplore the policy that has been in force during the past ten years, claiming that the work has been so changed that it is now merely an association of music teachers, largely those engaged in institutions, and not a national association of musicians.

The reply to this has been that the great body of musicians, teachers especially, in the United States has not been alive to the opportunities offered by such an association, more truly, perhaps, has been unwilling to share in the burdens and responsibilities incident to the work of such an organization. Those who have been willing to stick to the work have gradually found, in their connection with institutions and the various problems of music education to be worked out there, a solidarity of interest which has made the organization a live, aggressive one.

Quoting from the program for the present year, we present to our readers the following as the aim of the Association, which is "to be a center for every class of earnest musical workers—who regard music as a noble and valuable branch of social and personal culture, and who, because of their zeal for the art, are ready to unite in continuous efforts to advance and elevate the pursuit of it as a profession." In carrying out this aim the Association has had at its meetings representatives from most of the states east of the Mississippi and north of the Ohio, with a few members from the sections outside the limits just mentioned.

Just why the membership should remain so comparatively small is not an easy matter to determine. One reason may be that teachers who have remained outside the circle may not have given the subject serious thought. Some of them may have raised the question to themselves, if not to the one who suggested membership, "What will I get out of it?" —that notion that one must always see the *quid pro quo* in a transaction.

In a work such as this which is possible to an organization of music teachers, the musician ought rather to ask himself, "What can I put into the work of the Association to help it along?" The spirit should be that of giving, not taking; of service, not to be served. The present writer is firm in his conviction that one gets from association with others in proportion to what he puts in. Every one of us owes a duty to his fellows to do something for the common good. An organization of two to five thousand music teachers—it is not an impossibility to reach that number if proper enthusiasm could be aroused—would be a great force in musical education and progress in the United States. We ought to have a large body of earnest workers. The extent of the work of the Association and the effectiveness of its efforts depend upon the support which the musical profession will give to it.

The sessions of the Convention were preceded by a reception at Hotel Sinton to the visiting delegates

given by the Musicians' Club of Cincinnati, Mr. Frederick Hoffman, president, a flourishing organization containing many of the leading men musicians of the city. The club was assisted by members from several women's musical organizations, and a delightful social occasion was the result of their efforts. Prominent among the guests were Dr. Kunwald, conductor of the Symphony Orchestra, Mr. A. J. Gantvoort, director of the College of Music, as well as a number of the teachers from that institution, Mr. Louis Victor Saar, Messrs. Gorno, Miss Mary Venable, among them, Miss Bertha Baur and Sig. Tirindelli from the Conservatory of Music, and prominent teachers and members of the orchestra. The hospitality for which Cincinnati is famous was well displayed on this occasion. A special feature was the playing of Mendelssohn's *Octet* for strings, by local men.

TUESDAY

The morning session was held in the Odeon Hall, a fair audience being present, although the list of members from a distance was somewhat small, quite a number coming in later in the day. After the session was formally opened by President Farnsworth, Mr. A. J. Gantvoort gave an address of welcome, which was followed by a paper by Mr. Arthur Farwell of New York, *Civic Music in New York,* read by Mr Paul Bliss of Cincinnati, in the absence of Mr. Farwell. Mr. Farwell gave a very interesting account, with figures, showing the nature and extent of the free orchestra concerts in Central Park, which are supported by the city.

This paper was followed by an account of the work done in Cincinnati for the people in the poorer sections of the city, under the title *Music as a Factor in the Social Uplift,* given by Mrs. Adolph Klein. Representing the National Federation of Musical Clubs, Mrs. Ella May Smith, of Columbus, O., described the nature of the Federation's work and made a plea for closer touch between the various organizations of the country.

The afternoon session consisted of papers by Mr. Edgar Stillman Kelley, of Cincinnati, *The Trend of Modern Composition,* and of a Harmony and a Voice Conference, the former led by Prof. H. D. Sleeper, of Smith College, the latter by J. Lawrence Erb, of Chicago. In the Harmony Conference, Mr. Louis Victor Saar, of Cincinnati, presented a paper, with musical illustrations, *Ultra-modern Tendencies in Music,* in which certain works by Debussy and Schoenberg were discussed; following this was an account of *Some Experiences in a Composition Class,* by Mr. T. Carl Whitmer, Pittsburgh, relating to system of training in which emphasis is laid upon original work even in the elementary stages. Mr. Sleeper closed the discussion with a talk on the subject of the method of presenting harmony to secondary schools.

The Voice Conference was taken up by Dr. Floyd S. Muckey, of New York, who presented the subject of a scientific study of the voice so as to avoid the various interferences to pure tone production. This was illustrated by charts and photographs and aroused much interest.

In the evening a recital of music for two pianos was given by Miss Ada Zeller and Mrs. Gertrude Beryl Dalton, of Cincinnati, with two groups of songs by Dr. Fery Lulek, baritone, of the Cincinnati Conservatory.

WEDNESDAY

The regular morning session was preceded by a short organ recital by Karl Otto Staps, of Cincinnati, followed by an extremely interesting paper on the history of music in Cincinnati, by Mr. Frank R. Ellis, for a number of years closely identified with the Cincinnati May Festival. Then came the address of President Charles H. Farnsworth, of New York City, on the *Nature of Esthetic Pleasure,* a scholarly study in the value of music, which showed the deep relations which esthetic phenomena have on the higher life of mankind.

The morning session closed with a piano recital by Miss Irene Gardner, a highly talented pupil of the College of Music. Her work aroused the interest of the visiting members.

In the afternoon the annual business meeting was held and various matters discussed and acted upon, among them one to change the name of the Association, which was voted down. The time of the year in which the meeting should be held was also taken up and the officers instructed to get the views of each member through a questionaire. At the close of the business meeting papers were read on the theoretic and practical aspects of music editing by Prof. Waldo S. Pratt, Hartford, Conn., and W. J. Baltzell, Boston, followed by a paper on *Musical Interpretation* by Miss Mary Venable, of the College of Music. Two conferences closed the work of the afternoon, one for pianists and teachers, led by Mr. Allen Spencer, Chicago, with papers by Henry P. Eames and Walter Spry, both of Chicago; the other conference was on Public School Music, led by Osbourne McConathy, of Northwestern University, with reports from various sections of the country, and papers by E. B. Birgé, Indianapolis, Otto W. Miessner, Oak Park, Ill., Walter E. Aiken, Cincinnati, and Karl W. Gehrkins, of Oberlin University.

The evening's entertainment consisted of chamber music by the College of Music String Quartet, and a group of piano compositions played by Mrs. Walter Gilewicz. The most interesting number was Mr. Louis Victor Saar's quartet for piano and strings, Op. 39, with the composer at the piano.

THURSDAY

The morning session opened with a short organ recital by Mrs. Lillian Arkell Rixford, followed by a report on the conducting of examinations in England by Douglas Powell, and in France by Johannes Miersch, both of Cincinnati. Prof. Carl E. Seashore, of the State University of Iowa, gave a most interesting and stimulating address on the measurements of musical ability, such as pitch discrimination, perception of consonance, tonal imagery, tonal memory sense of rhythm, etc., with chart and drawings to illustrate his ideas. The theme of his address was that by means of certain tests with specially constructed apparatus it is possible to get a record of a person's natural musical endowments. Much interest was manifested in the presentation of the subject.

In the afternoon the papers and discussions covered the subject of examinations as a basis for professional recognition with reports from several states.

This closed the regular meeting of the Association, which was, however, immediately followed by an open meeting of the United States Section of the International Musical Society, which holds an annual session at this time of the year. Prof. Waldo S. Pratt, of Hartford is president, and was in charge of the meeting.

Two papers of unusual character were read, following out the policy of the Society which is to stimulate research and production in matters of musical scholarship. The first was by Canon Charles W. Douglas, of New York City, on *The History of the Schola Cantorum,* which had its origin in Rome centuries ago, and was the chief agent for developing and preserving ecclesiastical music. Following this came a paper by Mr. Edward Burlingame Hill, of the music faculty of Harvard University on *The Modern Interpretative Ballet,* with especial consideration of the French school. The meeting was closed with a dinner to members of the Society present, at the Business Men's Club, by the trustees of the College of Music.

Thus has passed into the record of music education in the United States another meeting of the M. T. N. A. What the permanent value of the meeting is to be is a matter that concerns those who were present. It was possible for them to have absorbed much of value or to have taken away but little. The amount is a matter of individual power and desire to absorb. But the good things in the meeting could just as easily have been distributed among twice or treble the number present.

The time and place for the next meeting is as yet unsettled It is not too soon, however, to say that the M. T. N. A. wishes additional members as well as subscribers to the very valuable reports of the proceedings. But more than that the Association needs musicians, men and women, who will attend the meetings and will assist in the work of carrying it on. There is need for many, there is opportunity for many. In closing let me express the hope that, when the roll for the next meeting is made up, the number may be much larger, and represent an increased percentage of the total membership.

ROMEO FRICK, BARITONE

Mr. Frick is a native of Indiana, and as a young man studied architecture, at the same time devoting himself to vocal music, graduating from the Cincinnati Conservatory. For a time he engaged in professional work with Cincinnati as headquarters, winning high appreciation in concert and oratorio. Later he went to Europe and studied with well-known teachers, among them Randegger in London, and Emerich in Berlin, remaining in the latter city for four years as artist and teacher. During his stay in Berlin he married a popular concert soprano.

Last fall Mr. Frick and his wife, Mme. Karola Frick, located in Boston. In addition to a certain amount of teaching the artist pair will give joint recitals in a number of American cities. Their Boston address is 87 Gainsborough Street. Included in Mr. Frick's repertoire are several songs by William Arms Fisher, *He that dwelleth in the secret place* and *When Allah spoke,* Charles Fonteyn Manney's *Henceforth O love,* and Cadman's *The pearl lies in the sea.* These songs are published by the Oliver Ditson Company.

THE MAKING OF A MUSICIAN

As Shown in Reminiscences of Constantin von Sternberg

III

IN THE UNITED STATES

THIS Court concert* carried in its train excellent engagements at the various embassies and aristocratic palaces; it was, of course, only a consequence of the Emperor's graciousness and, recognizing this, nothing could have been further from my mind than the thought that my renown could be more than purely local. Hence my profound surprise when a month afterward I received a telegram from America asking for my terms for one hundred concerts to be given within the space of five months.

At that time I was engaged to be married, had my pockets overflowing with money, and felt altogether too happy to think of going to "far, distant America." That cablegram received no reply, but after a week there came another one, asking for an appointment on the 15th of June (1880). Not knowing any English, I had it translated and replied: "Carlsbad, Hotel Pupp."

Sure enough, on the morning of the appointed day a man from America, with a long, black beard, the late C. C. Colby, called upon me with an interpreter and began to coax and bid. At first I would not hear of going away, but he raised his bids higher and higher until I began to waver and telegraphed to my fiancée, who replied at once that I should accept. The contract, the largest ever made up to that time (except Rubinstein's) was signed and on the 10th of September I sailed on the old Wieland, of the Hamburg Line, to the distant shores where, since then, I have established my permanent and much beloved home.

CONCERT TOURS

After the first season I left for Europe to get married. My success, however, inspired my manager with enough confidence to offer me another and still better contract before I left. Prudence whispered rather plainly to me that it were better to postpone a return for two or three years; but I had learned to like America, to like its frank, kindly, and unaffected people; the audiences, too, were very sympathetic to me, not because of any particularly unerring judgment—remember this was thirty-three years ago—but because of their manifest desire to learn what the great musical master minds had to reveal. In short, I liked it here and, accepting one contract after another, I always came back, just like the proverbial cat. For six seasons I continued touring here, at first alone, later on in conjunction with Wilhelmj; also with the now almost forgotten Minnie Hauck.

IN ATLANTA

In 1886 I was compelled to go south on account of my wife's illness. Atlanta, Ga., offered a good opportunity to find a field as a teacher and after but a few weeks I had formed a class so large that I had to engage one of my former pupils from New York—where I had given lessons occasionally between tours—to assist me. I arranged with my pupils for occasional absences and made several concert tours of two and three weeks at a time. Two years later I began to feel the need of fresh artistic stimulus so plainly that I could stay there no longer and left Atlanta under conditions so brilliant as to make me, in many ways, feel sorry to leave. The Governor of Georgia (General Gordon), the Mayor of Atlanta, the entire Legislature and 150 prominent ladies addressed an open letter to me in the *Constitution* in which they characterized my leaving as a "public calamity in the field of education and culture," and requested me to reconsider my removal; but the dictates of my artistic conscience were imperative and I left, though with much regret, as I had formed a great fondness of the kind people of Atlanta.

*At the court of Wilhelm I, German Emperor.

IN PHILADELPHIA

Attending a meeting of the Music Teachers' National Association, in Detroit, Mich., I met a persuasive piano dealer who offered me all sorts of advantages if I would move to Philadelphia, where he had a large business. I accepted and came, but after a few weeks he vanished from the city and I have not heard of him since. His departure was not so deplorable to me as it was to several others, for I soon had enough pupils to keep me busier than I wished to be.

Whenever I had visited Philadelphia on my concert tours the city had always impressed me very favorably, especially because it seemed so much more quiet than New York; it seemed like a place where, after professional duties, one could find repose and leisure to work upon one's own further development. If I was deceived in this it was due only to the rapidly growing demands upon my time through concerts and pupils. In less than three months I had no time left for my many private studies, much less for composition which, ever since that time, has been done during my summerings in Europe.

COMPOSITIONS

How one's writings do accumulate! My latest opus bears the number 106! And the catalogue of my writings comprises compositions for the piano, for the voice, for violin, 'cello, chamber music and several choral works. While it gives me, naturally, great pleasure to see in my royalty accounts that many of my works more than thirty years old are still in demand on both shores of the "pond," I could not venture to express an opinion as to their relative merits. No composer ever could. At best, he can only say which one of his works he believes best to represent his style and manner of writing. With this reservation I might mention the *Humoreske,* Op. 26; the three *Concert Etudes*—written many years apart; *Impromptu* and *Caprice hyppique* (no opus number, Peters Edition); *Nuit Arabe;* a short piece entitled *En Bohème* which my friend, Josef Hofmann, frequently places upon his programs; the three *Preludes,* Op. 106, and my six trios for piano, violin and 'cello, among which the three *From Italy* seem to find particular favor by the public and press in America.

AS A TEACHER

Barring my occasional appearances as soloist with the Boston, Philadelphia, and other orchestras, and a restricted number of recitals in which I specialized more and more upon American and Russian composers, my work in Philadelphia has consisted chiefly of teaching in the school of music which bears my name and of which all the other fifteen piano teachers have been my pupils. Eight years ago the growth of the school made incorporation necessary, to lessen my administrative work and my responsibility as president. About 250 of my pupils are now holding responsible positions as teachers—with occasional concertizing—in various parts of this country. Among others whom I have taught are men and women who have acquired fine reputations and, in some instances, great fame, as is the case with Mme. Olga Samaroff, now Mrs. Stokovski. Less widely but favorably known are Robert Armbruster, Dorothy Goldsmith, Bernardo Cortese, Israel Cahan, Mary Fox, Jakob Friedberger, Gustave Becker, Kate Bundy,—now Mrs. D. Burke,—Robert Braun, and a number of others, too many for enumeration here. And still others, much larger in number than I am able to provide with opportunities to be heard in legitimate concerts for which they are fully equipped and—fondly hoping.

MUSICAL PROGRESS IN THE UNITED STATES

From spending my summers in Europe I derive the advantage of living, practically, on two continents and of profiting by the views and experiences of both, in musical and other ways.

America has labored long under, and has gained a wonderful victory over, two disadvantages. While Europe, assisted by centuries of inherited appreciation, was developing its music, America had to grapple with the problems of civic life, of political organization, of the mechanical side of human existence. Appreciation of good music, largely inherited in Europe, had here to be acquired by slow stages, and the battle against the anti-musical inheritance of Puritans and Quakers had to be fought. And yet, it sets every foreigner amarveling when he finds how completely we have "caught up" with Europe, how we have even outrun it in some lines, as, for instance, in the excellence of some of our orchestras and in grand opera. In the creative line we are, of necessity, behind, though, I think, rather in the number of good writers than in the merits of their works.

That American compositions are not yet of ethnical distinctiveness is easily accounted for by the shortness of our history and by the enormous conflux of so many—artistically speaking, heterogeneous—nationalities and races. Considered as composers *per se,* irrespective of the ethnical element, our writers show not only thorough training, broad musical learning, but also very remarkable inventive talent, in short, everything that entitles them to a place of high respect in the musical world.

AMERICAN MUSIC TEACHING

Still higher is my estimate of American music teaching. While the number of great teachers may be larger in Europe than it is here, I know of no one there that could claim superiority over *some* of his colleagues on this side. The European master teacher enjoys two great advantages for which we can only trust to the future. Their pupils need not divide their time and energy between their studies and the earning of a living; if they are poor, they find some benevolent person to lend them the means for studying and to enable them to concentrate their forces on their work. This is the rule in Europe; here it is, unfortunately, the exception; partly because too many of our moneyed people, who would gladly assist a young man in studying law, medicine or engineering, hold as yet too low an estimate of the dignity of art and of the difficulty of its studies; partly, however, it is the false pride of the student which prevents him from looking for assistance. I call this pride false, because it causes a halving of energy and because from half an energy no whole result can be expected. A loan of two or three thousand dollars would enable the student to fit himself for professional life so adequately as to be enabled to repay the loan (with interest) in a very few years, whereas the constant division of energy retards his studies and prevents that fulness and unification of purpose which alone can insure complete results.

The other advantage of the European teacher lies not only in the length of the season—it fills *ten* months in the year, while we are here expected to

produce the same results in seven, sometimes six, and occasionally in five months or even less—but also in the *obedience* of his pupils. They are not allowed to pit their immature criticism against his life experience; they are not allowed to appear at public or semi-public occasions, musicales, charity (?) affairs or the like without his permission which he, naturally, withholds until the pupils are fit to be heard and are no discredit to their master. This spirit of discipline and obedience affects even the American student abroad.

Leaving the master teachers in Europe and America aside, there is no doubt in my mind that the average teacher in America is superior to his European brother. He seems to stand on a somewhat higher ethical plane; he feels his responsibility more keenly; he is *far more modern* in his methods, more resourceful in conveying them, and he is, as a rule, of broader, extra-musical culture. The tone in the social intercourse among the teachers here is generally much higher and more refined than in Europe, and petty jealousy or envy is hardly known among them, whereas it does exist in Europe to some extent, as was admitted to me by my friends there. The greater competition in Europe is, no doubt, accountable for this; but it accounts also for the almost total absence (in Germany and France) of the charlatan, of the "society teacher," and kindred fakirs, of which we have many specimens.

As for those poor, deluded American youngsters who feel that they must "study in Europe," there is simply no help (and no excuse) for them. They have to go there, and return, usually, a little worse for wear, in more than one respect. After completing one's artistic training here, it is always advisable to spend a year or two in Europe under the supervision of a master. It broadens the mental scope in musical and other ways and makes one see how one's country looks from the outside. But to go to Europe *before* the training is completed is absurd, unjust to the honesty of our teachers, and it is contemptibly snobbish. A girl who had not learned more than the first three Cramer études left me, went to Europe and returned *after six months* with Liszt's 12*th Rhapsody*! She "grawnted" that she "cawnt" play it "purfectly, ye know," but—well, I need not say where, of all places in Europe, she had "studied."

It is this silly sort of thing which often threatens to reduce the seven-league boots of our progress to a pair of very ordinary shoes. How we managed, in spite of it, to traverse in less than forty years the enormous distance from Theodore Thomas' Central Park concerts—where he could only occasionally smuggle a movement of a Beethoven symphony into his programs—how, I say, we could, from Pat Gilmore's "Music festivals with cannon accompaniment and fireworks," arrive at the pure, refined, and elevated atmosphere of our present symphony concerts, can be accounted for by only two factors: by the past work of *our* music teachers and by our proverbial "unlimited possibilities." It seems like magic! And it gives good ground to hope that even our grand opera will, some day, cease to be a mere social function plus some gushing star worship, and become really an esthetic educational institution where national differences are disregarded and art is the sole purpose.

MODERNITY IN MUSIC

When I am asked about my favorite composers, my reply is invariably that I have none. From the masters of the early Italian Renaissance, across the many Germans and the fewer French, to the latest Italians, Americans, and Russians—I love them all! All, except those recent mercenaries of Mammon who, for his sake, have made "sensation" their ideal, and who have distorted modernity into modernism as an offering upon the altar of Aaron's golden calf. I have no time for *isms*. Modernism recalls to my mind what an old forester in Germany told me once as he looked sadly at the damage a wind storm had done to his beloved trees. I had noticed that some very sturdy trees were broken, while others in the same direction, and some of them less stout, had been spared. As I commented upon the storm's whimsical selection, the old forester shook his head and said:

"No, sir, the wind does not *select* and the resistive power of a tree is not entirely due to its circumference; it depends far more upon the depth and strength of the *roots*!" I think that the fine old fellow has answered the question of modern*ism* for all time succinctly and exhaustively. I admire modernity of Bach and Beethoven as much as of MacDowell, Chadwick, and Glazunov, because it does not prevent their work from being *organic*; modernism is unorganic and its phraseology is asthmatic. It lacks *Ethos,* because it has no root in the past. It is undoubtedly "new"—and nothing else; neither is it beautiful, ethically true, nor has it any artistic ancestry, such as every great master shows and had to show in his work, despite his modernity.

By opposing a new fad in art I lay myself open to the charge of being an "old fogy." I know it, but it does not trouble me. Whoever takes the trouble to look at some of my compositions cannot deny that—however modest their merits are—they are *modern*. And since some few of them have remained in public favor over thirty years, I can with all modesty regard the charge of "old fogy" as rather "sassy" than serious. So long as Bach and Beethoven still *live* the modernistic meloclasts need not alarm us.

The claim is often made that every genius was at first antagonized. This is one of those dangerous half-truths behind which the incapable love to barricade themselves. While the general public was never prepared and equipped to follow the thought courses of a new genius at once, it has always learned to do so after a little while because *there was always a small circle of appreciators that did understand the new thought* and were capable of judging its worthiness or unworthiness. I belonged to this small circle when Brahms, Wagner and Tchaïkovsky were new and hotly contested. In the battles I fought for their sake my mind received the training to measure a new genius by his own standards and to distinguish between ethics and mere cleverness and cunning. I trust that I am still a member of this small circle and I do not wish to forfeit this membership for the sake of a few ephemeral, newspaper-made "celebrities." I am not alone with my views on modernism; my company is small but eminently satisfactory.

My belief in the Ethos in music is as unshakable as my belief in God. Wherever music is not ethical it sinks down either to the level of a banal, vulgar "amusement" or, still lower, to that of a culpable appeal to our lowest instincts, to something to which the serious men and great minds of musical history could not have consecrated their best powers. Their arduous work, their uncomplaining self-abnegation, their brave heroism and their sacrifices were not wasted upon a frivolous triviality. Better than any other class of men, they have written the history of the human soul—truthfully and indelibly. What was their musical creed is mine today, as it was that of the philosopher I love best, Plato, whose words may serve the foregoing as a redeeming Coda:

> "Music is a moral law. It gives a soul to the Universe, wings to the mind, flight to the imagination, a charm to sadness, gayety and life to everything. It is *the essence of order* and leads to all that is good, just and beautiful —of which it is the invisible, but nevertheless dazzling, passionate and *eternal* form."

TIME, NUMBERS, THE PUBLIC

BY LESTER S. BUTLER

"It is a perfect waste of time to make any effort in these directions (charging for missed lessons and registration of teachers), because a number of us people have tried to improve these very conditions for almost fifty years without any perceptible success."

This statement in a well-known musical paper, written by a noted musician of this country, should not be allowed to discourage the profession from working for the reforms mentioned. One does not feel surprise at the pessimism of the writer of the article in question, and most of us know the disappointment that comes from present failure of purposeful and honest effort to secure a result.

First, then, the music teachers of this country should feel that charging for missed lessons and being protected from the competition of incompetence, by some form of legal restraint, are needed reforms based upon equity, benefiting the community as well as themselves; and when, upon evidence gathered from country-wide discussion and much thought, this has been decided, they should marshal every force in their favor, and attack the opposition until it retreats, or, better, joins the winning side.

The following story by Ella Wheeler Wilcox illustrates one writer's view about taking another's time: An office boy had a message to deliver, came back after the address, fearing that he had mistaken the number; later, finding that the man had moved, he returned to ask whether he should take the elevated or trolley. While he was doing this, a clerk who had mislaid a box given him to post, went to his employer to ask if he had seen it. When found, a blemish was discovered on the object which the clerks should have removed, but he interrupted his employer to inquire what should be done about it. The author says: "Neither the office boy nor the clerk realized the absolute criminality of his conduct—for it is a crime to steal and take what is not ours; and another man's time and brain energy are not ours, when we are paid to help him keep them for his own uses."

Of course, the one who misses a lesson has no intention of stealing time or anything else. Viewed charitably, it is a matter of "didn't think."

Mrs. Wilcox says further: "It is doubtful if the boy or the clerk will ever be in a position to understand the matter, since by their failure to use their own wits and do their own work they will not be able to reach any responsible position in the world."

It is unbelievable that the class of pupils going to the music teachers of this nation, their parents or guardians, belong to such types of humanity as the office boy and the clerk. So we conclude that it is not a waste of time to labor with these until they join our ranks.

But to bring about these important though, to some, such radical reforms, the weight of numbers is needed. Heretofore numbers have not been secured, which is a very encouraging fact, for if former trials had been made with the main body of the teachers working for the improvements, and had met with failure, it might be considered useless to force the issue at the present time.

Discuss these subjects with one another, through the columns of the local newspaper, the musical weekly, and the great educational musical monthlies. This will educate the public, which will sift the chaff from the wheat until it has the truth; then it will bring to bear that invincible power that can overthrow empires, and will grant the members of the musical profession proper legal protection by making some educational standard necessary before being allowed to teach, and issuing a certificate announcing that a candidate has met requirements.

AN AMERICAN TEACHER IN PARIS

Mme. Florence Goodrich

BY HARRIETTE BROWER

DURING my recent stay in Paris, I was able to carry out a cherished desire to visit the well-known musical educators, Mr. and Mrs. A. J. Goodrich, who have for several years been located at the French capital. I found them one morning in their delightful apartment near the Arc de Triomphe. The long, wide windows of the music salon look out on the broad Avenue Victor Hugo, with its trees, its shops, and its busy promenaders.

After a short chat with both these enthusiastic workers in the field, Mme. Goodrich kindly gave me an hour or more of her valuable time, during which we earnestly discussed methods of training young pupils, and awakening the musical ear and taste. I have her permission to write out the gist of our talk, which I am sure will contain points of interest for teachers and students.

"Young teachers," began Mme. Goodrich, "came to me from all over the country, when I was teaching in America, saying: 'We have studied harmony and analysis, but we can't seem to make these things practical; we must have something we can get hold of. Can you help us—can you show us how to memorize?' I was then in Chicago, and had the branch of musical analysis in Wm. H. Sherwood's school. My room came to be a sort of refuge where pupils could bring their troubles.

VIEW OF GOODRICH STUDIO

"As you studied with Mr. Sherwood you know the calibre of the man and what he expected of his pupils. He himself had a wonderful memory. I'm sure he knew a thousand pieces—concertos of all kinds and quantities of difficult solos. A new pupil would come for a first lesson, and he would set her a terrific task to do for the next lesson, whether that came in a week or in four days. I have in mind one girl from a small western town. At her first lesson she was given some études by Wilson G. Smith, a Bach fugue, and a piece of some kind. These were all to be memorized in a week. She came to me after that first lesson almost in tears. 'What shall I do?' she cried; 'I don't know how to memorize; I never learned a piece of music in my life.'

"I said, 'I will help you. First you must get rid of this fear that you cannot memorize music, for you *c-a-n*, if you once learn how it is done. Take this étude of Smiths: It starts with the simple chord of C and follows it out in sequences; the formation is extremely simple once you grasp it. Now that you understand it, you can just as well play it in the key of Db, and now in D.' She grasped the idea quickly, and was able to play the figure in other keys. Then we took the next exercise and the next, working them out in the same way. Thus she was started on the right track; she was shown how to do the work for herself. We don't need to go every step of the way with a pupil, but we must show them to the direct way and to the right spot.

"I was with Mr. Sherwood eight years, doing analysis and harmony work, for he felt all pupils should have a knowledge of these subjects. Then we came to New York and had our own private classes and pupils. Three years ago we came to Paris on a visit, for a short time, and we have been here ever since.

"Last year I had a wonderful season; pupils came to me in large numbers. I taught right through the season, from nine in the morning until six in the evening, daily, with but about fifteen minutes respite for my lunch. I love Paris, and I feel there is a great field here; so many students come abroad who need to study these subjects and who don't understand the language. So I took up this work because it seemed to come to me, though of course I do not need to teach. But I felt that if these ideas are so helpful to the adults such as Mr. Goodrich has in his large classes, they could be simplified and adapted to children; and so I began with the children.

"I do not talk to the children about technic, or method, or any of those things which make them hate music,—but I try to show them, at the piano, how to make a beautiful tone. I don't so very much care how they touch the key, — with elbow, wrist, flat finger, or any way at all, but they must listen until they can make a lovely tone. For the little children, I ask them to play one note and make it beautiful; then put a companion with it, one that will agree. If they have played C and then try D, they soon see that when sounded together these two tones do not agree or harmonize so they are not pleased with the result. Then they try C and E, and find these two can live together in harmony. After this they add G to the other two and find these three can dwell together as a happy family. Then I ask them to break up the chord and play the notes one after the other. They usually do this with the right hand. Then I say it's not good to make one hand do all the work while the other is idle; can't you employ the two hands by playing one of the notes with the left hand? And so they experiment until they arrive just where I want them to,—in fact until they really compose the first little piece in the set of beginning pieces which I have written. You see I do not put the printed page before them at first, but make them work the notes out themselves; it seems to them as though they had really composed the little piece themselves, and of course they remember it, for they know its construction.

"It happens sometimes that I have two pupils from one family. In such a case I ask one of the pupils to come at nine and the other at nine-thirty, for instance, so that a part of the work can be done together. I place one pupil at each piano; the first plays a succession of chords; the other holds herself ready to supplement and fill out if the first one cannot quite think out the sequence. In this way they are both kept alert, and the thought never wanders. I really obtain wonderful results in this work.

"I do so much work along these lines that I am able to take but very few private piano students, and when I do it is for some special reason. One of my piano pupils of last season was a young girl whose mother brought her to me in a state of despair. The girl fairly hated the thought of practising on the piano, though fond of music itself; she was up in rebellion as to the way to study it. She had been taught by a very mechanical method, and had been kept at technic to the exclusion of tone production, and the musical side of study.

"I told the mother that I would take the girl if she could be placed absolutely in my hands; that I was to have full charge of her study, and she must do exactly as I said. Consent was given. The girl came to me for half an hour every day and did no practising at home. I began at once on the musical side. We studied tone, single tones, and tones in simple sequences and combinations. Everything was explained and analyzed. I was like a physician healing a sick child, and I administered my cure in small doses. After several weeks of such treatment, light began to dawn on the girl; she saw the reason for things,—she began to see the meaning of music, and then she learned to love her practice; there was no more trouble on that score, after that.

"I give a number of musicales during the season when my work is demonstrated before listeners. Sometimes a little piece is committed to memory right then and there; which shows what a simple thing it is to do, once you know how. At these musicales we have large audiences in attendance, which fill every corner of these rooms and overflow into the hallways.

"As soon as you return to America, I will have the books which I use in my memory and analysis classes sent to you. Of course you have seen Mr. Goodrich's book on *Memory Training*. I really did not know that he had written and had had it published, until he placed the book in my hands. I took it up, glanced through it, and finally came to read it in earnest. Then the idea came to me,—if this work can be done by older pupils, why cannot a simplified form of it be given to children? So I set to work to evolve something along these lines for the young pupil; and my work for the last several years and my booklets have been the result."

Since this delightful interview with Mme. Goodrich, in Paris, I have had the opportunity of examining the *Album of Six Piano Studies* above referred to. As she said, they are composed of sequences of the chords of the various keys employed; and, used as the author intends, must be very helpful in giving the pupil ideas in tuneful and melodious key construction. I shall take pleasure in using them, and thank the author for her practical ideas. I believe other teachers will find them helpful, and will also be interested in the work which Mme. Goodrich is doing for foreign and American children in her home in the French capital.

DUSSEK: A NEGLECTED COMPOSER

BY J. MENDELSOHN

JOHANN LUDWIG DUSSEK was born in Czaslave, Bohemia, February 9, 1761. His father, one of the best organists of his time, entrusted his education to the Jesuit Fathers in Iglau. From there young Dussek went to Prague, where he took his bachelor's degree and studied theology, at the same time perfecting his musical education. He started his musical career as harmonica player. The choice of this instrument was conditioned by the fundamental character of the artist and at the same time nursing and fostering it. For the harmonica (an equivalent for the most complete instrument of the accordion family) commands all the shades of tones from the softest breath to the shrill, nerve-wrecking shriek, a bell sound, sweeter than the flute, almost bodiless like air, drawling like the mellowest bowing, an abundance of harmonics vanishing into each other, and with it all is capable to arouse the deepest sentimentality, but not appropriate for serene, lively, and vigorous tunes.

When Dussek left the university his musical studies had advanced so far that he was able to fill a position as organist in Mecheln, which his protector, Count Männer, had procured for him. He soon changed this position for a similar one in Bergen-op-Zoom in Holland. Amsterdam became his next domicile, in 1782, and from here he followed a call as tutor of the sons of the Governor of The Hague.

After a visit to Philip Emanuel Bach, in Hamburg, he traveled as a piano and harmonica virtuoso, followed Prince Radziwill to Lithuania, and two years afterward made his début in Paris, where, in 1786, he played before Marie Antoinette. He then traveled through Italy, returned to Paris, but was forced by the Revolution to flee to England. Here, in London, he married (probably in 1792) a talented singer, pianist, and harpist, the oldest daughter of the Italian composer, Corri, and engaged, with his father-in-law, in a music publishing and engraving business on a large scale. This enterprise failed, however, and he returned to Germany, settling first in Hamburg and then, after a visit to his old father in Bohemia, in 1802, in Berlin, where he became the intimate friend and artistic adviser of that talented, chivalrous, prince-musician, Louis Ferdinand of Prussia.

The latter's noble compositions (F minor quartet and others) reflect credit on his friend, and the relation of these two excellent men was mutually beneficial; unfortunately it was terminated by Prince Louis' hero death at Saalfeld (1806). Dussek hereafter became court musician to the Prince of Isenburg, in Berlin, and, in 1808, to the Prince of Benevento, and to Prince Talleyrand, in Paris, and died there, March 20, 1812. Although Dussek's works today are not so popular as they deserve, their study must be recommended to every serious student of piano and composition for two reasons:

First, they reveal a sincerity of sentiment and a magnanimous seriousness of conception that are bound to arouse sympathy and respect, and, second, they assign to the old master a higher rank than to many a modern one.

However, Dussek's chief merit is that he was the first who studied his instrument, the piano, with energy and considerable success, and let it appear to its advantage in his compositions, without resorting to artificial virtuosity and neglecting the most important—the content.

This tendency is very significant indeed. Musical art requires an organ that speaks to our ears and can reach its aim only by the appropriate use of this organ. The idea of a work of art and its organ stand in the same relation as mind and body, so that one of the first and decisive questions is in what relation both reveal themselves in the art work, whether the spiritual is neglected or the bodily, whether spirit or material predominates. Even in some compositions of Mozart the organic part has been less developed. The spirit, alas, has often stepped back before the material in many works of our time as well as of a former epoch. Only in Beethoven, who brought the piano music to perfection, are both sides found in happiest harmony. Hence we can measure the great merit of Dussek, whose activity falls between Mozart and Beethoven, at the time of Clementi, Cramer, Louis Ferdinand, and others.

If we contemplate Dussek's piano music, especially his later, characteristic works (for instance, his G minor concerto, the sonatas: *Elégie,* etc., *La consolation, Le retour à Paris, L'invocation,* and the one in E♭, Op. 44, and his excellent four hand compositions), we soon find out what he endeavored to gain from the instrument, the poverty of which, as to its sound, could not escape him, although the more sonorous English pianos were at his command. His task became to win abundance of sound from the instrument in contradiction with its original dryness (as compared with the sound of string and wind instruments), and this task was a just and meritful one. He also sought wide and euphonious positions of chords; a rich harmony spiced with chromatic passing tones and passing chords; connected with it a rich, soft modulation frequently led enharmonically and indulging in the change of the more distant sharp and flat keys; duplication of chords, followed more characteristically by duplication of whole sentences, especially after the manner of the setting for clarinets and horns; long, sonorous, tranquil, and soft figuration and passages in several parts; many triplets, the melody, where it appears in homophonic form, decorated with vivacious runs.

These are about the characteristic features in which the master likes to reveal himself and which are so inseparably united with each of his thoughts.

The mechanism and sound of the English grand pianos which he used corresponded to this trend of his mind and confirmed him in his tendency. For this sound is so full and lasting, so powerful and determined, that it captivates as it were the ear and the sense. This was not the case with the old Vienna instruments which, in their lesser precision, left more leeway to the fantasy. While, therefore, the old Vienna school excels by its light, energetic, and spirited play, the great fulness of the sound of the English instruments and the deep fall of their keys entice to a legato in wide tone-masses and positions, full of a grand, noble, and tender sentimentality. We find in them the appropriate mouthpiece for a noble mind, for a heart, soft but capable of lofty elation; and this is what we should love and study in Dussek's works.

But the sincere study reveals at the same time the defective side of this excellent composer. He was so absorbed by his organ and the method of its application that in his very deepest and most pleasing compositions he could not get away from it any more; his representation became mannerism. In the uninterrupted abundance of harmonies and passages the fresh life drowns and chokes like that English duke in the Malmsey cask. Sequences and sentences blur into each other, because the eternally overburdened setting effuses all boundary lines of groups and sections, and spreads the same form and color over everything. The rhythm loses its elasticity, the continuous succession of broadly displayed masses and sentences, while noble and grand in almost every detail, as a whole becomes fatiguing and monotonous.

From another point of view, it may be said that the tendency of the slow tempo predominates in Dussek. The meaning of the slow tempo is to abide with the single moments. If this inclination rules in the composer, it penetrates the whole with the propensity to conceive the single moments in a deeper, more intimate way. This is the characteristic trait of a mind abandoned in noble sentiment, but neither by a richer life of ideas, nor by important, stirring events, nor by tasks imposed from the outside (from church or theatre) aroused from its brooding and mooding to a higher, bolder swing. Hence Dussek's adagios, to a great extent, make an extremely pleasing impression, while his allegros, because of perpetual abundance of play and copiousness of details, are too immovable to fill their purpose, that is, to serve the adagios as an adequate contrast.

If Dussek would have cultivated more the orchestral and vocal forms, he would have escaped or conquered this one-sidedness. It seems to be the unavoidable fate of all virtuosi (to whom their virtuosity, their instrument has become the chief aim) that a mannerism from the work of their hands, from their instrument, and their intimacy with it sticks to their compositions.

Dussek, too (like his friend Prince Louis Ferdinand, his contemporary Field, his successor Chopin, and most of their followers, even the most modern piano composers), should succumb to this fate; but by his accomplishments as well as by his deficiencies he becomes an object of our profound respect and consideration. We will gladly pardon his mannerism as soon as we find what deep meaning, what noble mind hides behind this veil, and no pianist or composer for the piano will study his works without being abundantly recompensed and furthered in his art.

THE RHYTHM OF LONDON

THERE is one thing which impresses before all others, that thing is the rhythm of London; the eternal orchestration of London life, with the roll and jolt of endless moving vehicles, and the myriad movements of countless people, expressing every key and every tone of sound, ringing the changes on every harmony, rising and falling in a perpetual diapason, like the undercurrent of organ music in the service of a great cathedral. The rhythm of London is the most subtle and the most fascinating characteristic of the capital. It is something more than mere sound, something more than a great orchestral piece; it is part and parcel of the monster city, the very garment of her; the folk song she croons to herself and her millions, and the banner of sound she waves aloft to heaven as a sign for all who come near her.—London *Evening News.*

THE DUET

SCIENTIFIC HAND TRAINING

BY BURNETT JORDAN

II

IT is taken for granted that the reader has carefully carried out the instructions as given for relaxation.

It may not be amiss to call attention to the necessity for co-operative action in the muscles of the upper part of the arm, shoulder and back. We know that perfection in any physical exercise involves not only familiarity with the necessary movements, but, in an equal degree, the elimination of all movements that are aimless and superfluous.

Herbert Spencer, in one of his essays, tells us that a leading trait of grace is *continuity, flowingness.* Motion in curved lines is economical motion. Given certain successive positions to be assumed by a limb, then if it be moved in a straight line to the first of these positions, suddenly arrested, and then moved in another direction straight to the second position, and so on, it is clear that, at each arrest the momentum previously given to the limb must be destroyed at a certain cost of force; whereas, if, instead of arresting the limb at its first position, its motion be allowed to continue, and a lateral force be impressed to make it diverge towards the second position, a curvilinear motion is the necessary result, and by making use of the original momentum, force is economized.

This theory can be satisfactorily demonstrated if the principles of circular movements be persisted in long enough to give freedom of movement, which can be achieved only after practice. After having gained freedom through the use of the arm-swinging movements outlined, take these same exercises and reduce them to meet the needs of the hand, and then apply these same circular, lateral, and perpendicular movements to the individual fingers, being sure all the time, that the movement is deliberately conceived and then decisively executed. All motions of a limb, all positions, even in a state of rest, are the result of a balance between two opposing sets of muscles. A proper balance of these opposing sets of muscles is an important principle which the pianist or violinist must understand. After all, the main object is to gain *control* over the various sets of muscles and so to free them, that the mental stimulus will automatically produce the desired musical result.

Action of the hand being downward and inward, the skin of the palm and between the fingers assumes the texture natural to such movements. The skin is tight and prevents the free outward action of the expansory muscles. The next problem to consider is a means for stretching the skin, and freeing the action of the hand in taking octaves, chords, arpeggios, and large intervals.

To bring about this condition of pliability, four exercises are herewith given. The accompanying illustrations will serve to make clear each step, if the description of the exercise be compared during the action. The exercises are: 1, Palm stretching; 2, Finger pulling; 3, Finger spreading; 4, Finger stretching. *They should be taken in the order named.*

1. Palm Stretching

(Illustrations Nos. 1, 2, 3 and 4)

Left hand flat on the table. Right hand over—placing thumbs and fifth fingers in opposition. Use enough pressure to cause a stretching in the palmer surface, graduating the pressure from day to day. Then change the position, bringing the left hand over the right.

Return to first position, bringing the thumb and fourth fingers in opposition. Repeat with each finger as per illustrations, which give three out of the four positions.

2. Finger Pulling

(Illustration No. 5)

Place hand on table with the index finger in position as per illustration. Wrist level. Pull the finger gently, several times. Place hand in position again with 2, 4 and 5 on table, and 3 in hanging position. Pull and repeat exercise with each finger of each hand.

3. Finger Spreading

(Illustration No. 6)

With the hand in position on table, spread the fingers of the left hand, with thumb and index finger of the opposite hand. After spreading the individual fingers, spread in groups—(2 and 4), (3 and 5), (2 and 5).

4. Finger Stretching

(Illustrations Nos. 7 and 8)

Hold hand in position of illustration No. 7. Thumb on first joint of index finger with a good, firm hold. Place thumb of the opposite hand on the tip of the third finger, bracing the back of the left hand with the right free fingers

1

2

3

4

5

6

7

8

9

10

11

as per illustration No. 8. Exert pressure on the fingers. This will cause a decided stretch of the skin between the fingers.

Replace the hand in first position, pressing down the third finger instead of the index, and repeat the exercise with each finger of each hand.

This is a difficult exercise to explain in any way except by personal demonstration, but if the illustrations are carefully scanned, it can be satisfactorily worked out. Care must be taken that the

12

13

14

pressure at first be light and then gently increased in strength from day to day.

After this set of exercises, the skin in the palm of the hands and between the fingers should be gently rubbed and manipulated as though one were washing the hands.

5. An Exercise for Giving Endurance to the Extensor Muscles of the Hand

Place the tip of the fifth finger *under* the tip of the thumb, as in illustration No. 9, with plenty of resistance as though the fifth finger were going to snap backwards. 2, 3 and 4 should be straight and spread. Draw in 2, 3 and 4 as in illustration No. 10, then spread thumb and 5 as in illustration No. 11. In this last position the thumb and fifth finger must spread apart and backwards.

6. An Exercise for Giving Endurance to the Extensor Muscles of the Forearm and Especially to the Wrist

(*Illustrations Nos. 12, 13 and 14*)

Elbow on table, with hand in a relaxed position, as in illustration No. 12. Snap the hand shut quickly and decisively as in No. 13. Spread wide, as in No. 14. Return to position 13 and relax to position 12. This exercise should be started with five counts for each hand and increased daily until the hand can take from twenty to fifty without feeling fatigued. This exercise is valuable in many ways, if the proper attention is given to each step of relaxation, flexion and full contraction and then the return step by step to the relaxed condition, for it will give greater endurance to the wrist and forearm than any other single exercise.

In beginning to practise these movements and exercises, it must be very necessary to observe that they should commence in an extremely gentle manner. The resistance applied must be at first quite small, in fact, it should scarcely be felt; it can then be gradually intensified as the parts become more accustomed to the exercise.

(*To be continued*)

LETTERS TO THE BEGINNING TEACHER

BY HELENA MAGUIRE

V

THE MOTH

"If I be left behind, a moth of peace."—Othello I:3.

If Desdemona had been willing to be left behind, "a moth of peace," there never would have been a tragedy of Othello. It is when those who are unfitted persist in following the strong into the blaze and glare of the "streaming glories" that tragedies occur. And never was there more pitiful tragedy than the too frequent one of the Moth in the Music World.

If you Beginning Teachers have ever attended a music school you have seen them fluttering there by the hundreds. During my years at the New England Conservatory there were so many of them!—some so pretty and bright, so gay, so lovely; others so dull, so drab, but all as unfitted for the life of music teacher for which they were preparing as is the Moth to inhabit the dark, shut-in room that the candle is made for.

As the Candle cannot burn in the open, any vagrant breeze being enough to put it most completely out; as the Candle burns only in the still, close, curtained Halls of Thought, so, in this heavy atmosphere necessary to the Candle, the Moth cannot live. It belongs in the open; it loves the very breeze that is fatal to the Candle, and when it wanders in to the Candle its life is imperiled and we have the tragedy of the Moth.

The Beginning Teacher must learn for herself what is necessary to make a music teacher; she must learn to distinguish between true enthusiasm and mere emotionalism. Almost anybody can be taught to make music; but it takes a rather unusual person to make a successful teacher of music. Everyone should study music, but everyone cannot teach it.

Yet young girls say, "I am going to be a music teacher," as gayly, as inconsequently as they say, "I am going shopping." They have not the least idea what will be required of them. They "love music, adore it"; they can play or sing; they are "filled with the zeal that is not according to knowledge"; so they say, "I will be a music teacher," and they enter the Music Life, and once in, blest Muses that keep the gates, how hard it is to get out!

For there is the Candle, that blazing, fascinating, wonderful teacher, sending out long, warm, inspirational gleams, drawing all to him by the magic of his divine fire. The Moth sees little Candles become ignited at this fire, and begin to kindle and throw out sparks; and the poor little Moth goes to the fire and—is scorched.

For she is only a Moth, you see. She does not understand, for no one has ever told her that she is only a Moth; she has lived surrounded by the unkind kindness of those who loved her, and to whom everything she did was wonderful! But the Candle cannot make Moths give light; it only singes them; so the Moth flutters away, hurt, perhaps tries to get away from the dreadful atmosphere, but she is blinded by the Candle's light, her poor little wings are burned, and always there is the fascination of the light; she cannot get out, and there is nothing but misery for her while she remains within, for she is a Moth, you see, and does not belong there.

Now, that is one of the things you Beginning Teachers can do—you can show the Moth the way out. You can make these girls understand that there is nothing disgraceful in being a Moth, and that a girl's life is by no means a failure because she has not succeeded in the Music Life. The trouble is that those in the Music Life are apt to forget that it is not the *only* life, and that failure in this life may be but a preparation for success in something else. I do not believe you will be teaching very long before you will have opportunity to prove to some disheartened young thing that she does not belong where she is, and that she will find her real peace by fleeing from this very atmosphere which so fascinates her.

It is for you to study how you can best prove to these girls that "life's elemental blaze goes wandering through the *Whole*," that the Candle is, after all, only a candle, and that there is always the blessed sunlight where the Moth belongs. God made moths as well as everything else, but He never intended them for teachers. He put them among the "beautiful things." Do what you can to prevent them from blackening themselves. Help them to get back their self-respect, and to say to the Music Life and those in it, "You do not banish me, *I* banish *you*."

Mrs. E. Stillman Kelley is one woman who has watched the fluttering of the Moths with great-hearted pity. She has watched the struggles of these pretty things to grow into Candles, she has watched their efforts as teachers. And because her pity was of the right kind, it has shown her a way to do something for them.

Mrs. Kelley is an example of a class of women laboring in the field of music here in America who will, after long, patient years, be recognized as having contributed immensely to raising our standard.

In instituting her classes in "Harmonic Thinking" in the Conservatory at Cincinnati, Mrs. Kelley has accomplished two things: first, she is helping the young teachers of the Middle West either to become *real* music teachers, or else to get out with enough courage and dignity left to become real something elses; and, second, she has proved that the instruction given to those who have entered our music schools to learn how to become teachers has been inadequate.

"My work ends with this generation of Beginning Teachers," Mrs. Kelley said, "for the need of a deeper, truer, more thorough course

(*Continued on page 142*)

OPERA SINGERS

BY GUSTAV KOBBÉ

GUSTAV KOBBÉ'S *Opera Singers* has reached its sixth edition. The book is issued by Oliver Ditson Company, Boston, in an unusually handsome form.

Many changes, however, in the contents make this edition almost a new work. One may note here the whirligig of time in its effect on opera singers. Caruso, who was not in the first edition at all, he being then entirely unknown here, now leads the book with his biography. This is followed by biographies of Geraldine Farrar, Olive Fremstad, Johanna Gadski, and Mary Garden; while the biographies of the famous singers of the Maurice Grau régime, which led the book in its earlier editions, are now placed after the pictorial section, into which many new portraits have been introduced. Those artists, who have not quite yet achieved the distinction of biographies in Mr. Kobbé's work, are well represented in the pictures.

CARUSO

Although the author disclaims in his foreword any attempt at a critical work, considerable discriminating comment will be found in these cleverly written pages. After very just praise of Caruso's voice and after saying that, to use a colloquial expression, "it has thrills in it, and a thrill is a valuable commodity in a voice," Mr. Kobbé adds: "Lest I should be deemed overenthusiastic, I hasten to add that there is one detail in this artist's method which I do not commend — a tendency in certain profoundly pathetic passages, as in the *Pagliacci* aria, to produce a 'weepy' quality of tone. On the stage of Latin countries this is considered a legitimate effect and is highly valued. It does not, however, appeal to Anglo-Saxon audiences, for the reason, probably, that, with the Anglo-Saxon, the man who weeps does not count for much."

GERALDINE FARRAR

In the brief opening paragraph of the Geraldine Farrar biography, Mr. Kobbé secures, in a few striking lines, a comprehensive summing up of what this prima donna has accomplished in her still youthful career. He writes: "Geraldine Farrar's home is in Berlin, Germany. Her address is the Metropolitan Opera House, New York. As she was born in Melrose, Mass., she may be described as a Yankee girl with a German home, an American address, and a reputation for vocal charm and personal attractiveness wherever opera is sung."

The author, basing his opinion on his own experience in Germany, does not consider it surprising that with her fresh, lovely voice, and her beauty, Miss Farrar was able, at the age of nineteen, to make such an extraordinary success in Berlin. "The fact is," writes Mr. Kobbé, "that, while Germans accept an artist because he is an artist, even if he be personally unattractive, they are not indifferent to physical charm and are delighted if, in addition to the necessary artistic qualifications, a singer, especially, of course, a prima donna, has personal beauty. For six years I lived in a German city that boasted of one of the leading opera houses of the country. The principal soprano rôles were sung by a short, thick-set woman, whose stoutness made her appear slightly hunchbacked. To her sometimes were entrusted parts that called for ethereal personal charms; and because she was an artist the fact that she was physically grotesque as the heroine of almost any opera was overlooked. To the audiences of that opera house, however, Geraldine Farrar would have appeared like a ravishing dream, and, though accepted primarily because of her voice and acting, she also would have been hailed with enthusiasm because of her beauty."

OLIVE FREMSTAD

A most interesting account is given of Olive Fremstad's life—and a life of almost constant and severe application it has been. Both her mother and father, Swedes who had settled in St. Peter, Minn., were practising physicians, but, in addition, the father had become an active missionary in the Methodist faith. Through her father's work Olive, early in life, was given a keen sense of the dramatic and musical. She was taken about by him to religious meetings to play the organ and thus aid him in securing converts; and, of course, she witnessed many emotional scenes on these occasions. At that time she was still so small that pieces of wood had to be fastened to her feet to enable her to reach the organ pedals.

"Another experience of those early days stood her in good use in her career as prima donna. For she was taught at a tender age the value of grinding work; her father, once having decided that she was to become a musician, keeping the child at her practice so long and so hard every day that some of the neighbors sought to interfere, thinking she was being cruelly treated.

"The author once asked Madame Fremstad which rôle was her favorite. 'Well,' she answered, 'when one has lived for them and worked so hard for each one, one is apt to love them all. A mother rarely has a favorite child. But perhaps I love Isolde the best, for she is the greatest. By this I do not mean greatest as a woman, for Brünnhilde is that, but Isolde is the greatest rôle, in all its difficulties, its intricacies, and its possibilities."

Mr. Kobbé writes that in few artists since Ternina's day has the individual development of a rôle in the hands of a prima donna been as interesting to watch as in the case of Mme. Fremstad. "Back of her art is an actively working brain, and responding to that brain is a splendid voice, a fine physique, and beauty and expressiveness of feature. No prima donna could take her art more seriously than does Mme. Fremstad. It is to this seriousness of purpose, combined with great natural gifts, that her success may be attributed. Nor, in the nature of things, can a success so won be ephemeral. It rests on too secure a foundation. An instance of mind, art, and perseverance applied to progress in a career is the manner in which she gradually developed her voice from a mezzo to a fine, broad, expressive dramatic soprano, capable of singing rôles which lie much higher than, during her first season here, her voice would have been credited with ever being able to compass."

JOHANNA GADSKI

In writing of Mme. Gadski, to whose record of progressive achievement the author does full justice, he points out that "it is well to remember that, although she is now esteemed as a Wagnerian singer *par excellence*, she did not start out with the heavy Wagnerian rôles, but in the beginning of her operatic career sang only the so-called lyric parts of classic operas, particularly those of Weber and Mozart, and worked only very gradually into the lighter Wagnerian rôles of Elizabeth (*Tannhäuser*), Eva (*Meistersinger*), and Elsa (*Lohengrin*). Not until 1903 did she begin to make her appearances in the heavier dramatic Wagnerian rôles, like the three Brünnhildes, and it was as late as 1908 when she included Isolde in her répertoire. In all this she followed the advice given her by her good friend Lilli Lehmann, who said to her: 'Johanna, if you feel that in singing the Brünnhildes and other dramatic roles your *bel canto* style, as required for the Mozart parts, will suffer, do not attempt the heavy rôles at all.' This advice Mme. Gadski undoubtedly would have followed had it been desirable for her to do so. But her schooling in *bel canto* was such that at the present time she is one of the few prima donnas, possibly the only one, who can sing today a Pamina in the *Magic Flute* and tomorrow an Isolde or Brünnhilde. For Mme. Gadski takes the stand that all operas must be sung; neither recited nor shouted; and it is meeting the supreme test of the art of singing when a prima donna, after interpreting a Brünnhilde or an Isolde, is fresh enough in voice to immediately follow it up with a Mozart cantilene."

MARY GARDEN

No great operatic career since Calvé's has been due, in Mr. Kobbé's opinion, "so much to the artist's personality as Mary Garden's. Her personality, in fact, is more marked than Calvé's. The French prima donna, at the height of her career, had a beautiful voice—sensuous and full of color. Mary Garden's voice, no matter how well trained, would not of itself account for her unique position on the operatic stage. It is her haunting personality, the highly individual touch she gives to everything she does, which, with a voice that suffices, makes her one of the interesting figures in opera today. She is a woman of subtle temperament who sings, and she is an entire exception to the traditional idea of the prima donna with whom voice is the first thing to be considered."

He also speaks of her as "more singing actress than conventional prima donna." Debussy is quoted as writing in an article, in which he refers to the rehearsal of *Pelléas et Mélisande*: "I have known cases of great devotion and great artists. Among the latter there was an artist curiously personal. I had hardly anything to suggest to her; by herself she gradually painted the character of Mélisande; I watched her with a singular confidence mingled with curiosity."

Mr. Kobbé repeats, "Curiously personal!" and adds, "It is interesting to note that Debussy, too, refers to her personality—that mystic, vague, haunting temperamental influence, which, after all, is the key to her success."

———*———

A MODE OF ATTACK

BY HAZEL VICTORIA GOODWIN

IN studying a piece for the piano it will be found beneficial to begin by running through the composition on top of the keys without striking them, up to tempo or faster, and thus giving to the brain and to the "nerve ganglia," or "little brains" of the arms and wrists, a general idea of the positions on the keyboard, of the passages that make up the composition (and adjusting the arm-and-wrist angle, as it changes in the course).

As one follows this up with more silent perusals that become slower and more specific, there will soon be felt a decided readiness and even impulse to strike the notes, and this, without stiffness or undue effort. This manner of attacking a new addition to the repertory gives the proper proportion and subordination to every movement on the part of the arms, hands and fingers, at the start, and spares one much perplexity and difficulty later.

———*———

AMONG the technical articles published in THE MUSICIAN will be found many helpful suggestions concerning the problems which confront teacher and pupil.

CO-ORDINATION IN PIANOFORTE STUDY

BY GEORGE PRATT MAXIM

A GENERAL survey of the field of musical pedagogy as applied to pianoforte teaching reveals the fact that most faults of instruction result either from over-intensive or over-extensive emphasis. That is to say, either the attention is directed to one phase of pianism and other equally important phases are neglected, or the attention is spread over so many subjects that all receive superficial treatment. The student with an aptitude for composition, if allowed to follow his own inclination, will be likely to accord too scanty consideration to the subject of pianoforte technic. Similar conditions will obtain respecting technic and reading, sight reading and memory, and so forth.

That the component parts of what we call pianoforte study, that is, sight reading, technic, ensemble, ear training, memory work, interpretation, transposition, form and harmony, are correlative is plain. It would seem equally clear that they are co-ordinate.

For instance, the cultivation of the ability to read fluently at sight is important from the standpoint of everyday usefulness. It also plays an important part in memory training and other phases of pianistic life. A piece intelligently read is half memorized.

The importance of ensemble training is evident when we remember that in the home circle and on the concert stage a very large portion of the pianist's time is given to the playing of accompaniments and other concerted music.

The fundamental element in all education is attention, and success in any sphere of activity depends primarily on its cultivation. Transposition stimulates the attention in an incomparable manner. The value of technical problems is greatly enhanced by transposition. Transposition is ever a desirable acquisition in practical musical life.

And ear training! Pupils with untrained ears cannot detect the errors in their own playing or profit from the performances of others; all remarks pertaining to *nuance* are meaningless to those who are unable to hear accurately, and when they become teachers themselves, they will be helpless to correct the mistakes their pupils make. Our ears are so often offended by the playing of pianists with benumbed auditory nerves that it would seem to be unnecessary to urge ear training as an indispensable part of pianoforte study.

It is quite unnecessary to emphasize the importance of technic. This subject is so often overemphasized that we would here draw attention rather to mental stimulation which the co-ordinate studies tend to promote. Technical problems are not primarily digital but mental problems, and the solution of these problems should be found by attacking them from the mental side. Growth and development of the mental faculties which direct and govern motor activity should be the aim of the teacher. A sound technic will be the result.

No idea, musical or other, is of value until it is embedded in memory. When we have made a musical thought our own it becomes a vital element in our cultural development, hence an aid in the progress of civilization, as the cultural development of a community is an index of its growth in civilization. There is an obvious financial viewpoint here, too.

Interpretation, the window through which we catch a glimpse of the composer, is closely related to memory training. Our valuation of any musical reproduction is determined by the merit of the interpretation. Let us open wide the window of interpretation.

The value of the theoretical branches and their co-ordinate relation in a well-rounded system of education is universally recognized.

Each branch of pianoforte knowledge *per se* stands alone with its own peculiar difficulties which demand individual treatment. The need of the hour is a more widely diffused knowledge of the interrelation of the co-ordinate branches and a recognition of the necessity of so adjusting the pupil's tasks that proper balance is maintained and the growth of the pupil is normal throughout all phases of his education.

———*———

NOTES ON THE MUSIC IN THIS ISSUE

PUPILS' recitals are numerous at this time of the year, and teachers face the problem of securing music that will be available for instruction, will be interesting to pupils and the folks at home, and please those who attend a recital. It really is something of a problem and only those who face it year after year know the burden of overcoming it. THE MUSICIAN contributes toward this solution by the music section which is included in each issue, varying in style and character from month to month. For this month of February and for March which presents similar problems we have selected music which can be used to advantage in recitals.

Humoreske, in E minor, Op. 6, by M. Levine, is the work of a Russian composer, and a composition in which the educational element stands out very prominently. Both hands are used in close positions, almost interlocking in places, with many short phrases and much staccato attack. It is a brilliant piece of work for technical display, and should forward a pupil on the road to technical mastery. Commence it rather slowly, follow the fingering absolutely, and increase the speed only after you have memorized it phrase by phrase and section by section.

At the ball, Op. 107, No. 4, is by Eugenio de Pirani, a composer, Italian by birth, educated in his native country and in Germany, lived in the latter country during the greater part of his professional activity, and a resident of the United States since 1905. It is one of a set of four interesting pieces in Grade IV, but not making specially insistent demands upon the technic. *At the ball* is in rapid waltz rhythm, dainty in style, and most pleasing in melody. It should prove a very attractive number for a recital program and to add to the young players' repertoire.

Barcarolle in D, by James H. Rogers, is a good example of the work of this successful American composer, in the easier, lighter forms of composition. Note the slur which passes over from the right to the left hand in a number of cases. The effect must be as unified as if one hand only were used in the playing. The pressure accents in the second and other measures must be fully recognized. Conceive this piece as a picture of a boat lightly floating on the waves, buoyant and graceful in every motion.

Country dance (Danse champêtre), Op. 43, No. 2, by John M. Steinfeldt, is also in the middle grade, III-IV, and is filled with the spirit of the French rural festivities which always included dancing, at least in the olden days. This is not to be played in a waltz rhythm, rather a little slower, and with a less pronounced swing, approaching to a mazurka, as may be noted in the B♭ major section by the syncopated effect produced by the accented half note on the second beat of the measure.

Clover blossoms (Reverie), by H. Engelmann, is in this popular composer's best style, filled with pleasing melody, passages lying easily under the fingers, and a lively, flowing rhythm. This piece is not so definitely educational in character as the four previously mentioned, being perhaps best suited to use in the home or social circle, and to play for recreation. The opening theme in the alto register, with the left hand crossing over the right, is particularly effective.

Gavotte of the sylphs (Gavotte des sylphes), Op. 142, No. 2, by Gustave Lazarus, is a grade easier than the pieces previously mentioned. It is by a German composer whose work has considerable vogue in his own country, and is beginning to be better known in the United States. He is very successful in joining musically pleasing expression to educational purpose, a combination which makes a typically useful teaching piece. The chords which are used in the composition are so pianistic that instead of offering difficulty to the player they will assist in developing skill in chord playing. The passage for the left hand in the section marked *Energico* is one that will attract and interest a player to do well.

Sicilian peasant song, by Emil Rhode, is also in Grade III, one which embraces a very large number of pupils. It is in a moderately fast tempo, approaching that of a slow waltz. Notice the two-note phrases which occur in the opening section; make these light and crisp in effect. The writer of these notes should be inclined to assign a piece like this to a pupil whose playing is a little logy or lacking in rhythmic feeling.

March of the tin soldiers (Marche des petits soldats de plomb), Op. 14, No. 6, for violin, by Gabriel Pierné, is French in thought and feeling, and in the working out as well. Pierné is a composer of high standing and a Paris conductor who ranks with the best. He has written large works, as well as some small pieces, for children, which are full of that grace of style and expression which we expect in examples of the French creative spirit. Violin teachers will find this a useful work, one they can at once add to their repertoires. It is not at all difficult, although some passages require the use of the higher positions. It has been carefully prepared for teaching use.

Harken unto me, Op. 67, by Frederick Stevenson, is a sacred song of unusual power and beauty. The Editor has received letters from teachers and singers who use THE MUSICIAN, calling attention to the lack of "big" sacred songs, that is, songs which have breadth of style, serious purpose and elevated character, not mere lyric settings of metrical hymns. Singers want songs that carry a message which they can deliver,—we might liken songs of this style to blank verse in poetry; and they want the songs to last for more than a few minutes. *Harken unto me* has the aria character and should exactly meet the needs of church singers.

Love of an hour, by Mary Turner Salter, is from the pen of an American woman who has written a number of beautiful songs. This new work will rank with her good pieces. It is a simple little lyric, tender and delicate in flavor, and should prove most welcome to the singer who is looking for a song with which to show power of delineation and of indicating atmosphere.

Supplication (Reproche), by Camille Decreus, is selected as an example of the French style of song, for which there is a marked demand at the present time. If the singer knows the French language, by all means sing it in that tongue. The translation, although adequate, cannot replace fully the original for which the music was conceived. There is, in this song, a suggestion of the style of that exquisitely lovely *Obstination,* by Fontenailles, so much sung some years ago. A pupil who is willing to work to acquire a satisfactory diction can deliver this song effectively. Be careful not to put too much stress on successive tones on the same degree. Let the emphasis on words supersede strict musical accent.

The Musician

A MONTHLY PUBLICATION

W. J. BALTZELL, Editor

PUBLISHED BY

OLIVER DITSON COMPANY

Boston, Mass., U. S. A.

THE MUSICIAN aims to supply the members of the musical profession with practical aid on all subjects connected with music, to stimulate students to earnest work and artistic ideals, and to raise the standard of musical taste and appreciation throughout the United States.

EDITORIAL NOTES

A NEW IDEA IN COMMUNITY WORK FOR MUSIC

PROGRESS in music is not dependent wholly upon what is being done in the more important centers of activity, or even in the larger towns. American music needs a more developed and a higher taste in music in all sections, the small towns and rural districts included. From these sections come some of the best students in the conservatories and other schools of music, who are often handicapped by the lack of a favorable musical environment in their younger days.

The Extension Division of the University of Wisconsin has arranged to push the social side of music in every neighborhood of the state. The work of private instructors will not be interfered with, in fact, it should be greatly encouraged because of the increased interest certain to be aroused in the various communities. The Division will confine its efforts to helping communities to get genuine enjoyment out of music in any form and encourage its promotion in relation to social life. Classes will be formed and courses given in towns which apply. The University is ready to lend its aid to any community that wishes to develop town bands or orchestras.

It is a fact patent to any observer that rural communities need some form of organized musical work in which social features have a part. The old-fashioned singing school was a great social factor in its time. We have nothing comparable to it now. If the Wisconsin movement can give the people of the state something which embodies the good features of the "singing school" idea, adapted to modern conditions, it will be doing splendid work. May it prosper!

MUSIC STUDY AND PUBLIC SCHOOL WORK

MUSIC teachers and lovers of good music and all for which it stands have often felt the call to do something for the cause, something which will leave a permanent impress for good upon a community.

THE MUSICIAN has tried to direct this desire into useful channels by suggesting lines of work, placing, among other things, much emphasis upon the opportunities for making music a living factor in the lives of the people through the work that is being done in the public schools, and to other musical work which can be done there and in conjunction with the school work.

In the issue of THE MUSICIAN for January we published a report of certain musical work carried on in the Junction City, Kansas, public schools, showing how the problem of giving pupils a chance to study music seriously and at the same time to keep up with their school work had been solved. A recent letter from Mr. Shideler, the superintendent, tells how the plan is working. We quote from this:

"The plan of the outside study of music is very successful on the part of the High School, as it meets a long sought need in this community. It is successful on the part of the private teacher, as it shifts the responsibility somewhat and encourages the pupils to do regular work. The parents are satisfied, in that it compels the pupils to practise and also to keep up with their lessons in order to conform to the requirement of reporting to the superintendent's office, and thus receive High School credit.

"The pupil is pleased because she receives High School credit for work which she would like to continue regardless of such credit. In truth, the plan is meeting with more success than we had anticipated. Six private teachers are instructing pupils outside of school in piano, singing, violin, and cornet, for which High School credit will be granted."

Here is a suggestion which can be taken up in every town and city with the result of greatly stimulating a larger number of boys and girls to music study and those who are already interested to more serious work in music. It is worth the trial. Five months are left of the school year, ample time in which to urge this plan upon school authorities and have it endorsed for next year. Try it!

———*———

CHOOSING A MUSICAL CAREER

YOUNG American men and women are no doubt asking themselves whether or not they will be wise to enter upon a musical career, and what are the opportunities for making a satisfactory livelihood in that field of labor.

The writer of this note believes that there is a fine opening for young men or young women who are fitted by talent and disposition for work in music and have added to these qualities the requisite knowledge and skill. But this does not apply to the superficially trained person who looks upon the music profession as a dignified method of earning pocket money. The prizes will be to those who can deliver the goods that are wanted.

About a year ago a gentleman prominent in public school work asked the Editor of THE MUSICIAN to tell the readers that there is a fine and inviting field of musical labor in connection with the public schools. The demand for properly trained men with executive ability is far beyond the supply, and the salaries are good even at the start. The efforts being made to organize orchestras in many American cities will create a demand for competent players, probably men only, at good pay. Why should not piano teachers also play a wind or string instrument in an orchestra, and thus add to the income?

Young women also have encouragement to enter the profession as artists, teachers, or as both in some cases; the various schools and colleges for girls are becoming more exacting in their requirements for faculty positions, and there is every incentive for a young woman who is thinking about such work to make the most thorough preparation possible to her.

As a contrast to the above read the following from Germany: A circular has been issued by a group of musical societies warning parents that the musical profession is overcrowded, and advising them to use their influence to keep their children from entering upon a musical career which, except in the case of extraordinary talent, will end only in disappointment on account of the small remuneration given to musicians in Germany.

A LOOK FROM A DISTANCE

SOMETIMES a teacher's work, — or a pupil's it may be—suffers from the fact that it is viewed from a point too near at hand. An interesting anecdote is related of a distinguished painter who criticised the work of a brother artist engaged in mural decoration.

"Take my palette," said the latter, "and go upon the scaffold and make the change yourself." The critic did as requested, painted for a short time, then came down and viewed his work from the floor.

"Why, it doesn't look at all the same from here as from the scaffold," was his verdict.

And this is the lesson which the teacher and the young artist must learn. Things look different when viewed from a distance. The player and the singer rarely, if ever, know how their work sounds at a distance. Of one thing, however, they may be sure, and that is that the effects are different; subtleties are lost, delicate effects do not carry far, and a mild quality of feeling or enthusiasm will not grip an audience. The coloring must be applied in broader touches, and the outlines must be bigger.

The teacher is inclined to place too much emphasis on details, forgetting that these are but parts worked out from the whole, and not the reverse. A look from a distance over the scheme of work with a pupil is a helpful and a necessary one. It is all right to be careful in minor matters but these must be proportioned to the general effect to be secured.

The SINGER and His ART

ENGLISH IN SINGING

A PLEA FOR A STANDARDIZED LANGUAGE FOR SINGING

BY BERNHARDT BRONSON

In the mass of material to be found in the current musical periodicals on the subject of English in singing we may search in vain for a tangible reason why some of our best artists fail to accomplish with English what they do with Italian, French, or even German.

New York, after its first trial of grand opera in English, complained that with one or two notable exceptions the singers' words were unintelligible. Critics noticed a lack of the usual freedom and brilliance in the voices. No one seems to have thought to inquire as to why the two notable exceptions sang English intelligibly and with good tone quality.

After Chicago's first performance of grand opera in English it was recorded that the only one who succeeded in making himself understood was a Frenchman. This was considered a singular circumstance, yet no one thought to inquire why a foreigner should be able to do this and all the native singers fail. The fact is that a perfect enunciation in singing is rare in any language, but the well schooled Italian or French singer has the advantage of the American at the very outset—even when it comes to singing English.

The reason for this lies in the fact that the American is encumbered by life-long habits of speech in which the organs of articulation are continually obstructing the vowel sounds. The tongue is never in a position of repose.

In France and Italy they have a standardized language which has been adopted for the dramatic and lyric stage. This compels every aspirant for lyric or dramatic honors to *study* his own language, which he finds far different from the one he has acquired by himself. He discovers and develops articulatory muscles which he never even dreamed he possessed. The result is that when he has finished his studies he finds himself in command of practically a new language.

Those who read carefully the article *Babel,* by Mr. Nicholas Douty, in THE MUSICIAN for October, 1913, must have been struck by the significance of this: "and while French words, as they are written, contain many consonants they contain fewer in actual speech. Whole syllables are omitted when the words are spoken."

When we recall the fact that in singing French *no* syllable is ever dropped (unless it interferes with the articulation of the following word) and also that vowels which are usually silent in ordinary speech are sounded *strongly* in poetry and singing, we begin to understand what the French have done to their language to make it singable, and intelligible to the public listener.

The first thing a French or Italian student learns (if he is in the hands of a real singing teacher) when he begins to sing words is *not to allow his tongue to anticipate the consonant which follows the vowel which he is sustaining.* Herein lies the first great difference between the language he speaks and that which he sings. The first he had acquired by imitation without analysis; the latter he is taught to analyze step by step. And thus no matter what province he comes from he is obliged to conform to the established standard language of the stage. In the process his tongue acquires the art of retaining the vowel position until it is required in the formation of the following consonant. In other words, he learns that singing requires co-ordination between the muscles of respiration and the muscles of articulation.

Now as a matter of fact the language of the French or Italians as employed in ordinary speech is a no more fit vehicle for singing than is English as we use it in everyday speech. This is because it is acquired by imitation with all its imperfections, which vary according to the customs of the various provinces. However, they have one advantage which is denied those who would learn to sing English. They have a standard language from which all articulatory imperfections have been eliminated. This language it is possible to sing. It is *vocal.* Not so with English. Neither here nor in England does such a standard exist. The consequence is that singers are thrown upon their own resources and sing the English they have acquired in childhood—by imitation.

Let us consider for a moment some of the imperfections of English (as we speak it) which make it unvocal. We have in English some combinations such as "er," "or," "irl," "irn," "ual," "ird," "ople," "kle," etc., which, as used in ordinary speech, are impossible to sing. In speaking these syllables we form the consonant in conjunction with the vowel and this habit of the tongue of anticipating the consonant, not only destroys the purity of the vowel but it ruins all of the phrase which follows, by disturbing the breath column, and throwing the burden of support upon the muscles of the throat. Subjected to such treatment the articulatory organs become so fatigued that they are unable to perform their proper functions. One or the other of these combinations occurs at least once in every phrase we are called upon to sing.

It is obvious then that if we are to sing English it will be necessary to establish a standard language, the study of which will bring about the separation of vowel and consonant in such instances as have been mentioned. For the purpose of singing, provision should be made for a freer and more decisive use of the muscles of articulation—the lips, soft palate, tongue and jaw, stronger consonants and amplified vowels; to insure vocal effects such as are possible in Italian and French.

If any one doubts that such a thing is possible or that English is singable, let him consider for a moment what some of our American artists accomplish with English. Let him listen to Evan Williams, Frederick Martin, Reinald Werrenrath, Mme. Homer, or Mme. Nordica sing some of the great operatic arias in a good English translation. These artists have solved the problem in the only rational way, which is by using the same rules for articulation as apply to French and Italian. The result is vocal, colorful, intelligible English.

Our national habit of anticipating consonants with the tongue is the one great obstacle which we have to overcome, but with a standard English, under the guidance of teachers who understand the principles of singing, English would soon become the accepted language for singing in this country.

The American vocal teacher is alive to the situation and he is beginning to study the possibilities. He realizes that singing means more than a daily "dallying with the Italian 'ah' (?)" He knows now that the training of the articulatory organs is a vital factor in the making of singers; that it is not all tone placement and breath control, however important that part of his work is. Having learned from the Italian and the Frenchman, he is now prepared to apply the principles to his own language.

The climate and language of America have placed their ineffaceable stamp upon the voice of the American singer. It is distinctive. He will never sing just like the singer of any other nation even though he employ the same methods. What he needs, if he is to attain even greater distinction and individuality, is a standing language of his own, which he can study and use with confidence.

Let vocal teachers differ in their "methods" as much as they please, but for the sake of the advancement of the art of singing in America and for the benefit of coming generations of students let them agree on the use of the English language.

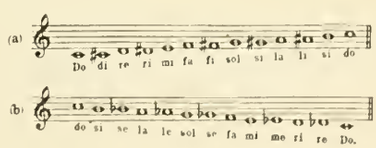
—*—

THE ART OF SIGHT SINGING

BY ARTHUR DE GUICHARD

V

Thus far our studies have been restricted to the major scale, Do, re, me, fa, sol, la, si, do. These notes may be altered in pitch by the use of sharps and flats, and their solfeggio names change their vowels: to *i* (pronounce ee) for sharps, and to *e* (pronounce ay) for flats. Thus:



These scales are said to be Chromatic, namely: Ascending with sharps, Do, *di,* re, *ri,* mi, fa, *fi,* sol, *si,* la, *li,* si, do; and descending with flats, do, si, *se,* la, *le,* sol, *se,* fa, mi, *me,* re, *re* (also *rah*), Do.

With the exception of the oldest form of minor scale (la, si, Do, re, mi, fa, sol, la) every scale has the seventh degree for its sharpest note, or *si,* that is, one semitone below its keynote, Do or la, as the case may be. Sharps and flats are frequently employed as passing-notes, without in any way changing the tonality; but the chief use of sharps and flats is to pass easily from one key, or tonality, into another. This is termed modulation.

SHARPS AND FLATS

In order to determine whether the new sharp or flat be a note of modulation (going into another key), or merely an accidental, or passing-note, all we have to do is to examine the musical phrase with

its accompaniment, when possible. If a sharp (or flat) is seen to occur only once or twice, and it is immediately corrected and made to resume its natural, it may be considered as a chromatic passing-note and not as forming an integral part of the tonality or key. But if the sharp (or flat) is repeated, not only in the melody but in the accompaniment, it must be considered as a note of modulation, one that leads into a new key.

Thus, keeping to our idea that the sharpest note is the seventh degree of the scale, or *si,* and that the flattest note is the fourth degree of the scale, or *fa,* we may conclude that the newly imported sharp is the seventh, or *si,* leading to the Do of the new key. In like manner the newly imported flat is the fourth, or *fa,* leading to the Mi, and so forth, of the new key. Not only will the practice of these rules enable us to modulate very readily from key to key, but it will ensure greater perfection of pitch.

MODULATION---MINOR SCALES

Before beginning to practise exercises in modulation, it will be well to examine the minor mode, which comprises four scales, namely: the Natural minor, consisting of the notes of the major scale but commencing on *la,* and having no sharpened seventh degree (la, si, do, re, mi, fa, *sol,* la); the Transition minor, having sharpened sixth and seventh degree (la, si, do, re, mi, *fi, si,* la); the Melodic minor, which ascends like the Transition and descends like the Natural minor scales (la si, do, re, mi, *fi, si,* la—la, sol, fa, mi, re, do, si, la); and the Harmonic minor which is the same as the Natural minor but with a sharpened seventh which gives us the interval of an augmented second from *fa* to *si* (la, si, do, re, mi, fa, *si,* la).

Observe that whenever we see two succeeding sharps on the sixth and seventh degrees (*fi, si*) we may be sure that they form part of the minor scale, and sing accordingly.

PRACTICE XXVII. Sing pages 76 and 77 of *Melodia.* In Exs. 67, 70, and 74 name the notes according to their Do-signature, thus: Ex. 67—mi, re, re, mi, fa, mi | la, si, do, do, re, mi, re, do | sol, fa, mi | si, si, do, re, mi | la, la, si, do, si, do.

In Exs. 68 and 69 it will be seen that the names of the notes are precisely the same as in Ex. 67.

In Ex. 70 name the notes in the same way and compare them with Exs. 71 and 72.

Observe in Ex. 72, seventh measure, that the two succeeding naturals in the bass, being in a flat key, are equivalent to two succeeding sharps; they indicate the minor mode, for they are on the sixth and seventh degrees of the new key. It is interesting to notice the preceding beat in the sixth measure wherein the treble sings the sharpest note, *si,* and goes *up* to its keynote, *la* (minor), while the bass sings the flattest note, *fa,* and goes *down* to its *mi,* thus giving us a correct insight into the harmonic construction.

Sing Ex. 74 in like manner.

Compare also Ex. 75 with Ex. 74. (See further.)

PRACTICE XXVIII. Sing the remaining exercises down to the end of page 80.

In Exs. 76 to 80, inclusive, no change of key need be attempted because each change is but momentary; the notes should be called by their chromatic names.

These exercises will be found to contain no difficulties, until page 79, braces three and four, where an enharmonic change occurs between the concluding E (do) of brace three and the Fb (le) of the next brace. The sound remains the same, but the change of name plunges us at once, on the next note, into the key of Ab, going a few measures later into the related key of F minor.

A similar change occurs on page 80, brace four, in going from B minor to Gb major, wherein the treble C♯ (*si*) becomes *sol* on the Db, and the bass *si,* on A♯, becomes *mi* on the Bb—changing names but keeping the same sounds.

Continue the study of *Melodia* in like manner to the end of page 100. Sufficient indications have been given to overcome all difficulties. Indeed, if the student has systematically mastered all the exercises up to this point he should be able to grapple successfully with more advanced problems in the Art of Solfeggio.

READ AHEAD

The chief point to bear in mind always is to make absolutely sure of the tonality of every phrase. Nothing must be guessed at or left to chance, otherwise the intonation will suffer. Before beginning to sing "at sight," examine the piece rapidly and endeavor to discover the changes of key. When we see a group of sharps or flats foreign to the Do-signature, we must determine without delay what the new key is. It has already been stated that this is done either by a new sharp (which becomes the leading note (*si*) of the new key), or by a new flat (which becomes the *fa* of the new key.)

In order to simplify this matter further, let us consider the following formula:

B E A D G C F

Memorize it as: BEAD—GCF. The last three may be easily remembered, because they are the names of the three clefs: the G clef (or treble), the C clef (or middle C), and the F clef (or bass).

In this formula, F, the last written of the series is the *flattest* of them all; that is to say, F is the flattest note of all, C is flatter than G, G than D, D than A, and so on.

Making use of the formula from the other end, we have B for the *sharpest* of them all (it *must* be so, because it is the least flat of the flats, as we have already seen); E is sharper than A, A than D, and so on.

A USEFUL FORMULA

So the complete formula stands thus:

Read this way for flats —>
B. E. A. D. G. C. F
<— Read this way for sharps

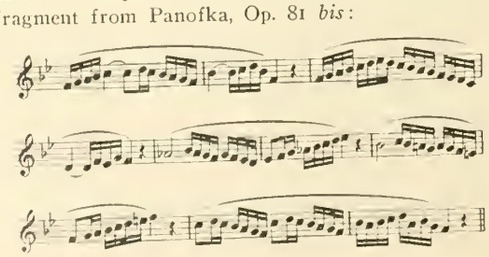
Now turn back to *Melodia,* page 77 (Ex. 75), the third brace, the second, third and fourth measures, and we see three new flats, D A G, while the signature contains B E. Which is the flattest note, or *fa*? The formula says it is G. But it also gives the next flat preceding it, or Db. Applying the rule, we know that this Db is the keynote or *Do,* for those three measures.

Turn to page 145, Ex. 100. Here is a Do-signature of six sharps. But a brief glance at the following measures shows that not one sharp has been retained in the stanza, and that a Bb is introduced. We thus learn that it is the key of F, and that which seemed very difficult has become quite simple.

Ex. 101 is along similar lines. The signature has five flats, but we see in the music that every one has been contradicted and, in their place, we have D C G and F sharps. Our formula tells us that D is the sharpest of these or *si;* therefore *Do* is the note E, just above it.

MELODY BUILDING

Not the least interesting feature of the use of the movable Do is the fact that it gives us harmony at a glance, reveals its shifting tonalities and shows us how a melody is constructed. Take the following fragment from Panofka, Op. 81 *bis*:



The first four measures are in the key of Bb. The fifth measure begins with a new flat and thus goes into the key of Eb, the names of the solfeggi being fa, sol, fa, mi, re, mi, re, do, si, Do, re, mi, fa, sol, la, si, do. In the seventh measure two of the flats are corrected and we are in the key of F; but we will see that the names of the solfeggi are identically the same as in the two preceding measures, although the pitch has been raised. So that to continue his melody, the composer has written the same phrase again, in a higher key, and then returned to the key of Bb.

A still more interesting example, by the same composer, is seen in the following:

Herein we see a phrase in D minor (mi-fa-mi-re, do-si-la-si, si-la-do-si, la) repeated, note for note, one whole tone higher, in E minor and again repeated another whole tone higher in F♯ minor.

Many other exercises and examples might be given, but enough has been said to show the student how to become a ready and accurate sight reader as well as how to delve into the mysteries of harmonic and melodic construction.

Some of the problems that are presented in Sight Singing may be solved from time to time in the columns of THE MUSICIAN.

SINGERS SHOULD HEAR VIOLIN WORKS

A BOSTON concert singer, Mme. Sundelius, who has won public appreciation for her work, especially in modern French songs, made the following remark to a reporter:

"Singing, as I have learned it, must be phrased in just the same manner as the playing of an instrument. A melody that is sung gets its effect from the same thing as a melody that is played. Therefore, a singer can learn how to present truthfully a vocal line by studying the performance of a great instrumentalist. A soprano has only to take the master violinists and wind instrument players as her models in phrasing to make an acceptable exposition of her themes."

The singer who has the use of a talking machine will help herself greatly by listening to records of pieces in the song style, or transcriptions of songs, for example, the Bach air for the G string, or Schubert's *Ave Maria,* played by Elman. The average singer has far too little a conception of a good legato. She can hear it in a master violinist's performance. It is unfortunate, too, that singers are often more or less ignorant of the fundamental principles of musical expression and interpretation which are part of the training of every good violinist, particularly one who engages in ensemble work. Study songs, but turn to the violinist for certain points in style.

MOTHER'S VOICE

BY F. ROENA MEDINI

MOTHER was a sweet singer when a girl. I heard her voice in the choir one Sunday and then went many times to pick out that voice and listen.

Introduced? I never thought of meeting her.

No one thinks of getting acquainted with the birds in the air, or the angels that brighten our dreams. I guess it never seemed to me that she was real. One day, when at church, a sudden shower came up, and I stood at the door for awhile, watching the rain, and hearing the echo of that sweet voice. Suddenly I realized that everybody had left the church, no, not all, for, hesitatingly, *she* appeared in the door, having lingered in the choir to put the books away. Of course, I could not see her go out in the rain with her soft white dress and pretty hat, with clinging curls around her face, so I offered her my umbrella.

"Thank you," she smiled, "but you must carry it so that I can keep my dress dry."

I had to take her arm to keep her under the umbrella, and—well, after that, came a year of courtship, and then she was too happy to sing much. We were nest building, then getting married. It isn't the minister that does all the marrying, it is the hearts of two people, and some take longer than others and perhaps those are the best marriages.

We were so busy fitting into our new conditions of love and happiness, we did not miss the singing. Then came the picking of a cradle, or rather the lumber for it, for I made it; while mother was so busy with her embroidery and fine stitching she forgot that she had ever sung.

"But, uncle," interrupts a matron of twenty-three, who proudly balances a three-months-old baby upon her knee, "auntie sings in public yet, and I heard her trilling on high B♭ this morning."

"Yes, I'll tell you about that. An opera singer visited our town and took it into her head to give benefits for three of our churches, and in no time she had the whole town singing.

"I frowned on the idea when she called to see your grandmother. The woman was all enthusiasm over what people should and can do for their voices, and she woke the rafters of our home and made the glassware jingle with the power she poured into some of the songs, and then she sang some simple little thing that was like the sob of a grieved child.

"I didn't consent, for I knew mother couldn't sing any more, and the grand lady badgered me for getting old before my time—which I didn't like to hear—and went away as joyous as a girl and with the confidence of a queen. Mother went back to her work real thoughtful-like and I went to the barn.

"In those days I had not dreamed of becoming a lawyer and used to try to help mother on wash days, but that day I clean forgot. When I remembered, most of it was done, but mother didn't hear me come in. She was wringing the clothes by hand and was humming an exercise the singer had given her. It was so soft it sounded far, far away. Once in awhile it would seem to strike something, and she would stop. 'No, that was in my throat, my breath must carry to my head.' Did you ever hear such rubbish?

"Well, the next day she was singing tones she had not sung for years and I sent for that woman and told her she had started the racket and had better give mother some more help. That summer mother helped out in church benefits and was about the sweetest singer among them.

"When fall came, the ministers got together in a body and made Madame Tirousky a handsome present for what she had done for them by improving the singing in the churches, and wanted to engage her to remain permanently, but, of course, she could not do that, but consented to come up from the city once a week.

"You never saw such a change in the town. That woman seemed to give women a new lease on life. Mothers of families sang for church sociables and for their neighbors. Old maids that had seemed to give up all hope in life bloomed out as entertainers and dared feel young enough to catch a beau. Mother said that Madame Tirousky said: 'Expression, and not repression, is what women need.'

"Once I would have said 'Heaven forbid,' remembering some of the town gossips, but now it was different; women talked art and started clubs.

"Occasionally there was a little jealousy, but the teacher had a way of pointing out to each their individual advantages that made them understand that nature had made voices as distinctive as faces.

"Yes, your mother became famous and considered the years of study as much a joy and delight as the love of her children. I was proud of her voice and, after missing it those first years and feeling that I was in a measure to blame, I was glad to encourage her in that talent that had attracted me to her. She never neglected her duties as a wife and mother, and, well, she promises to sing the *Shadow Song* on her seventy-second birthday, but that does not mean that she will stop singing then, not she."

QUALITY OF TONE RATHER THAN QUANTITY

BY GURDON A. FORY

In a neat frame on the wall of my studio hangs the above motto. It has, more than any other one thing, governed my teaching since I gave my first trembling lesson ten years ago. And I am not sorry today that I have made it my slogan.

Oh, it has been a hard fight at times—yes, indeed, very hard. I have had to fight always the ever-present demand for *noise;* at times I have had my own pupils at swords' points with me; at times I have had even myself to keep in subjection. But it has paid, is paying and will always pay. In the end nothing else *will* pay.

Here is an axiom: Mere size of tone conveys nothing; quality of tone everything. Not an emotion in the human breast but is stirred by its cognate quality in the voice of the singer, even as the waiting harp string thrills to the touch of the player. Mere size can only arouse astonishment which is scarcely to be classed as a finer emotion.

One of the greatest living teachers of voice says: "Every good tone is at first a small tone." He surely means here that quality and not size is the first consideration. Quality is placement; placement is quality. In placing a tone we strive merely to give it certain qualities as of clearness, mellowness, freedom, brightness, etc. When we have acquired such placement we then expect growth just as we expect growth in anything under normal conditions and cultivation. W. J. Henderson in a recent article in the New York *Sun* says: "If singers would devote all their attention to securing a round, mellow, beautiful tone they would have no difficulty whatever in acquiring all the power that Nature intended their voices to have."

And right here lies the beginning of a great deal of the trouble. Too many are not content with the size of the voice Nature has given them. They must be *heard.* They must sing louder than anyone else in the quartet, or in the choir, or in the congregation. They must make people notice them, and how easier than by noise? Yet the very one who does such a thing would, no doubt, have nothing but contempt for anyone else whom he might detect in the same artistic sin.

A voice cannot be given what it does not possess. We can bring out of a voice only what there is in it. If a voice has size it will grow to be large. If it has not size it will not grow to be large. There is a loudness which is not of size but of forcing. It is only a confession of ignorance or inability or both in teacher and pupil. They imagine that they are securing through loudness what they do not know how to secure in any other way. They are using noise as a cloak to cover the flaws they cannot remedy.

Such a teacher is playing upon the vanity and the latent bombastic tendencies of the pupil. Like attracts like, and such a teacher is sure to have a certain following. He talks much about "dramatic singing" and all his pupils are apt to have "dramatic voices." False education this is, for dramatic singing is not, of necessity, loud singing, but fervid, intense singing. Even a whisper may be dramatic and often is intensely so. Fervor and vividness are qualities, not quantities.

Work for quality and everything else comes that is in the voice; work for size only and everything else goes. That is as true as, "Seek ye first the kingdom of God and all these things shall be added unto you." Every teacher of experience and sense knows it. Even those who work for loudness know it and tremble. Their registers, instead of disappearing, become more obvious; the voice loses poise, flexibility, limpidity, sweetness; the natural beauty is shattered and in the course of a few years at best only the fragments remain. Robusto tenors are usually soon "busted," for their tendency is to sing always loud. Knote, with his terrific high "A," was good for only about two seasons. Others like him have come and gone while the "quality" singers remain to charm us with the beauty of their art year after year.

It is true that quality and quantity often go together but when they do the quantity is not forced or unnatural. It cannot be forced without irreparable loss. The truly great singers of all times have been so because of the wonderful beauty or sweetness or clarity or flexibility or vigor of their voices—always because of quality and never once because of quantity alone.

SERVICE

The sweetest lives are those to duty wed,
Whose deeds, both great and small,
Are close-knit strands of an unbroken thread,
Where love ennobles all.
The world may sound no trumpet, ring no bells;
The Book of Life the shining record tells.
Thy love shall chant its own beatitudes,
After its own life working. A child's kiss
Set on thy singing lips shall make thee glad;
A sick man helped by thee shall make thee strong;
Thou shalt be served thyself by every sense
Of service which thou renderest.

—*Elizabeth Barrett Browning.*

CHILDREN'S WORK IN MUSIC

CONDUCTED BY HELENA MAGUIRE

WHEN I DON'T PRACTISE

BY H. M.

My Dad's the best chum I have got,
We play and laugh and prank a lot,
He knows more jokes than all the boys,
And makes more fun than slews of toys.

But sometimes he comes home at night
And Mother says, with all her might,
"John did not practise well today,"
Then such a change in Father—say!

He gets as tall, and grave, and still,
And asks me if I have a *will,*
Says Washington his duty did,
And Lincoln playtime never cribbed.

And then there is no fun at all——
At last I on the stool do fall,
And practise all that I did cut,
Until Dad laughs and calls, "Time's up."

A MUSICAL GAME---TO TEACH NOTES ON LINES

BY LAURA ROUNTREE SMITH

(Book Rights Reserved)

THE children sit in chairs in a row. The Leader stands by a large paper staff, pinned on a screen. By him is a table containing letters made of stiff black paper.

When the Leader points to a child she must run to the table, select the correct letter and pin it on the line of the staff indicated. If one child fails, another is called upon. This continues until the staff has all the letters upon the lines and also on one or two added lines, above and below.

The children sing in connection with this game the following verse to the tune of *Lightly Row.*

Do you know, do you know,
Notes on added line below?
Do you know, do you know,
Notes on every line?
Pleasant games we like to play,
Reading music every day,
Do you know, do you know,
Notes on every line?

HISTORY STORIES FOR CHILDREN

BY ELIZABETH A. GEST

LAST month we heard how the oratorio and the opera began, and how the symphony began, and how everybody loved music and studied it, and now we are going to hear about some of the great composers of music.

You have all heard of Bach, and Haydn, and Mozart; but did you ever stop to think about these wonderful men?

Bach was born in a little village in Germany, long, long ago (1685.) His mother and father died before he was ten years old; so he lived with his big brother and learned to play on the violin and the organ, and on the old-fashioned pianos called harpsichords. He taught music and played the organ in church and at court, and composed a great deal of music,—preludes and fugues, etc., and sacred choruses—so he was always busy until he grew old and blind How much of his music have you learned to play, and how often do you think of this wonderful old man when you play it?

Handel lived in Germany and England at the same time as Bach, and spent most of his days writing music, too—operas and oratorios. Do you remember the difference between opera and oratorio? Some day you will hear his famous oratorio called *The Messiah.*

But at this time there was not much music for the orchestra to play until Haydn wrote some. He conducted an orchestra in a Prince's palace, and wrote a great many symphonies for this orchestra to play. Everybody loved Haydn, for he was so kind and generous, and when he grew old his friends called him "Papa Haydn."

Mozart lived at the same time as Haydn. He could play pieces when he was only four years old, and he composed when he was only five—just think of it! His father took him all over Europe to give concerts when he was a child. When he grew up he spent most of his time composing songs and piano pieces, and operas and symphonies.

In those days the pianos were made more like ours, and the people learned to play them better. Soon afterwards Beethoven lived, and he spent most of his time writing symphonies for the orchestra and sonatas for the piano, and these are so beautiful that no one has ever yet been able to compose better ones. When he grew older he was absolutely deaf and his life was very sad, for he could not hear the beautiful music which he had written.

Schubert lived at the same time as Beethoven, and he wrote a great many beautiful songs, but he was very, very poor, and his life had much sadness in it.

Schumann was born in Germany also. He played the piano, but injured his finger so that he could never play again. Then instead of playing himself he wrote beautiful music for other people to play and sing, and he taught music and conducted orchestras, so he was always busy.

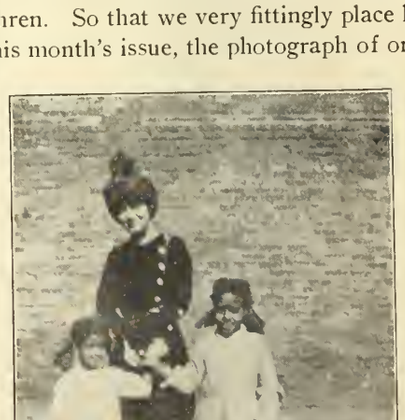
Mendelssohn was another child wonder. He played in public before he was ten years old, and he composed when he was twelve. When he grew older he composed a great deal and conducted orchestras and choruses; and he founded the Leipzig Conservatory, which is very famous, and students from all parts of the world go there nowadays to study music.

Chopin lived during the time of Mendelssohn and Schumann, and he played in public before he was ten, too, and spent all his life composing beautiful music for the piano.

Wagner spent his life writing wonderful operas, but they were very different from all other operas, and at first nobody liked them, and the people made fun of Wagner for writing such strange things; but after awhile they began to like his operas, and now everybody loves them.

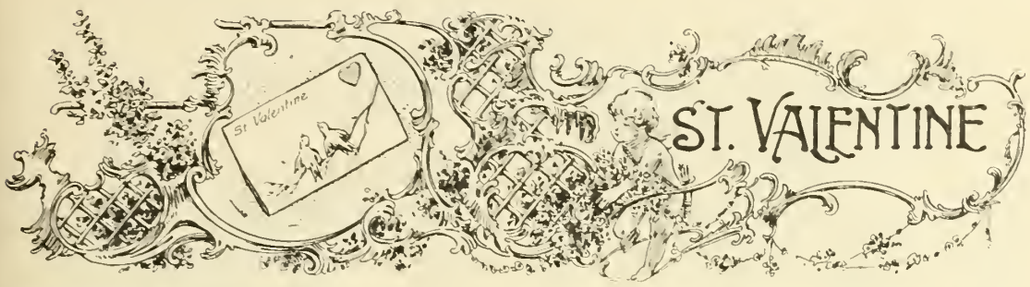
ALMA GLUCK

THIS month we celebrate the birthday of our martyr president, Abraham Lincoln, who gave his life for the freeing of our black brethren. So that we very fittingly place here, in this month's issue, the photograph of one of



MISS ALMA GLUCK AND DOROTHY AND ALINE WILSON

our American singers, Alma Gluck, who is the friend of the oppressed, even as was our great President, and who did not disdain to be photographed with two of her little "black sisters" whom she found listening, entranced, at the door of the green room.



ETHEL'S MUSIC

BY HARRIETTE BROWER

IV

ETHEL'S MUSICAL VACATION

School was over and holidays about to begin. Miss Dudley gave a closing musicale for her pupils at which Ethel played some technical exercises, an étude and a piece, all with precision and good tone, and did not make one mistake. She was so intent and absorbed in her effort to play every note just right, with the correct finger on it and the right amount of time given to it, that she quite forgot herself, and did not know until the musicale was over that she had done so well. Mamma seemed very much pleased, Miss Dudley praised her and said she hoped Ethel would keep on with her study all summer.

"I should like to take my lessons through the summer just the same; may I, mamma? I will promise to practise every day, and I'm sure I can learn some nice pieces during the vacation."

"That is just what I should like you to do, were we to stay at home," answered mamma; "for I do not believe all study should be at an end, simply because school has closed; much precious time is wasted in this way. Summer is the best time in the world to study music, and I am glad my little daughter is so willing to practise."

"Indeed I am, mamma."

"We have a surprise for you, which I have kept a secret till tonight. We are to take a trip abroad this summer, and you are to go with us."

"To Europe!" cried Ethel, "how perfectly lovely!"

"Though you cannot be with your teacher for piano lessons, you will learn a great deal about music in other ways, and I will help you each day with your finger exercises."

And so it happened that early in the summer, Ethel found herself, with her parents, on the great ship which was to carry them over the blue ocean. True to her promise, the mother helped Ethel with her finger exercises every day. Together they did finger gymnastics, pressure and elastic exercises, finger, wrist and arm movements. The exercises were practised on a table, either in the dining hall or saloon; whenever there was opportunity the piano was used. The chords were recited up on deck, much to the amused interest of several boys and girls who wanted to join in the game, as they called it. This they did, and before long were able to recite the triads as well as Ethel herself.

For ear training, she learned to listen for the ship's bells which struck the hours, and before long began to know what tones they were. Then there were other bells and gongs for meals; but the very nicest was the chant which the man with the silver trumpet used to play every morning before breakfast. It was quite long,—a whole verse of music, and Ethel soon was able to hum it, and then sing it correctly. Her mother suggested she should try to write down the notes of the chant, to keep as a memento of the voyage. After many attempts, and with some help, she at last set down the notes as she heard them. When this was accomplished, she copied it very neatly and kept it to send to Miss Dudley the first time she wrote to her.

The ship's orchestra was an object lesson to Ethel. She learned to know the various instruments better than she had ever done before. She carefully studied their shapes and listened to what their voices were, and in what way the men played them. She noticed the difference in sound between a pipe made of wood and one made of metal. She loved to watch the 'cellist, as he leaned over his instrument and brought such beautiful tones from those four strings,—tones that seemed to have the changing colors of the sea in them.

"Those men must have all practised with a metronome," she thought; "how glad I am Miss Dudley makes me use one, and has taught me how. For if these men couldn't play in time they couldn't make music."

So you see Ethel was learning many things about music, even though, for a little while, she was not with her teacher. She was so eager to learn, that when she stepped off the big steamer and was carried along in the railway train—which had such funny sounding whistles—up to London, she felt as if she could hardly wait till they reached the great city, about which she had read so much in her history. What new musical impressions she received during her stay there you shall know later.

A COUNTRY GIRL AT A PADEREWSKI CONCERT

BY NELLIE R. CAMERON BATES

You who dwell in the large cities where the advent of great artists is an everyday affair can hardly imagine the sensations of a little country girl when she hears a great artist for the first time.

All my life long I had dreamed of Paderewski. What romances I had woven about the aureole of fair hair, the soulful eyes, and slender white hands of that young manhood picture of his!

Now I was actually to see him and hear him! The paltry payment of two silver dollars for my ticket and two more for my railroad fare to the city was to admit me into Paradise! How strangely is the mundane linked with the spiritual in this life! I could hardly believe that these prosaic dollars earned by teaching Johnnie and Pearl the major scales and *Mamma's Pet Waltz* were the passport to admit me into the presence of this master pianist.

It still seemed like a dream to me as I sat waiting in the big auditorium with three thousand, three hundred and ninety-nine other persons for the appearance of the magician.

The auburn-haired friend next me was telling how she had walked two miles from the depot instead of taking a street car for the sake of a glimpse of Paderewski's private car, with its flowers and canary bird in the window, when the clapping of hands riveted all eyes to the platform.

Two or three imperative chords commanded absolute silence which was maintained unbroken throughout the three hours over these thousands of people by the wonderful spell of his magnetic presence as well as the charm of the music he evoked.

How shall I begin? There was music to see as well as hear! Oh! the poetry and grace of the swiftly flying supple hands and the ever-moving feet! Sometimes his arms were lifted as high as his head; sometimes they glided on the surface of the keys like foam on the waves, but always with absolute ease and precision.

And the music! You soon forgot to note the amazing technic, the endless variety of tone quality, the kaleidoscopic change of effects. You felt only that a great soul was speaking to you and drawing you close to the heart of life. He was opening God's great book of human life for you and letting you read the pathos, the grandeur, the terror, the hope, the joy, the love which lie deep in the heart of this life of ours. You heard that song which has pulsed for so many years—old, old as the world and yet, forever new.

It was almost with a shock that you realized that the music had ceased as you saw him rise and heard the wild storm of applause. As for me, I sat breathless, awed and silent. A great peace and rest had taken possession of my soul. It would have been no expression of my feelings to have clashed my hands together and jarred the floor with

my feet. I think it would have jarred my soul also. But I felt vaguely thankful that others could do it and thus express in some way, although a rude, barbaric one, our appreciation of the artist and man who had spoken to us.

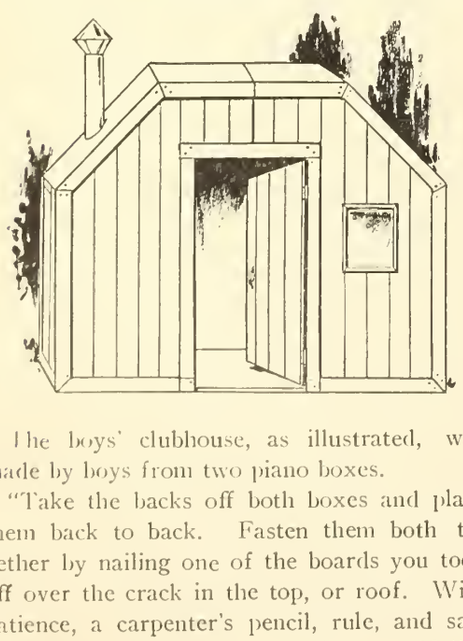
Paderewski bowed stiffly again and again without a smile or light of the eye. I had expected grace and poetry of motion and I wondered if this angularity was a part of the quaint foreign flavor or—a sudden thought gave me a queer tender feeling about the heart—perchance this stiffness was the result of that martyrdom of ceaseless hours of toil at the piano that he might speak to us thus of the highest and holiest in fitting strains.

What a demand this constant bowing must be upon the soul of an artist, to rise from the absorbing abandon of a soul outpouring at the piano, to call himself back to earth in thus acknowledging the applause of an insistent, ofttimes greedy public! Over and over did the great master acknowledge the storm of applause and then patiently did he return to play four times, before the impulsive western audience would let the exhausted artist rest.

I went home that night inspired with new courage and zeal. Lesser artists had made me discontented. This great man seemed to say to me: "Go home, live earnestly your life, spare no pains to do your best. Feel genuinely and sincerely, and express that feeling simply and earnestly. Try to catch the thought of the great composer and express it reverently and with the very best effort of your limited powers, humble though that may be. Fulfil your little allotted task as though it were a holy mission, as indeed all useful work is."

———*———

A CLUB HOUSE MADE FROM PIANO BOXES



The boys' clubhouse, as illustrated, was made by boys from two piano boxes.

"Take the backs off both boxes and place them back to back. Fasten them both together by nailing one of the boards you took off over the crack in the top, or roof. With patience, a carpenter's pencil, rule, and saw you can cut your door and window. Nail a narrow molding a half inch from the edge all the way round your window and fit in a square of window glass. For a few pennies you can buy hinges, latch and padlock for the door. Insert a bit of tin stove pipe for chimney, so that you may have a fire on very cold days, as this is half the fun of a clubhouse, and you will have an ideal little place for winter afternoons."—Reprinted from *Aunt Kate's Cosy House*.

WHEN MYRA PLAYED

BY ANNE GUILBERT MAHON

"I KNEW one girl who never had to be urged to practise," said mother, as Ethel twisted round and round on the piano stool and gazed frowningly at the piece on the music rack before her, the piece which was so hard to learn.

"Who was she?" asked Ethel, running one hand lightly over the keys.

"Your Aunt Myra."

"Is that the reason she is such a splendid player now? If I thought I could be as good a player as Aunt Myra, I wouldn't mind practising, no matter how hard it was. I'd keep at it and at it; but I'm afraid I'll never play like her," said Ethel disconsolately.

"If she had had your advantages when she was your age, she would have been the happiest girl in the world. She not only did not need to be urged to practise, she overcame the strongest obstacles to be able to practise, and she succeeded where most other girls would have given up long before," said Mrs. Edmunds.

"Tell me about it," said Ethel.

"When your Aunt Myra and I were little girls she lived with her guardian, as she was an orphan. He was a very peculiar old man and had a great many notions concerning a number of things. One was that he would not have a piano in the house. He did not care for music, he said, and he would not have any musical instrument in the house.

"Myra loved music. She remembered when she was a very little girl and her mother was alive, how her mother used to sing and play, and how she loved to sit and listen, young as she was. She seemed to have the music born in her, and she coaxed and coaxed her guardian to get a piano and let her take lessons. He let her have everything else she wanted, but on this question he was firm. He would not have a piano in the house.

"All the other girls who went to school with Myra and me took lessons and played, more or less. Myra was the only one who didn't, and that made her all the more anxious to learn. She would go to our houses in the afternoon after school and she would pick out pieces with one finger on the piano and ask us to teach her easy little things, and she learned amazingly fast. The music was in her.

"One day when I was at her house she said to me, 'Gertrude, could you keep a secret?' I told her I could, so she took me up to the attic and there was a board, a long, narrow board, like the keyboard of a piano. Myra had painted it black and white to represent the different keys. It was a perfect facsimile of a piano.

"'I am going to practise on this' she said. I was amazed. 'You never can learn anything that way—why, you can't *hear* anything,' I said. 'That's all right,' she replied, 'I'll do it, and I want you to help me. Will you lend me some of your old music and show me a little about it?' Of course I said I would, and I did.

"After that she used to spend every minute that she could up in that attic practising the studies and pieces which the different girls lent her, and, whenever she could, she tried them on our pianos to see that they sounded all right. Her guardian never minded what she did as long as she didn't bother him.

"You would not believe how well she played. As I said, the music was in her. She had just the right touch and just the right conception of the pieces. She was a master hand at it from the first. Before we knew it, she was playing far better than any of us girls, who had the advantage of taking lessons and a piano in our house to practise on all the time.

"Well, this had gone on for several months and Myra's guardian did not know a thing about it until one Thanksgiving they were all at a family dinner and reunion at one of his brother's. There were several girls in the party and, after dinner, they had music. The other girls played, and played well. The guardian, who really thought a lot of Myra in his queer way, began to wish she could do as well. As he sat there, he resolved in his mind that after that she should take lessons, that he would get a piano, that the other girls should not outshine her, after all. She should be able to do what they did.

"Then someone asked Myra if she played and, to the amazement of the old guardian, she said 'Yes.' He could scarcely believe his ears when Myra sat down and played a really difficult piece, played far better than any of the other girls who had played before her. He was completely mystified, but he was awfully proud of her, and he said she should begin her lessons right away.

"She took him up in the attic and showed him the board which she had made and which she had practised on all those months. He was wonderfully pleased at her ingenuity, and and obtained the best teacher, and after that Myra had all the music her heart could desire; but it all came of her ingenuity and her perseverance amidst such almost insurmountable obstacles."

"No wonder she plays so well," said Ethel thoughtfully. "She certainly must have loved it. It ought to be a lesson to girls who have pianos and teachers and the time and opportunity to practise," and she turned once more to the difficult piece on the rack before her.

THE VIOLIN

CONDUCTED BY RAY G. EDWARDS

THE MAKING OF A CONDUCTOR

BY RAY G. EDWARDS

A STUDENT of the violin, having devoted three years of continuous practice and study to the instrument, wishes to know what course to pursue to become a symphony orchestra player and possibly a conductor. The career of a concert soloist. he says, is not in the least alluring.

I would like very much to know personally this student. His ambitions are so unusual as to be unique. Most violinists, especially those of only three years' experience, do not deliberately plan for themselves the life of a symphony orchestra player or conductor. And yet this student is wisely selecting the broader field, provided his talents are such as to bring success. Of this it would be difficult to judge. If he is willing to follow out something like a systematic course of preparation, no doubt he will ultimately reach the goal of his desire.

Having acquired considerable knowledge of the violin (he plays the Fiorillo studies), I would first of all suggest his becoming familiar with the viola and its clef. This instrument will not in the least injure his violin playing. Quite the contrary, in fact. If he prefers the 'cello he would do well to acquire some technic on that instrument. He will in the study of the 'cello acquire knowledge of another clef, and it may be that his study of the 'cello or viola will bring him an orchestra position much sooner than it would come to him if he knew only the violin. In fact, violinists whose talents are limited to performance on one instrument do not easily acquire a desk in a symphony orchestra. If possible the conductor chooses violinists who can lend a hand if need be in the brass or wind sections of the orchestra. So it follows that any time devoted to study of the various orchestral instruments will not be lost. Many a first violinist in the large orchestras got his start by being prepared to fill in a much needed part for trombone, double bass, flute, or drum.

Without giving up the study of the violin, and while slowly acquiring technical knowledge of the other instruments (at least one of the other strings), the student should delve into harmony and find out how music is put together, how chords are "spelled" and how they follow each other. The relations of keys and the means used by the best composers for modulating from one key to another are intensely interesting, leading also to a much wider knowledge of art. In fact, harmony will lead to the study of composition and counterpoint.

Orchestration, the study of tone values, and the technical possibilities and limitations of each instrument, is a subject that cannot be followed through books to any great extent. Nor are there many instructors who are qualified to teach orchestration; but sooner or later the student will feel the need of knowledge along this line, and if he studies his manual of orchestration until such time and listens intelligently to the instruments in the orchestra, this phase of his musical education will not be lacking.

He will, of course, attend symphony orchestra concerts as often as possible. In fact, living in New York City, he has unusual opportunity of hearing weekly concerts during the season by four very fine orchestras, and of comparing the conductors. To be sure he will not see these conductors at work on the orchestra, as he might if he could secure permission to attend the morning rehearsals (they occur nearly every day of the week), but until such time comes he can become very familiar with the orchestral instruments and literature. Let him, for instance, take note of the few instruments required in the older classics and the part played by the modern wood-wind and brass sections; also the effect of each section, strings, bass, and wood. Each section can produce the full harmony: soprano, alto, tenor and bass. Let him try to comprehend why the composer uses the flute for the melody here and the 'cello there. The study is endless and intensely exciting, as you get deeper and deeper versed in the intricacies of composition, orchestration, and instrumentation.

To a student living in a city where there is only one symphony orchestra, I would recommend attending both concerts each week, Friday afternoon and Saturday evening. Although the program is the same, he can study the orchestra more closely, as in the first hearing he will naturally listen to each work as a whole, without having time to study its make-up. If the student is keen to the finesse of the composer, he may, with his supplemental reading and study of counterpoint, gain a true insight into orchestral composition. With a lively imagination he can follow the thought of the composer in the development of his melodies and the elaboration of an entire symphonic movement. From this point he will probably wish to branch out and try the wings of fancy and imagination in original composition, for which he should now be well prepared.

Nearly all members of a symphony orchestra are good quartet players, and the student will do well to become proficient in this line too, for it will lead to many pleasant evenings with his fellow musicians, if not to permanent and profitable chamber music organizations. The Kneisel Quartet, famous among great organizations of this kind, grew out of the Boston Symphony Orchestra. Its members, all from the Vienna Conservatory, by the way, held their positions in the Orchestra until they felt strong enough to stand alone and hew out their own musical career.

And now, as a matter of ideal, let the student take for his standard of excellence a man like Frederick A. Stock, a few years ago leading viola player in the Theodore Thomas Orchestra of Chicago. While holding that position he took part in many chamber music concerts and the present writer has a very pleasant memory of a composer's concert in which Stock presented his own compositions for string and voice. His larger compositions, for orchestra, were often played during the life of Thomas, and upon the death of that master the orchestra members chose their own conductor from among the ranks—Stock, the viola player. This choice, in preference to any of the great conductors from Europe, was acceded to with slight misgivings, but the wisdom of it all appeared almost immediately to all concerned, the management and the musical public, for the man was prepared in every particular, and therefore master of the situation from every standpoint, as a program maker, a modern and authoritative interpreter, a drill master, and one who commanded the admiration, love, and respect of the men with whom he had formerly played under the baton of another master.

This rise of one of the lesser lights in the musical firmament into a star of the first magnitude is one of the beautiful events in American musical history. To those of us who were attending the concerts that season it served also as an inspiration, seeing such a position so successfully filled by a man from the ranks. Although of European birth and training, it pointed to a development in American art when home talent and genius will receive the highest rewards and emoluments.

It need hardly be added that the student who follows the above outline of study and unfoldment will not necessarily do so abroad. Look it over again and note that the entire process could take place in America quite as well as in Europe. If this outline is followed with due co-ordination of Head, Heart, and Hand, I feel that I have been addressing a future musician of renown.

———*———

PROGRESS IN CHAMBER MUSIC

BY RAY G. EDWARDS

WE are reminded occasionally that chamber music is making some progress as the years slide quietly into the background. Pick up any of the special trade papers in which artists, entertainers, and "attractions" advertise themselves to Chautauqua managers and concert-goers, and note the number of string quartets, quintets, and trios. Not a very great number, to be sure, but sufficient to afford considerable encouragement to those of us who have learned not to expect too much. Our fathers can tell of the time when the old Mendelssohn Quintet Club traveled all over this broad land, year after year, in undisputed possession of the public ear, or that portion of the public ear given to an appreciation of the highest forms of music.

Perhaps its very name, "chamber music," suggests its limitations, so far as the public is concerned. It is not for great gatherings in a concert hall, but for the small music chamber for the select few. And again, having been written for performance at court in the king's chamber, for the cultured ladies and gentlemen of the court (said kings and courts having since become very scarce and not altogether popular) musicians who are addicted to this style of music must, of course, search out their public in the democracy of citizens. The silk stockings and other furnishings of the scene of by-gone days are followed by ladies and gentlemen in modern evening dress. After the concert, with viols and suitcases, the musicians move on to the next one night stand.

The general public knows nothing of the coming and going of these chamber music organizations, but they are very dear to the heart of the musical world. A few of the best quartets in the world make their

home in this country, but we are probably not so familiar with music of this kind as are the people of England, where, for many years, Joachim and his Quartet made annual tours. The *Strad,* a fiddle paper issued in London, has for years kept us posted in regard to chamber organizations. Now comes *The Music Student,* also of London, with a *Chamber Music Supplement* issued every two months.

These supplements, beginning last June, bid fair to prove interesting. The first number dealt largely with duos for piano and violin, with an instructive article on the sonata. Subsequent numbers were devoted to the trio, the quartet, and quartet repertoire. Mr. W. W. Cobbett, editor of the *Supplement,* has the assistance of those who have made a special study of chamber music, the bibliographical notes being especially praiseworthy. Of course, coming from England, the Feminist movement is represented in a page conducted by two ladies, who will tell of the part woman plays in chamber music, both creative and executive.

Such a publication cannot fail to inspire many an amateur to the more thorough study of chamber music. To those who have indulged, there is no form of musical pastime affording such great pleasure as that of an active part in a chamber music evening.

This is brought out quite aptly by the Editor of the *Supplement* when he indulges in the following story:

In the old days country villages were more addicted to the singing of good folk-songs and the playing of good instrumental music than now—a taste handed down to them by forefathers accustomed to look upon a chest of viols as a necessary appurtenance to the home. Today, alas! only echos from the variety show to the fireside.

Well, a village pastor was addressing, one evening, a meeting of young men, and in an exuberant mood comparing the joys of the world to come unfavorably with those of an earthly kind. Perhaps he had reason to think that the village alehouse had received of late an undue share of their slender earnings. "Now, can you honestly say," he cried, lifting up his voice, "that any real happiness is to be obtained by a search for mere worldly pleasure?" 'A timid reply came from one of his auditors, who lifted up his hand and said, "Please, parson, I do be happy whilst I'm playing of a string quartet."

The compelling charm of the four voices in a vocal quartet is quite as distinct and even more varied in a string quartet. The inspiration and refinement of the home that knows chamber music have reached the very soul of many a boy and girl and led to pleasures throughout life that are associated only with the sweet, untouched by bitter experiences.

VIOLIN TEACHING

BY FRANZ C. BORNSCHEIN

I

Although apathy has been shown towards any psychological presentation of the principles of violin teaching in the past, the best conservatories and music schools in this country are now devoting attention to this important branch of musical education and the subject of Violin Pedagogy is placed upon the curricula and is being rapidly recognized.

It has been the present writer's experience to impart this knowledge by practical demonstration with model pupils in a direct way to a number of advanced students of the violin, who, though able to display the possession of fluent technic and in some cases disclosing a broad musical grasp as soloists, were unable to reduce to simple language the description of even the most elementary problem so that it would become comprehensible to an absolute beginner. True enough it requires a special adaptation to give lucid directions as to the physical problems with which the beginner is to cope, and, it is granted, that a wide experience is needed before real instruction (that is, instruction which cannot be considered a waste of effort on the part of the instructor or a useless spending of time for the beginner) can be given.

Knowing how much energy is misspent and how much thought is wrongly directed by the novice teacher, and endeavoring to eliminate the "wild flounderings" which pass as lesson periods and unfortunately result in harming the prospective violinist, the following exposition of the subject of violin teaching as considered from its incipiency and based upon psychological deductions, though always couched in practical terminology for the sake of directness, may be the means of awakening thought, creating alertness, stirring the imagination, and, in general, serving to develop the pedagogic instinct of the future violin instructor.

FIRST IMPRESSIONS, GIVEN AND GAINED

Before proceeding with any instruction, it is the duty of the teacher to ascertain whether the applicant for instruction is physically capable of eventually performing the various actions which will be demanded. This needs but a quick glance to sum up the general formation of the frame, noting the growth of the body, its normal or abnormal conditions, the length of the arms, their weight, their natural suppleness, or any deviation from the accepted physical molding according to the health or age of the applicant. A friendly grasp of the hand will disclose any latent stiffness, flabbiness, or serviceable flexibility, and further detailed examination as to the length, thickness, strength, and the nail-growth of the fingers will require but a moment's consideration. Should there be any serious physical drawback noted, such as double-jointedness, caved or very weak joints, or any malformation, it is the duty of the teacher to speak of this handicap, but, of course, not in a discouraging manner, unless the case is hopeless from the very outset. An honest opinion from the start is not only just, but will save many misguided careers.

It is next imperative that a simple ear test be given, preferably at the piano, using the notes which compare to the open A and D strings. After a short trial the applicant should be able to hum, whistle, sing, or at least "grunt" an approximate tone; then a more minute "pitch test" should be given with the violin, using the same notes, however, changing the intonation slightly to find if the applicant's ear is susceptible to the delicate shadings or waverings of pitch. Also use the octave equivalents of these two tones, altering the pitch ever so slightly and asking if these changes are noticeable, then giving the open string with its octave a bit off pitch to test if the chord in this imperfect state is just as agreeable as when purely intoned. Watch the pupil's facial expression during these tests to note any sign of irritation or annoyance when faulty tones are given. Only a faint encouragement need be shown to this pitch test, as the average ear cannot detect the inflections from the start. Should there be a case of tone deafness (monotone), the applicant not being able to distinguish the rise or fall of the given intervals and seeming incapable of even "groaning" an equivalent tone, it will be wise to direct his attention to the study of the piano, as it is an almost impossible task to attempt the study of the violin under such unfavorable conditions.

The teacher having made mental note, and, if he wishes to be systematic, also recording his impressions of the physical conditions of the applicant, the task of selecting a suitable equipment should now be considered. At this point it will be necessary to make several practical measurements so that the peculiar needs of the individual may be properly met. The following will help to ascertain the exact size (length) of violin to be used:

Let the beginner relax the left arm at the side of the body, palm inward, and then let the teacher lift the pupil's arm lightly until it is extended without stiffness. With the back of the violin (at button) placed against the hand, beginning at the tip of the middle finger and continuing up the arm, the scroll or head of the violin should terminate just above the biceps muscle. If so, a perfect adjustment can be assured and a comfortable size selected. When this rule is followed the question of half, three quarters, seven eighths or full size violin will present little difficulty. To find the exact measurements for the bow, proceed as above, but with the right arm extended without stiffening; the stick should correspond in length to the distance from the middle finger tip to the end of the right shoulder.

To find what model of violin to select, that is, its shape, large or small, broad or narrow, depends upon the size of the pupil's head, the formation of the chin, shoulders, and hands. A small head and narrow shoulders cannot well balance a very broad model, or a square chin hold a highly curved shape. To gauge what will be comfortable to the individual, place the body of the violin crosswise against the shoulder-blades of the beginner, the measurement of the violin body should equal the width of the shoulders, and if measured from the center of the chest to the end of the collar bone the violin body placed crosswise against the chest will extend to the middle of the bouts. It will take only a moment to carry out these precautions and through them any chance of faulty equipment which

If You are in the Market for a
RARE Old VIOLIN

This Book Will be Sent You Without Cost

If you appreciate the time, money, travel, experience and work necessary to produce such a book; if you realize that we have bought and sold more precious violins than any other house in America, then we know this book will be treasured by you.

Within white and gold covers, in the highest form of the printer's and graver's art are faithful color-type plates of rare old violins we own. Many of them are world renowned masterpieces.

From Stradivarius and Guarnerius violins at $10,000, down to genuine old violins at $50 and $100, we show and describe rare old instruments which have responded to the bows of masters of greater or lesser fame.

In this book you feel and breathe the atmosphere of the violin world and if you wish to buy a good old violin this book is for you.

It goes without saying when you buy a valuable violin it is most necessary that you deal with a responsible house whose word and guarantee will protect you.

To those who are soon to be in the market for a fine violin we extend this invitation to write us for a complimentary copy.

would produce fatigue or lead to bad habits will be avoided.

The importance of using a suitable chin-rest need hardly be called to attention, but the comfortable adjusting of the same will need special solving with each individual, as the formation of collar bone and the curving of the chin differ in each case. The teacher should place the violin gently under the left jaw of the pupil, endeavoring to find just the location or angle at which comfort as well as a correct position will result, noting carefully that there is no abnormal tilting of the head in any direction.

The next consideration is to judge the proper cushion or pad which is to be placed beneath the lower table of the violin and upon the left shoulder to keep from unnecessarily elevating the shoulder-blade, or from awkward bending of the head, and also to relieve any muscular strain which might otherwise occur. The amount of padding, shape or position, will depend upon the space or cavity that is to be filled in between the violin and the beginner's chest and collar bone. The careful teacher will supply this "under-wedge" from the very start so that while the instrument is being adjusted by the teacher the pupil will at once gain a correct impression as to the proper balancing of the violin by means of the head and with the aid of this under-support. Some experimenting may be necessary before a natural balance of the instrument and its correct tilting are attained; but remember that during all this process the arms of the pupils are to remain in a relaxed position at the side of the body, while the teacher does all of the adjusting and actually governs the support of the instrument by having it under his control.

After having carried out the above directions as to the adjusting of the violin with some assurance that a true impression has been gained by the pupil, the teacher should lay aside the instrument for a moment, and, while resting the pupil, utilize this time by demonstrating the general attitude of the body, showing the position and functions of the left arm as used in supporting the violin, this being done at first by motions alone and afterwards with the use of the instrument. Thus the pupil will be able to form a correct mental picture of what is required and by imitation will proceed to test the impressions conveyed.

Before advancing further the teacher should feel convinced that there are no signs of rigidness, slouchiness, or any physical awkwardness noticeable in the beginner's normal standing position. If stiffness is apparent simple exercises in devitalization should be gone through. To convey the exact meaning of this to a very young pupil, appeal to his sense of play. Have him stand with his arms extended, letting him represent the "flying bird" in the game, the teacher being the "crack-shot gunner," who aims at his mark, strikes fair, and brings the bird quickly to the earth without a flutter; the pupil following the events in the game with appropriate devitalized fall of the arms, having at the same time produced a free and relaxed position of the entire body. If the pupil seems fairly loose in frame but through nervous tension tightens the various members of the body, the idea of relaxation can be taught by slightly modifying the above game so as to have the "gunner" a less sure shot who only maims his prey and allows it to flutter away. In fact, through this or other imaginative appeal the pupil can be immediately shown the difference between devitalization and mere relaxation of joints, muscles and the entire frame.

In teaching the proper attitude of the body great care should be taken for the acquiring of freedom. An easy manner of obtaining grace and poise of the body is to recall the pose of the statue of Mercury, which, no doubt, is familiar to every school child. Have the beginner imitate this attitude a few times, as it teaches the placing of weight upon the left foot and brings about a good relaxation of the entire body. Of course, this pose is not to be followed literally, but will be an example which will impress the pupil with the need of gaining perfect balance, ease, and freedom so that a comfortable as well as correct attitude of the body may be attained from the start.

Being convinced that the pupil is standing correctly, balancing the weight of the body principally upon the left foot, with the entire frame erect but free from tightness, the teacher should then stand before the pupil and gently elevate the pupil's left arm, bending it into what appears to be a convenient position for eventually supporting the instrument. Note that the shoulder elevation has not been changed through this action and insist upon the left elbow being brought inward, towards the center of the chest, so that when the violin is finally held the forearm and hand will naturally assume the correct position which at once makes possible the gaining of control for future fingering and shifting, the wrist being slightly bent outward to conform somewhat with the upper right lobe of the violin body, thus not permitting the chance of the hand or the arm coming in contact with the instrument. The teacher should have the pupil go through these postures many times.

Help the beginner gently in molding the various curving of the joints of the left arm and hand. Now, while the pupil has assumed a satisfactory pose, the teacher, supporting the violin (holding it by the scroll with the left hand) should again adjust same to the pupil's head and the extended arm, also arranging the pupil's left thumb and forefinger so that they may serve as a fork-like support at the neck of the violin, keeping the instrument more securely balanced and properly tilted. See that the thumb and forefinger form only a light brace, never allowing these members to clutch the neck or permitting the palm of the hand to come in contact with it or the body of the violin. Caution the pupil against the caving inward of the second joint of the thumb and insist upon there being an open space between the thumb and the fleshy base of the forefinger under the neck of the violin.

If after quickly observing the pupil's hand position from all sides there appears to be an easy attitude the teacher should gradually release his hold and allow the beginner to support the violin alone. Rest the pupil a moment, during the interim demonstrating again the whole process of holding the instrument and, perhaps, elaborating upon the subject until a clear impression seems to have been conveyed, after which, have the pupil go through the prescribed motions, first without the instrument, and then as outlined herein, with the teacher continually guiding the support of the instrument, only releasing the same when in his judgment, there seems to have been acquired some sense of balance and freedom.

Above all be patient with the beginner. Repeat these fundamental principles with the utmost care, always marking the impressions which are being made through an appeal to the different faculties of the mind. These lengthy details will not require a great amount of time in being carried out, and if carefully followed will certainly mold the most refractory frame into an obedient form, pliable, elastic, and ready for the task at hand.

THE CHOIR & CHORAL DEPARTMENT

CONDUCTED BY H. C. MACDOUGALL

THE ECHO ORGAN

BY H. C. MACDOUGALL

Our interesting contemporary, *The Diapason*, in its December issue, gives the specification and a drawing of the console of the organ in the Jahrhundert Halle, Breslau, Germany. This organ probably represents the highest point to which builders have attained, at least as regards size. It has 187 speaking stops, five manuals, 15,133 pipes; the specification was drawn up by Karl Straube, Thomas Church, Leipzig, and the instrument was built by Paul Walcker. A remarkable circumstance in connection with its use is that it has been placed freely at the disposal of German and foreign organists for practice and recitals.

Some of us are somewhat bewildered at the advent of the *Imperator* age in organ building and are wondering just how these monstrosities relate themselves to organ progress in general. Perhaps it is the part of wisdom to keep quiet and wait for results, good or bad.

* * *

Lately a few facts as to organists' salaries in France and England have been published. It appears that Widor receives $300 a year, Bonnet $160, and the organist at the Madeleine (Dallier) $360! The average salary of the English organist is considerably less than $250, since, as the *Musical News* remarks, "hundred of organists get less than that sum and comparatively few get more."

* * *

The following item going the rounds of the press was published in the Paris *Intransigeant* and was, of course, written at the expense of America. The names of the opera house and city may be inserted as the reader's fancy dictates.

"Faust up-to-date. Some weeks ago a performance of Gounod's masterpiece was given at the —— Opera House, ——. After the first act the stage manager addressed the audience thus:

"'Ladies and gentlemen: By a happy innovation our distinguished manager has decided to replace the spinning wheel of Marguerite, a noisy and obsolete instrument, by a sewing machine of Messrs X., the running of which is so smooth that you will not lose a single note of the delightful song of the King of Thule.'

"Marguerite gravely took her seat before the sewing machine, on which the name of the maker was shown in luminous characters, and then, when she had finished the lines, murmured, enraptured, 'This sewing machine is incomparable; moreover, it only costs $60.'"

* * *

A few days ago in clearing out a drawer in my desk I came across a book of programs given by Mr. James M. Preston, organist of St. George's Church, Newcastle-upon-Tyne; the date is 1891-1892. I have been comparing the programs Mr. Preston gave at that time—and most excellent they were, too—with those printed in the October, November and December numbers of the *Musical Opinion and Music Trade Review* (London), 1913. In Preston's list there are 187 pieces, in the *M. O.* list, 436. About one third of Preston's list are arrangements and one fifth of the later one. In the first, names like Gigout, Alan Gray, Herzogenberg, Oliver King, Mailly, Silas have a somewhat unfamiliar look and there are no pieces by Lemare, Hollins, Wolstenholme, Faulkes, Elgar, Karg-Elert, P. J. Mansfield or Tchaïkovsky. In the early list Buck's sonata in G minor is the only American piece down; in the later list Buck, Borowski, Dethier, Horsman, MacDowell, Nicholl, and Rogers are represented.

Those composers of the *M. O.* list having five or more appearances are Smart (34), J. S. Bach (29), Mendelssohn (15), P. J. Mansfield (15), Lemare (14), Handel (12), Guilmant (12), Hollins (11), Elgar (12), Karg-Elert (10), Dubois (9), Faulkes (8), Tchaïkovsky (7), Wagner (7), Widor (7), Reger (5), Wolstenholme (5). The large number of compositions by Smart is due to this year being his centenary.

In the Preston list Bach and Mendelssohn have each seventeen titles, Handel nine, Guilmant eight, Beethoven seven, Mozart, Schumann and Widor each six, Best, Saint-Saëns and Spohr have each five.

The comparisons show that in twenty-one years a considerable change has taken place in the organ repertoire; new men have come forward and some of the older composers have a waning popularity. I can illustrate this in no more striking way than to give Preston's latest program in his church (October, 1913). It is *Feierlicher Einzug* (Solemn Prelude), Strauss; First sonatina, Karg-Elert; *Choral* Prelude, Bach; *Moderato cantabile* from the eighth symphony, Widor; *Etude de concert*, Bonnet; *Liesbeslied* from *Indian Suite*, MacDowell; *Melody* in C, West; Overture to *Tannhäuser*, Warner.

The reader will have noted, possibly, with some surprise, that out of the 430 pieces played only 13 were by American composers. Several of our publishers have excellent organ lists. Is there any valid explanation of the fact that the English recitalist is apparently ignorant of our catalogues? Is there not a call for missionary work?

OVERHEARD AMONG THE PIPES

BY CHARLES N. BOYD

It was Sunday evening. The service was over, the organist had played the final resounding chords of the postlude to an empty church and hastily departed. Only the janitor remained; just as he was turning off the last remaining lights he thought he heard a noise in the organ, but such matters were not of his concern, and he forthwith departed.

There was a noise in the organ, even though the tired motor was still. The pipes and mechanical accessories, friendly through long association, were about to have their evening chat. Ordinarily it would not have begun so early, but the little Fifteenths were excitable and so precipitated an argument with the Mixtures. It was with difficulty that the Open Diapason kept them in order until the church was quite dark.

"I am the most useful stop in the organ," claimed the Fifteenth in a peppery voice. "Not to my way of thinking," squeaked the Mixtures, always proud of its ranks. "You wouldn't be heard half so often if composers wouldn't say 'Great to 15th,' and I knew an organist who thought that meant to use up to 12th only and leave you out." "Enough of your shrilling," cried the Pedal Bourdon; "you two are always squabbling, and it seems as if you never would grow up. Try to act dignified and cultivate a voice like mine, then you may become the most useful stop in the organ."

"Ba-a-a! You dull boomer, to consider yourself the most useful stop in the organ just because you growl all the time," said the Vox Humana with a nasal twang. "If it were not for me what would become of the service? Why, half the popular voluntaries are written around me, for me, and dedicated to me; without my fetching qualities those pieces would be nothing but organ music. What does anybody care for you plain, simple pipes, anyhow? I ought to sit out front, because everybody likes my voice better than—" "Cut it," said the Tremolo, a busy fellow of few words, "I am the lad that put the *hum* in Humana."

"Yes, yes, yes!" the Chimes struck in. "We are the real distinction of an organ. You old pipes can be found in any organ, but we are the marks of the genuine instrument, and the congregations never hear enough of us. You open-mouthed grouches often get out of tune with us, and do your best to make our work unpleasant; but though we are few in number we cost more and please better than rows of you."

During all this time the Crescendo Pedal had been trying to get in a word, but the clang of the Chimes drowned his squeaks. "If it were not for me lots of you would never have a chance to speak. I am the main reliance of the organist; he likes me better than any of you pistons, and unless I am on a vacation he never touches a stop with his hand."

"Be careful there, fellow," advised his neighbor, the Swell Pedal. "As nearly as I can see the organist uses me as much as he does you. He keeps me going up and down all the time, and several times today imagined that I had charge of the Great pipes too. He ought to know that in this organ none of the Great pipes are enclosed in my box."

There was a moment of silence, broken only by a low murmur from a lot of pipes which were borrowed so much and kept so busy that they were tired out. Then three soft eight-foot stops on the Swell spoke together:

"All good things are three. If it were not for us who would give cut the hymn tunes, play the *Amens*, accompany most of the solos and half the anthems, and serve for all the modulations and short improvisations? Sometimes our little four-foot brother on the left joins us, but we can't depend on him, he's in and out all the time."

The Great Melodia nudged the Dulciana, and it began to pipe in a thin voice: "Don't forget that this is only a two-manual organ, and that

sometimes helped by my good friend the Melodia, have to do all the Choir work as well as my own."

The Swell to Great Coupler jumped on with a start, and the Dulciana was lost. "In earlier days I was ornamental, and only a strong and willing organist could play when I took a hand. But now I am drawn all the time—in fact some organists feel better when I am drawn than when I retire. And in these later years I have two new helpers, Sub and Super. Sub growls a good deal, but Super helps a lot. When he and I pull together, and we have a good selection of little pipes on the Swell, we brighten up the service to beat a band."

"Um-m," said the Great to Pedal Coupler, stirring uneasily. "You needn't talk. That fellow who played here the other night reversed me so often, so quick and so hard that I am still sore. Usually I float in on the Crescendo Pedal, but I think he had a grudge against me."

"What's in a name? Haven't I a right to be heard, with a name like mine and a reputation for being one of the most reliable stops in the organ?" piped the Principal.

"Oh, you are all right in a crowd," sadly answered the Swell Oboe, "but you have no such solo voice as mine. Confidentially, the Vox Humana has never had such a lovely tone quality as I have at this moment, and I stay in tune better than she does; but she is such a forward thing that I don't get a solo once a month."

At the thought of a solo the Swell Bourdon and the eight-foot 'Cello on the Pedal heaved a sigh in octaves. "Solo," said the latter, "the only time I did have a solo was long before this last organist came.

"One night—" "Yes, I remember," interrupted the Great Gamba, "I was in on that, too. That was the last time I have had a chance to be heard without being drowned out by this overgrown Open Diapason."

At that the Great Open, which had not taken any previous part in the discussion, began to assert its authority. "What, you fussy mechanical accessories to be talking organ! You belong with the seat, bellows starter, and wind indicator. And the rest of you—mostly imitations! I am the real and only organ tone, the representative of might and solemnity. When, once in ten years or so, I get a chance to speak without a lot of you smaller fry crowding around, people hear something better than a lot of pretty whistles. That will be enough for tonight."

THE LATE CONGREGATION, THE SUNDAY-MORNING CHOIR REHEARSAL AND OTHER MATTERS

BY L. ALTHAUS SMITH

THERE is in our town a congregation which has the reputation of always being late at its services. Minister, organist, choir, all have remarked it and wondered at it. In a varied experience with choirs in New York City, as well as several small towns, I have known many congregations which bore this unenviable reputation, and in making a little study of underlying causes I have found certain conditions in such churches identical.

In the minds of a great majority of church-going people of all denominations, the church building is set aside as a place of worship, a holy spot where the Supreme Spirit loves to dwell. Devotionally inclined persons love to come early and enjoy a short period of private communion in this place dedicated to worship. The soft light falling through colored windows, the stillness, the flowers, all have a soothing effect on a tired spirit, and many thinkers and workers have told me that often their best thoughts were inspired at just such times.

Now, in these churches of the "late" congregations, what does the early seeker after spiritual communion find? He finds confronting him the choir rehearsing their part of the service. Anthems which are supposed to have a distinct function, responses—perhaps the "Amen" after prayer, so appropriate in its place—are here gone through repeatedly. The organist tries out the various stops with the soloist, while others are discussing, in no gentle tones, matters not to be found in anthems. While, of course, everyone knows that the most impressive "Amen" as well as other successful features of choir service are the result of faithful and painstaking study, yet no one wishes to be apprised of this fact at just this time. Even the most devout worshiper will find it rather disconcerting, to say the least, to try to pursue his meditations and devotions facing a choir practising, talking, prinking.

Choirs, particularly the "choirs visible," are often at a loss to know in what manner best to dispose of themselves until service time, more especially those choirs whom custom has thrust into awkward prominence by placing them face to face with their congregations. I have in mind a dear little church in Vermont where a pleasing effect is gained thus: The members of the choir gather near one of the rear entrances of the church, and when the minister is seen approaching the pulpit from another entrance, they quietly move to the front into their places, and are ready to begin when needed.

There is another point I wish to speak of in connection with choirs: It is remarkable what a difference exists in the degree of veneration or lack of veneration exhibited by the young people of various churches for their church edifice. Young people will talk as noisily and thoughtlessly at rehearsals held in church as though at a public dance. Children are permitted on occasions to run about the aisles and here and there without rebuke or restraint. In such churches the task of a conscientious choirmaster, who wishes to have the choir express in attitude as well as musically the purpose of the hour of worship, calls for almost superhuman efforts. I can speak from personal experience, for I undertook one year the training of a vested choir of twenty-four such girls and boys. For a while it looked as though I should have to resort to severe measures to obtain the desired discipline, when the church for-

tunately changed ministers, and the new man, one of personality and quiet dignity, soon changed the attitude of the entire congregation, which was not without effect upon the children. Also this dear man would come into the room where my choir was restlessly waiting for the opening procession, and quietly demand their attention to a little prayer. This would have a calming effect and send my youngsters out prepared to do their best. In all my varied experience with ministers, organists and choirs, I could not but fail to be impressed with the effect upon the choir of the pastor's attitude toward it.

Many clergymen still do not realize the psychological importance of hymns appropriate to the text of the sermon and anthems which fit the occasion, and the result is a kaleidoscopic variety in the service, which leaves the hearer in a bewildered state of mind. I do not mean that the minister should try "to run" the choir, for that is often resented, but, after all, he is the leader of the congregation, and organist and choir are but auxiliaries.

I believe that the minister, by a sympathetic regard for his choir, by showing his appreciation of the importance, of the appropriateness of their part of the service, by convincing them that their outward behavior during services reacts upon the congregation, and, above all, by always maintaining a dignified and reverend demeanor himself when even at a rehearsal only—if it be held in church—will certainly do much toward creating, with even an unskilled choir, a harmonious and restful service, not to speak of the invaluable assistance he thus renders organist and choirmaster. In speaking of these latter—organist and choirmaster—I wish to say that I have almost always found them to be in earnest and enthusiastic, thoroughly alive to the importance of their task, but, unfortunately, often prevented from expressing their opinions freely, particularly in handling volunteer choirs, for fear of offending some valuable choir member.

The best way is not to practise in church beyond the final rehearsal, and if that of necessity must take place just before service time, it should be distinctly understood that every choir member must remain quietly in his place, and all practice cease with the approach of the first member of the congregation, and that no one in the choir should try to stare out of countenance the unfortunate individual who dares thus early to enter the sanctuary.

THE ART OF FACING STRANGE ORGANS

BY GORDON BALCH NEVIN

Every organist is called upon to do more or less playing of strange organs, either recital work, or the equally difficult and frequently occurring form, church work, on little or no notice. We say equally difficult, advisedly, for the organist is expected calmly to seat himself at the console and commence playing exactly as would be the case at a piano. The most trying phase of this matter is to be found where candidates for vacant positions must play before committees; often no time is allowed for examination of the instrument, and the applicant must dive in, trusting to his general knowledge and quick wits to help him over the rough spots. A store of knowledge, accumulated from up-to-date sources, together with some pre-arranged system which shall facilitate grasping the essential points of strength and weakness of the organ, will, at such times, be a strong factor in giving that poise and confidence so much needed.

The actual processes at the console will, of necessity, differ according to whether the call be to recital, with some time for preparation, or to service work, with little or no time in advance.

In connection with both forms, and more important than any method, or system of console processes, the writer would urge the value of a thorough preliminary study of all literature on organ building, all current schemes of new organs, and becoming familiar with the tendencies of the principal builders through hearing and playing their organs.

Through these gateways the organist can enter into a familiarity with organ building that will prepare him for almost anything he may meet. The study of treatises on construction will be of value in itself, but the greatest benefit that will accrue will be the knowledge that certain forms of pipes produce certain tones, and *why;* that certain names of stops are generally accepted to stand for approximately given varieties of tone; that certain relative strengths of tone are to be expected in stops of the same name in different divisions of the organ. The student who will devote even a comparatively small amount of time to the study of a good dictionary of organ stops, will gain a fund of the most valuable knowledge, knowledge that will stand him in good stead at times when he will most need it.

Great aid in becoming familiar with what is to be expected in new organs, is to be found in the perusal of specifications of stops, through the journals now giving space to such matter. A splendid plan is to have a scrap-book, into which these specifications may find their way, preferably classified according to builder and date. so furnishing a means of tracing the distinguishing features of the different builders' work. From the study of such a book the organist will come to expect to find certain things in every organ of a given builder, and a corresponding number of other things missing. The mere sight of a name-plate on a strange organ should prepare the organist for the given fads and fancies of that builder's work. He will come to expect of one builder the duplexing of the choir and solo organs; of another, the borrowing of pedal stops from manual ones *ad libitum,* and *ad nauseam*; of a third, the substituting of a coupler system for "upper work." And so on.

Now, by knowing these things, he will be prepared to use makeshifts where he would prefer to use his favorite combinations and methods. This preparation, probably one of the most important elements of an organist's education, is strangely neglected; nevertheless, it is of the utmost importance, and should be thoroughly studied. It will have a special value when coupled with the playing of representative organs of the different builders. The organist who has studied, through the printed specifications, the trend of a given builder's work, and has seized upon the opportunity to examine a good sample of that builder's work, will be pretty well prepared for whatever he may meet of the particular builder.

Now for the actual processes at the console; these will, as we said above, differ with relation to whether the playing required be for concert or service. With both, however, the thing we wish to do is to suggest to the student the need of *his* working out some system that shall become a part of his routine when facing a new organ. We will suggest one method, not saying that it is the best, *but that it is a method;* the student must decide whether or not it is the *best* method for his particular use.

CONCERT WORK

First: Memorize the couplers and their position; as they are generally ranged above the upper manual, memorize them from left to right. This sounds difficult, but it is surprising how quickly it can be done. Where the couplers are distributed among the speaking stops the matter is more difficult, but it should be done.

Second: Memorize the position of the balanced swells, and the crescendo pedal. This is necessary because of the lack of uniformity even in this simple matter.

Third: Draw all the diapason stops and couple at unison pitch; follow this by testing in the same way all the reeds, all the flutes, and all the strings; this will give some idea of their relative strength. Follow this by a crescendo through all the stops, drawing by hand, and then testing the crescendo pedal; then the principal solo stops.

Fourth and last: Look to the pistons; if these are adjustable, the rest is easy. A good adjustable combination action is the greatest blessing yet bestowed on the organist by mechanical skill. If the action is set, the player must arrange in his mind what piston to press to throw the nearest combination to what he desires. It is well to memorize the position of the principal solo stops and heavy reeds, as it is often necessary to shut them off in much haste.

SERVICE WORK

When it is impossible to try an organ before playing, the organist is driven to depend on either the pistons for his combinations, or to use hand registration altogether. Where the pistons move the stops, it may be safe to depend on them for most of the changes; the crescendo pedal will also be of service. However, where the action is of the "dead" type, it is very risky to depend on the pistons; rather should combinations of different strength be drawn on the different manuals, and these adhered to; with this procedure little else but coupler changes will be needed. Limited registration changes are better than blunders and long waits while the spare hand is hunting for stops. Anyone who has, as has the writer, been obliged to play a service on a "dead" combination organ, with no time to examine the combination board, and with freak combinations set on nearly every piston, will never be inclined to bless this type of action.

To sum up: Study all literature on organ construction, and every specification you can lay your hands upon, try every organ that opportunity may present, and by so doing prepare yourself in advance for what you may meet. Having done this, work out in your mind, and at various consoles, some system of attack, and then make that system a part of your routine at each new organ you may meet. System makes for speed, and speed is what counts today; everyone must, however, work out his own plan of action.

———*———

THOUGH the greater part of his life was spent in England, Handel never learned to speak English fluently or without a strongly pronounced German accent. This, with the habit he had of oddly contracting his facial muscles while speaking, threw the men into convulsions of laughter at a rehearsal when he arose to announce the organization of a scheme of concerts by his rival and one-time friend, Dr. Green, who had taken the large assembly room at the Devil Hotel for the purpose. He said gravely, "Gentlemen, Tocktor Greene has gone to the Devil—" but he was greeted by such a storm of merriment that he was unable to finish the rest of his speech, which was probably what he had in view.

TEACHERS' FORUM

CONDUCTED BY BLANCHE DINGLEY MATHEWS

Address all questions relating to the work of this department to Mrs. Blanche Dingley Mathews, 25 E. 18th Avenue, Denver, Colorado.

Over half of the questions received by this department during the last month have been on "European education," my correspondents inquiring as to whether it is necessary to go to Europe to study music.

During the last few months many musicians have written in favor of the American education for our girls, emphasizing the moral side of the situation and urging girls to stay at home where they can take their education under the parental wing and not subject themselves to the temptations of the European capitals. In many instances the persons interviewed have given statistics which are startling and alarming to prove their point.

In talking with Madame Fanny Bloomfield-Zeisler the other day she spoke emphatically for the American education and, among other things, said that it is absolutely unnecessary for anyone to go abroad to perfect their musical education. "In Chicago one can hear the best in the world, and the city can give the student every advantage possible to be secured in Europe."

It is unquestionably true that we have made a wonderful advancement in musical pedagogy within the last twenty-five years, and that our cities offer limitless possibilities to the students with plenty of money and time at their disposal. But what about the atmosphere of our cities, the ideals in our home life, the preoccupation of our so-called middle class and moneyed class? What is their attitude toward life and what influence has it on the minds of the youth of our time?

I do believe and know from experience that much of this talk of "atmosphere" in Europe is all buncombe, but isn't it true that the attitude of the average European toward education and the teacher, is entirely different from that of the American of the same class?

A teacher in Europe is reverenced and is a factor in the daily life of the child. We Americans have but little reverence in our make-up, our children are not taught to respect anything unless it be money and the things that money will buy.

How many times it has happened to us that pupils have gone to Europe feeling that no one in this country knows anything and after being there a few months, imbibing this reverence for artist teachers, returning to us feeling that there is just as good work being done in this country as in Europe.

So to my correspondents on the European question, I would say that I feel it is a splendid thing for pupils to go to Europe to study; but what they learn there is not alone music, but reverence for knowledge and those minds that are striving for advancement, things that should have been instilled in their minds and hearts, when as children, they stood by their mother's knees.

I wish every student of mine might have the privilege of European study not because I consider that we haven't as good work in this country or that we can't hear the music, but because of the different outlook on life and the broadening and illuminating proeesses which must certainly take deep root in the minds of our students after a year of travel.

Go everywhere you can. Keep your eyes and ears open. Knowledge is everywhere, and we'll hope it's catching!

* * *

What is the difference between the marks *sf* and *fp*? It seems to me that they mean the same thing. Am I right? B. H.

While I believe that many writers use the marks interchangeably, still it has always seemed to me that there is a difference between them; *fp*, I should say, always means a tone suddenly loud and immediately diminished. The sign is used more by orchestral composers than by piano composers, as it is an effect almost impossible to produce on the piano but delightful in orchestral instruments. The violin, as well as most orchestral instruments, can give a tone a sudden accent and immediately diminish to pianissimo.

The *sf* is also a sudden accent but not necessarily as loud as the *fp*, although it may be, depending more on the content of the preceding measures: the tone, however, is not immediately diminished but lasts through the entire value of the note over which this marking appears.

Thus we have in nearly all of the Beethoven piano sonatas both markings used perhaps only two measures apart. I can't help but believe that Beethoven, when he used the *fp*, had the orchestra in mind and wanted an accent with an immediate diminuendo; when the *sf* mark was given the full tone of the fortissimo accent was to be held through the entire value of the note. Neither of the marks influence anything but the note over which they are written.

* * *

Will you tell me how I can tell a "theme" in music? I find it very hard in taking up a new composition to be sure I am right. Also as to how I can distinguish between lyric and thematic music? S. M. C.

A "theme" is a musical idea. It's like a text in discourse. In thematic music, the theme is very easy to find as it is repeated over and over again, not on the same pitch or perhaps in the same key, but with the rhythm unchanging, so that the ear and eye both immediately recognize the repetitions as the "Idea."

It is always a question of "some more of the same," and it is the "theme" because it is what the composer talks about.

Lyric music is music with a flowing melody, and the rhythmic incidents within the measure are by no means so diversified. Generally you find the subject from two to four measures in length and many times eight measures or even longer. It is like a line of verse in poetry, the less you analyze it and the more you sing it the better off you will be when you come to play it.

In my classes I have the rhythmic incidents of thematic music tapped out in order that the student may feel that the rhythm is the one thing that makes it possible for us to recognize an idea as it is repeated on various pitches. So long as the rhythm is the same it is the same idea. And if you try this you will find that many times the idea, when treated thematically, is like the children's game of "three times and out." That is the theme will be repeated exactly, three times, and then comes an ending which is more or less conclusive according to whether the cadence is in the original key or a relative key. If you will refer to the first line of the Schumann *Novelette* in B minor, Op. 99, you will understand the form.

In fact this composition as a whole shows the difference between thematic music and lyric music as well as any. The first part is decidedly thematic, as he is continually harping on the same idea which both the eye and ear readily recognize. Then in the *Trio* comes the lovely melody in D major, where the smallest unit is four measures. Should this line be cut up and analyzed it would be like picking a rose to pieces; nothing short of a miracle would ever put it together again.

Many persons say to me "How I wish ideas in music were as easy to recognize as ideas in discourse," which always amuses me, as they are just as easy or easier.

In discourse the lecturer or minister doesn't take any chances with his public. He always tells them what he is going to talk about, many times repeating the text in order to have it take root in the minds of his audience.

Musicians don't do this, but still our message makes its way, oftentimes making a wonderful impression in one hearing.

* * *

Do you think it is necessary for a piano teacher to keep up her practice when she teaches only the elementary grades? K. C. H.

How can she help it. Personally I don't see how a teacher can get along without studying something, not because she is going to teach the work but to gain comfort and inspiration from some masterwork. If my pupils come into my studio and don't find me practising how can I make them see that practising is worth while? Isn't my influence with them incomparably greater if they see that I believe in music and love it for its own sake?

I can only give you my own experience which has been that I cannot teach music unless I am working at it. Not alone because of keeping my hand in, but because of the influence music has on life and character. A half hour even, in good company, is a wonderful stimulus and often insures an inspired teaching day.

BOOK NOTES

Annual Report of the Board of Regents of the Smithsonian Institution, 1912. Government Printing Office, Washington, D. C.

As usual this report contains much extremely valuable information to anyone who is interested in scientific and general investigations. To the musician the chapter of special value is that on *The music of primitive peoples and the beginnings of European music,* by Willy Pastor, published in the *Zeitschrift für Ethnologie,* and translated for this report. Every musician who is interested in the evolution and history of music should get a copy of this report and read the chapter noted.

How the Piano Came To Be. By Ellye Howell Glover. Chicago, Brown & Howell Co. Price 50 cents, net; postage extra.

Here is a little book that will serve admirably as a gift book or prize for young players, or as a book of study for children's classes. It gives in entertaining style the story of the origin and development of the instrument. A number of illustrations give a fine view of the various phases in the evolution of the piano and add to the attractiveness of the work. Teachers of piano playing ought to have a copy of a handy book like this on the studio table.

In Music Land. A handbook for young people. By George P. Upton. With illustrations by James Bloomfield. Chicago, Browne & Howell Co. Price $1.25 net; postage extra.

The veteran Chicago musical critic has done a genuine service to the cause of music education in writing this book. All children love a story, and it was a happy thought of the author to use the conversational style for his treatment of the subjects. The contents include a most graphic presentation of the boyhood days of twelve of the great composers. Then follows a fairy story which presents the essential facts in regard to musical notation, that is, note values, rests, characters used in music, etc. The fourteenth evening tells about forms of musical composition, the fifteenth evening all about the orchestra, and the last story is practically a dictionary or explanation of the terms used is music.

We recommend this book to our readers as a delightful gift book or prize for well-learned lessons and faithful practising.

The Fairy Story That Came True. Containing also *The Three Famous F's,* a story of the time of Chopin, Mendelssohn and Liszt. By Mme. A. Pupin. Published by the author, Station O, New York City. Price 60 cents.

The Fairy Stories That Did Not Come True. Containing also *Miss Loomis' Legacy* and *The Symphony in Q minor.* By Mme. A. Pupin. Price 60 cents.

How To Be Rich and Have the Best of Everything. By Mme. A. Pupin. Price 25 cents.

The aim of the first little book is to show that all modern inventions were foreshadowed in fairy stories. The second book is a collection of short essays, the third being talks on conquering conditions and commanding success. The author is a pianist and teacher who is well known to readers of THE MUSICIAN by her practical educational writings.

GENERAL NEWS ITEMS

It is reported that Felix Weingartner and the management of the Berlin Royal Opera have again come to amicable relations after many days, and as a result the distinguished conductor will be at his old operatic home by next season.

That was an especially strong trio in Ysaye, Godowsky and Gerardy, which appeared in New York recently in a Beethoven program.

Ernest Hutcheson, the Baltimore pianist, will appear as soloist at one of the Hausegger series of concerts in Berlin next season.

Massilon, Ohio, has a concert orchestra which made its initial appearance in that city in December. The orchestra, under the direction of H. A. Schroeder, played excellently, according to report, and while as yet not large in numbers, it will prove a nucleus for an admirable organization later on.

It is said that the first Munich production of Wolf-Ferrari's *L'Amore Medico* was a great success, and marks a decided advance in the composer's art.

The Cecilia Society of Boston, Mass., Arthur Mees, conductor, produced at its December concert Florent Schmitt's *Forty-sixth Psalm,* for the first time in the United States. The work is for soprano solo, chorus, orchestra and organ.

George Henschel, the first conductor of the Boston Symphony Orchestra, is still active in that capacity, although he has retired from the stage as a singer.

The Mendelssohn Choir of Toronto, which gave some notable performances in America, a season or two ago, is planning a tour of various European cities in the summer of 1915.

Mme. Schumann-Heink will be the feature artist at a special festival concert to be given in Scranton, Pa., on May 15, next. She has not appeared in Scranton for twelve years, so it is said.

A Gluck Society has been formed by Dr. Max Arend in Dresden, and the society will honor the second centenary of the composer's birth which occurs on July 2, 1914. It is said that the society proposes also to print gradually a complete edition of Gluck's compositions, and to give frequent performances of his works, including many of the lesser known.

This year, as Wagner's *Parsifal* is "free" as far as rights of performance are concerned, this masterpiece will receive productions in over forty opera houses in Germany, and in as many more in the rest of Europe.

It is said that Gustave Charpentier has revised his *Italian Impressions,* and will produce it in ballet form.

The success of Boieldieu's long forgotten *Les Voitures Versées,* revived at the Berlin Royal Opera recently with Richard Strauss as conductor, has been very great. The celebrated composer conducted Boieldieu's ultra-light music with the utmost delicacy and humor. The cast comprised Hoffmann, Philipp, Frau Alfermann, Frau Andreïova, and Frau Schelle-Muller.

The German adaptation, by Georges Dröscher, proved remarkably clever.

A New Type of Player Piano

The most important musical announcement of recent years has just been made by Sohmer & Co., who have put on the market a new type of player piano with a fundamental improvement for controlling the expression—a means of graduating the tone of the piano evenly, positively, and naturally with the fingers, obtaining that indescribable "sympathetic" touch heretofore heard in only the most skilful hand playing.

Sohmer

"The Player Piano with the Gradutone Buttons"

Best of all, this advanced type of PLAYER has been combined with the Sohmer piano, "The Piano of Permanent Tone," one of a few American pianos of the very first rank, whose makers have always kept artistic ideals uppermost in their work, yet have never charged anything additional for their justly earned reputation.

A brochure with illustrations of case designs and full details, prices, etc., will be mailed to you upon request. Please mention The Musician.

GENERAL NEWS ITEMS

THE Pittsburgh Male Chorus, James S. Martin, conductor, assisted by the Tuesday Musical Club Choral, 70 women's voices, gave the first concert of the season, November 21. Evan Williams is to be the soloist at the second concert, April 24.

THE Dartmouth College Orchestra, which now numbers 32 players, under the direction of Prof. Charles H. Morse, gave a fine concert, December 9, playing, among other numbers, Haydn's *Surprise* symphony.

HAROLD BAUER'S program for January 11, at Aeolian Hall, New York City, included eleven compositions in dance form.

THE A Cappella Choir of Milwaukee, with the assistance of the Chicago Singverein and the Boeppler Symphony Orchestra, 600 singers, under the direction of W. Boeppler, will give Hugo Kann's symphonic poem, *Auf dem Meere*, Op. 54, for mixed voices, baritone solo and orchestra, during the coming Spring.

THE Red Wing, Minn., Choral Club gave a successful performance of Willard Patten's oratorio, *Isaiah*, December 5, under the direction of Prof. H. C. E. Schmidt. Mr. Patten was present at the performance

THE Christmas Festival of the MacDowell Club of New York City was held December 16 at the Hotel Astor.

ST. LOUIS citizens realize the value of a fine orchestra. At the December meeting of the Business Men's League it was voted to back the Symphony Orchestra. Conductor Zach agreed to give a free concert in the Coliseum during the Christmas season.

THE Choral Club of Hartford, Conn., Ralph L. Baldwin, conductor, gave the first concert of the seventh season, December 8, singing a program of music for men's voices.

FRED WALKER, a prominent singing teacher of London, who had a number of American singers in his classes, died November 27. He was born at Marylebone, January 17, 1835.

PROMINENT citizens of Edinburgh, Scotland, have agreed to aid in establishing a college of music in that city.

THE Saint Louis Orchestra Club, Frank Gecks, conductor, gave the first concert of the twenty-first season, December 11. The Club is composed of 82 amateur musicians, about one quarter of the number being women. Local papers reported a fine performance.

HAROLD HENRY, pianist, of Chicago, gave a recital at Boston, December 15, playing a program of compositions from the classical repertoire, and a group of "modern" pieces. He made a very good impression.

AMERICAN music lovers who are interested in the opera will be pleased to know that plans are under way to extend the sphere of the Century Opera Company of New York City. It is expected that five or six companies may be running in co-operation with the Century, which will be the central institution. Philadelphia is the first city to come into the circuit, and applications have been received from Boston, Baltimore, Washington, Pittsburgh, Cincinnati, Chicago, St. Louis, and several other cities for a series of performances.

ANDREAS DIPPEL, former manager of the Chicago Opera Company, will place a company in New York next Fall under the name "The Dippel Opera Comique Company," with a season of eight months. Most of the performances will be in English.

ELLSWORTH C. PHELPS, a well-known musician of Brooklyn, N. Y., for many years connected with the music work in the public schools of the city, died November 29.

HAROLD BAUER played the following program at the first meeting of his class in criticism, December 22, at the Institute of Musical Art, New York City: *Chromatic fantaisie and fugue*, Bach; *Sonata*, Op. 78, Beethoven; *Carnaval*, Schumann; *Barcarolle*, F♯ major, Op. 60, Chopin; *Scherzo*, C♯ minor, Op. 39, Chopin.

THE Festival Chorus of Columbia University sang *The Messiah*, December 17, under the direction of Walter Henry Hall. The chorus has 300 members.

RUDOLPH GANZ, the pianist has completed a series of twelve recitals in Switzerland, and is now in Berlin, where he will make his headquarters.

JOSEPH HOLBROOK'S new orchestral suite, *Auld Lang Syne*, will be given at this year's festival at Cardiff, Wales, with Sir Frederic Cowen as conductor.

MAX BRUCH was recently elected a member of the Senate of the Berlin Royal Academy of Arts.

A SPECIAL performance of Handel's *Messiah* was given January 25, at the New York Hippodrome, by a chorus of over 1,200 voices under direction of Tal Esen Morgan. The soloists were Corinne Rider-Kelsey, Corinne Welsh, Daniel Beddoe and William Hinshaw, with the New York Symphony Orchestra in assistance.

HOUSTON, TEXAS, possesses a professional symphony orchestra of forty players, recruited entirely from resident musicians. Julien Paul Blitz is the conductor.

LORTZING'S *Undine*, a favorite light opera of the old school, has been revived with success in its original form recently in Berlin.

THERE was an interesting sale of musical autographs in Berlin not long ago, and among the most noteworthy were the manuscript of Schubert's *Salve Regina*, which was sold for about $350. A Bach manuscript, sold for $200 and two letters of Beethoven, brought a good average price of $400.

THERE is a prize of $50 offered for the best musical setting of the new Bowdoin College song, entitled *Forward the White*. The contest will close April 1, and those desiring to compete can obtain copies of the song by writing to Prof. E. H. Tras Bowdoin College, Brunswick, Me.

THE twentieth anniversary of Tchaïkovsky's death was fittingly observed by a concert at the Imperia School of Music, Moscow, recently One of th numbers was the composer's *Concert Fantaisie*, fo piano and orchestra, the soloist being Taneieff th composer-pianist and a lifelong friend of the Rus sian master.

KURT PAUR, son of Emil Paur, is making a nam for himself in Berlin as a pianist and ensembl player.

WESTON SPIES GALES, formerly organist at th Emmanuel church, Boston, Mass., appears to b making something of a success as a conductor i Germany this winter, judging by reports.

EMIL SAUER, the pianist, made his usual succe at his recent Dresden concert, a group of his ow compositions being especially admired.

JACQUES ROUCHE, the new director of the Par Opera, has a great opportunity to restore the form glory of this famous institution. He states that will be his aim to banish "bastard Munich art" a to restore to French singers, French composers a French scenic artists "the prestige which is the due." If he can do all this, he will accomplish muc

WITH THE SCHOOLS ADD TEACHERS

Mr. Sumner Salter, director of music, Williams College, gave his 104th organ recital in Grace Hall, December 3. Three of the numbers are by American composers.

Mr. E. R. Kroeger, assisted by the church quartet, gave an organ recital at the Church of the Messiah, St. Louis, December 14, under the auspices of the Missouri Chapter of the American Guild of Organists.

Mr. Eber C. Hamilton, organist of the First Presbyterian Church, Franklin, Pa., sent The Musician a program for the Christmas service. The music, most of it Ditson publications, was rendered by a double quartet, organ and an orchestra of seven.

Mr. Frank E. Ward, organist of the Temple Israel, of Harlem, N. Y. City, gave a series of weekly recitals at the Temple during December.

The closing weeks of the Fall term at the Central State Normal School, Mt. Pleasant, Mich., Mr. Wm. E Rauch, director, were busy ones; a number of recitals were given by members of the faculty and pupils.

From the Faelten Pianoforte School, Boston, comes an interesting program of a pupils' recital given at the School, December 18. We note particularly the work of the class in unison and ensemble playing.

The New York School of Music and Arts, Mr. Calfe Leech Sterner, director, gave a very successful recital by a number of vocal pupils at the Carnegie Hall. This was the 348th concert by the school. Pupils of this school also gave a special matinee recital at the Auditorium in Wanamaker's, New York.

Mrs. Mary Sleeper Ruggles, principal of the Liederheim School of Vocal Music, Worcester, Mass., presented to the public her pupil, Miss Phyllis Learborn, in a recital of songs, on December 4.

The Cincinnati Conservatory of Music gave two interesting programs, one of concertos with orchestra, under the direction of Sig. Tirindelli, December 3, and an evening of ensemble music, played by Wilhelm Kraupner, piano, Bernhard Sturm, violin, Julius Sturm, 'cello, on December 8.

Miss Elsa Sherwood, of Boston, daughter of Wm. H. Sherwood, and a successful concert pianist and teacher, has arranged a benefit for her mother, who, although advanced in years, retains much of her old-time skill as a pianist.

NEW YORK CITY NOTES

BY EVA EMMET WYCOFF

The Metropolitan Opera activities have been going on with performances of old and new operas. *Der Rosenkavalier*, by Richard Strauss, has had its "Première." New Year's Day had a special matinee of *Parsifal*. The Opera Company has made arrangements with a number of eminent artists for appearances at their Sunday evening concerts. The following names are prominent: Teresa Carreño, Mischa Elman, Carl Flesch, Jean Gerardy, Alma Gluck, Leopold Godowsky, Josef Hoffman, Fritz Kreisler, Yolanda Merö, and Eugene Ysaye.

Between Dec. 17 and Dec. 27, New York had four performances of *The Messiah*, given respectively by the Columbia University Festival Chorus, the People's Choral Union, and two performances by the New York Oratorio Society. With the Columbia University Chorus, the soloists were Mme. Jeanne Jomelli, Mrs. Foster-Why, Mr. Orville Harrold and Mr. William Hinshaw. The soloists with the People's Choral Union were Mrs. Caroline Hudson-Alexander, Mme. Glesca Nichols, Mr.

Melba and Kubelik

The present joint tour of Melba and Kubelik is acclaimed one of the greatest musical sensations of recent years—and it is a truly noteworthy event.

But to hear these two famous artists is an *everyday* pleasure where there is a Victor or Victrola in the home.

Melba and Kubelik are among the world's greatest singers and musicians who make records exclusively for the Victor.

Any Victor dealer in any city in the world will gladly play any Melba or Kubelik records you wish to hear. No more beautiful rendition of Gounod's "Ave Maria" can be imagined than Victor Record 89073, sung by Melba with violin obbligato by Kubelik.

Victors $10 to $100. Victrolas $15 to $200.

Victor Talking Machine Co., Camden, N. J., U. S. A.

LIVE BOYS AND GIRLS
Need the companionship of a live magazine like
LITTLE FOLKS
The Children's Magazine

IT is made just for little girls and boys between three and ten years old. It is a ***story teller,*** a ***picture book*** and a ***playfellow.*** Its fun is of a simple, sunshiny sort. Its little tales of children stimulate their readers and hearers to be fearless, cheerful, unselfish, and, above all, true and honorable. All stories of a painful kind are excluded, especially such as would haunt nervous and imaginative children.

The best children's writers, artists and editors make this the ideal juvenile magazine. You cannot bring too many good influences to bear on your children. The influence of such a magazine will be of inestimable value to you.

Special Introductory Offer
For 15 cents LITTLE FOLKS will be sent for three months to a new subscriber

LITTLE FOLKS MAGAZINE
Dept. B, Salem, Mass.

Book VI of Graded Studies
For the Piano
Compiled by MRS. CROSBY ADAMS

is now available. This book contains a wealth of good material. The list of composers represented:

MOSCHELES	KIRNBERGER	HANDEL	KESSLER	SCHMITT
JEAN VOGT	JENSEN	BERENS	SPINDLER	WOLLENHAUPT
STERNDALE BENNETT	LOESCHHORN	REINHOLD	CZERNY	BACH (Chorale)
KIRCHNER	PARLOW	GLUCK	BURGMUELLER	HABERBIER
				GURLITT

gives some indication of the scope covered.

Writings by the older masters largely predominate. The preparation for polyphonic playing is interestingly presented through a number of the simpler selections of that nature by Handel. The book contains many other fine examples of writing by the old masters, that adapt themselves fittingly to the grade of difficulty involved in this series.

The contents of Book VI is largely supplemental to Books IV and V, except that greater demands are made for musical interpretation. It is indeed a unique volume, one that teachers will thoroughly appreciate.

Price uniform with the other books ($1.00), subject to sheet music discount

In the Bottoms
A Characteristic Suite for Piano
By R. NATHANIEL DETT
Summy Edition, No. 61 - - - - - - - - - Price $1.50

This Suite consists of five numbers—Prelude, His Song, Honey (Humoresque), Barcarolle, Dance (Juba)—and pictures scenes peculiar to Negro life in the river bottoms of the Southern Sections of North America. As "Program music," characteristically American, it is no doubt the most representative of anything that has been issued for some years. An ideal is portrayed through it all, which is significantly sincere, and it is done with a degree of musicianship that is not only fully satisfying but that commands admiration for its skill and finish. No attempt has been made at elaborate ornamentation consequently the difficulties are not beyond such as the average good pianist can manage. It is simply a free and spontaneous expression of a concept, masterfully done.

Clayton F. Summy Co., Publishers
64 East Van Buren St. - - - - - - - Chicago, Ill.

SCALES AND ARPEGGIOS WITHOUT NOTES
By J. Rode-Jacobsen **Price 75c.**
Piano teachers should use this great work. It teaches the major and the melodic, as well as the harmonic minor scale, in all keys, in 8ths, 6ths, 10ths and 3ds, absolutely without notes; also arpeggios. It is so simple and plain that a child beginner can play scales and arpeggios from the very first lesson, yet is not too childish for grown up pupils. Saves teachers all trouble teaching scales and arpeggios. Sent on approval for 25c.
RHODES-SHELMO MUSIC CO.
2814 N. Albany Avenue, Room 2, Chicago

When you write to advertisers, mention THE MUSICIAN

Frank Ormsby, and Mr. Clifford Cairns. The soloists with the Oratorio Society were Mme. Corinne Rider-Kelsey, Miss Christine Miller, Mr. Evan Williams, and Mr. Frederick Martin.

JAN. 20 *The Messiah* was presented at the Hippodrome by the Festival Chorus of 1,200 voices, directed by Mr. Tali Esen Morgan, the man who is famous for handling big organizations successfully. Generally speaking, the choruses have done the best work in these performances.

DEC. 5 the Oratorio Society presented *Ruth,* composed by Georg Schumann. The soloists were Miss Florence Hinkle, Miss Mildred Potter, Mr. Foster-Why, and Mr. Putnam Griswold. Mr. Louis Koemmenich is the director of this organization. Splendid work was done by the soloists. The music is somewhat out of the ordinary, being quite oriental with great opportunities for solo work.

DEC. 12 Mme. Gertrude Auld presented a song recital at Aeolian Hall.

MRS. MARSHALL ELLIOTT STEWART, who is at the head of the School of Accompanying, gave one of her pleasant Sunday afternoons "at home" on December 14, in her studio in Aeolian Hall.

THE Musicians' Club held a reception to Mr. Charles Wakefield Cadman, Dec. 17, in the club rooms. The club quarters were overflowing with representative New York musicians. Mr. Cadman played the accompaniments for several singers, who sang his songs. These singers were Mrs. Edith Hallett-Franke, Mrs. Morrissey, and Miss Love. Mr. Dan Beddoe sang with Mr. Charles Gilbert Spross at the piano. The Welsh Male Singers also contributed to the enjoyment of the afternoon.

MR. JOHN J. BLACKMORE, who recently returned from Berlin, is settled and teaching in New York City. He speaks in most glowing terms about his work with Leschetizky and Arthur Schnabel.

FRANZ EGENIEFF presented a program in Aeolian Hall on Dec. 16. Mr. Egenieff sings well and is a artist of the first rank.

THE VON ENDE SCHOOL presented a lecture o Dec. 16 by Mr. John C. Freund, editor of *Musica America.* The subject was *The uplift of music i America.*

MR. and MRS. HENRY HOLDEN HUSS gave piano and song recital in Aeolian Hall, Dec. 10.

NEVADA VAN DER VEER and REED MILLER, co tralto and tenor, respectively, presented a progra in Aeolian Hall, Dec. 3, which proved most enjo able.

MR. CHRISTIAAN KRIENS announces a series concerts in the Park Avenue Church, where he h the direction of the choir.

MR. JOHN BARNES WELLS, tenor, gave a recit in the Mehan Studios, Dec 15. His singing has it much charm.

ARTISTIC VIOLIN BOWS

From celebrated makers in Germany and France

Bows for Violin family are a very important necessity. Musicians everywhere recognize this fact, and spend time and money in careful selection of a Bow, which will meet with their exacting requirements. Good Bows must have well balauced, selected sticks, of suitable material, be symmetrical and elastic, have plenty of hair, a well fitted frog and screw, so that when a player is ready to use it, he does so with ease and comfort, feeling he can depend upon responsiveness from his instrument the moment it touches the strings. The Violin Bows listed below are the result of a long experience in catering to the wants of the artistic amateur and the finished artist. The different grades have been carefully selected and every Bow is well worth your consideration in regard to quality and price.

LETTERS TO THE BEGINNING TEACHER

(*Continued from page* 93)

of study for those who would teach has been recognized and will be provided. The Moth of the next generation will not be allowed to flutter through a course of study and out into the world—only to find, when she begins to teach, that she has neither knowledge nor understanding for the work.

At present, in her classes in Harmonic Thinking, Mrs. Kelley is taking those young girls who have been taught to play and who have studied harmony, but who have kept these two carefully apart, and have never been taught how to use their knowledge of either in their teaching, young people to whom analysis is a closed book, who could no more explain to a pupil the structure of a composition than they could put one together, or make plain to a pupil how to go to work to study. They do not know themselves. All the knowledge that they have is floating about in their brains in little, abstract, separate bits. The first intelligent question a pupil puts to them staggers them.

Mrs. Kelley is helping these young people to realize their knowledge, is supplying them with weapons with which to combat ignorance and to fight against the low, insidious tendency rag-timeward; and, incidentally, she is helping those who are not strong enough to do this to realize it, and encouraging them to become beautiful "moths of peace." We need these "moths of peace" very much; they make our happiest music. Let the tear-stained, blood-streaked music of the strong accomplish its own end, and let the moths of peace make for us the joyous, sunny music of a day.

Northwestern University

EVANSTON—CHICAGO

The University School of Music offers Courses in Piano, Organ, Violin, Voice, and Theory of Music, leading to academic degrees. Also courses in Public School Music, and Piano and Voice Pedagogy. Literary studies in the College of Liberal Arts or Evanston Academy included without extra cost. Thorough Preparatory School maintained. Refined social environment and beautiful situation on the wooded shores of Lake Michigan.

The professional String Quartette, the student Symphony Orchestra of sixty, the A Cappella Choir, the Evanston Musical Club, and the great North Shore Musical Festivals with choruses totaling over 2000 voices offer unparalleled practical advantages.

VICTOR TALKING MACHINE RECORDS FOR FEBRUARY

OBSERVERS of musical conditions remark that the great increase in the use of instruments of the Talking Machine type has had a very strong influence in extending musical interest in all parts of the country. In the home, in the public schools, and in the higher institutions of learning, the Talking Machine and the record are considered an essential in educational progress, and used in accordance with such recognition. The taste of the children of a household is unconsciously molded along the lines of the best in music. To love the good in music one must know what is good and become familiar with it. This is one splendid contribution of the Talking Machine to musical uplift in the United States.

The issues of the Victor Company for February are in line with the many previous splendid records, meeting a variety of tastes; especially interesting to readers of THE MUSICIAN will be those of the great artists, for example the following:

Caruso, Enrico: *Turiddu's Farewell,* from *Cavalleria Rusticana,* Mascagni's famous opera.

Beddoe, Daniel, tenor: *A Moonlight Song,* one of Charles Wakefield Cadman's most melodious songs.

Melba, Mme., soprano, and **Jan Kubelik,** violinist: Aminta's lovely air, *I will love her* (L'amerò sarò costante), from Mozart's charming pastoral opera, *Il rè pastore* (The Shepherd King). The violin obbligato by Kubelik adds much to the clear, beautiful tone of the singer.

Melba, Mme.: *Romance,* by Bourget, and *Mandoline,* by Debussy, two delightful short songs by eminent French composers of the modern school.

Melba, Mme.: *John Anderson, My Jo,* one of those beautiful Scotch ballads which never grow old.

Kubelik, Jan, violinist: *Romanza Andaluza,* by Sarasate, and *Finale* from second concerto, Op. 22, by Wieniawski; the great violinist's playing is filled with warmth and beauty of tone.

Hamlin, George, tenor: *Love's sorrow,* one of the most popular songs by Harry Rowe Shelley, the well-known American composer.

Schumann-Heink, Mme.: *In the boat* (Im Kalme), Op. 60, No. 3, one of Grieg's finest songs, given in German by the favorite contralto.

Whitehill, Clarence, baritone: *Uncle Rome,* by Sidney Homer, the text taken from *Bandanna Ballads* by Howard Weeden; this is a number in which an old negro boatman is the central figure. Mr. Whitehill admirably reproduces the spirit of the verse.

Gadski, Mme.: *Thou art Spring* (Du bist der Lenz), from Wagner's opera *Die Walküre,* one of the finest lyrics of the master.

Powell, Maud, violinist: *Minuet,* by Boccherini, and *Kol Nidrei,* Op. 47, by Max Bruch, the first a fine example of old Italian melody and rhythm, the second of the strange, melancholy charm of the traditional Hebrew melodies.

de Gogorza, Emilio, baritone: *Serenata, Open thy window* (Deh vieni alla finestra), from Mozart's opera *Don Giovanni,* sung in Italian; and the *Serenade* of Mephistopheles from Gounod's *Faust,* sung in French. These are recorded on one disc.

Williams, Evan, tenor: *Just a-wearyin' for you,* by Carrie Jacobs-Bond, an exquisite little gem of song in which the fine voice of this favorite American concert artist is heard to great advantage.

NOTE—Compass shown by letters in brackets [ ]. First letter is lowest note; notes below the staff indicated by small letters; on the staff by CAPITAL letters; above the staff by *italic* letters.

SECULAR SONGS

HIGH VOICE

DICHMONT, WILLIAM
Thinking of you. [E♭][E♭-g]..... $0.50
A song of the so-called ballad type, a pleasing melody with a simple accompaniment; it can be used by a first year pupil in singing.

JOHNSON, WILLIAM SPENCER
From oversea. [D♭][d♭-g♭]..... .40
A lovely little lyric for recital use; the accompaniment has a certain independence that is very effective owing to the use of counter-themes.

LISZT, FRANZ
O in my dreams (*Oh! quand je dors*). [E] d♯-a]..... .50
One of Liszt's best lighter songs, in the style of the French romance, graceful and elegant in melody and modulation.

PÜTZ, EGON
Enchanted. Op. 27, No. 2. [A][E♯-g♯ .50
An art song, filled with color and atmosphere, and with a fine climax; for second year pupils.

Love and life. Op. 27, No. 1. [G♭] [E♭-b♭]..... .60
An old English text with a striking musical setting; concert quality.

REIMANN, HEINRICH, Arranger
Spinning song (*Spinnerliedchen*). [A] [E-F♯] ..... .50
An old German folk song with a very effective accompaniment; suitable for recital use.

MEDIUM VOICE

BERGH, ARTHUR
The little peach. Op. 16, No. 2. [G] [d-E]..... .60
A humorous song, telling of the havoc that a green peach worked upon a boy and a girl who ate it; a good encore number.

DAVIES, WILLIAM
Oh, that summer smiled for aye (*O! na byddain haf o hyd*). [A♭][E♭-E♭]... .60
A splendid song for recital or concert use, sung by Evan Williams, the famous tenor; can be used with pupils in the second year of study.

GILMOUR, HOWARD C.
Off to the kingdom of dreams. [D] [d-E]..... .50
A charming little lullaby, appealing in text, and pleasing in melody.

JOHNSON, WM. SPENCER
A road tune. [F][c-F]..... $0.50
A bright song with the Nature spirit in it; the music is spontaneous and very pleasing.

LISZT, FRANZ
O in my dreams (*Oh! quand je dors*). [C][b-F]..... .50
(For description see Secular Songs, High Voice.)

PETERHANS, W. H.
Hush thee, baby. With violin *ad lib.* [G][b-E].. ..... .60
Voice and violin give the effect of a duet; a very pleasing song for concert or recital use.

ROBINSON, CLARENCE C.
Love dreams (Waltz song). [F][c-g]... .60
A pleasing melody with several rather florid cadenzas make a brilliant song for recital or teaching use.

SALTER, MARY TURNER
Love of an hour. [F][c-F]..... .50
A new song by a successful American composer, expressive and tender in sentiment.

LOW VOICE

DEBUSSY, CLAUDE
Evening fair (*Beau soir*). [D][b♭-E].. .40
A beautiful song, descriptive Nature's moods.

The mandolin (*Mandoline*). [B♭] [b♭-F] ..... .50
A fine song for concert use, in serenade style, with piquant accompaniment.

DICHMONT, WILLIAM
Thinking of you. [B♭][b♭-D] ..... .50
(For description see Secular Songs, High Voice.)

MAY, T. G.
Juanita. [D][a-D]..... .40
A new edition of a favorite old song.

WARNER, FRANK HOWARD
I know a little rose. [B] [b-D♯]..... .40
A charming little song for a contralto voice; effective in the lower register; also suitable for a baritone.

SACRED SONGS

HIGH VOICE

BENNETT, W. STERNDALE
O Lord, Thou hast searched me out (*The Woman of Samaria*). [A♭][E♭-F].. .50
A fine aria from an oratorio not so well known as it should be.

MEDIUM VOICE

JOHNSON, NOEL
There is a green hill far away. [F] [b♭-F] ..... .50
An effective setting of this Lenten text; available in place of the much used setting by Gounod.

LOW VOICE

BENNETT, W. STERNDALE
O Lord, Thou hast searched me out. (*The Woman of Samaria*). [F][c-D]. .. $0.50
(For description see Sacred Songs, High Voice.)

CUSTANCE, ARTHUR F. M.
Still, still with Thee. [B♭][a♭-E♭].... .50
A fine new setting of a favorite hymn, pleasing in melody, and very singable.

SACRED DUET

HOSMER, E. S.
I waited patiently for the Lord. Alto and Baritone ..... .60
A good duet for a combination which has been neglected by composers; it is a useful church number.

PIANO SOLO

KROGMANN, C. W.
Op. 103. No. 3. Olga (Mazurka) I-II .. .25
No. 4. Silver raindrops. I... .25
No. 5. The brave little soldier (March). I-II .25
Three little pieces of a set of six melodies, both hands playing within a compass of five notes.

Op. 104, No. 2. Sans souci (*Capricietto*). III-IV..... .60
A bright piece in a rhythm approximating that of the gavotte; the themes are unusually interesting and attractive.

Op. 104, No. 3. The star (*L'etoile*) (*Capricietto*). For the left hand alone. IV..... .60
Pleasing as a musical composition and a good display piece for recital use.

OFFENBACH, JACQUES
Barcarolle (*Tales of Hoffmann*). Transcr. by Robert Austin. III..... .50
An easy and effective arrangement for young pupils.

OLSEN, OLE
Butterflies (*Papillons*). Op. 50, No. 5. IV ..... .50
A piece with plenty of motion in it, mostly fast finger work for both hands, making a brilliant recital number.

SCHRAMMEL, JOHANN
Vienna forever (March). III-IV ..... .50
A stirry march in the military style.

SMITH, H. WAKEFIELD
Woodland chimes. III-IV ..... .60
An interesting composition, in gavotte rhythm; the middle section consists of a broad, melodious theme in octaves for the left hand with repeated chords for the right.

ORGAN

KRAMER, A. WALTER
Morning song (*Chanson matinale*). Op. 28, No. 2 ..... $0.60
An attractive composition, suggestive of the pastoral style, with effective registration for a three-manual instrument.

MÜLLER, CARL C.
Postlude in C. Op. 99, No. 1..... .50
A dignified work of moderate dimensions, suitable for general or festival occasions.

VIOLIN and PIANO

JÄRNEFELT, ARMAS
Berccuse in E minor..... .50
A delightful little piece of moderate difficulty, using the higher positions.

VIOLONCELLO AND PIANO

KRONOLD, HANS
Meditation religieuse. Op. 32, No. 1.. .75
Melodie romantique. Op. 32, No. 2... .60
Serenade espagnole. Op. 32, No. 3... 1.00
Three splendid pieces by a composer who is also a master of the instrument, concert in style and quality.

TRIOS

DONIZETTI, GAETANO
Sextet from *Lucia*. Arr. by Wm. Dressler. For violin, 'cello and piano .75
A very satisfactory arrangement.

MANDOLIN ORCHESTRA

FERBER, RICHARD
Zigzag. Intermezzo capriccioso.

GILDER, J. F.
Norwegian slumber song. Arr. by H. F. Odell.

LUSCOMB, FRED.
Friendly Greeting (March).

ROLLINSON, T. H.
One flag for all (March).

MISCELLANEOUS

TIFERRO, EMIL

Solos for Christian Science Services. Low voice. Selected by Helen Allen Hunt, 1st Church, Scientist, Boston 1.00
25 songs of splendid quality; available for any Protestant service.

VACCAI, N.
Practical Italian method of singing. Ditson Edition, No. 155, with English text ..... .75

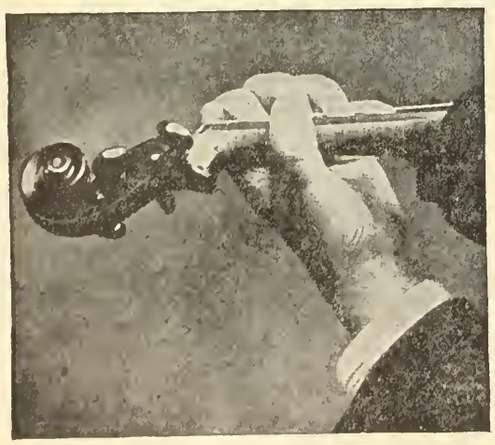

Figure III. Position of the Left Hand

THE PUBLIC SCHOOL CLASS METHOD FOR THE VIOLIN

By Albert G. Mitchell, Mus. D.
Assistant Director of Music, Boston Public Schools

DITSON EDITION, No. 176
Price, 50 cents, net; by mail, 5 cents extra

THAT the violin may be successfully taught to classes of beginners in schools has been abundantly proven abroad. Dr. Mitchell is proving it right here in Boston in the Lowell, Mary Hemenway, Prince, Norcross, Shurtleff, and Dillaway Schools, where this book is used.

By the aid of pictures, diagrams, text, and easily memorized exercises, the author presents his subject with great clarity, in a manner stimulating and unconventional. Though designed for class use, the work is also suitable for individual instruction.

BOSTON: OLIVER DITSON COMPANY
New York: Chas. H. Ditson & Co. Chicago: Lyon & Healy

Graded Material for the Left Hand

By H. C. MACDOUGALL
Professor of Music, Wellesley College

Ditson Edition, No. 112
Bound in paper **Price, postpaid, $1.5**

"If your left hand needs training send fo 'GRADED MATERIAL FOR THE LEFT HAND,' b H. C. Macdougall, for students of the piano, an let him tell you just what to do and how to d it."—*John Orth.*

"I have given practical expression of m opinion by using the work in special case amongst my own students, and by warmly recom mending it to other instructors and students o both sides of the Atlantic."—*Orlando A. Mans field*, Mus. Doc., F.R.C.O., F.A.G.O., Prof. o Music, Wilson College, Pa.

1.50 Year

Greatest Subscription Offer of the Season

THE MUSICIAN has made special and unusual arrangements with the publishers whereby we are enabled to offer this entire combination of four splendid magazines.

Pictorial Review,	**monthly**	**(fashions) one year**	**$1.00**
Modern Priscilla,	**"**	**(needlework) "**	**1.00**
Ladies' World,	**"**	**(household) "**	**1.00**
and THE MUSICIAN	**"**	**"**	**1.50**
Total subscription value of these four magazines			**$4.50**

ALL ONE YEAR FOR . . $3.15

8 Fine Rose Bushes, value $1.00, additional. Free, if order is received not later than March 31.

These three great standard, national family magazines are of the very highest class. Each is a leader in its particular field. All are as good as money and organization can produce.

Something About These Three Standard Family Magazines

PICTORIAL REVIEW is a large magazine of ninety or more pages, profusely illustrated throughout---hence its name. Its fashion pages are justly famous ---in fact they lead the world in the showing of newest styles. Its Fiction, its special features and its departments are eagerly awaited monthly in over a million average American homes. The household departments are edited with just one purpose---to show you how to save money and make it go farther. Then, too, there are general departments on Embroidery, Home Dressmaking, Home Millinery, etc.

THE LADIES' WORLD is a thoroughly practical and up-to-date household magazine, and treats of every subject of interest to women and the home. Its household departments are as good as a course in Domestic Science. Its stories, verses and entertainments for children always please and interest, and at the same time convey some instruction that is of value. THE LADIES' WORLD is particularly valuable to the home manager. Its suggestions for saving expense and new ideas for doing things make THE LADIES' WORLD a practical guide for women everywhere.

MODERN PRISCILLA is recognized as the leading Fancy Work magazine in America. It is today the undisputed authority on all kinds of Embroidery, Crochet, Lace Costumes, Lingerie, and Home Decoration. There are several departments devoted to China, Oil and Water Color Painting, Stenciling, Pyrography, Leather Work, Basketry, and the like. No other magazine publishes anywhere near so many designs for all sorts of fancy work or gives you so many ideas for making dainty dress accessories, as MODERN PRISCILLA.

IF YOU ARE ALREADY A SUBSCRIBER to any one or all of these magazines, your subscription will be extended for one year from the time it is now due to expire. These magazines will be sent all to one address or to separate addresses as requested.

These are the Roses we offer FREE

EVERBLOOMERS

HESSIE BROWN:—Snow-white, delicately tinted pink. Flowers large and beautifully formed, lasting a long time after being cut. One of the finest roses of late introduction.

KAISERIN AUGUSTA VICTORIA: — Delicate creamy white. Buds are elegant, long and pointed; flowers full and double; very fragrant. One of the most beautiful of all roses for open ground culture, being perfectly hardy.

MRS. B. R. CANT:—A beautiful rose of splendid habit of growth, being very strong and free blooming, bearing large double flowers of a beautiful carmine red. Valuable for outdoor culture.

PEARL DU JARDIN (Pearl of the Garden): — Rich golden-yellow. Often sold in cut flower stores for "Marechal Neil," so close is the resemblance. Buds of immense size; flowers globular and very fragrant. Dark, thick, shiny foliage.

WELLESLEY:—Clear rose-pink, reverse of petals silvery rose. A vigorous grower and free bloomer, with extra large double flowers.

PINK MAMAN COCHET (the Queen of all Pink Garden Roses):—Such beauty and exquisite form as is possessed by this variety is well nigh marvelous. The buds are beautiful, large, full and firm and elegantly pointed; as they expand they show great depth and richness, sometimes measuring two and one-half inches from base to tip. Perfectly hardy in all sections of the country. The color is clear, rich pink, changing to silvery rose.

CLIMBERS

LADY GODIVA:—A new climbing rose. This rose is similar in habit of growth to the Crimson Rambler. Blooming in immense clusters it is a beautiful sight. Its color is most pleasing, being a pale flesh, the lightest of all the pink ramblers. The individual flowers are very large, borne in great clusters. A very rapid and free branching rose; hardy as an oak, deserving a place in every garden.

TAUSENDSCHON (Thousand Beauties):—The most sensational climbing rose yet introduced, blooming profusely from the beginning of June until the last of July; the double flowers appear in large clusters. The color runs from delicate balsam or tender rose through the intermediate shades of bright rose and carmine, with white and yellow tints showing. There is no other rose in cultivation like it. It is a strong grower, with but few thorns, and absolutely hardy.

To the above Combination of THE MUSICIAN, Woman's Trio and 8 Rose Bushes, add the following at prices given:

Twenty Nursery Rhymes

SET TO NEW TUNES

By EDMOND RICKETT

Price, Postpaid, $1.00

There is always a demand for songs for children or songs to be sung to children. The composer of the songs in this collection has kept close to the qualities demanded in music for little folks and his tunes are easy, pleasing, melodious and full of spirit and attractive rhythms.

The accompaniments are easily playable and are suited to the hands of the little pianists of the family. All the old favorites are included, such as Ride a Cockhorse; Little Bo-peep; Goosey, Goosey, Gander; Little Boy Blue; Little Jack Horner; Tom, the Piper's Son, etc.

KITTY CHEATHAM SAYS:

"I have used **Rickett's Nursery Rhymes** in all my German Programs with great success."

PUBLISHED BY

OLIVER DITSON COMPANY

SINGLE COPIES.....$ .15
SUBSCRIPTION PRICE, PER YEAR 1.50

The Subscription Price of $1.50 per year applies to subscribers residing in United States, Mexico, Panama, Hawaii, Philippines, Alaska, Cuba, Porto Rico, Guam, Tutuila, and the city of Shanghai. The price to Canada is $1.75; to Great Britain and the British Colonies, 9 shillings; to Germany, 9 marks; to France, 11 francs. To all other countries the yearly subscription price is the equivalent of $2.20 in American money.

The entire contents of this magazine are covered by the general copyright, and articles must not be reprinted without special permission.

REMITTANCES should be made by Bank Draft or Check, Post-Office Money Order, or Express Money Order. *Where none of these can be procured,* money may be sent in a Registered Letter.

NEW SUBSCRIPTIONS may commence at any time during the year.

EXPIRATIONS AND RENEWALS.—When a subscription expires a notice is sent with the request to renew. Renewals should be sent promptly as subscriptions are not continued after the time for which they are paid.

NOTE.—Customers with charge accounts in good standing may have their subscription charged to their regular account, if desired.

COMMUNICATIONS ARE WELCOME from all interested in the teaching and study of music, and in furthering the success of THE MUSICIAN. All articles or communications submitted for publication should be clearly written on one side (only) of the sheet. Those which cannot be used will be returned. These communications must invariably be addressed to the Editor of THE MUSICIAN.

We decline to be responsible for unsolicited manuscripts. We shall always be glad to consider them for publication in THE MUSICIAN, and we will return them if postage and full address are enclosed.

SPECIAL NOTICE: The publishers should be notified of a changed address before the 5th of the month. Otherwise the next month's issue will be sent to the old address.

All REMITTANCES should be addressed and made payable to

NEW MUSICIANS LIBRARY VOLUME

Anthology of German Piano Music. Volume I. Classic Composers. Edited by Moritz Moszkowski.

IN this volume of THE MUSICIANS LIBRARY the editor has indicated the field from Frohberger, who brought the best traditions of Italy into Germany, down to Becthoven, in whom the classic culminated and the romantic school was born. This great period of German art produced masterpieces in the contrapuntal style of Bach and Handel, and in the homophonic forms of Haydn and Mozart, and the editor has chosen wisely from this rich storehouse, bringing together pieces of conspicuous excellence to form a collection of general significance. As past master of the pianist's art, Mr. Moszkowski's helpful editing, annotation and fingering leave nothing to be desired.

SPECIAL SUBSCRIPTION OFFER:—One copy with The Musician, one year, paper covers, $2.25.

NEW PIANO WORKS

Isidor Philipp: Exercises for the Development of the Higher Pianoforte Technic Ditson Edition No. 196.

ISIDOR PHILIPP is known to pianists as one of the most distinguished teachers of piano playing connected with the celebrated Paris Conservatoire. His system, which has been the educational basis of the training of many of the younger French pianists, consists in using exercises to give drill in variations of intensity of tone, or duration of tone; practising passages in legato, detached and portamento styles; changing of key; special practice with one finger; alternate extension and contraction of the fingers; modifications in all possible forms, scales, arpeggios, repeated notes; exercises for acquiring suppleness; passing under of the thumb; velocity in scales; the use of the fingering of C in all keys; studies in double notes, octaves, octaves with intervening notes, etc.

The price has been fixed at $1.50; until published we will accept orders at 50 cents per copy.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $1.85.

Orvil A. Lindquist: 100 Exercises for the Weak Fingers. Ditson Edition, No. 195 $1.00

MATERIAL of a very useful character such as every teacher needs in his work with pupils. The weaker fingers require special drill and specially prepared exercises, a need which the author has admirably met and filled. Try this work in your efforts to develop strength of attack in your pupils' fingers. It can be used with any method or course of studies.

SPECIAL OFFER:—With The Musician, one year, $1.65.

Arnoldo Sartorio. Twelve Melodious Studies in Velocity in Broken Chords. Op. 1018.

As the title implies, these very useful studies employ chiefly arpeggios in many and varied forms and applications. They are remarkably melodious, whether it be in the style of accompanied cantabile themes in one hand or the other, or developed entirely from figuration. As new and valuable pedagogic material, these studies by a well-known composer of technical works are heartily recommended to progressive teachers; they are moderate in difficulty and do not exceed Grade IV.

This work will be added to the celebrated Ditson Edition. In advance of publication we will accept orders at 40 cents, postage paid, if cash accompanies the order; if a charge is to be made on our books, postage is additional.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $1.75.

Ernest R. Kroeger. The Whole Tone Scales.

THIS little work is designed to meet a need which has arisen since latter-day composers have been employing with increasing frequency the whole tone progressions. Twelve possible scales are given with their corresponding arpeggios both in parallel and contrary motion, all equipped with their most convenient fingering. The work will be a boon to teachers and to all pupils who have encountered in their studies this new and at times perplexing musical resource.

This work will be added to the Ditson Edition. In advance of publication we will accept orders at 25 cents, postage paid, if cash accompanies the order; if a charge is to be made on our books postage is additional.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $1.60.

A NEW ORGAN WORK

30 Offertories for the Organ Ed. by Jas. H. Rogers. $2.00.

A NEW volume uniform with the popular 30 *Preludes* and 30 *Postludes*. The editor has drawn upon the best works by European composers, and has made a number of admirable transcriptions especially for this work. It is to be bound in cloth with gilt top, and is in every way a distinct addition to the organists' collection.

SPECIAL OFFER:—With The Musician, one year, $2.50.

A NEW VIOLIN WORK

Cecil Burleigh: 12 Short Poems, Op. 18. Ditson Edition, No. 94. $1.25. A set of fine pieces for the use of advanced pupils and in concerts. While they have exceptional value for teaching use in the matter of training for style and interpretation, they were composed primarily for purely musical ends, are poetic in conception and content, and thoroughly violinistic in form and expression.

SPECIAL OFFER:—With The Musician, one year, $1.85.

MISCELLANEOUS

James H. Rogers. Five Quatrains From the Rubaiyat. The tempting quality of Omar's immortal verses has inspired the composer with most felicitous musical imaginings. For this set of five songs quatrains have been chosen which are in themselves among the most beautiful and which are adroitly contrasted in mood. To meet their poetic content Mr. Rogers' melodic vein was never more fluent, his harmonic scheme more vital, nor his economy of means to produce just the right emotional effect more sure. These songs, the latest product of his muse, may be used as a cycle or singly, and will adorn any artistic recital program.

The price has been fixed at $1.25; until publication we will accept orders at 75 cents per copy.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $2.10.

Laura Rountree Smith. Sixty Musical Games and Recreations. This stimulating little book is the work of one who understands not only the needs of kindergarten teachers, but the interests of and mode of approach to the child mind. It is, in part, a reprint of material which appeared in The Musician, department for children, and greatly appreciated. The Games are very simple at the beginning, and in various forms wherein the children can all take part; and they convey in an agreeable manner much valuable musical instruction. The Recreations, or "Recitals," as the author calls them, are more elaborate, and consist of well-planned entertainments wherein recitations, piano pieces, and songs are happily introduced, all bearing on the central idea of the recital. Costumes and scenery may be employed in many of them, there is opportunity for pretty dances, and the scheme may often be elaborated or simplified at pleasure.

The price has been fixed at 75 cents; in advance of publication we will accept orders at 40 cents, postpaid, if cash is sent with the order; if a charge is to be made on our books, postage is additional.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $1.75.

AN AMERICAN ORATORIO

"ISAIAH," BY WILLARD PATTON

This fine work by an American composer has been appearing more frequently in the programs of choral societies and music festivals, the number of performances in 1913 being nearly double that of previous years. During 1914 we look confidently to another increase in its use by societies.

Last Fall a performance was given at Racine, Wis., by the choir of the First Baptist Church, under the direction of Mrs. Jessie Waters Northrop, of the Chicago Musical College. Mrs. Northrop took the soprano parts in the oratorio. Her voice is rich and sympathetic in quality, and has been well schooled. In her concert work she shows fine interpretative powers.

WILLARD PATTON

A few words about Mr. Patton will be interesting to our readers. He was born at Milford, Me., May 26, 1853, his father being a good amateur musician. In his youth he studied in Boston and later in New York, his teacher in composition being Dudley Buck. But the greater part of his musical education has been gained through personal study and research.

In 1883 he removed to Minneapolis where he still lives, a leader in musical affairs in that city. The oratorio *Isaiah* was composed in 1896 and is published by the Oliver Ditson Company.

MARY DENNISON GAILEY

(See next column)

Among the young violinists who are winning the favor of the musical public we note an Ohio girl, Mary Dennison Gailey, who was born in Marion and studied in the New England Conservatory, later in Cincinnati with Tirindelli, and then in New York under Musin. Her latest tour consisted of return engagements in Southern states and extended to Cuba. Her tone is pure and full, and her general technic brilliant and masterful. In her repertoire she uses the following compositions published by the Oliver Ditson Company: *Deep River,* by Coleridge-Taylor, *Intermède Arabe,* by A. Walter Kramer, and *Through the Snow,* by Burleigh.

NINA PICINI

A coloratura singer who is sure to have a big success is Nina Picini, who returned to New York this season after concert work in Paris and London where her singing of Mulder's *Staccato* and Delibes' *Bell Song* from *Lakmé* created a real sensation.

In her work this season Miss Picini is using the following publications of Oliver Ditson Company: *I'm not as other lassies are,* by Hugo Wolf; *Love and life* and *Enchanted,* by Egon Pütz; *Blossom time* and *She is a winsome, wee thing,* by Mary Turner Salter; *Sweetheart's eyes,* Kronold; *The heart o' ye,* and *Such a li'l' fellow,* by Dichmont; *Off to the kingdom of dreams,* by Gilmour; *Hush of night hath fallen,* by Spence.

The Organist's Journal

The Largest, Best, Most Useful and Most Practical Organ Periodical

Each issue of The Organist's Journal contains sixteen large pages of Pipe Organ Music, selected from the latest compositions of the leading English, French, German, and American Organ Composers. There are also many transcriptions from the scores of the world's greatest masters.

The music is edited in the most careful manner, special attention being given to the phrasing, pedal, marking, registration, etc., etc.

It is printed from specially engraved plates in the finest style of engraver's art. The lithographing is exceedingly clear, and the paper of the best quality.

None of the pieces are too difficult for the amateur or the organ student, while the professional organist will find an abundance of choice material exactly suited to his requirements.

There are 196 of the largest size music pages in 12 issues, with an average of about 80 pieces. This music cannot be bought in sheet music form for a dozen times the cost of a year's subscription.

Subscription price $3.00 a year. Sample copy 25c.

The Organist's Journal $4.50 / The Musician—value } Both for one year $3.75 } Postage additional on Canadian and Foreign Subscriptions

NEW EASTER CANTATA FOR CHURCH USE

THE DAWN OF THE KINGDOM

By J. TRUMAN WOLCOTT **PRICE, 50 CENTS**

A new and attractive Easter Cantata especially suited for choir use in churches. The text is taken chiefly from the Scriptures and from well-known hymns. This cantata is not too lengthy to be used at any short church service. The solo work is chiefly for tenor and baritone, and the choruses, all for mixed voices, are all very effective, well within the range of the average choir.

In addition to these 1914 publications, we have a large and complete stock of Easter Music for the Choir and Sunday School — Solos, Duets, Quartets, Anthems, Carols, Services and Cantatas. Send for our complete catalogues and special Easter lists. All sent on Selection at our usual Liberal Discount.

CARL FISCHER COOPER SQ. NEW YORK

NEW CHOICE PIANO COLLECTIONS

CHILDREN'S COLLECTIONS

JOLLY TUNES FOR LITTLE PLAYERS

Nine little pieces for the piano of the easiest grades and provided with rhymes so that they can be both played and sung if desired.

It embodies such a variety of rhythms and keys, major and minor, and the rhymes which accompany each number are of such quaint and original character, that the "little player" cannot fail to be delighted. **PRICE 50 CENTS**

SPELLING NOTES FOR LITTLE FOLKS

A unique and delightful collection of twelve attractive melodies in the first grade, designed to facilitate the beginner's knowledge of the notes.

Each piece is provided with words to be sung or read, in which the principal word is formed of letters spelled with corresponding notes on the staff. **PRICE 50 CENTS**

TUNEFUL TALES FOR LITTLE MUSICIANS

This charming collection of fifteen pieces in the first grade has been formed with the idea of presenting, in the most attractive manner, the primary musical forms, and the easier keys — both sharps and flats.

Each piece has verses which may be sung by the player or another pupil, making them especially suitable for elementary or kindergarten work. **PRICE 50 CENTS**

MERRY MELODIES

A collection of original melodies with well-known words, so arranged that they may be sung or played separately or both together.

All are very easy, instructive and entertaining, presenting an exceptionally fine combination of clever words and bright tunes. **PRICE 50 CENTS**

FIRST AND SECOND GRADE COLLECTIONS

HOURS OF PLEASURE

Every piece in the volume has proved its worth for recreation purposes. Many of the selections are expressly adapted to the needs of small hands. Included in the contents are very easy arrangements of some old familiar songs and some of the pieces include words which may be sung if desired. **PRICE 50 CENTS**

RECREATION HOUR

The prevailing idea in this collection is the presenting of strong contrast in the character of the compositions.

Each composition has been selected with care. The small hands of the child receive due consideration in the technical simplicity of all the pieces chosen, while the fancy is pleasantly excited by the merry rhythms and pleasing melodies met on every page. **PRICE 50 CENTS**

LITTLE TRIPS TO TUNE LAND

In making this collection, especial care has been taken to keep the subject-matter well within the grasp of childish minds and hands. The majority of the pieces are two pages in length, and all are kept close to the requisite simplicity of primary music—yet the demands of a reasonable progression of difficulties have not been neglected. Indeed, a volume such as this affords to the young musician a fount of never-failing amusement, and one that in the formation of a correct musical taste is valuable. **PRICE 50 CENTS**

MUSICAL MESSAGES

The characteristic feature of this collection is the number of compositions, which, while keeping closely to the technical simplicity demanded by grade limitations, afford scope for the play of fancy and the development of expression generally thought incompatible with music of so simple a nature, so that all sides of the musical intelligence of the young musician may be equally developed. **PRICE 50 CENTS**

THIRD GRADE COLLECTIONS

MODERN FAVORITES

In collections of this kind the great effort is to bring together compositions that, while of a certain grade and standard, will present suitable contrasts; a contrast of mood and temperament as well as style. A large variety of compositions are here presented, and the list of composers embraces those most widely known both here and abroad. **PRICE 50 CENTS**

PIANO GEMS

A group of fifteen compositions of high standard and brilliancy, offering to the pianist a wealth of melodic beauty, from which may be gathered material that gives lasting pleasure. Here may be found "gems" from the best known and most popular writers for the piano in this grade, and the player who presents them in recital or concert is assured of success. **PRICE 50 CENTS**

FAVORITE FANCIES

Here are works to meet all moods, and the player may find the material for several "recitals" without repetition of the numbers on the program. The composers are all of high rank, and take position among the best of their class. Student and teacher will find here a rich store of works, furthering the development of sentiment and expression as well as the mastery of a refined and comprehensive technic. **PRICE 50 CENTS**

MODERN RECITAL PIECES

A strong array of high-grade solos of character and merit, from the pens of many well-known and popular composers. Every number is a GEM and the collection embraces all phases of musical composition, as the selection has been made with a view to presenting contrasts and providing something for all occasions. **PRICE 50 CENTS**

PIANO STUDIES

PUBLISHED BY

The Willis Music Company :: :: Cincinnati, Ohio

Material for the Study of Pianoforte Pedals

BY

ALBINO GORNO

PART I—First (loud) Pedal

The first nine exercises consist in connecting chords by means of the first pedal. The next four, in connecting tones of the melody by the first pedal.

Exercises 15 to 24 show effect of sustaining a note or chord with pedal, while the hand is removed to play accompanying chord.

Exercises 24 to 30 are exercises in **superlegato.**

Exercises 30 to 33—Pedal effects produced by hands.

Exercises 33 to 36—Pedal used to sustain acciaccaturas.

Exercises 37 to end—Left hand used in complement with first pedal.

Price, $1.50

PART II—First and Second (soft) Pedal

This second book treats of and explains how to vary tone-color by use of first or second pedals both used together, or how to obtain this variation by use of both pedals and sustaining notes or chords with the hands. For example, "The hand and pedal together can produce the greatest possible contrast in volume of tone.

"Legato impossible by fingers alone, therefore use the first pedal."

"Louder effect than fingers alone can produce."

"Notes of melody sustained by First Pedal, repeated softly in the accompaniment." "Effect to be imagined."

"Right hand alone, left hand alone—a study in contrast of tone coloring."

These and many other points are exemplified—giving a complete system of material for pedal study.

Price, $1.50

Material for the Study of Pianoforte Technic

BY

ALBINO GORNO

I. Exercises for the Wrist

A complete and exhaustive series, to be used in practising every possible use of the wrist—staccato, legato—in all positions and with all fingerings.

Price, $1.50

II. Minor Thirds. Chromatic Exercises

First with right hand alone, in various figures—then the left hand alone first ascending, then descending. Then in free variety, combining single chromatic figures with minor thirds in the other hand—furnishing a satisfying text-book for all the higher grades.

Price, $1.50

Exercises for the Fourth and Fifth Fingers

BY

ALBINO GORNO

As thorough a series of exercises as the Wrist exercises. Utilizing figures to place the hands in every possible position, and then developing exercises to gain strength and flexibility therefrom.

Price, $1.50

Pedal Study at the Piano

BY

EDOUARD MAYOR

The easiest method to teach the pupil to listen.

The simplest manner of presenting the beginning of the study of damper ("loud") pedal.

Melodic studies requiring the least possible technic and demanding most accurate use of the pedal.

Price, 50 cents

New Music Books of Quality for Music Lovers

A New Volume of THE MUSICIANS LIBRARY

Forty Songs by Adolf Jensen

Edited by W. F. APTHORP

For High and Low Voice

Bound in Paper, Cloth Back $1.50 postpaid
In Full Cloth, Gilt - - - - 2.50 postpaid

In this volume are gathered the finest of Jensen's songs, and they form a collection of rare excellence. Every teacher of singing who wishes to be ready with works of the classic song repertoire and every concert singer will find the Jensen songs an essential and most useful part of the song library.

SPECIAL OFFER:—This book, paper cover, with THE MUSICIAN one year, $2.25

"The Musicians Library might be called an aid to the survival of the fittest. The latest addition is a collection of forty of the one hundred and sixty or more songs of Adolf Jensen. Genuine melodies never become stale and in Jensen's songs there are many such melodies. It was his lusciousness which endeared his songs to the public. The sympathetic sketch of Jensen's pathetic life given by the editor will interest singers who use their brains as well as their vocal cords and will add zest to their interpretations."—Henry T. Finck, in *The Nation*.

Solos for Christian Science Services

Selected by HELEN A. HUNT

For High and Low Voice

Outlines of Music History

By CLARENCE G. HAMILTON, A. M.

Author of the two successful works, "Sound and Its Relation to Music" and "Piano Teaching: Its Principles and Problems"

Illustrated. Price, postpaid, $1.50

1. The text has been thoroughly scrutinized, obscurities cleared up, and new data added.
2. The last chapter, regarding modern music and musicians, has been revised and enlarged, to include recent musical developments.
3. Several new portraits have been added, of living musicians: Max Reger, Cyril Scott, Rachmaninoff.
4. Three maps, especially drawn for this edition, give prominence to the fields of activity of the great musicians, and are each prefaced by a list of the musicians whose birthplaces are recorded.
5. A list of musical illustrations covering the entire field of the text has been added. These illustrations are of moderate difficulty and are readily accessible. They are designed for use in the class room or for reference by private individuals.
6. A new index has been compiled, topical in character, so that references to a great variety of research subjects are fully given.

Thus, while retaining all the essential features and text of the former editions, a large amount of additional matter has been inserted. Most of this matter has been compiled as the result of suggestions by teachers who are employing the book for classroom work.

OLIVER DITSON COMPANY, Boston

Chas. H. Ditson & Co., New York

New Music Books of Quality for Music Lovers

Eight New Ditson Edition Numbers

The Ditson Edition is absolutely the best among the so-called cheap editions. Catalogue free on request.

PIANO

Exercises for the Development of the Higher Pianoforte Technic

By ISIDOR PHILIPP
Ditson Edition, No. 196
Price, 75 cents net

This system of the distinguished teacher at the Paris Conservatory has been the educational basis of many noted pianists, and consists of valuable original exercises which deal with the advanced technical problems that confront the modern teacher and pupil.

Thirty Exercises for the Development of the Hand and Finger Muscles, Op. 80

By FREDERICK A. WILLIAMS
Ditson Edition, No. 201
Price, 50 cents net

The thirty exercises contained in this work are intended to develop the muscles of the hand and fingers, in the shortest possible time. The exercises are so arranged, that if practised correctly, every muscle of the hand will be brought into action. Special work is given to the fourth and fifth fingers in order to equalize the muscular action of hand and fingers.

100 Exercises for the Weak Fingers

By ORVIL A. LINDQUIST
Ditson Edition, No. 195
Price, 50 cents net

Material of a very useful character such as every teacher needs in his work with pupils.

First Studies for Young Pianists

Twelve Progressive Studies, Op. 112
By L. STREABBOG
Edited by Karl Benker
Ditson Edition, No. 192
Price, 38 cents net

Useful for development of style and technic. Grade III.

VIOLIN

Twelve Short Poems, Op. 18

By CECIL BURLEIGH
Ditson Edition, No. 194
Price, 63 cents net

A set of fine pieces for the violin for the use of advanced pupils and in concerts. While they have exceptional value for teaching use in the matter of training for style and interpretation, they were composed primarily for purely musical ends, are poetic in conception and content, and thoroughly violinistic in form and expression.

Scale Studies for the Violin

By HENRY SCHRADIECK
Edited by Franz C. Bornschein
Ditson Edition, No. 172
Price, 38 cents net

These splendid studies need no word of commendation. They have a distinct educational value recognized by all teachers. Mr. Bornschein has not only edited these studies in a masterly manner, but has also extended them.

The Violin

By BERTHOLD TOURS
Revised and Enlarged by Franz C. Bornschein
Ditson Edition, No. 198
Price, 38 cents net

A splendid new edition of one of the most popular violin methods ever published. New engraved plates are used, and the editor has greatly amplified the old material making this the best and the handsomest edition in the market.

ORGAN

The Organ Students' Bach

Edited by JAMES H. ROGERS
Ditson Edition, No. 193
Price, 63 cents net

The purpose of the editor has been to make a selection from the organ works of J. S. Bach, of such pieces as will serve as an adequate introduction to the study of the greater works of the master.

Organ

Thirty Offertories for the Organ

Edited by JAMES H. ROGERS
Price, $2.00, postpaid

A new volume uniform with the popular *30 Preludes* and *30 Postludes*. The editor has drawn upon the best works by European composers, and has made a number of admirable transcriptions especially for this work. It is to be bound in cloth with gilt top, and is in every way a distinct addition to the organists' collection.

Thirty Organ Pieces for Use in Christian Science Churches

Edited by WALTER E. YOUNG
Price, $2.00, postpaid

This is the first collection of organ music published expressly to meet the needs of organists in Christian Science churches. The author, who is organist of the Mother Church in Boston, has a full knowledge of what is suitable. The book contains ten preludes, ten offertories, and ten postludes. It is bound in cloth, with gilt top.

For the Children

Sixty Musical Games and Recreations for Little Musicians

By LAURA ROUNTREE SMITH
Price, 75 cents, postpaid

Teachers of children are constantly on the lookout for material in the style of little musical games, plays, and entertainment specialties, with and without stage setting and costuming, to use in their recitals and concerts. The present work meets exactly the want specified above and gives a very great amount of material, varied in character, using quite young children as well as girls of fourteen to sixteen. It is in every way the best book of the kind in the market.

MESSRS. BOOSEY & CO.

announce with pleasure the recent issue of

a Second Volume of

ELIZABETHAN LOVE SONGS

(From the Lute Tablature)

Edited and arranged
with Pianoforte Accompaniments by

FREDERICK KEEL

The appreciation extended to Volume I gave Mr. Keel an incentive in rescuing from oblivion a further collection of these beautiful and comparatively unknown Songs of the Elizabethan period; and this second store of Traditional Art will undoubtedly fill a want with Music Lovers of today, especially as the present vogue of leading Recital Singers lies in this direction.

In transcribing from the Lute Tablature, the Compiler found the accompaniments as they stood to be unsuitable for the pianoforte. Writing for the modern instrument he, however, kept as closely as possible to the original characteristics, which, as he very truly says, constitute the charm of the Music of the Elizabethan age. **Published price of each Volume $1.00.**

THE "IRISH COUNTRY SONGS"

Edited, arranged and collected
by

HERBERT HUGHES

is another volume of Traditional Songs meeting with much favor among leading Singers. **Price $1.50.**

Boosey & Co. 9 East Seventeenth St., New York (and London)

SPRING RECITALS

Special Offer to Pianoforte Teachers

WE want you to become acquainted at once with some of our latest pianoforte compositions which will be found most effective for use in your Spring Pupils' Recitals. We make you the following

Op. 11
FOUR ROCKY MOUNTAIN SKETCHES
FOR VIOLIN AND PIANO

1. At Sunset - - .50
2. The Rapids - .75
3. Up the Cañon .50
4. The Avalanche .50

As in the case of his other compositions, these pieces are permeated with the spirit of the West, suggesting vast expanses, the majestic grandeur of the mountain landscape, and the mystery of solitude. *At Sunset* sounds a simple melody filled with a depth of poetic sentiment and creating an air of serene and tranquil calm. *The Rapids* is full of impetuosity, fulfilling the mood indicated by the title. It is strongly ind vidual in style. The opening bars lie in the low register of the piano suggesting the rumbling of the distant torrent; and the music increases in intensity to a climax in crashing octaves in both instruments. *Up the Cañon* reflects in musical language the spirit inspired by the grandeur of the scene; and the picture is painted with a rich palette of tonal coloring befitting the subject. In *The Avalanche* the composer has caught and vividly portrayed the sense of mass and awful majesty which the mind associates with a cataclysm of nature. From the beginning the music sweeps onward in broad chords which give place to figures indicative of unrest and turbulence. The composition begins in E major but ends in E minor, suggesting a final doom.

NEW VIOLIN MUSIC

GEORGE W. CHADWICK

"Easter Morn"
(Reverie)

Also Published for Violoncello and Piano
Suitable for Solo Performance or Class Use

FIRST STEPS IN VIOLIN PLAYING

By BENJAMIN CUTTER
Late Professor at the
New England Conservatory of Music

Part I, Part II; Price, 75 cents each

The work gives independent training to the bow-arm for rhythmical control, at first using the open strings for these exercises and later adding simple problems in fingering with separate sequence repetitions.

Both major and minor modes have been used from the beginning, thereby affording systematic ear training for the pupil and assisting him in reading notes with accidentals in the early stages.

Carefully selected lists of supplementary material have been added throughout.

MARK HAMBOURG AND THE PIANIST'S ART

By WILLIAM ARMSTRONG

A TALL, old-fashioned house, roomy as only an English one seems able nowadays to be, is the London home in which Mark Hambourg has now settled down. The first floor is mainly taken up by his study and the dining room above is a vast music room, overlooking Regent's Park with its sweep of green, thick sward, and giant trees under which a flock of sheep browse all day lazily. So absolute is the reign of peace, both inside and out, that one might fancy oneself in the depths of some country district.

Since the days of his beginnings the young pianist has, himself, changed little; there is the same frank, modest simplicity; the same virility and optimistic outlook on life and things; and, too, the same bubbling fervor and maintenance of originality in his ideals. The point in which he has gained notably is poise, the poise of the man, who, knowing his own power of command in art, concentrates it in that art's expression.

MARK HAMBOURG IN HIS LIBRARY

The fully developed instrumentalist stands in a class apart in the aspect of his musicianship. All that he has lived and learned forms part of it. Working hard of necessity to build up his technical equipment, he is forced to think deeply that he may fully gain his ends. Concentration makes his main dependence down to the smallest detail that he is called upon to master. Applied as well, and in natural consequence, to every detail of life, travel, associations, observation, reading, a vast store is laid up in memory to draw upon. Personally, I should say that the musician who has mastered thoroughly this trait of an absolute concentration, has supplied himself with the chief technical means of acquiring education. Every item about him contributes as a result to his upbuilding. As a result of thinking with all his might on one thing at a time that thing is indelibly impressed, and becomes part, great or small as the case may be, of his expression.

Endlessly to repeat or to regard unconsciously, automatically, the same thing over and again, with a mind wandering everywhere, is about the slowest known method of getting on in any career. No brain, however brilliant, can master two things at the same moment. We either think completely or we do not think successfully. To do the latter every atom of our being must be focused on a single point. It may prove fatiguing at first, but absolute concentration grows and strengthens as any other quality, and the one who has developed it will likely confess that a different process of study is far more wearying because of the excessive time increase demanded to make even a small showing.

So far as any musical interpretation, vocal or instrumental goes, its effect upon an audience is in exact proportion to the degree in which mind concentration of the executant is exercised. For that matter it plays a vast part even in the elusive trait of personal magnetism. It is surely beyond the power of any individual either to make or to hold an impression if his mind is not concentrated upon the person to whom he is speaking. Mme. Nordica, who, in common with other fully equipped Wagnerian singers, possesses mental concentration in high degree, in speaking to anyone, friend or stranger, conveys completely the impression that she feels the person addressed to be in that moment the sole person in the world. To Washington the same power was ascribed by his contemporaries.

To hear and see Mark Hambourg play a recital program one afternoon last June in London was to realize the value of concentration in its various phases. In repose his face, always interesting, is stern to the point of a forbidding heaviness. From the instant that he was well embarked in that day's performance all this changed. Not alone in his countenance, but in his whole figure there was expression of tense concentration, so complete that it apparently made itself felt even by the casual among his audience. It was the composition passing through his fingers in which he was living. From the light created within him by this absorbed mental attitude his face, glowing and radiant, became that of another being. Many persons were seated on the stage. To watch the effect upon them of his concentration was interesting. At times those nearest him half rose to their feet and bent forward toward pianist and piano, drawn by an answering absorption in their own mentality.

This concentrated power is part, — and how great a part!—of every successful artist. No matter how far we may be seated from the stage we feel it, for it dominates the very air of the concert room. Yet if we stopped to ask anyone of the great artists whether this concentration was the final outcome of a realization of complete command of their art, the answer would be that it was that art's very foundation, not its capstone, and that it had begun with the study of finger exercises. Poise is the last phase of it to materialize; for poise comes of a thorough knowledge of full command, combined with concentration supremely developed.

Just two days after that Queen's Hall concert last summer, seated beside Hambourg on a bench in Regent's Park, it was not to either poise or concentration that his conversation turned, chiefly, perhaps, because the qualities were so naturally a part of him that he would as readily have thought of speaking of his eyes. The first thing, though, was one particularly dear to him and that was independence of tradition in interpretation. His latest program had been made up entirely of Bach and Chopin, which practically bore out in a way his views on the subject

"What I feel in the matter may," he said, "be briefly summed up thus: Reproduce a thing so that it pulsates and is alive to you, and it will not fall short in its appeal. Bach, Handel, Debussy, Chopin express a living idea and not a mathematical problem. The piano is a dead instrument unless you put into it all the intensity of your feeling controlled by your brain, a self-restraint not of the deadly kind, but of feeling restrained.

"The outline of a composition you cannot change in its performance; that remains fixed, just as painters who reproduce a landscape must first outline or map it out before they proceed to imbue it with their individual sense of atmosphere and color. What one may change, just as the painter does, and in sincere accord with the way in which he sees things, are the effects in detail, in color, and in nuance.

"Aside from holding to the given outline which exists unchanged, there should be difference in performance in a smaller way, a change as one feels it in the moment, and which, perhaps, may never be twice alike. The mood of that moment has a vast deal to do with it, sad, gay, contemplative, rapturous, as the case may be. The essence of this mood even if not the pervading atmosphere of the composition itself, creeps in

just as surely as its interpreter is sincere. But, again, all one's moods must be tempered by the head and education.

"Tradition! What is tradition, the only right and reliable tradition? Good taste and keeping to the style. This does not mean sudden contrasts of *pianos* or *pianissimos* and *fortes,* or a treating of the pianoforte as an exploding machine any more than a painter may hope to succeed with a sense of outline, but none of symmetry or color. But composers in general do not write detail with a hard, fixed tradition for doing it, any more than master painters label their pictures with inscriptions, 'This is a tree,' or, 'This is a donkey.'

"On the other hand only solid schooling prepares one to express oneself freely and plastically. The sole true way is to follow an experienced head, one older than our own, in the beginning. Then the fatal question will not come up, and perhaps too late, 'Why was I not taught properly?' Leschetizky would say to me in my boyhood, 'Do as I do, then, when you go away from me, you will know how to do things for yourself. But not to be curbed in the beginning means disorder later.'

"Individuality cannot be drowned. But individuality will never properly and coherently express itself until it has experienced the value of correct guidance as to what taste and coherence really mean, and what they stand for in the interpretation of any and every good composer.

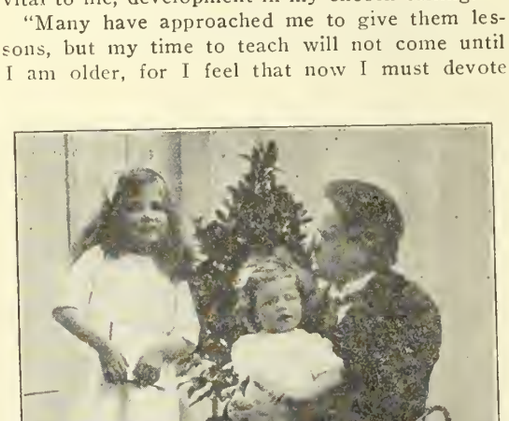
"In Bach we find everything in pianoforte technic. Study of all that he produced impresses one with the knowledge that music owes to him what religion does to its founder. He began the modern technic, for, as we recall, in the old days the little finger and thumb were not used. Bach wrote the *Forty-eight Preludes and Fugues* to prove the futility of antique technical ideas. He was the first to hold that all pianos should be tuned equally. That giant master should have lived three hundred years later. His is perfectly romantic music if one gets inside it. Take, for instance, his toccatas and fantaisies. What is more modern in instinct and emotional expression? Nothing, and nothing has since been said that Bach has not indicated.

"To play Bach, which every pianist most unquestionably should, means not to give him as a human machine, but with plasticity and vibrant life and expression. Bach, more than any other composer, develops the pianist, he is so polyphonic, so thought out. If anything is missing, the fault is glaringly apparent. You cannot, as in Liszt, put on the pedal to gloss over shortcomings. But for all his tremendous equilibrium, and virile sanity, there is in Bach that splendid vein of the romantic. In his interpretation the whole resource of the pianist's expression is called into play. To torture and compress him within narrow, measured, mechanical bounds. means distortion, pure and simple. Executant art, to be great, must give something lasting; neither is it conquerable, for there must be always something new. Only a lesser talent will hide itself behind a cut and dried formality which has been labeled 'tradition.'

"Absorbed in his playing in public, the pianist is spurred on by any appreciation and enthusiasm that may result. An audience, therefore, acts as a stimulant for which the corrective is practice at home. On coming home, if the artist does not play as well as in the concert room, there is only one remedy, to practise more. I do not say it is the law, but it is my own individual experience. To rely on emotional excitement aroused by appreciation, or, perhaps, enthusiasm in others is unsafe, and leads to inequality in performance on the part of those who trust to it in making their effects. It is all well enough to take from surrounding conditions all that they may give as aid to achievement. But the ardor of training and study must be so completely realized that the pianist will be at his best with no other than the incentive of his own inner resources.

"To give a fine interpretation requires an excellent education, and that means tireless, enthusiastic assiduity backed by solid foundation. Whistler expressed the meaning of it completely in his words that likely all know, spoken when a man reproached him for asking an immense price for a tiny picture: 'I do not charge you for the painting alone, but for the twenty years it required me to learn how to do it.' And as part of that upbuilding education of the pianist, how great a share the allied arts and literature play in it. To me the collecting of good pictures, the accumulation of good books, even the acquiring of rare glass and china to add to my surroundings in the artistic sense, all give incentive to thought to be turned into the one channel most vital to me, development in my chosen calling.

"Many have approached me to give them lessons, but my time to teach will not come until I am older, for I feel that now I must devote



MARK HAMBOURG AND HIS TWO DAUGHTERS

myself to the expression of my own art. Up to forty-five the pianist remains in full command of all his technical resource, after that he is not at his best. Still, what he then loses in the mechanical sense, he gains in another direction, for the mind grows and he is at his finest in interpretation."

Since his last appearances in America six years ago, and on his way to Australia, Mr. Hambourg has played throughout Europe, in Germany, Italy, France, Russia, Austria, and of course in England, the land of his adoption, giving an average of 180 public recitals and performances annually.

His home life is ideally happy. His wife, a daughter of Sir Kenneth Muir Mackenzie, Permanent Secretary to the Chancellor, and Warden of Winchester College, is highly cultured and with all the *savoir faire* that means so much to an artist in his helpmate. Mrs. Hambourg is, as well, thoroughly artistic, a quality she inherits from her grandfather, a great collector of pictures, and from her father, whose gallery contains some of the most notable paintings in England. The Hambourgs have two little daughters, Nadine and Sonia. They were opposite us that day in Regent's Park, under a tree with their nurses. After our talk we joined them.

"Father," said Sonia, "when are you going to buy me some more toys?"

"And only this morning I bought her five shillings' worth. She wouldn't let me off until I did," he said comically to me. Then, turning to her, he answered quite cheerfully, "Very soon." Her sigh of satisfaction showed how she trusted him.

The scene meant much to me, though the key to it all was his fatherly tenderness, for I had known him since the time, not so very long ago, when he was a slim boy, making his first excursion into the big world of art. The home life at Professor Hambourg's was of an almost patriarchal charm, and to those formative influences Mark Hambourg owes so much both in his career and in his daily life. Today finds him with his own home sustaining the same family devotion that surrounded him in his earlier years. It is one thing for a boy to appreciate home and parental love before he has children of his own; afterward it becomes another. Then, in what *is* he realizes first fully what *was*.

And I fell to wondering whether it would not be safer to add yet another factor to concentration and art command as forming Mark Hambourg's growth in poise—the knowledge of others dependent upon him for happiness and protection, the full development of man's best by a man's best responsibilities.

BRAHMS' CIGARETTES

An amusing incident is related in which Brahms and Erich Wolf, a promising young composer, who died about a year ago, are the figures.

When young Wolf had finished his course of study at the Vienna Conservatory he became filled with the idea that he ought to be presented to Brahms. This was not a very difficult matter, for one of his teachers at the Conservatory agreed to send to the master one of Wolf's compositions, which Brahms examined and then reported that he would see the young man. Needless to say that Wolf availed himself of the permission.

When he presented himself at Brahms' house, he was shown directly into the music room where the composer was seated The latter received the young man very cordially and, after a short conversation, asked him to play the piece he had submitted for examination. The composition had a certain technical value and was played fairly well. Brahms expressed himself as pleased and showed less reserve in his commendation than was his custom.

Before dismissing his visitor Brahms offered him a gold tipped Egyptian cigarette, saying, "Smoke this; it is something extra fine."

The young musician accepted it thanking the master very warmly, and put it in his pocket.

"No, no!" said Brahms; "smoke it now," himself lighting one and offering a match to his visitor.

"Permit me to keep it," said the latter; "it is not every day that one receives a cigarette from Johannes Brahms."

Reaching out his hand and at the same time offering another case the composer said, "In that case take a cigarette from this pack of common make; for your purpose it is quite good enough."

———*———

Of all the arts music is the most rational; it fact, its mathematical theory has been devised and its place assigned among the physical sciences; a concourse of sweet sounds may be reduced to a formula and the human voice itself exhibited as a Mechanism. . . . Music can be neither true no false; it can be neither good nor bad; it falls only under the second of the ancient categories of th good, the beautiful, and the true. It may be grav or gay, it may be inspiring or depressing, it ma be saddening or cheering, better or worse i quality, inferior or superior in grade; but ther can be no evil in music to him who no evil think

—Edgar Adell Lovell.

EMIL LIEBLING

The cause of music and education in music in the United States suffered a severe loss in the death of Emil Liebling, of Chicago, on Jan. 21. His activity was varied, embracing work as pianist, teacher, composer, lecturer and writer, and in all these fields he was uniformly successful and in great demand.

The Editor of The Musician in his present connection and previously with another musical magazine always found Mr. Liebling a willing adviser in educational matters, and one whose opinion was practical and safe.

In his writing for the musical press he was distinguished by wide knowledge of the art, clearness in expressing his thought, and a warm sympathy for genuine efforts to advance. *Per contra* he never hesitated to express himself in the strongest terms against pretence, charlatanism, and reputations built upon flamboyant press material.

The present writer recalls with much interest a dinner in Chicago at which Mr. Liebling was one of the speakers. It is pleasant to record for the honor of the craft that he ranked, in that evening's addresses, on an equality with men celebrated in the political forum. His address was marked by keen insight, a close observation of men and things, and a lively, incisive humor not unmixed with satire, that won the gathering.

Mr. Liebling was born in Pless, Germany, April 12, 1851, the son of parents of musical inclinations. His aptitude for a musical career was displayed at an early age, but he did not undertake the work until after he had finished a thorough course of study under Ehrlich, Kullak and Liszt in piano work, and Dorn for composition.

We have reason to be glad that as a young man just through his studies, Mr. Liebling decided to make his career in another country than his native land. He was just past his twenty-first year, in 1872, when he located in Chicago, which became his permanent home.

Here he soon took a place as one of the leaders in musical matters, and the years that passed strengthened his position in the community. As a pianist he did splendid service, giving lecture recitals in all parts of the Middle West and farther West, as well. From this same territory he drew a splendid clientele of pupils. His summer classes for teachers were always well filled.

As a composer of drawing room music Mr. Liebling won considerable distinction, and it is fair to assume that had he been able to devote more time to creative work he would have given us most excellent works. But like the majority of American musicians who have natural gift and thorough training in composition he had to devote most of his time to teaching and playing.

Mr. Liebling's personal work has closed, but his influence remains with us for good. Upon his pupils devolves the duty of carrying out the principles which he taught and the ideals which he cherished.

———*———

[The following was written by Mr. Walter Spry in response to the invitation of the Editor of The Musician.]

EMIL LIEBLING

AN APPRECIATION

BY WALTER SPRY

One day last November I called on Emil Liebling to pay my respects after not having seen him since the opening of the season. I was much shocked to note the great change in his appearance. So his death late in January was not a surprise to many of us in Chicago.

Mr. Liebling came to this city in 1872 and at once took a leading position as piano teacher, which he held to the end. He was well equipped as a pianist and educator, and had many excellent students as his pupils. He was very successful in his manner of helping all grades of musical talents, for, being a broad-minded man, he felt the needs of the American student and was able and willing to suppy his wants.

He was catholic in his tastes, knowing all the great masters from Bach to Liszt. He was a keen critic and observer of character, and a wit of no mean order. He held MacDowell in high esteem as a writer of smaller pieces; of Mrs. Beach he spoke very recently, when I played for him her *Variations,* Op. 60. He was not, however, in sympathy with the works of the modern French school.

Mr. Liebling was more than a pioneer musician, for he was always able to hold his own with the younger musicians of eminence who spring up from time to time in a large musical center.

Many lessons may be learned from such a career as Emil Liebling's. He was extremely self-sacrificing, working both summer and winter that he might help others. This, however, proved unwise, for it undoubtedly hastened his death. Nevertheless his life was complete from many standpoints, his influence on his pupils was good, and his friends were most loyal to him. He will be remembered as one of the most elegant of salon players, and one of the greatest musical educators this country has ever adopted.

———*———

COMPOSING AT THE PIANO

The use of the pianoforte in connection with composition, says the London *Times,* is really twofold. It can either suggest ideas itself or it can test ideas conceived by the composer away from the instrument. In the first case the extemporizer is at the mercy of the muscles of his arms, and an idea which has arrived at expression may not really be an idea at all but only the result of certain muscular contractions and expansions, having no more connection with music than the chance groupings of the pieces in a kaleidoscope have with the color-sense of the person who shakes it. Or, if the resulting music is the outcome of a genuine act of thought, it is necessarily altered and deformed by such accidents as the disposition of the keys of the pianoforte or other mechanical consideration; considerably more so than if the composer had struggled with it in silence until he was at last able to set it down direct upon paper in some form or other.

It could be replied to this that, if he had not the pianoforte to help him out, the composer might never succeed in putting his ideas upon paper at all. Actual contact with the keys often sets free ideas which would otherwise never have come to light. This, however, is merely a question of intellectual stamina; hearing music in one's head is a faculty that, like every other, increases with practice and becomes impaired with disuse; and to shirk the difficulty by letting it come solely through the fingers, instead of direct from the brain, is one of the surest means of drying up the fount of originality. Again, it may be urged that an extemporization—which is, so to speak, a translation into physical terms of a mental process—has often a warmth and spontaneity that are not to be found in the more studied products of the unaided brain. But the danger is that a composer who depends solely upon his pianoforte is led by degrees to mistake the sham for the genuine, and to accept ideas hurriedly and carelessly from his fingers, believing them to be the creations of his brain, whereas they are really nothing of the sort, but probably merely the outcome of mechanical movements of his muscles, or, worse still, tags from other composers reproduced automatically.

It is of the greatest importance nowadays that composers should be on their guard against any form of mental laziness. At the present moment we are at a crisis. Harmony is in the ascendant, counterpoint declining; in other words, an accessory is being glorified while the essence of music is being neglected. Harmony, after all, is merely an accident resulting from counterpoint; that it should take precedence of it is an inversion of the natural order of things. The cause of it all is the cult of the pianoforte, and particularly the cult of the sustaining pedal; this in particular saps the very life of counterpoint by turning passages of sirgle notes into chords and suggesting harmony where none is intended.

Since harmonic music is so much better suited than contrapuntal to the peculiar genius of the pianoforte, and in addition is so much easier to play, the latter has naturally retired into the background. The strain exerted by counterpoint on the brain is infinitely greater than that exerted by harmony. Recital players know that a Bach fugue is far more troublesome to get by heart than a piece of the same length by Debussy. If a composer who is accustomed to write at the pianoforte embarks upon a three-part contrapuntal improvisation, he will not be able to keep the strain up for more than two or three bars, and will soon be reduced to filling up the bare places of harmony. If he perseveres and transfers it to paper, he will find that, while the harmonies are probably complete and satisfying, the counterpoint is mostly sham; and in the process of polishing up the last remnants of the latter will vanish. If they were to be worked at and improved, the harmonies would almost certainly have to be simplified; and that the inexorable pianoforte will not allow.

Harmonies once associated in the mind with a melody have an odd way of sticking and refusing to be dislodged. In some ultra-modern settings of old English songs by one of the most impatient of the young British composers the simple harmonies of the original melodies ring persistently in the listener's ears, and fairly rout the more elaborate versions. Indeed, it must have cost the composer himself a severe effort of will to perpetuate them. The accompaniments of the tunes thus "dished up" also illustrate by their extreme chromaticism a mannerism, not confined to one composer, for which the pianoforte is directly responsible. The *glissando,* or rather the old organist's trick of sliding the fingers about by semitones, has produced in some quarters a particularly slimy kind of chromatic writing, based apparently not so much upon any logical sense of tonality as on an insatiable appetite for smeared and luscious sounds. The more chromatic the harmony becomes the more fugitive is its effect; and the more complicated the chords are elaborated the less can they be differentiated one from another. The same thing is true of the orchestra; the common chord of C major can be orchestrated in a hundred ways, each of them different from all the rest, but it does not matter much how Scriabine's chord of the thirteenth is scored; in however many ways it is done they will all sound more or less alike.

It is well to acknowledge frankly that we are rapidly approaching an *impasse.* We are not producing music, but instrumental music and chiefly pianoforte music. Our orchestras increase daily in size and complexity, and every fresh thing they play sounds more like the last. There is one way out of it; and that is for the young generation of composers to shut their pianos for a while, and to write once more for the voices that they have so long neglected; and to base their art upon Bach, Handel, and Purcell instead of Chopin, Liszt, and Debussy.

COMPETITION AMONG MUSIC TEACHERS

BY THALEON BLAKE

Sooner or later the ranks of every vocation are confronted with the effects of competition. Physicians, barristers, and now musicians are experiencing the crowding that results in unrelenting rivalry. How will professional teachers solve this serious problem? A wrong solution may lower teachers' ideals by its attempts to foster monopoly by coercive methods. I propose to suggest that a compromise with monopoly—or "teachers' business agreements"—is fraught with this evil: that when teachers organize to control or regulate competition they introduce one weapon of trade-unionism that is incompatible with a teacher's high calling.

INDIVIDUALISM AND SOCIALISM

Two diverse doctrines are contending for supremacy in men's thoughts—individualism and socialism. Individualism, carried to its logical end, is intended to leave absolute freedom to men in choice of actions within the bounds of conscience prescribed by social custom; philosophic socialism, likewise carried to its full development, is intended to limit the range of men's actions, giving to organized society the prerogative to dictate and to prescribe actions. The two schools of philosophy are antagonistic. They define liberty by antithesis. Under the individualistic regime, competition flourishes, and monopoly by certain members of society is obnoxious; under socialism, competition among members of society is largely superseded by government monopoly.

It is self-evident that the business side of teaching is bound to be influenced by these doctrines. Competition, the soul of individualism, awards the prizes to the teachers best fitted by training, culture, talent, and willingness to succeed. The less successful feel the impulse to organize; trade-unionism, as a means to escape from the strains of competition, is knocking at the studios of many musicians, and asking admission. Will any musicians harken?

TWO QUESTIONS

To answer this question, let us ask and answer two others. First, what is the effect of competition on artists? Second, will artists remain individualists, or take kindly to communism among themselves as a class against the general public for self-preservation? The latter question may be quickly disposed of by defining artistic qualifications. Here psychology may assist, for artists are presupposed to have either genius or talent. If artists have genius they are individualistic to a degree alike incomprehensible and inimitable to men of mere talent. They cannot be controlled by agreements of self-interest designed to protect the weaker, the less talented, the lazier, the unthrifty in the same profession. It would be absurd to expect geniuses to lose their priceless individuality, restrict their personality by trade agreements. They are philosophic anarchists, laws unto themselves no matter what for the nonce, they may choose to call themselves. They are artistic aristocrats, which, in two words, disposes of them as trade-unionists. Not only will they remain individualists, but they are above competition, and should not harken even if they were affected by it.

Men of talent are different; trade agreements can appeal to them, for, since they cannot hope to be so largely creative, they give more thought to the commercial aspects of their art. They are better teachers as a rule, because they have more patience with pupils' shortcomings. They are frequently the founders of schools and colleges, and, in consequence, have an eye to money making as well as music teaching. The bulk of musicians are but talented; genius is too rare; and upon talented men falls the burden of musical interpretation and scholastic work, and the public's advance in learning to comprehend music which plays so large a part in making a community musical.

Even men of talent, however, having artistic temperaments, being high-strung, nervous, and restless, and what is more weighty, having, by the nature of their calling, superior ideals and wider mental views than men in less studious vocations, will never generally be obedient to agreements in restraint of competition. It is scarcely conceivable that teachers will condescend to work under such imperious rules of conduct as do the organized band and orchestra performers. But if competition among teachers is ever to be regulated by organizations not very dissimilar to trade unions, it will be regulated by men of talent for the gain of men of talent.

THE EFFECTS OF COMPETITION

Now, as to the effects of competition, which are exceedingly complex and diverse. The causes of failure among private music teachers are also the causes of failure among men in all other callings. Competition strikes the hardest blows at the incompetents. Incompetency may be from inherent causes, such as lack of talent, of energy, of sociability; or from extraneous causes, such as want of training, of thrift, of good habits. These compose the unfortunates almost outside the pale of help.

But competition often strikes many others besides incompetents. Thousands of teachers in small cities, towns, villages, and rural districts have to contend with conditions quite unknown to metropolitan teachers. The price of lessons is too low in small towns, and cutting of these low prices, instead of being branded as unprofessional, is often thought to imply business acumen. Competition, where pupils are limited and prices paid for lessons are already too low, becomes more than a vague theory to struggling teachers when the field is suddenly invaded by strangers for a brief campaign or two, who, after a blatant announcement, or a sensational concert, begin to sell lessons by job-lot, bargain-counter methods. Such proceedings are far too common, and when the nomadic teachers decamp, and leave the pupils to drift back to their old teachers, it requires much time to repair the demoralization.

The effect of competition in cities is no less keen but obviously different. If one teacher cannot succeed in acquiring a fashionable clientèle, he may succeed with a class as substantial but less pretentious. The chief advantage of teaching in a large city lies in the opportunity to teach specialties. Tuition may be limited to what the instructor can best do, not only between the chief divisions, vocal and instrumental, but in the several departments of each. Competition among well-trained city teachers, while no whit less strenuous, is necessarily less fatal, inasmuch as this choice of specialties is unknown to teachers in limited centers of population.

The assumption that it is less fatal in large cities may be open to dispute by teachers residing in small cities. It may be pointed out in defense of this opinion that a field that will support ten teachers cannot well support fifteen, because so small a choice of employment in the range of musical activity is given; whereas a field that will support one hundred teachers, will not cause starvation, or driving of musicians out of musical activities, if suddenly asked to support one hundred and fifty teachers. Among a hundred and fifty, many will be unmarried women whose ranks will be constantly diminished by marriage, to say nothing of the contingent occupations allied with the musical trades to which the least successful may as a last resort turn. There is no last resort in small places. Cities enabling several thousand music teachers to find pupils of some sort, offer still greater choices of collateral employments in music trades.

TRADE UNIONISM

Finally, will teachers harken to trade-unionism? It does not appear plausible that they will. They do organize, and they should organize into city and state societies for support and assistance; but that these societies will ever attempt more than to hold the tacit consent of their members to respect the rights of each other as gentlemen and ladies should is unbelievable. Surely no teachers of merit could subscribe to trade agreements by which they are bereft of liberty of action the result of which would be to reduce the teaching profession to an ordinary business calling, working harm for teachers exactly as trade-unionism does for mechanics; viz, curtailing the extreme efficiency of the better workmen nearer to the inefficiency of the poorer workmen.

The honest victim of competition may well ask, now, "What may be done in my case?" Well, a compromise with certain phases of competition may be honorably made. Wholesome agreements covering length of lessons, prices to be charged for lessons under certain liberal limitations providing for charity, and allowing reductions for poor pupils of talent, payment to be exacted for lessons missed except during illness, and unavoidable absence, are not illegitimate subjects to which honorable teachers may subscribe. Yet here arises a difficulty: the well-known teacher has the right to sell his reputation; he can charge what he can get; no agreement will ever amicably cover this.

Yet, while it is unthinkable that teachers will ever concur in that illogical example of trade-unionism such as now obtains among musicians connected with theatres, it is losing a valuable asset to themselves if they refrain from organization. Music teachers' city organizations should compromise between the doctrines, basing their compromise on the sentiment of justice. Much has been written about the duties between teacher and pupil; it is time something be said of the duties of teacher to teacher. Teachers' organizations may never go as far as to pay pensions to disabled members; but they ought to begin at once to encourage young teachers with something more concrete than advice.

WHAT ORGANIZATIONS CAN DO

When a vocation becomes fraternal, it becomes human. Let me hurriedly suggest a little assistance to each other they could do under organizations. Create lending libraries of volumes of classical music and criticism, and of standard works of charm and usefulness often beyond the purse, if not the ambition, of many poorly-paid teachers; provide means either for lectures or to disseminate announcements of worthy lectures as given by philanthropic societies now becoming factors in many cities for social uplift; compile a registry of reputable teachers without favor; and, lastly, promote fraternal feelings among themselves. Did *you* ever hear of an ill teacher? Did *you* ever call? Did your organization ever send flowers, dispatch message, give heartfelt condolence?

My final thought is, that teachers should be licensed to teach by city or state, the requirements being character as well as knowledge. That is too Utopian now; it is a germ that may grow into fruition under the increasing stresses of competition; until then, the possibilities of fraternal organization remains the sole solace.

———*———

WHAT HE ADMIRED

He—I think you handle the mandolin, Miss Lillian, better than any other girl I ever saw.

She—Why you never heard me try to play, Mr. Wixley.

"No, that's why I admire the way you handle it."—Horace Zimmerman.

THE MUSICAL INDEPENDENCE OF THE UNITED STATES

It is a matter of ordinary comment that the United States has made great progress in music, particularly in certain lines. The daily press of all of our large cities is accustomed to tell its readers that we have, in our country, opera equal to the best that Europe enjoys. Certainly all the great artists come to play and sing for us, and we are justified in our statements that the American music lover may hear the best that the world has to offer in music and in its presentation to the public.

Our orchestras are rapidly improving in their work and it is generally understood that several American orchestras now stand in the same class as the best in Europe. So much for opera and orchestras.

But these two items represent but a portion of our musical work. We have in these United States an army of well-equipped music teachers and a much larger body of students of music, whose interests are American, whose training and sympathies are American. For many years the work of these teachers was based wholly upon European ideals. The great majority of American teachers were accustomed to go to Europe to study at some conservatory or in the studio of some famous teacher; they told their pupils about conditions of study in Europe and in many ways encouraged the opinion that a year or two in Europe is absolutely necessary to a complete musical education.

And the pupils were quite ready to follow the tacit encouragement of teachers and the public who vigorously applauded the foreign-born and foreign-trained artists. As a result, every year a great number of young men and young women went to Europe seeking entrance into the class rooms of conservatories and the studios of private teachers in France, Germany, Belgium, Austria, and Italy, hoping there to work out their musical salvation and win the knowledge and skill that should lead them to success.

But in the course of years a reaction set in. Men and women, artists and teachers, who had profited by their European experiences, who knew the dangers for the unwary, who had witnessed the poor results from mediocre teaching, who recognized the drawbacks resulting from unfamiliarity with a new language and new social customs, began to tell their pupils and friends that there was much of unwholesome, false glamor about music study in Europe and the advantages expected to result therefrom.

The movement gained force and, today, has the practically unanimous support of the leading American teachers, artists, and the press. Lately Mr. John C. Freund, of New York, editor of *Musical America*, has entered the lists and has stoutly championed the cause of American music and American teaching, giving the movement the support of a vigorous pen, a wide knowledge of music and musical conditions, and a fearless statement of facts that have come under his own observation as well as that of prominent American musicians. At a meeting of the Fraternal Association of Musicians of New York City, held at the Musicians' Club, Feb. 3, Mr. Freund delivered an address having for its theme "The Musical Independence of the United States," which was heard with close attention by a large audience, among whom were Walter Damrosch, Victor Herbert, Oscar Saenger, Alexander Lambert, Tali-Esen Morgan, Dr. Frank Miller, and others.

Mr. Freund's address recounted various steps in the propaganda for keeping our pupils at home and indicated obstacles that had been thrown in its way. Lack of space prevents a reprint of the address, but we quote the following which is somewhat in the nature of a prophecy.

"Our girls and boys will stay at home for their musical education, except those who desire by travel to broaden their intelligence and increase their store of knowledge.

"By that time we shall have put heart into our schools and teachers, heart into our musicians, heart into our singers. There will be librettists of distinction and composers who will write American operas worthy of the librettos. There will be symphonic orchestras and great choral bodies established all over the country. . . .

"We shall spend our money on the competent schools and conservatories and the splendid teachers we have here, instead of sending our boys and girls to the teachers, conservatories and schools of Europe, some of which are unquestionably of the first rank, but the majority of which are not up to our own standard.

"The attitude of the press to everything concerned with music will be changed. It will have come within the circle of that human interest which,

JOHN C. FREUND

today, characterizes the mass of matter which fills the columns of our daily and weekly papers.

"The interest in music itself will have been increased. . . . There will be more people to buy pianos and other instruments, teachers will find a larger number of students willing to study, and their wage will be larger.

"I stand for the American composer, musician, singer, music teacher, player, critic. I believe them to be not only equal to the best, but to be 'the best'!

"I stand opposed to the ridiculous prejudice against everything American in music simply because it's American!

"I stand opposed to the equally ridiculous prejudice in favor of everything foreign simply because it's foreign!

"I declare 'The Musical Independence of the United States'!"

———*———

PRESUMPTIVE EVIDENCE

Grimsby—So you are going to make a pianist of your son? Has he an ear for music?

Flimsby—I don't know anything about his ear, but see what a head of hair he's got.—Horace Zimmerman.

THE BROKEN WALTZ

BY LEONORA SILL ASHTON

The little girl about whom this story is written had met with a serious accident. Something of which she was very fond was broken. This was not a doll that had lost its head; or a toy wagon that had lost a wheel; or a hobby horse that had lost a leg. Probably all these things had happened to her in her play room, but just now it was something quite different.

A little waltz, which she loved to play on her piano, was all broken to pieces. You will ask how this could be.

Well, just as she had been careless with her toys, so she had been careless with this little waltz; and now you would hardly have known it for a waltz at all, when she tried to play it.

First: The pretty melody was half gone, because her fingers had forgotten just where to go; and her eyes had forgotten just what keys on the piano the printed page told you to strike.

Second: The beautiful, firm bass, which made the waltz what it was, was so unsteady and uneven that no one could have danced to it, no matter how hard they had tried.

The whole thing was as badly shattered as a china doll would be if you dropped it on a hard pavement. And all because Mary had been neglectful of it and had not cared for it as she should.

But you have heard of dolls' hospitals and places where toys can be mended; and, do you know, that after vacation, when all this trouble came, a doctor for broken pieces appeared, and—no he did not mend it for Mary—he told Mary how to mend it herself. And this is the way the doctor went to work:

He had Mary take the sheet of music away from the piano, and read every note of the melody by name. Then he had her find these same notes for the right hand on the piano; and also had her play the *whole melody, very slowly, fourteen times.* Then he did the same thing with the bass.

Mary read each note and chord, first; and then found them on the piano; after which she played the bass of each measure, *seven* times; then the whole bass, *seven* times. When this had all been done, Mary's mother, who was listening, began to recognize the little waltz once more.

Mary was getting tired now, but this doctor, who was of course her new teacher, told her to do just a few more things that he wished, and she would have her waltz back again, better than new.

It was only two pages long, and he had her play those two pages, both hands together, *very slowly, seven times.*

Then he called her mother into the room, and asked Mary to play it for her in the proper time; and lo, it was perfectly whole and fresh, not a flaw in it.

"Now you will know how to mend pieces another time yourself," said he.

Have any of you any broken pieces? If so, sit down to the piano, and see if you cannot mend them, after this fashion.

———*———

No performer ever gives a great interpretation to any but his own conceptions. It matters not where the conceptions come from. He may originate them or he may absorb them from the printed copies of another's dreams, but he must own them before he can issue them with authority. As the true actor feels for the time that he is Hamlet or Lear or some other character, so the musician must become so saturated with the notes he would interpret and the feelings from which they spring that he will give them forth as self-recollection.—*Henry Hanchett.*

RAOUL PUGNO

BY ARTHUR DE GUICHARD

A GREAT pianist and an eminent composer has passed away in the person of Stephané Raoul Pugno, more generally and affectionately known as Raoul Pugno. Like some valiant soldier in the cause of civilization's progress he may be said to have died in the heat of battle, "with his boots on."—that happy death which is the desire of every zealous, energetic, single-minded worker.

Only a few days after the sad news had been flashed to this country, the present writer received a friendly letter from Pugno, who was then in Switzerland, in which he promised to communicate an article from his pen to the readers of THE MUSICIAN, upon his return from his Russian concert tour. Without warning Death came and removed Raoul Pugno in the plenitude of his power; one of the leading pianists of the day, without peer as an interpreter of Mozart and Chopin, and a man whose mind and heart, counsel and sympathy, were always open to help every deserving traveler on the rugged road to Parnassus. Among all his brother artists and musicians, still with us, there is no more complete musician and no more lovable man and comrade than was Raoul Pugno.

The current issue of *Le Monde Musical* (Paris) contains the following eloquent article, from the pen of its Director and Editor, Mr. A. Mangeot:

"Death does not choose those whom he smites!

"In the midst of his glory and the full vigor of his talent, the great pianist, Raoul Pugno, was suddenly stricken down, at Moscow, on January the second last.

"He had left Paris on the fifteenth of December, after his impressive séances of sonatas, with Eugène Ysaye and his fine revelation of Schumann's *Allegro* at the Lamoureux Concert. He left us to fill a few engagements in Switzerland, after which a slight touch of bronchitis caused him to make a stay of forty-eight hours in Berlin (en route for Russia). The doctors, whom he consulted, advised him to go on to Moscow, where he was to give two concerts. At one of these he was to play Mlle. Nadia Boulanger's *Fantaisie* for piano and orchestra, under the composer's direction.

"On the day that the first concert was to take place a small clot of blood formed in the leg and forced him to keep to his room. Energetic treatment put him on his feet again and Mlle. Boulanger had telegraphed to her family the most reassuring news, when he was suddenly seized with violent pains in the heart, on the second of January, at seven in the evening; at eleven * he was dead.

"So it may be said of Pugno, that he died like a hero, on the field of battle. Up to the very last day he had kept all his enthusiasm, all his ardor for the art that he loved extremely, all his moral youth and the serenity of his fine intellect.

"There were three very distinct individualities in Pugno:

"First, the composer: As early as 1879 he had made his début at a Pasdeloup concert with an oratorio. *The Resurrection of Lazarus,* which was very well received. This work, which was of a religious nature, noble in style, obtained for him some offers of librettos for operettas. But he had to live, so Pugno allowed himself to be tempted, and between 1881 and 1897 he supplied the Bouffes, the Eden Theatre, the Renaissance, the Casino de Paris and even the Ambigu (!) with a dozen scores. But the artist did not allow his lyre to be dragged in the gutter so, after turning out in good style a few gay choruses and joyous ritornelles, he again took his seat on the organ stool of Saint-Eugène, where he created an atmosphere of artistic serenity.

"A few failures, some theatre mortifications (fortunate mortifications!) caused him to remember that, in 1866, he had been one of the brilliant prize winners in the class of Georges Mathias. He underwent a period of severe training and, on the 24th of December, 1893, at the Conservatory, under the direction of Taffanel, he met with such success in Grieg's concerto that his career as a pianist was assured. Financial success was much longer in coming, and the master one day told us that he played at the Colonne Concerts seventeen times 'free gratis, and for nothing!' The eighteenth time, however, he succeeded in having a share of the receipts, which were so good that his fee amounted to almost four hundred dollars.

"Pugno was never what is termed a 'virtuoso' of the keyboard. Playing 'by heart' was repellent to him and he was frozen with fright when he appeared as a soloist at his Pleyel grand. But in the midst of the orchestra and in chamber music he became an incomparable interpreter of

STEPHANÉ RAOUL PUGNO

the thoughts of the masters. Then he no longer played the piano, *he made music,* and when that music was the sonata, the quintet or the *Symphonic Variations* by Franck, concertos by Mozart, Beethoven and Saint-Saëns, he was sublime.

"His seventeen years' artistic association with Ysaye is well known, as well as what these two masters of the sonata form achieved together. The souls of the two great artists beat in unison in the contemplative intimacy of Pleyel Hall—that same hall which Chopin and so many illustrious artists had peopled with marvelous visions.

"Another aspect of Pugno was that of the teacher. He was nominated to succeed Duprato, in 1892, at the Conservatory, as professor of harmony and, in 1896, he succeeded Fissot as teacher of piano. His long journeys forced him to resign in 1901. It is sufficient to recall the names of the principal pupils, whom he formed during that short period, to show the fruitfulness of his teaching. They were: Mlles. Rigalt, Clémence Fuleran (who disappeared too soon), Rennesson, Boucherit, Marguerite Debrie, Celiny Richez, Amélie Cock, Blancard, Schnitzer, etc. Who was there who did not nourish the secret hope that the master would soon give up his long absences, in order to remain longer in Paris and take up his classes again at the Conservatory!

"Other great events were being prepared for him in Paris. The Opéra Comique had placed on its program for the ensuing season d'Annunzio's *Ville Morte,* for which he had written the music in collaboration with Mlle. Nadia Boulanger;† the composition is entirely finished and engraved and the work of composing it had been a source of deep joy for him; it will be his musical testament, his artistic *credo.*"

But in order to know how generous and good a man and how responsive and affectionate an artist was Raoul Pugno, it was necessary to share his intimacy. His worship must be known for the companion of his whole life, for their daughter, for his friends—and for Nature. How often have we felt the Virgilian charm of his estate at Gargenville, and to make some of those feel it who did not know it, let us read these few lines (in the *Monde Musical* for Oct. 15th, 1902), due to one of the purest affections with which he surrounded his life:

"No noise of the common crowd, but the calm of the fields, in that humble and sweet solitude. It is there that he shelters his life and his peaceful hours when, weary from victories won, he regains in the Springtime that *Ile de France* which was his cradle and to which he remained faithful.

"A child of the Latin Quarter, he had, at an early age that simple tenderness for broad horizons and the silent earth that the frequenter of the boulevards hides in a corner of his heart for the freshness of the suburbs. As his artistic development advanced, he crossed the first green boundary, where the Parisian usually stops, and continued to Parc-Saint-Maur, then to Vaux, and finally to Mantes where his fancy held him.

"Nature is there, close by;—Charpentier's Narcissus bends over the calm waters of the basin, and the green lawn is enameled with bright flowers—a like joy is shed over all this, and behind the thickets quite a small world of very humble lives coo and peck—the artist is rich with these bits of existences, he overflows with living principles, with Nature entire, with great beliefs—so near the earth he is bent over it with the tenderness that he has for healthy things—and no contact with artificial beauty will, for him, take the place of that customary act, whereby he believes in the generosity of the fertile foster-mother, and wherein he, her spoiled child, hears her pulse beat at the very source. A landed proprietor he became a countryman from taste, a farmer, living on the product of each acre, treading the soil like a great book that one opens, and taking pleasure in simple things, which make the hands horny and the regard limpid.

"He remains the lover of great spaces, and realizes, in a small way, that which his interest knows how to make immense. In the department of Seine-et-Oise, in the plain plotted out in small parcels where prodigies of patience are necessary to join one lot of land to another, he puts aside all barriers and dreams of the great fecundity. It is something more than capriciousness, or than an artist's fancy; it is great sincerity.

"Gifted even as a prodigy, having always lived on free space and sunshine, having remained very simple, with a naïve and believing simplicity he had to love the strong principle, the living appearance, whence all sap springs and where all freshness dwells; that Nature so broad and generous for him, so maternally kind at all times, which changes without withering and which returns young and smiling. He has believed in that smile, he believes in it in his art, and he believes in it in his life."

*"Le Menestrel" (Paris) says at 3 on the morning of January 3.

†Pugno was closely connected with the Boulanger family, for some years past. He had made Nadia and Lili his two musical daughters and he devoted to them a great, pure affection. With Nadia he had already composed the "Heures claires," an important song cycle.

TIRED OF TEACHING?

BY CHARLES N. BOYD

Are you tired of teaching, of the interminable round of lesson after lesson, pupil after pupil? Do you wish you had chosen any other means of livelihood than music teaching? Have matters come to such a point that you "hate to give a lesson"?

If such be the case, what do you consider the value of lessons given with such a spirit? Is it not quite probable that the pupil gets as little pleasure, and experiences as little good from the lessons as you expect from giving the lesson? You can scarcely expect the pupil to be enthusiastic, alert and receptive when the lesson hour is anything but a pleasure to you.

Perhaps your physical condition has something to do with the case. If so, you will doubtless save time, money, and pupils by taking a rest now—often two or three days' absence from the routine makes a lot of difference, and makes teaching easier and better for weeks. Maybe going to the nearest large city to hear some good music will afford you both recreation and inspiration. At any rate the teacher should have some time for recuperation every day. It may be for a nap, better perhaps a walk in the open air—many great musicians have set this example—or a daily meal with congenial spirits (mental only) may be what one needs.

Few people realize what a strain is laid upon the teacher whose work is really effective. To interest pupils of different temperaments and attitudes for several hours daily, and to keep them all at maximum efficiency, is a task for any teacher.

The same old round of exercises and pieces may be responsible for some of your weariness. See if there are not other ways of reaching the desired technical ends, in addition to those you have been using for the last ten years. Any music house or publisher will send responsible teachers a selection of new music "on approval," and upon investigation you will doubtless find a lot of new material that will be a valuable addition to your lists. There are sonatinas that Clementi did not write—good ones, too; and with all due respect to our old friends Gurlitt, Czerny, *et al.*, there is a lot of good teaching material by later composers.

Have you allowed your explanations to fall into routine phrases which gradually shorten until they fail to awaken any response? Then see if you cannot devise new ways of telling the old stories, of approaching them from new angles. One of the most successful teachers I have ever known seemed to have as many different ways of explanation as there were notes in the piece. No pupil ever had a chance to become listless during his lessons, for there were no phonographic remarks from the teacher, and every observation was carefully and purposely adapted to the requirements of that particular pupil. Impersonal explanations are not apt to make any stronger impression upon pupils than organ voluntaries do upon a choir.

In order to get new ideas on teaching and teaching methods it is not always necessary to give up your class and go somewhere for a year's study, even if that would be a most desirable and salutary performance. Books like some of the volumes in Ditson's *Music Students' Library* are worth many a lesson to the teacher. Not many teachers have exhausted the possibilities of informing literature that is within easy reach. Or if your reading has been so exclusively musical that five pages make you nod, try a few detective stories, and perhaps your pupils will appreciate the change.

Why limit your music to that which your pupils study? Would you not like the satisfaction of knowing more than your associates about one great composer, Beethoven, Schubert, Chopin, or any of the great men? Then begin to specialize for a while and make a careful study of that composer's music, biography and surroundings. Think how much labor and investigation were necessary for such studies as Spitta's life of Bach, or Thayer's Beethoven biography. So long as you do not try to take all your first and second year pupils into the same work, this specializing will be profitable.

If your teaching is limited entirely to private lessons, why not try some ensemble classes for piano, four hands, or other combinations? You may be surprised how enjoyable these meetings will prove for both teacher and pupils, and how there is improvement in sight reading as well as widened acquaintance with music. If a violinist or 'cellist can be an occasional attendant at these meetings, so much the better; even some practice in playing accompaniments for singers may be a valuable experience for the embryonic piano student.

You will have observed that these remarks are for the teacher who likes music and once enjoyed music teaching. For those who never did enjoy the work and who do not regard the future years of teaching with pleasurable anticipation, the best course is probably to enter some other field of occupation. A teacher whose interests are elsewhere cannot honestly expect much from the student.

SKIPPING EXERCISES AND THE CONSEQUENCES

BY CLARA LOUISE GRAY

The little French clock which sat ticking away on my mantel chimed the hour of eleven, and as I looked at it I thought that even it felt in unison with its musical surroundings and enjoyed hearing the lessons as much as I. "Dear me," I cried, stepping across my studio and going over to the pianoforte, "eleven is William's hour. I do hope that he will come today. He missed last week, and his mother will not think he is doing well if he does not attend to his work better. He is bright and smart, but like all boys he does not like to practise. I must try to find a way to interest him more in his work." Ting-a-ling came from the door bell. "Hello! here he is,' and with a whistle and a bang William stamped into the room, bringing with him a sense of freshness and sunshine most welcome to the stay-at-home.

"Well, William, how is the music this week?" said I, placing his instruction book upon the piano and turning to his lesson.

"Fine," he answered. "Mother says that if I keep on practising so well, she will get me a pair of new skates."

"That will be very nice," I retorted, "but we must go to work."

When we had got about halfway through the lesson, he suddenly looked up and said: "What I don't understand is this. Mother and I were talking it over, and we could not make it out, what you were telling me at the last lesson. You gave me this exercise, number forty on page fifteen, and said," pointing at it with his chubby finger, "that you wanted me to have this exercise. What did you mean, teacher? I don't understand or mother either. She says that she would rather study straight along from one exercise to another without skipping all around the book."

"But, William, I know what is best for you; I am your teacher. Can your mother not trust me to do the work for which I am fitted?"

The look on the child's face did not change. "I don't understand why you skipped so many exercises, teacher."

"I was only trying to make a pleasant little change for you, William, and make it easier. A teacher can do this sort of thing, without being obliged to account for it. Come, let us not talk any more about it, only remember that I know what is best for you."

I said good-by to William with no little misgivings. Why cannot mothers have more confidence in the teachers they engage? thought I. It makes it so hard. Other pupils claimed my thoughts for the rest of the day and William was for the time forgotten. However, early the next morning came a dainty little note, saying:

"Miss G——:

"Dear Madam,

"I am very sorry, but I find that I must take William away. He is doing well in his playing, but I do not like your method of skipping all around the instruction book.

"Very truly yours,

"Mrs. Clara Whitney."

Should I have explained?

———*———

THE GENTLE ART OF PRACTISING

BY AUBERTINE WOODWARD MOORE

"The trouble with you, young lady, is that you have not learned how to practise," said a great teacher of music and of the piano to an aspiring pupil, who had failed to meet his requirements.

"Not learned how to practise?" queried the pupil. "Why, master, I have practised from six to eight hours a day since my last lesson, and I have memorized many pages of music which I can play without striking a single false note. What more would you have me do?"

"I would have you use your mind as well as your muscles, my dear young lady. You have sat at the piano hour after hour, exercising your muscles without thought of what you are doing and why you are doing it. That is the reason why your playing is so mechanical and colorless. Even your memorizing is done by rote, not with sentiment and understanding. You are becoming a machine player, not an artist."

"What can I do, master, to be saved from this condition?" cried the pupil, now thoroughly roused. "How ought I to study?"

"Put all that you have and all that you are into your work. Study with all your heart and all your soul and all your mind. Never strike a note on the piano without feeling and understanding its reason for being. Trained muscles are essential to the musician, but are valuable only as obedient servants to a trained mind. Better practise half an hour with absolute concentration and command of your forces, than many hours with a wandering, inert mind, or slumbering soul."

The master's words strike the keynote to profitable piano practice. Much time, effort, and money are wasted in piano lessons and piano practice, because the average teacher and the average pupil fail to realize the importance of applying mental effort to the work of mastering the instrument and notes, and even more to that of kindling and controlling sentiment. A pupil should be well grounded in fundamental principles and taught how to apply them. He should be taught to recognize his own blunders, and not to depend on endless criticisms and corrections from the teacher.

You cannot advance far in music without thought. The gentle art of practising demands it, and necessitates the cultivation of memory, imagination, understanding, and everything else that is of value in our physical, mental and spiritual make-up. Great things in music cannot be accomplished, or even sought, without developing a great heart and a rich mind, a purposeful will, earnest effort, high moral courage, patience, perseverance and lofty ideals.

If you study music and devote time to piano practice, see to it that your endeavors are in the right direction.

EYE TRAINING AND MUSICAL MEMORY

BY ROBERT T. WHITE

A GREAT deal of importance is attached nowadays to ear training, and rightly so. To be able to hear mentally a phrase before actually playing it is the foundation of fluent reading at sight. Let the teacher introspect for a moment and discover why it is that he finds it so difficult to read pianoforte music of the ultra-modern type, even though it may not be technically difficult. Is it not because the harmonic scheme is so unfamiliar that he cannot hear the chord before he has played it?

But does not successful reading at sight also involve another process? The very term "at sight" emphasizes the fact that the eye plays an important part. To test this, let the teacher write a short melodic phrase on a card, expose it for two or three seconds only, and then ask the pupil to play it. He seldom gets beyond the first two or three notes, and frequently if the melody is right the rhythm is wrong. Obviously such a pupil is not going to read at all fluently.

Now the causes of failure may be stated as follows:

1. *He may not be able to see clearly what is written.*

This may seem a trite remark, but it is astonishing what a number of persons have defective eyesight without knowing it. Of course, the defect may be very slight, not enough seriously to interfere with reading, and consequently many a pupil is unaware that his sight is really impaired; it is difficult in slight cases to discover this for oneself. Hence, before assuming that a child reads badly because he is mentally sluggish it would be well to discover whether his eyesight is really good.

2. *In endeavoring to take in at one glance the whole phrase he will probably try to assimilate key, melody, and rhythm with one mental effort, and in doing so get only a blurred perception of all three.*

Experienced readers can, of course, combine these elements quite readily, but the ability comes from long practice. Referring once again to our card, tell the pupil that he is only to look at the key, and then expose the card for one second. Next, direct attention for another exposure exclusively to the rhythm, and the card being removed ask the pupil to tap the rhythm from memory. The next exposure will be required only to ascertain the melodic outline; probably the rhythm will also be perceived again. By this time the phrase as a whole will have been grasped and will probably be fairly well memorized.

3. But even if the phrase had been dissected as described above, some will still find a difficulty in translating it on the keyboard from memory, and the cause may be a *defective power of memorizing in general.* Children differ very largely in this respect, although, as a rule, the faculty of memory is very strong at an early age. Some have visual memory strongly predominating, so that when they play the given phrase from memory they "mentally" visualize the card and, in effect, play from the copy as usual. Although it is to be feared that visual memory is largely relied upon by many pupils, it is, after all, inferior from a musical standpoint to aural memory, which it should supplement and not displace. The really musical person will imagine what the phrase will *sound* like and will remember this series of sounds. If in the exercise described above the pupil is inclined to sing or hum the phrase, all the better; it will lead him to rely more upon aural than visual memory.

In my own practice remarkably quick progress has been made by quite small pupils seeing and remembering long phrases after a little time and trouble have been spent upon systematic work of the above type. I take a number of small cards upon each of which has been very clearly written a simple two-measure phrase; the pupil is then told exactly what to observe—key, rhythm, and melody in order; the card is then exposed for two or three seconds, after which the phrase is played from memory. Occasionally the pupil is asked to write the phrase before or after playing it. The length and number of exposures are gradually diminished as more efficiency is attained. The pupil takes home a set of cards and spends about two minutes at each practice in taking cards at random and going through the usual procedure; he afterwards actually plays from the card to see if he has memorized with accuracy.

As soon as possible it is advisable to treat in the same way phrases from the actual studies and pieces learned by covering with a piece of card as much of the phrase as is considered desirable.

Another point to notice is that whether the reading is done vertically or horizontally, or by a combination of both methods—this is largely determined by the character of the music—the eye *must always be in advance of the fingers.* That is, we must be looking at what is coming, not at what we are actually playing. To find out whether a pupil actually does this, cover with a card the notes which are being played so that the player can see only those notes which follow.

When a new study or piece is to be learned it should previously be carefully examined away from the keyboard. The object of a teacher should be not to correct mistakes after they are made, but as far as possible to prevent them being made at all. Ofttimes a mistake is made, not because a really difficult point is encountered but because the player is taken by surprise. A few such simple questions as these will materially assist:

1. Point out the chief theme of the piece. Sing it (transposed, if necessary).

2. Find another phrase which occurs more than once.

3. Point out any arpeggio. Upon what chord is it founded? Does it occur anywhere else?

4. Does the key change anywhere?

5. Find any rhythm which persistently recurs. Tap it.

Finally, it is an educational truism to state that the best way of training the eye is to make the hand co-operate. The surest way of forming a correct mental image of an object is to draw it. So, too, musical notation can be made thoroughly familiar by a reasonable amount of music writing.

Also, many children cannot play without persistently looking at the keyboard; this, again, is a mere habit, and is quite unnecessary, except when wide skips are encountered. The bad habit is due to the fact that the mental image of the keyboard is very imperfect; therefore, such pupils should be made to draw large diagrams of the keyboard, coloring the notes of any given scale. Another good device is to make them close their eyes and play a familiar tune; this compels them to form a mental image of the keyboard.—*The Musical Herald.*

TWO WAYS OF TEACHING

BY EDNA KINGSBURY WATTS

I AM not a music teacher, but write of teaching methods as I have experienced them as a pupil. As a child I was considered a musical prodigy, and as though that were not hindrance enough was further hampered by limited opportunities for observation and study. For the first eighteen years of my life my home instrument was a large reed organ; I took lessons (what few I had) on my teacher's piano and practised on this organ. Urged by an insatiable craving I picked up a shockingly miscellaneous répertoire, playing everything which came into my hands. After I was twenty-one I managed to study a year and a half at a good school, then stopped because I must earn money to live.

This in explanation of why, at twenty-four, I was still so much of a beginner as to be a fit subject for the experiences which I am about to relate.

Through a friend I heard of a young lady, then in Boston, who wished for her own experience to teach free of charge some young woman of musical ability and small means. Her credentials were excellent and her teachers had been the best. With a heart full of hope I mounted the stairs to her room and found her sunny and attractive, a few years older than myself. After a little conversation she asked me to play and I sat down at her piano. I had studied the *Sonate pathétique* and chose to play the first movement. She sat down beside me, her head bent, watching my fingers closely. I was not in good practice and naturally I stumbled and forgot. She promptly brought forth a copy, an edition strange to me, and I fumbled worse than before. I was not allowed to finish it, mercifully or unmercifully, for she began in a brisk, eager way to find out how much I knew.

"Do you know what 'legato' means? Then play the scale of C with legato touch. Oh! that's not right. Haven't you been taught to connect your tones, like this?" She played the scale with what I now know as the pressure touch.

"Now *you* play it. No, don't lift your fingers, press them close to the keys. Well, that's a little better. Now play it softly. Now loud." Her manner, though pleasant, indicated that this was all bad.

"Now play it 'staccato'; now 'portamento.' Oh! don't you know what 'portamento' means? I'll show you. Now you try it. You don't bear down enough on the keys, your touch is not firm enough. Now play it 'legato,' twice as fast; now twice as fast again. Oh, yes, you can—" and so on for an hour until I was the most bewildered and disheartened girl in the city. For my recent work had consisted of technical exercises to strengthen flabby muscles, and this evening's lesson was the exact opposite of all I had learned. My state of despondency on my way home must have filled the car with blue vapor, for, though knowing myself to have musical perception and loving to feel the keys respond to my touch, I then resolved that never again should I touch a piano.

I had, however, an appointment to see on the following day, Mr. O——, a well-known and successful teacher in Boston. With no hope of encouragement, I went to his studio and was charmed with his cordial greeting. He, too, asked me to play for him and, warned by my previous experience, I chose something more simple, Nevin's *Love Song* in A, a beautiful thing which I have seldom heard played.

This time my critic listened from a distance, though the sound of his footsteps as he paced the floor did not deceive me as to his concentrated attention. Inspired instead of confused by his presence, I played better than usual, and at the close he said—though he must have been aware of my many faults: "You played that very musically." That was probably the only kind thing that he could have truthfully said, so lacking were my fingers in strength and proper training; but it sent my spirits soaring so high that it seemed they would never drop again. And thus encouraged by the sympathetic word of this truly great teacher, I determined anew to follow my longing for a musical training.

Subsequently I studied with this teacher and learned much at every lesson; never was I discouraged by criticism. His method of instruction was positive, not negative, and his comments were constructive, not destructive.

How many a pupil has had his musical fate sealed at the very beginning of his career, by the wrong kind of instruction from a well-meaning, but tactless teacher, who, though knowing much about music, knows little of the psychological processes of the sensitive brain!

NEW BEDFORD, MASS., HIGH SCHOOL ORCHESTRA

ORCHESTRA AT THE CONGDON SCHOOL WHERE THE MOVEMENT STARTED

THE PUBLIC SCHOOL ORCHESTRA AND MUSICAL EDUCATION

BY WATSON RANDOLPH

Two of the greatest problems confronting those interested in musical education in the public schools are the cultivation of a musical taste for the best music and a readiness in recognizing the best when it is presented. The fact that it is so often used for idle, sensuous enjoyment has caused music, like other arts, to suffer in the popular estimation and in its best influence. This has made imperative a systematic attempt on the part of musical educators to measure and direct the power of music for children as the language and the educer of the highest emotion.

The use of vocal music as a branch of juvenile education has been generally adopted throughout the country. Not only does singing involve a healthful exercise and growth of the muscles of the throat and lungs of the child, but it stimulates both intellectual and emotional development. In many respects it furnishes a discipline that few other studies can match. In late years, however, there has been a tendency on the part of musical educators to develop in the child mind a taste for and an appreciation of the best music. And it is here that vocal musical training in the public schools has largely failed.

The public school instructor must needs put much time upon teaching that the major scale is made up of seven intervals, with the intervals between the third and fourth and the seventh and eighth steps only half as long as the others; that the minor diatonic scale has its half-intervals between the second and third and the fifth and sixth steps, and equally elementary matters. When the child mind has mastered enough of the elements of the subject that he can sing easy compositions with some degree of ease, the selections for his use must be of the most simple nature. And so it has come to be the opinion of most students on the subject that, at best, this method of musical education cannot teach a true conception and appreciation of the best in music.

It is in the attempt to solve this problem that authorities are introducing orchestras into the schools. In every school there are always a few children with musical ability which has been developed under wise training. They are usually capable of rendering rather difficult music. A guidance of the musical inclinations of pupils in the schools who have had no previous training in instrumental music has often led to the addition of different pieces to the orchestra. In many cases the school orchestra, under the leadership of a competent director, has become very proficient.

One of the leaders in this movement in New England is New Bedford, Massachusetts. Although the movement in New Bedford has been organized but a few years, the system of school orchestras throughout the city has become so well developed that it has been noted by prominent educators of the country.

The promoters of the school orchestras in New Bedford have worked on the theory that the appreciation of music is the first thing to be taught the child mind. The essence of the theory is to give the children the opportunity to hear good music, correctly played, to explain to them its meaning, and thus to instil into their minds a desire to know something more about it, because it is something that appeals to them.

Whatever may be said of the theory upon which the educators of New Bedford are working, the results from a musical point of view in the various school orchestras are remarkable. The first orchestra was formed in one of the grammar schools six years ago, with a piano and ten violins. The children became so enthusiastic over their work that they told other children about it. The pupils of other schools began to ask for an orchestra, with the result that at the present time there are five grammar school orchestras in the city.

The leader in this work has been a young man who has already become a director of unusual ability. He possesses, to a remarkable degree, the patience necessary in dealing with young children. Mr. Arey has had charge of the school orchestra work since its conception by the present superintendent of schools in New Bedford, Allan P. Kieth.

The culmination of the grammar school work in an orchestra wonderfully accomplished for players of the High School age was the natural result. The New Bedford High School orchestra of thirty pieces last year had the reputation of being the best High School orchestra in the state. Having been taught to follow the *melos*, and with proper phrasing to bring it into prominence, the orchestra plays with commendable precision. In its play can be detected finer graduations of tone than the *pianos* and *fortes* of the ordinary band. This has been brought about by a knowledge of the value of gradual diminuendo and crescendo, and of nuance.

This musical knowledge is being instilled by the medium of music which represents the best form of musical composition and yet offers no great technical difficulty. Through such overtures as *The Scarlet Crow*, by Bennet, Lachner's *Four Ages of Man*, and others in the book of *Twelve Overtures*, published by the Oliver Ditson Company, the young musicians are being taught that true rhythm is not the strict adherence to a steady beat, and to a knowledge of the standard overtures, two of which the orchestra has already attempted in *The Bohemian Girl* and *Peter Schmoll*. Such numbers as Dvorák's *Humoreske*, Knox's *Thaïs* waltz, and Brahms's *Hungarian Dance*, No. 5, have been played by the young orchestra, and in such a manner that musical critics have highly commended its work. *Ditson's March Folio* has also been used.

The school orchestra has not only been carried out successfully in New Bedford from a musical standpoint, but it has also been made to pay for itself. No contributions have been asked from anyone for the movement is entirely self-supporting. In addition to paying all expenses one of the grammar school orchestras was enabled to give two large photogravures for the walls of the school auditorium. The concerts in the various school halls, to which small admission fees have been charged, have been attended by fathers, mothers, brothers, and sisters, who would probably not have been brought within the school halls in any other way. In the six years since the movement was started, 21,000 people, all of whom have paid a small admission fee, have been brought into the various schools of the city to hear the orchestras play.

The concerts given by the five grammar school orchestras in the auditoriums of their various schools in the last three years have brought in over $2,000. Out of this amount all the music used has been purchased, besides brass and percussion instruments and violins, which have been lent to any pupil who would take lessons on the instrument. In its concert last spring, the High School orchestra made $296 above expenses. The salary of the director, who gives one rehearsal a week to each orchestra, besides the concerts and special exercises at which the orchestras play, has also been paid from the proceeds of concerts.

Such is the work being done in the effort to teach the children and young people, the men and women of tomorrow, an appreciation of the best music. In this day when trashy music is gaining such a hold among all classes the movement is especially commendable. The harvest from such a sowing as that of the New Bedford educators will be bounteous. A foundation is being laid for a brilliant musical future for many of the children who are led by the desire to play in their school orchestra, to practise diligently on an instrument of their choice. Their ambition will probably never be realized on the platform of their school hall, but the impetus will have been given which will send them on to realize higher and greater things. To the promoters of such an enterprise there can be naught but the highest praise. It will mean much to the artistic future, not only of the city in which it is organized but to the country as well.

In the *Li-Ki*, or *Memorial of Rites of the Chinese*, we read as follows: "Music is intimately connected with the essential relations of beings. Thus, to know sounds, but not airs, is peculiar to birds and brute beasts; to know airs, but not music, is peculiar to the common herd; to the wise alone it is reserved to understand music. That is why sounds are studied to know airs, airs in order to know music, and music to know how to rule."

COMBARIEU: *Music, Its Laws and Evolution*.

HEALTH FOR THE STUDENT OF THE PIANO

BY ELEANOR BALDWIN CASS

3. HANDS ABOVE HEAD
2. FEET RAISED
4. ARMS SPREAD OUT
1. RAISING ONESELF FROM THE FLOOR

NORMAL health has been defined as that perfect balance of all the powers of the body and mind which enables the fortunate possessor to get all the best out of life in the way of achievement and pure enjoyment. Surely no one is more entitled to joy and pleasure than the musician, for he can give to others so much of both, and no one should possess better health.

Although a great virtuoso's life may seem soft and downy after he has become a public favorite, the fact is that his life is a constant series of self-denials, and many times, when he is delighting the public with his music, he is not only suffering physical inconvenience but actual pain. Think of playing the Liszt A major concerto with split fingers, and of the great muscular control of the nerves that enabled one pianist to do it.

Paderewski uses a very low seat so as to keep his heels off the floor. He believes that in this position the muscles are kept more tense and that greater variety in pedal effect is possible. Do you think this is an easy thing to do? Try it and you will immediately notice the strain on the muscles of the calf and thigh. Here again is an instance where the musician is demanding from his body the severest tax, from three separate parts, the mind, the nerves, and the muscles, and they affect the great whole. Must there not be back of this a body actually perfect in its physical power and strength?

It is because musicians have refused to acknowledge the supremacy of the greatest instrument in the world, the human body, that much tragedy is woven into the lives of many of them. Chopin stands almost apart in his great musical power and physical weakness. What must he not have suffered with the fires of genius burning within him and that terrible disease constantly quenching them until it won the battle when he was only thirty-nine. So many of the great musicians died young: Liszt, Wagner, and Handel reached the seventieth mark; but take the ages of Beethoven, who died at fifty-seven, Schubert at thirty-two, Mendelssohn at thirty-eight, and Bach, who lived the longest,—he was sixty-five when he died,—and add them up, divide them by four, and you will realize that the average is not equal to the average age a man is supposed to live and should live under ordinary conditions.

Music is essentially emotional. If one possesses the artistic nature, the nerves are high strung, and surroundings and conditions play upon the nervous system as they do not in any other profession or phase of business of life. To meet with any amount of efficiency the arduous duties of a public performer, a musician (and I have in mind the piano) must have perfect muscular control. There must be perfect co-ordination; that is, the muscles must respond automatically to the will. This is impossible where the organism is enfeebled or the nerves unstrung.

All students must realize that vigorous health is the first thing to gain and the most precious thing to guard. Sterne said, "O blessed Health! thou art above all gold and treasure; 'tis thou who enlargest the soul, and opens all its powers to receive instruction and to relish virtue. He that has thee has little more to wish for, and he that wants thee, wants everything with thee." Only in muscular activity is perfect health obtained. With sleeping muscles there is only a resemblance of health upon which there can be no dependence in time of need. For the musician the time of need is all time, and muscular activity lies at the root of fame.

Some form of general physical training should be considered by every student of music. Those studying the piano might do well to think once in a while of some of the ills they must guard against. Pianist's cramp is a great deal more painful than writer's cramp, and by becoming chronic has blasted many a promising virtuoso's career. Muscular rheumatism is another horror to the pianist, to say nothing of the many nervous torments, such as neurasthenia, neuratrophy, and neuralgia. Here is another argument for a perfect organism, and then, as Dr. Sargent says, "The problem is to retain our acquired health, strength, and power under the conditions imposed upon us by modern progress."

As no system of music is complete without scale study, so it is that no system of life is complete towards maintaining physical harmony without the free exercises.

In arranging these free exercises for piano students I have kept in mind their particular needs; every day, as you do them, remember that the body is like a harp: tune it well by nourishment and exercise and every fibre vibrates a perfect note.

Begin by lying flat upon the floor. Then, as in picture No. 1, rise to a sitting posture; if the feet refuse to stay down catch the toes under some piece of furniture that will hold them and it will not be long before the muscles of the back will be strong enough to allow you to rise from the waist up and not have the feet lift up also. Having done this the minimum number of times the first week, about five times, increase the number until the maximum is reached, about fifteen times.

From the same position keep the upper part of the body down and lift the feet, as in picture No. 2. This is more difficult to do, and may require you to hold on to something over the head; but as in exercise No. 1, the muscles soon respond and grow strong. Do this exercise like No. 1, increasing from the minimum to the maximum.

In beginning exercise No. 3, stand easily, with the weight more on the balls of the feet, and, after clasping the hands down in front of the body, lift them high over the head; push hard for half a second and bring them down, shoulder high, and bring one foot back with bent knee, as in picture No. 4; from here relax and begin all over again. This is a compound exercise and takes in several movements. The doing of this one exercise alone twenty times a day would assure the student of good physical balance. In doing this last exercise, alternate the feet, and on the final movement, that is when you have done all the required number of times, do it once as a breathing exercise. Take in a long breath as you go back with the backward knee bent, and exhale as you relax.

I wish all musical students would take up fencing, for it meets all physical demands as no other exercise does. It arouses enthusiasm, trains the eye, teaches self-control, and, as the movements must respond with the greatest speed to the direction of the will, it develops what all musicians must master, quick muscular responsiveness. Whether one takes up fencing or any other form of apparatus work, the free exercises must continue; nothing can be substituted for them; for as "health is the vital principle of bliss," so free exercises are of health.

To those who are upon the threshold of a musical career and who would produce music which, Beethoven said, "should strike fire from the heart of man and bring tears from the eye of woman," must remember that clear thought flows only from a healthy body, and that "it is exercise alone that supports the spirits, and keeps the mind in vigor."

MUSIC AT THE PANAMA-PACIFIC INTERNATIONAL EXPOSITION

WHILE it is yet too early to announce with finality the musical plans of the Panama-Pacific International Exposition, the directorate has formulated a scheme of entertainment the working out of which promises to place music on a footing of artistic importance and interest equal to any of the other departments of its inclusive activities.

The program embraces a series of symphony concerts to be directed by the ablest conductors of this country and Europe; a season of organ recitals to be coterminous with the Exposition, that is to say, lasting from February to December, 1915; innumerable band concerts, the flourish of military music being designed to be continuous throughout the Exposition term and in many different sections of the 625 acres of exposition domain; choral concerts in which noted musical organizations will participate; the Eisteddfod, in which will be assembled many Welch singing societies.

Special importance is attached to the series of organ recitals which will be given in Festival Hall, for which it is proposed to obtain, as the climacteric feature, the presence and playing of an organist of international fame. Interpreters of national and local reputation will be heard also in the recitals that will be given daily in Festival Hall, the main auditorium of which will seat 3,000 persons. The organ that will be installed will be worthy of the fingers of a Guilmant.

TEACHERS will find THE MUSICIAN a great help in their work with their pupils.

CÉCILE CHAMINADE

BY ARTHUR DE GUICHARD

THE French Government has recently accorded to Madame Cécile Chaminade the title of Chevalière of the Legion of Honor, together with the ribbon and cross of that celebrated order.

This is the first time in the history of the Order that a woman composer has been admitted to its ranks and granted so great a distinction. It should be added, however, that the Minister, the Chief of the Government, Mr. Barthou, to whose initiative the recognition is due, is himself a musician of considerable merit and fully capable of appreciating the special talents of Mme. Chaminade.

Vox populi, vox Dei says the much abused dictum and, if we may judge by the sale of her compositions, not only in France but in every civilized country of the world, Mme. Chaminade has fully won the ribbon of the Legion of Honor by being the most popular woman composer of the time. Hundreds of thousands of her piano solos and songs are sold yearly and, while the compositions are unpretentious in style and without any endeavor to soar into the higher regions of sonata, symphony, oratorio or opera, they fulfil a purpose that is, perhaps, of greater utility than these; for they implant in the minds of the masses a taste for simple melodies and graceful harmonies that is a step toward a better appreciation of the beauties of music.

Much as Mme. Chaminade may treasure the unique distinction of being the only woman composer *chevalière* of the order founded by the great Napoleon, she probably esteems more highly and is, surely, more deeply touched by the fact that there are in the United States of America more than two hundred and fifty Chaminade Clubs—a very direct expression of the *vox populi!*

Let those musicians who wear out their shoe leather in the vain endeavor to persuade publishers to buy their dry-as-dust compositions and who deny that the woman composer is a factor in the world of music ponder over the fact that one little piece alone, *Automne,* written by Mme. Chaminade and published some twenty-five years ago, had a sale of over eight thousand copies last year.

Mme. Cécile Chaminade was born in Paris, France. She was exceptionally gifted in music and composed when only eight years old. Having written some little pieces to be sung in her parish church by little girls of her own age, she was asked why she had composed melodies that seemed much more simple than those she usually wrote, she answered naïvely: "I had to write down to the level of the little ones!"

Her parents were musicians; but it was the good advice of Bizet, the lamented author of *Carmen,* that decided them to give their child a thorough musical education. The gifted girl studied the piano with Le Couppey, harmony, counterpoint and fugue with Savart, and general musical knowledge with Marsick and Benjamin Godard.

In 1908-1909, Madame Chaminade made a remarkable visit to this country, being acclaimed by musicians and the public whenever she appeared. The formation of the Chaminade Clubs dates from that time. If we have thus remembered her, she has not forgotten us. In a letter to the present writer, Mme. Chaminade says: "I love America and the Americans who have always shown me so much sympathetic interest and who received me so affectionately five years ago."

Her compositions are numerous; they would be still more so if she had cared to work her musical vein to the utmost. But Mme. Chaminade is essentially an artist in the best meaning of the term; she does not compose to order, or write "pot-boilers"; she composes only when so inspired. She has written about one hundred and fifty songs, some of which may be found in the *Ditson Collection of French Songs* (Vol. 1); the same number of piano pieces; fifteen choruses; duets; two trios for piano, violin and 'cello; a sonata for piano; a small concerto for flute; *The Amazons,* a dramatic symphony for chorus, solo voices and orchestra; the ballet *Callirhoë,* which has had over 160 performances, among others at New York, and whose dances, *Scarf Dance, Dance of the Amphores,* and the *Cymbal Dance* are popular as piano pieces.

Those who aim too high frequently miss the mark altogether. Augusta Holmès endeavored to revolutionize music and show how far a woman could go in symphonic composition; her works are things of the past. On the contrary, Mme. Chaminade's chief qualities are simplicity, sincerity and spontaneity. These appeal directly and forcibly to the hearer and are the real secret of her great popularity.

Madame Chaminade, whose full name, by the way, is Mme. Cécile Carbonel-Charminade, is now resting from the fatigue of a very arduous season. When she resumes work there is good reason to believe that she will favor the readers of THE MUSICIAN with some of her ideas and impressions.

———*———

WHAT CAN YOU PROMISE IN TWENTY LESSONS?

BY CHARLES N. BOYD

THE scene is the teacher's music room; the persons are the teacher, a careful, prudent mother, and the daughter, the latter a prospective pupil. She has already had some music lessons which were satisfactory neither to pupil nor mother, and therefore a change of teachers is being made. In the course of the usual questions the mother asks, "What can you promise in twenty lessons?"

A very natural question for any person without musical experience. In many other branches of study twenty lessons count for much, and both teachers and pupils expect to reach a certain rather definite point by the twentieth lesson. The average person's general training, surroundings or ability make this possible, and it may reasonably be promised. What answer shall be made to the mother who has inquired in perfectly good faith?

Neither musician nor public has much faith in those who are ready to promise rapid progress and all sorts of attainments in twenty lessons, without any previous knowledge of the pupil's general ability. To promise nothing is obviously poor policy, and simply to promise "the best I can do" may not always satisfy the expectation of mother and daughter. It is preferable to give some definite statement of plan and policy, not only as a better answer, but by way of explanation and of interesting mother and daughter in the work about to be undertaken. So the answer may be framed somewhat as follows:

Progress in real music study depends first upon the talent and application of the student. Until teacher and pupil are actually at work one cannot estimate progress. But there are certain things we shall undertake, and we hope that a good beginning may soon be made in each.

The first thing is learning how to study. Hours upon hours are wasted by diligent and conscientious students because they have not learned this art. It is not a secret, and though it may be the pupil's good fortune to acquire it without direction, the wise teacher will make it one of the first essentials. As well learn mere dates in history, without knowing anything of their significance, as to allow mere repetition of notes.

In these twenty lessons we shall strive for an improvement in tone, both in its production and recognition. For the latter purpose, in addition to the ear-training studies which should be an essential for every piano student, we shall learn to listen for every tone, not merely to see if it is the right note, but to judge its quality. We shall aim to establish a high ideal for tone and shall investigate its production, that these ideals may be realized.

Of course there must be some technical exercises, but not to be played through several pages at a time in practice, with the hope of getting a new instalment at the next lesson. They are, on the contrary, to be submitted to the tests named above, to be transposed into various keys, and some of them are to be practised in several different ways, to gain command of different touches. In these, as in all keyboard work, both teacher and pupil will strive for proper muscular control and freedom, proper positions, and whatever makes for technical facility and effectiveness.

There will also be "playing pieces" of appropriate grade and (we hope) acceptable character. These will be carefully analyzed for form and content, probably before they are practised, for not only is time thus saved in practice and memorizing, but only thus can the composer's intentions be realized. Schumann said, "Until the form is made clear the spirit cannot be made manifest," and this important principle should be impressed upon students from their earliest lessons. And these pieces, once studied through-out, are not regarded as finished—we may have them again before the twenty lessons are over, for the sake of the improvement and satisfaction a revision should bring.

In the time at our disposal we may not be able to do any formal, text-book harmony study, but in the everyday technical work, in the analysis of pieces, and in almost everything else we shall find constant use of the harmonic principles explained during the piano lessons. Upon it we depend for safe and sure memorizing, and without some knowledge of harmony our progress is indeed difficult.

Finally, we shall have some reading, and doubtless some writing on musical subjects. If we are to realize what music is, who the great composers were and what they did, and how music developed to its present state, we must read about it, and our reading is made more valuable by writing occasional short papers for the teacher or for pupils' gatherings.

Thus both mother and daughter are advised of the expected course. The question has been answered, in so far as the character of the work is concerned, and the way is prepared for both the pupil's guidance and the more intelligent interest of the mother.

HAROLD HENRY, PIANIST

THE AMERICAN TYPE

BY HELENA MAGUIRE

It is quite generally realized by music students today that artistic criticism, in its essentially vital aspect, does not consist of a denunciation of the obviously bad or a heralding of the obviously great, but in the valuation, so far as possible, of serious work which eludes or baffles standards hitherto adequate.

With the changing of the times standards must change even as types change, and it has been said that the ordinary music lover gives but scant attention to the forming of a mature and considered judgment. Yet until each music lover of us is possessed of a reserved and balanced judgment *of his own*, the "serious work" of our day cannot receive justice.

In considering the development of Harold Henry from an "ordinary American boy" into a concert pianist, we are studying an essentially new type, a type which demands a new standard of judgment.

Hitherto we have put into the hands of our students the time-honored life stories of two types of musician: one, the musician of the stern musical parent who dragged him out of bed to practise in the deep of cold and cruel nights; the other, the musician of the stern *unmusical* parent who *drove* him to bed when youthful genius would be up and practising, and we bade our young people take example and inspiration from these. Yet how could they, our "free and emancipated new generation"?

Young America does not know the stern parent, either musical or unmusical. Young America has never been dragged or driven. Conditions are too different for our students to get much more than entertainment from these old world lives. What they need is to be shown just how an ordinary American boy becomes as great in music as his school-fellows in politics, business or philanthropy; and what a man our sane, normal, football playing, college trained young American is when into his healthy body and clear individualized brain the vision enters, that spiritual something we call "genius," and he makes music his medium of self-expression and through it serves his fellow-men.

THE NATURAL STEPS

Nothing "just happens." In every life which has culminated in greatness may be traced the so-called natural steps which have led in sequence to success in some particular art or science.

Harold Henry received his first musical impressions in the most natural way in the world, through his mother's voice. "My mother had a lovely voice, and sang a great deal," he said. Then his older sister had lessons on the piano, and while he played with toys upon the floor he was hearing intervals, chords, melody, absorbing music as unconsciously as he was the other impressions of childhood, daily. After a time he wanted to play too, so his sister gave him lessons, but he was neither driven to the piano nor dragged away from it. "Whenever my sister wished me to practise, she would sit down and begin to play herself, and immediately I would want to begin. That was her way of getting me to work; no amount of coercion would have succeeded!"

Another important factor in this natural sequence was that he was born in a university town. "I was brought up like any other boy," he said, "going to school (the public) in the winter, and going barefoot in the summer, doing just what the other boys were doing." Doing what all Young America was doing, but doing it in the best possible atmosphere, that of a small, western university town, Lawrence, Kansas, which was one of those centers toward which converge the aspiring spirits from the outlying farm lands, lads who approach a university with such high ideals and such a reverence for knowledge that James Lane Allen said they should have "mounted camels like the youths of the Holy Land of old, taking their solemn, tender way across the country to Jerusalem."

The next right step was in the choice of his first music teacher. Attached to the University of Kansas was a school of music, and to one of the teachers in this school, Miss E. Geneve Lichtenwalter, he was sent for piano lessons when ten years old. "My parents selected Miss Lichtenwalter to teach me, and the choice proved to be a most fortunate one."

Writing about Mr. Henry's early lessons, Miss Lichtenwalter remembers that "he was a very small boy, so very dignified and serious that he was positively awe-compelling, and made me feel my responsibility keenly. After his first lessons," she goes on, "it comes to me, I told him he must at once assume the entire responsibility of his practice,

HAROLD HENRY

adding that pupils who had to be driven to practise never amounted to anything." How quite fiercely and entirely he did assume this responsibility was told her afterward by his mother with that gentle, understanding amusement of the American parent at the terrible seriousness of their young.

"He developed very early," continued Miss Lichtenwalter, "a masterful independence and self-responsibility. Although but a 'beginning teacher' myself, I recognized Harold's superiority, mentally and musically, and, I might add, industriously, for every lesson of his was worked out with the minutest care." Refreshing to read this, after all the fault that has been found with the American student; and I do not believe Mr. Henry would like to feel himself a lonely possessor of these virtues; I do not believe he would like to be a solitary type, even the best.

Miss Lichtenwalter was one of the teachers who took her pupils to concerts, and it was with her that Harold Henry received his first impressions of professional music. Also she played much with her pupils, four hand arrangements of the symphonies, quartets, etc. The first thing he played in public was a Bach *Invention*.

After five years Miss Lichtenwalter left the school and the boy had piano lessons with Mr. Carl Preyer and his theory with Mr. George Penny, during his high school and university years. While at the University he took part in all college activities, social and athletic as well as musical, being a member of the Sigma Chi fraternity and playing much in public.

At this time yearly musical festivals were held at Hutchinson, Kansas, a feature of these being the awarding of prizes and medals to contestants in the various branches of music. The year that Mr. Henry was seventeen he entered the contest, and Mr. E. R. Kroeger, who was the adjudicator, said the other day: "I did not know who he was at the time, but Mr. Henry's work stood out immensely superior above everyone else's. In all the years I was judge at the Hutchinson contests Mr. Henry was the best of all the pianists there."

So, then, this was where he stood, when he decided to make music his profession. "I decided this for myself," he is careful to explain, and, having taken his degree at the University, started immediately after graduation for Berlin. I give the story of his study in Europe in Mr. Henry's own words for all American students to read and ponder:

"I started for Berlin. I think such a step was an unwise one. The sudden change from a small town to a great city, and that a foreign one, was not good.

"I first went to Godowsky. I do not think that either of us understood the other. I was in awe of the great man, never did my best work for him, and consequently he was not interested, perhaps I should say, did not *show* much interest in me.

"After a short time I went to Dr. Ernst Jedliczka, pupil of Rubinstein and Tchaïkovsky, a many-sided man, and a wonderful teacher, who had the faculty of giving each pupil what was most needed—in my case self-confidence—and in bringing out the best in all who came in contact with him. During my third year with him I made several successful appearances, including some with orchestra, in the Beethovensaal, in Berlin. Unfortunately, Jedliczka died at this time.

"I spent a few months more in Berlin, then went to Paris, where I worked for almost a year with Moszkowski. While in Paris I had a long and severe attack of typhoid.

"Then I returned to America, broken in health, unknown to my countrymen, without financial backing, and without confidence in the future. All this showed itself in my playing, which was small, perhaps exact, but of a limited range of color. As I had to earn my living I began at once to teach."

Compare the young American on his "start for Berlin" and on his return after his European experience. No one denies the advantage of going to Europe, but it generally turns out to be a quite different kind of advantage from that the student had looked forward to. One veteran of our music world said to a student looking Europeward: "Oh yes, go to Europe to study if you will, but take an American teacher along with you, and study with him all the time you are there." Mr. Henry says that "more fine talent has been ruined by the foreign teacher's misunderstanding of the timid, self-conscious American pupil than has been benefited by study in Europe."

HIS OWN MASTER

After this Mr. Henry "found himself." He has again proved that it is not a misfortune for a virtuoso pianist to be obliged to give lessons for a living. In order to do this Mr. Henry began to study, this time his own needs and his pupils' needs together. He divided his day into three parts, the first, teaching; the second, practising and studying and the third, physical exercise. Teaching has made of him a man who not only knows how to d

things, but also *how* and *why* everything is done; he learned how to work things out clearly and logically for his pupils, and is immensely to the good himself, mentally, for it. In the practising and study part of his day he has, as Karleton Hackett puts it, "dared to develop his own personality, to approach his music from an individualistic point of view, and express the thing as he feels it. He leans naturally toward the heavy line and mass, he gives a reading of power, he gets a tone of sonority from the piano, but always with a clearly conceived purpose which he wishes to bring out. . . . He so evidently knows what he is doing, has so planned the thing out for himself, according to his own feelings, that all he does is interesting. It is no diluted copy of what somebody else has done, but a personal expression."

And, lastly, in the part of his day which he devotes to physical exercise, he is regaining the good health lost in Europe and building for the future.

He has played much since his return to his own country; his concert appearances have extended, in this country and Canada, from the eastern coast as far west as the Rockies, and everywhere he has met with success. Americans like him and welcome this young American, who has attained to a notable place among artists without sensational advertising of any kind, as "their own."

———*———

NOTES ON THE MUSIC IN THIS ISSUE

MARCH! There is a reminder in the word, a warning to be up and active, and to press vigorously toward the mark set before you. Just now the teacher ought to be able to look back over the work of the past five months and note what success he has had with his pupils. Has he been able to keep them interested and working along the lines he had previousy marked out? A course of study demands systematic work, each successive task mastered.

As for the pupil, it is not out of place for him to turn his attention to the work he has been doing to learn what progress he has made since last October. Is it satisfactory? Is it less than he had hoped? At any rate, he can say to himself, "March! March!" and then set himself again to his tasks with renewed enthusiasm and application, feeling certain that thus he will make the wished-for progress.

Doubtless some of the pieces included in this month's issue will prove helpful to the teacher and also to the pupil, and thus aid in making the "forward march" which is needed at this time of year.

Waltz of the bells (Valse des cloches), by Paul Wachs, is an excellent example of this popular French composer's facile style and ability to write a piece that combines attractive musical qualities with technical brilliancy. The "bell" idea appears at intervals throughout the piece, and should be made fairly prominent. In the middle section, in C major, note how the pedal is used to sustain the "bell" sound. Do not play the piece at too rapid a tempo; a moderate waltz movement with sufficient acceleration and retardation to give a satisfactory *rubato* will be best. Passages in eighth notes will generally admit of a slight increase in tempo; the section in A minor calls for a higher tempo than the others, except the passage near the close in eighth notes; observe the diminuendo here.

Song without words (Romance sans paroles), by W. Rebikoff, Op. 3, No. 2, is the work of a Russian composer who ought to be better known in this country. He has written studies of moderate difficulty that are worth examination. Note the counter-theme or figure in the left hand, at the very beginning of the piece. This is to be kept subordinate, but must also be made clear and distinct (the left hand plays over the right here). At *piu mosso* the theme is taken in octaves, five measures later being found in the middle or tenor register, and, of course, must be made most prominent. Toward the close of the piece the melodic effects become broader, the theme calling for a strong, impressive delivery as a climax. Here is a good piece to stimulate a pupil of musical mind.

Moon elves (Mondelfen), by Leo Oehmler, Op. 176, is intended for young players, or older children who have had but a year or two of study. It is a bright, tuneful little waltz, with a marked swing such as attracts the average listener. A feature of the piece, from the teaching point of view, is a theme for the left hand which develops skill in melody playing. In this section play the chords for the right hand rather softly and somewhat staccato.

Adelaide (Petite gavotte), by William R. Spence, is a charming little number for use in teaching and recitals, tuneful and rhythmically quite interesting. Don't miss the gavotte swing in this piece; note the occasional special accents marked to occur on the third beat of a measure. This will serve as a piece for school or calisthenic exercises.

Measured steps, by Paul Opper, is also intended for the younger players, in march rhythm, and especially suitable for marching or gymnasium work. Watch the staccato. Young pupils should not use the pedal with this number. Put it on a recital program. It will please.

Sunshine and shadow, by Wilmot Lemont, Op. 5, No. 6, is one of a set of six easy little pieces entitled *The Merrymakers,* every one of them available for teaching and recital use. Although in 3-4 time, it is not intended to be played as a waltz; the suggestion is made that unless specially marked accents occur a strong accent be played only at the beginning of every other measure, as if the time signature were 6-4 instead of 3-4.

Cap and bells (Marche grotesque), by H. L. Cramm, Op. 18, has something of a descriptive character. The composer has indicated the spirit of the piece by the various marks of expression which appear on the printed page. The left hand is to be played lightly and staccato in the opening measures as if the drum beat is heard from afar, gradually drawing nearer, at the close of the piece as if the procession were disappearing in the distance, the sound dying away gradually. A story descriptive of a procession of dwarfs, grotesque figures, marionettes, etc., will supply material for a plan of interpretation. We recommend this as a fine recital program number.

Romance, in E, by Wassili G. Wrangell, is for the players who have reached the advanced third or early fourth grade. It is in song form and style, and can be considered as a "song without words," if that should prove a help in interpretation. A striking effect is found in the imitations between the two hands; naturally the figure for the left hand is to be played more lightly than the melody. The pedal is to be used with discrimination.

Valse caprice élégante, by H. Engelmann, is a delightful waltz, moderate in point of difficulty, and very pleasing in melody, just the kind of a piece to interest a young player to the practice so necessary to master, and to attract the average listener. We recommend it, very confidently, as a good piece for use in the home and social circle, one that can readily be memorized and therefore available for use whenever the player may be called upon. Notice the strong contrasts between the leading themes, first in C, second in G, third in Ab. Near the close of the Coda the time movement may be slightly hurried, the last eight measures being very rapid in movement.

Symphony III, in D major, by J. S. Bach, is included for the benefit of those pupils who have studied none of his works. It is not specially difficult, unless the player aims to make use of a very rapid tempo, in which case the grade will be at least one degree higher. The principal theme appears in the first measure and in many others later in the piece, sometimes in the right hand, sometimes in the left. Before playing the piece the pupil should look through every measure to find this theme or motive and mark it. Then, in playing, whenever the motive appears it must be brought out clearly. For instance, in the last half of the third measure the figure is in the alto; in the sixth measure it begins on the last half of the first beat (F♯ and G), in the bass; in the eighth and ninth measures the development is based on a part of the counter-theme, found in the last half of the second measure and in the third measure, in the soprano. At the last half of the first beat of the tenth measure we find the principal motive again in the soprano; and at intervals throughout the piece. In learning this piece commence slowly and work on a measure or two at a time, increasing the speed as you become familiar with the notes.

Minuet, for violin, by Beethoven, is a number that is quite popular with teachers and players, one that has been used with success in concerts of music of the classical period. It has been carefully edited in accordance with the playing of the best artists and should be in the repertoires of teachers and of pupils. It is not a difficult number, and makes an excellent study in drawing a good tone.

Off to the kingdom of dreams, by Howard C. Gilmour, is a charming song of the lullaby type, easy, melodious, and sympathetic in style. It is dedicated to Mme. Gadski and will probably appear on some of her concert programs. It can also be had for medium voice, in the key of D.

Once only, love, by Wintter Watts, is a song characterized by broad melodic lines, a rich harmonic support, and a thoroughly singable quality. Naturally a song in which there are a number of repeated notes, as in the first measure, calls for careful diction of an artistic character, corresponding to Wm. Shakespeare's definition of singing as "A perfect prolonged talking on a tune," etc. This involves placing the emphasis on words or syllables according to the natural reading of the text, not adhering strictly to normal musical accents. This song is also published for high voice in G.

Send out Thy light, a sacred song by Alfred Wooler, is a splendid number for the church service, on general or festival occasions. It is cast, in a measure, in the aria style, that is, with themes of a somewhat contrasting character, with big, broad melodies, such as will permit a singer to use a full-toned, resonant style of production. The final section, marked *maestoso,* is splendidly effective. The edition used in this issue of THE MUSICIAN is for low or medium voice; the song is also published for high voice in B minor.

———*———

NOWADAYS we betake ourselves to a theatre or concert-hall with no other object than to hear a beautiful opera or a fine symphony, and to taste an entirely disinterested pleasure; the singers and the players have nothing to do with our public or private affairs, and we rather ask them to make us forget them. Music, indeed, frequently accompanies certain religious ceremonies, but this is either a survival of ancient customs or in order to lend them an ornamental and pleasing appearance, like the objects we put in a drawing room. Formerly, it was quite different. Music was associated, as an organic and essential element, with the acts of religious and profane life, of war and of peace.

THE MUSICIAN aims to supply the members of the musical profession with practical aid on all subjects connected with music, to stimulate students to earnest work and artistic ideals, and to raise the standard of musical taste and appreciation throughout the United States.

EDITORIAL NOTES

A NEW MUSICAL IDEA FOR PUBLIC LIBRARIES

KANSAS CITY offers something new in the way of spreading opportunities for becoming acquainted with good music. The Public Library of that city has received the gift of 500 music rolls for a player-piano which are available for circulation under the rules governing the taking out of books. The pieces are of the standard and classical types, and the collection contains no ragtime, which is strictly barred. The donor of the collection plans to add to it from time to time and according to the use made of it.

This suggests a method of bringing about the condition which Theodore Thomas advocated, namely, that to popularize the best in music it is essential that the people be given opportunity of becoming familiar with it.

LOCAL MUSICAL STATISTICS

FIGURES and facts are always in demand, for they show progress or retrogression according to the totals.

When we speak or write of progress in music we are apt to deal in generalities. After all progress in music in the United States is but the sum of the forward movement in all the communities in this wide land, and in the final analysis, the total depends upon what individual teachers have accomplished. Here then is a personal side to progress in music. The following suggestion can readily be taken up by the interested ones:

Make an effort to secure statistics in regard to musical work in your community, that is, information upon such facts as the number of teachers engaged in musical work, the number of persons now studying, the number of persons who have studied music, the number of homes in which musical instruments may be found, churches which support musical work, money spent in support of teachers, purchases of musical supplies of all kinds, concerts, musical magazines subscribed for, amount of money appropriated by the municipality for free music, what the schools are doing for music, with all other facts which will bear upon the general question as to what your community is doing for music.

There is news value in such an investigation. The editor of your most influential newspaper will certainly co-operate if you place the matter before him. You have two or three months in which to gather the statistics and facts.

A LETTER FROM CINCINNATI

IN the December (1913) issue of THE MUSICIAN we printed an article entitled "The West as a Factor in American Music," by D. A. Clippinger, to which exception has been taken by an officer of the Cincinnati Chamber of Commerce, who feels that the claims of that city to musical distinction and as a pioneer in musical work was slighted.

We are glad to know that an article in a musical magazine can attract the attention of business organizations. It shows a distinct advance along the lines which THE MUSICIAN follows. In a series of articles on musical conditions in certain Western cities, published in THE MUSICIAN during 1913, emphasis was laid on the point that the work of the musicians and the music lovers of a city is a part of the force of the community, and must be reckoned as a community asset. We further urged, not only in THE MUSICIAN but by letter and word of mouth, the leaders of the profession in these cities to see that the musical interests are represented in all publicity material prepared for distribution.

The letter from the Cincinnati Chamber of Commerce gives an account of the various musical forces of the city with the work they have done and are doing, a record of which any city may well be proud, going back to 1849, when the first Saengerfest was held in the United States. THE MUSICIAN had no thought of slighting this famous musical center, which is hardly West nowadays. We assumed that Cincinnati's standing in the musical world is so definitely fixed that there was no call to include it in the article in question, which was planned to discuss conditions in cities further to the westward.

THE WORK YOU LIKE TO DO

WORK, for its own sake, appeals to few persons. Most of us like to "play." Since we must work in order to live, it would seem advisable to infuse into our work some of that spirit which we find in play. As some one has said, let us make play of our work and work of our play. Thus shall we make our work more enjoyable and effective, and our play more useful to ourselves and to others.

This thought is especially helpful to the teacher of music who looks upon his duties as partaking of drudgery. It is well to get rid of such an idea as soon as possible, and to replace it with a lively interest in the work to be done, for interest is the one thing which redeems work from the commonplace and turns it into real pleasure. With interest comes enthusiasm for the work, and, in consequence, the power to impress the same spirit upon pupils.

A SPRING MUSIC FESTIVAL

NEVER had one in your town, you say? Well, it's not too late to begin now. Really it is not. Here is a suggestion: Get the local musicians together and ask for united support. Combine church choirs, high school chorus, and any other singers who can be gathered into a chorus, and thus have a body of singers for the festival. During the next ten weeks five or six choruses can be learned without difficulty. You have now provided for the local forces and an interest which can be relied upon to sell tickets and provide patrons.

The next step is to secure the support of the business interests of the town, and the active help of the local newspapers, so that the expenses—or at least half—can be guaranteed.

Then write to a manager of artists for several singers who can add the "star" feature to the festival plan, and give you one "artists' concert" in addition to the one or two in which the chorus assists. You then have the principal features of a festival provided for. To work it out means quick action and a warm enthusiasm, generally the best way to initiate a movement.

Your town is big enough to have a good and a successful music festival, if you want one.

OUTSIDE THE LESSON

TEACHERS have splendid opportunities to help pupils in matters of the utmost importance outside the lesson. For example, emphasis may be laid upon the value in character and personality building of steady, persistent study effort, of painstaking care in preparing the lesson, of the habit of close adherence to a plan of interpretation, as well as other habits which promote intellectual growth.

Music study has disciplinary value and culture-developing powers. The teacher should impress upon his pupils these facts which at first may seem extraneous to music study but are, in reality, a part of the personal development by means of music study which is the aim of that study.

The SINGER and HIS ART

CONSCIOUS CONTROL OF THE DIAPHRAGM FOR SINGERS

BY M. LOUISE BAUM

ARTISTIC breathing, as it is sometimes called, is different from the so-called natural breathing, or the habits of the average untrained human being; but this is because few persons breathe correctly without training. As in piano playing, the hands have to be trained until the left is approximately as useful as the right, and as all the fingers have to approach a common standard of free action, so the various breathing processes have to be developed and equalized in the singer by right training. The point most often overlooked by teachers is, however, the conscious control of the diaphragm. The action of this muscle may be consciously differentiated from all the other activities concerned in breathing, and when this is done the singer has what feels like a single point of control by which all the other actions are regulated.

Various shibboleths have in times past pointed to the particular breathing fad of various teachers —such as the "fixed high chest," "intercostal breathing" and "diaphragmatic" or "abdominal." In reality all the activities hinted in these words should have their right proportion of use in a fully developed breathing power.

The very first lesson a pupil should have in breathing is to take quiet, normal breaths while consciously freeing or relaxing the jaw, tongue, and throat. As the runner sets his jaw in his effort to make his legs go, or as the child, over his pot hooks, twists his tongue or his lips along with the painful movements of his pen, so the singing pupil tightens his throat, jaw, and tongue when he is striving to gain control of his breathing apparatus, and so lays up months of anxious undoing for himself. Therefore, to establish a habit of freedom in these parts during the process of inhalation is of the greatest importance.

The old-fashioned method of teaching a yawn for the correct singing position no doubt looked to the quick relaxing of all the throat parts after the tension of the yawn. It is said that the secret of jiu-jitsu, the Japanese wrestling science, is this of practically instantaneous action, which is secured by the swift transition from extreme tension to entire relaxation. At first the pupil need think only of dropping the jaw, as if it were heavy, and to become conscious of the loosening of the throat and tongue, perhaps until a yawn naturally follows, in muscular reaction from the relaxation. He may practise turning the head slowly from left to right while inhaling easily, the throat feeling "loose" inside.

Correct bodily poise is the real secret of right breathing. We breathe wrongly because the various parts do not have free action. The sagging chest is the worst enemy to right breathing, with the attendant thrusting out of the abdomen. Now to hold the chest properly high is not done by throwing the shoulders stiffly back, but by deliberately lifting the chest by its own system of muscles.

There is no better exercise for this than one which a famous teacher of Paris gives to all his students. Standing on the balls of the feet, let the arms be held with elbows bent and nearly touching in front of the breast bone. The hands meet in front of the face with fists closed. The fists push up toward the ceiling steadily and firmly, the elbows keeping together as long as possible and the forearms and hands parallel with the face—that is, always *perpendicularly*, not at an angle. When the arms are at last straightened out to full length the hands are still together directly over a point three or four inches in front of the nose, where they started. Now the hands must open, back to back, and push directly away from each other, right and left, then firmly downward in a circle, keeping the arms always at full length till they point toward the floor. Then the hands are brought up again to the original position before the nose, ready to repeat the exercise. When it is well mastered it may be practised steadily, without break or hesitation, again and again. The chief thing to observe is that the arms reach their full length and that the circle described by the hands lies in front of the body. The arms must not be thrown back.

The effect of this exercise, when properly done, is to lift the chest into place. One feels as if all pulled up out of one's belt. The abdomen is flattened and the ribs expand sideways. This should be practised without thinking of the breath. But the thought of keeping jaw and throat relaxed should be continued.

Now one is ready to learn a conscious control of the diaphragm, which may be called the air brake of the whole breathing process, controlling it, and keeping any part of the expiration from becoming too strong.

Standing on the balls of the feet, easily, with the chest in the high, easy position, the abdomen normally flat and the lungs normally full, touch the body lightly with the finger tips, just below where the ribs come together at the lower end of the breast bone. This point is where the "wind" may be knocked out of one by a sharp blow. It is the spot where the conscious differentiation of the diaphragm action may be felt. Let us call it X.

With the lips together, as if sipping air through a whistling mouth, let a tiny bubble of air be drawn in and pushed out, delicately and softly at first. This should be felt as a slight throbbing or pulse at X, the point below the breast bone. If this spring of the diaphragm is not felt here, let the pupil imagine that he is holding in his lips the mouthpiece of a toy balloon. The balloon is fully extended and through the slender tube he draws in a bubble of air and then pushes it back at once into the extended balloon, outside his lips, drawing it in and out, gently but quickly. If the little pulse of breath is not felt at the diaphragm by this process there is a third device to try.

Let the pupil take a full breath freely, then let it go in a round "oh" whispered through the rounded lips and suddenly turned into a sharp "oo" (as in "boot") by puckering the lips tight as if to whistle and pushing hard, with the thought of making the "oo" sound very intense and sudden. This will almost always give the pupil the sensation of the diaphragm spring at the point X. The exercise sounds like a whispered "oh—who," The "oo" or "who" is short and sharp, the "oh" rather long.

The great point is to gain this action of the diaphragm while the chest and abdomen remain quiet. At first the chest will rise and fall with the breath. Let the other hand touch the upper chest lightly to make sure that it is still. If the amount of breath handled in this way is kept very small at first, the chest and abdomen may be kept quiet. Later on the action becomes sharper and stronger, until one can flutter the breath in and out at X in quick, sharp impulses, while the chest and abdomen remain firm. In time one can even round out the soft part of the body just at the place—a spot perhaps as large as half the palm of the hand.

Care must be had always that the throat and jaw do not stiffen.

When this conscious control of the diaphragm is gained one may take plenty of breath and sustain tones by only the simple, quick thought of pressing out—and perhaps slightly down—at the point named X. Most pupils find that to think they are holding this soft part out without relaxing at all during singing is most effective. Of course, there will come relaxation as the breath is used up, but the mental impression on the pupil's part is that he is not letting go this firm and delicate touch, *from within*, upon the point named X. This seems to steady all the interplay of muscular action and to keep that *poise* of breath which the old Italian masters so insisted upon. Singers who have learned only to take big breaths by sustaining the side expansion of the ribs in thought, find that when they start to sing this soft part at X begins at once to cave in. Now let this part be kept firm and all the rest of the action goes on naturally. It feels as if all the other muscles interact with just the right amount of holding and yielding when this central sense of control is gained.

VOICE ESSENTIALS IN SONG AND SPEECH

BY W. WOOLLEY

(The following helpful hints on singing are taken from a report of an address by Mr. Woolley at a conference of choirmasters in England and published by the London *Musical Herald.*)

THE ability to produce a pure, sustained tone is the basis of all singing. "Speech long drawn out" was what Sims Reeves called it. Without sostenuto there can be no real expression, no good phrasing, no fine shading.

A criterion of good voice production is the apparent ease by which it is produced. Its characteristics are smoothness, roundness, brightness, fulness, and firmness. That should be the normal tone. The singer will have a sensation of the whole body taking part in the act—a feeling that the tone strongly vibrates in the chest and in the head, the throat

being, as it were, a channel through which the vocal stream flows unimpeded.

Over-inflation of the lungs makes control of the breath very difficult. It is not so much the quantity we take, as the way we take and control it. As a foundation, the lateral costal or rib breathing method is best. The so-called panting exercise is a good one to commence with. In that way the muscles at the bottom of the breast-bone are vigorously exercised.

The voice should have resonance—that is, the intrinsic tones of the voice need amplifying by sympathetic vibration of the chest, which happens when the voice is allowed to rest on the chest, and the tones need beautifying by *allowing* the tone to vibrate in the head—I say "allowing" because that is the singer's sensation.

Good voice means good vowels. Vowels are the tone carriers; they should be pure and clearly differentiated, while being unified in tone quality. It is a mistake to condemn *oo* and *ah* as some teachers do; the fault is not in the particular vowel, but in the way of using it. Good tone will be independent of any vowel if conditions are right.

Consonants interrupt the tone, but this interruption will be small if the articulation is sharp and light at the tip of the tongue and lips, so that the vowel is preserved in quantity and quality. Bad enunciation spoils the tone; it makes a splash instead of a neat finish to a vowel; it pulls the tone column from the roof of the mouth. Bad enunciation will cause scooping, especially on some consonants. Consonant practice can be obtained by taking the phonetic order of the consonants and tacking the vowels on to them, thus *too-toh-tah-tai-tee, doo-doh-dah-dai-dee,* etc.

The whole secret of good enunciation is in the perfect flexibility of the throat muscles, the jaw hanging loose and forward, and the articulation being light and sharp at the tip of the tongue and lips. It is in pronouncing with the throat and jaw stiff that so many throat troubles are caused.

The voice must be expressive. Mechanical and technical details alone will not make a singer; but the more perfect they are, the more freedom there will be for real expression. Singers need to give much attention to the character of the words and phrases and to the atmosphere of the piece as a whole. There will be no real success without the ability to give the right coloring to a song.

Colorless singers sing with what is termed white voice, and it does not matter much what the words are about; the alphabet or multiplication table would do just as well. With the same kind of voice they will sing about the birds in spring, the golden summer sun, the sombre autumn, rainy days, smiles and tears, joy and sorrow. When a singer possesses this color or tone character the appropriate shade will be given to the voice to suit the sentiment of the words. This requires a dramatic nature and a vivid imagination. The most beautiful tone will fail unless it expresses some definite thought or feeling. Besides voice culture there must be soul culture. The sister arts of poetry and painting should be studied as well as nature in her varied moods.

———*———

VOCAL CONTRADICTIONS

BY GURDON A. FORY

I SUPPOSE that no art, certainly no science, is so indefinite as the art of voice building—so intangible, so vague, so elusive when we try to fit it to hard and fast rules or try to deduce unvarying rules from it. I know that some will say this is not true. I believe that many think they have discovered and formulated definite and unvarying rules—that they have "the only right way" at last, and that all other methods are wrong.

In my student days—I mean while I was preparing to teach, for I still consider myself a student—I visited the studios of many well-known, reliable and famous vocal teachers. I talked with them of methods; I heard them give lessons in which were brought out their ideas and their pet theories in regard to the action and control of the vocal organs and the placing of tones. I read widely of reliable standard works on the voice, and am still reading. I talked with singers who did not teach and with teachers who did not sing. I have yet to find any two singers or teachers or writers who agree.

The different viewpoints that I have thus obtained I have found of great value in my teaching. By steering carefully through the maze of contradictions which they present I can find, somewhere, something to fit each individual voice that I am privileged to handle. Yet, in my student days, I often found myself in a hopeless tangle and on the verge of despairing that there was a way out.

First of all there is the breath. I will mention three men well known in American music with whom I talked about breathing. One, a famous old dramatic tenor who toured the country years ago with Seidl's orchestra, teaches purely abdominal breathing—expansion only *at the waist* and *below.* He has many splendid singers among his pupils. Of some of them you have all heard. Another, an old baritone of prominence and the creator of one of the most famous and favorite rôles in all opera, taught breathing from the diaphragm alone. Two, at least, of his pupils are world famous. Another, a famous bass-baritone and a favorite oratorio and concert singer, teaches the high chest breathing. And *his* pupils are well and widely known. So much for the breath! How is one to choose? Bouhy's advice is, "Breathe naturally; think nothing of it." About breathing he says nothing further than this to his pupils. He is right, of course. But many must be *taught* to "breathe naturally."

Then there is the throat. "Leave it open as in taking deep breath," say some. "Close it for a glottis stroke," say others. Which shall we do?

Here is the tongue. One says, "Keep the tip below the lower front teeth." Another says, "Depress the root and *raise* the tip." One says, "Flatten the tongue"; another, "Hollow the middle." One says, "Let the tongue absolutely alone"; another, "Hold it down with a spoon." Have you heard each of these ideas advocated? I have.

Here is the jaw. "Leave it quiet," says one; "Keep it in motion as if chewing," says another.

And the mouth! Of two teachers almost next door to each other in the same studio building one told me to open wide on the high tones, the other laughed at me for doing it, and said the sound would get out through the face. Of the lips Parisotti says, "Hold them projecting out away from the teeth"; another says, "Draw them tight over the teeth." Shakespeare demands a smile from start to finish; Marchesi forbids it.

Parisotti would have you hold the soft palate down on the high tones by depressing the nostrils. Brown and Behnke's book says that it does and should come up; Lilli Lehmann's book says it rises and must be held up. Parisotti encourages to "hum," while Lamperti warns us to avoid it.

Now, why have I thrown this jumble of ideas together? And what is to be learned from it in regard to the action of the vocal organs? Simply that *nobody knows.* Discussion and contradiction are at once silenced by definite and concrete knowledge. We know that two and two are four; no one contradicts it. We know that water runs down hill; no one denies it. But about the natural and correct action of the vocal organs *we do not know.*

True, we can look into the singer's mouth, if he opens it wide enough, and with the laryngoscope we may even look into his throat. But the position favorable to such examination is not a natural but a strained one, and the action cannot, in consequence, be natural and unstrained. If such examination can be relied upon then why the contradictions between observers?

True, we can have the singer describe the sensations of vocal adjustment, but can he describe accurately what he feels but vaguely, and does not see at all? And do any two have the same sensations and, if they had, would they describe them in the same way? And can organs, whose action is normally unconscious, act naturally under the surveillance of the conscious mind? And do the organs act the same in each singer? Do not the various tone qualities which various individuals have in mind have much to do with the varied and dissimilar and seemingly contradictory action of the organs in different voices? Assuredly. And until each and every singer and teacher has come to the same ideas in regard to the quality and placement of each and every tone in the compass of the human voice these contradictions will exist. And such a sameness as this would mean I cannot think of as at all desirable.

———*———

A CHAT WITH LOUISE HOMER

FROM various clippings giving experiences in the career of Mme. Homer, we select the following, which have much interest for young singers.

Speaking of her choice of a career, she recounts the following incident:

"One night—it was before we were married—Mr. Homer took me to my first performance of grand opera. The opera was *Faust,* the company from the Metropolitan in New York. I felt transported into Paradise. To me it seemed another world. Emma Eames and the two De Reszkes were on the stage. While I listened, it was like the opening of a new universe, and the purpose of the human voice seemed revealed as if in a vision."

Later on she went to Paris with her husband, and there, after one year and a half of hard study, she was ready for her dêbut, which she made at Vichy.

While Mme. Homer was in Paris, preparing for her career in grand opera, she took daily lessons in singing; to judge from what she says concerning her own training, she would advise no one to study in haste. The singer says:

"I had my first years of study in America and only a year and a half in Paris. In the latter city I had the good fortune to study under a truly great master, the late Fidele Koenig, to whom I feel a deep and lasting gratitude for his wise and devoted guidance and help.

"I took daily lessons in singing, and I think it exceedingly important that a singer should do this, in order to work under the master's close direction—as much with him as possible, as little away from him as he thinks advisable. I had also another great master, Paul Lhérie, the most famous singing actor of his time in France. With him I had three lessons a week; I had three lessons a week in French diction with the well-known Yersin sisters.

"Knowledge of French, German and Italian is essential to an opera singer, and absolutely correct diction should be acquired under teachers familiar with the standards of European opera houses. Such teachers can be found here, and the study of languages and diction should be begun as soon as the voice work. Facility in singing in all languages is a great advantage; otherwise, the artist's repertoire is limited to the favorable language only, or her interpretation is hampered by difficulty of diction."

Young singers, who aspire to succeed in concert and opera, will be interested in the advice which Mme. Homer offers.

"One great truth," says Mme. Homer, "I gathered from my own experience. It is that a singer cannot be too thoroughly prepared for opportunity when it comes. Delay is often defeat. An unforeseen engagement or a sudden request to sing a rôle

should find the singer ready. It is a fatal error not to learn a rôle thoroughly, unless assured of a representation. This may be demanded unexpectedly, and too much stress cannot be put upon the crucial importance of knowing a rôle, absolutely, before attempting to sing it before an audience. It is a question of victory or defeat, and no amount of preparation against defeat can be too great. It is by grasping each single opportunity to rise to the possibilites of her rôles that the reputation of an artist is fashioned.

"All rôles should be studied with the exact traditional interpretation of the best opera houses as regards tempo and so on. It is better not to know a rôle at all than to learn it wrong; and it is better not to study languages until they can be acquired correctly. There is no greater help to a student than to listen to and study carefully the best singers and great artists."

FACIAL EXPRESSION IN SINGING

BY MME. LUISA TETRAZZINI

The mouth in singing should always smile slightly. This slight smile at once relaxes the lips, allowing them free play for the words which they and the tongue must form, and also gives the singer a slight sensation of uplift necessary for singing. It is impossible to sing well when mentally depressed or even physically slightly indisposed. Unless one has complete control over the entire vocal apparatus, and unless one can simulate a smile one does not feel, the voice will lack some of its resonant quality, particularly in the upper notes, where the smiling position of the mouth adjusts the throat and air passages for the emission of light tones.

The lips are of the greatest aid in shaping and shading the tones. Wagnerian singers, for instance, who employ trumpet-like notes in certain passages, are often seen shaping their lips like the mouthpiece of a trumpet, with a somewhat square opening, the lips protruding. However, this can be practised only after perfect relaxation of jaw and control of the tongue have been accomplished. A singer's mouth must always look pleasant, not only because it creates a disagreeable impression on the audience to see a crooked and contorted mouth, but also because natural and correct voice production requires a mouth shaped almost into a smile.

Too wide a smile often accompanies what is called "the white voice." This is a voice production where a head resonance alone is employed without sufficient of the *appoggio* or enough of the mouth resonance to give the tone a vital quality. This "white voice" should be thoroughly understood, and is one of the many shades of tone a singer can use at times, just as the impressionist uses various unusual colors to produce certain atmospheric effects. An entire voice production on these colorless lines, however, would always lack the brilliancy and the vitality which inspire enthusiasm.

One of the compensations of the "white voice" singer is the fact that she usually possesses a perfect diction. The voice itself is thrust into the head cavities and not allowed to vibrate in the face and mouth, and gives ample room for the formation of vowels and consonants. And the singer with this voice production usually concentrates her entire attention on diction. The cure of this tone emission is, first of all, the cultivation of the breath-prop; then attacking the vowel sound *oo* in the medium voice, which requires a low position of the larynx; and exercises on the ascending scale until the higher notes have been brought down, as it were, and gain some of the body and support of the lower notes without losing their qualities.

The singer's expression must concern itself chiefly with the play of emotion around the eyes. eyebrows, and forehead. You have no idea how much expression you can get out of your eyebrows, for instance, until you study the question and learn by experiment that a complete emotional scale can be symbolized outwardly in the movements of the eyelids and eyebrows. A very drooping eyebrow is expressive of fatigue, either physical or mental. This lowered eyelid is the aspect we see about us most of the time, particularly on people past their first youth. As it shows a lack of interest, it is not a favorite expression of actors, and is only employed where the rôle makes it necessary. Increasing anxiety is depicted by slanting the eyebrows obliquely in a downward line toward the nose. Concentrated attention draws the eyebrows together over the bridge of the nose, while furtiveness widens the space again without elevating the eyebrows. In the eyebrows alone you can depict mockery, every stage of anxiety or pain, astonishment, ecstasy, terror, suffering, fury, and admiration, besides all the subtle tones between.—*Musical Record.*

THE LOST VOCAL ART

[One of the latest books on the subject of singing bears the above title, to which the author, Mr. W. Warren Shaw, of Philadelphia, has added "and its restoration," wherein lies the real value of the work. Criticism to be helpful must be constructive as well as destructive; to tell us that the true vocal art has been lost is to fill us with dismay; to tell us how that lost art may be restored is to offer us ground for hope. We have made a few quotations from this book which contains many paragraphs of value and interest to the vocalist. It is published by the J. B. Lippincott Co., Philadelphia. Price $1.50 net.—The Editor.]

The value of the old school was in the teaching, which incidentally brought about correct adjustment of the parts involved. Empirical instruction, that is, instruction given in the light of observations of phenomena as they occurred, was the general method, if it can be so called.

The empirical system of the old school was effective in obtaining good results, and had the old school been fortified and made impregnable by its reduction to scientific principles, instead of ignoring the true import of the meaning intended, all would have been well.

Physiology and anatomy have nothing whatever to do with correct synthesis of voice production, except to define what can be done and what cannot be done without producing physically injurious results.

Psychology as applied to the art of singing includes a sense of physical activities, as well as divine idealism and conception. It is the first factor for consideration in training the voice, because mental conception of some kind should always precede execution.

Ideally singing is musical vocal expression, and the criticism of song today, generally speaking, is that it is not this. . . . It has degenerated into attempts to make tones in accordance with some method for inducing quantity, resulting for the most part in noises loud and strident.

The quality (of voice) is dependent not only on physical environment, but on the soulful animus, the creative faculty in the imagination; in short, on the condition of the mind.

No man or woman can wilfully hold back or push the breath, and at the same time sing with spontaneity, naturalness, or soulful expression. . . . All attempts to control the breath or tone at the diaphragm are suicidal. . . . When correct habits of breathing are formed, the singing should be as subconscious as the vital or living breath.

When one *expands* to breathe he finds it no longer necessary consciously to hold back the breath in expiration. Technical skill in singing comes from practice the same as is the case with other instruments—for the human voice may be considered as an instrument, but practice does not always make perfect. . . . It is the kind of practice rather than the number of hours which determines the result.

The old masters and singers were fully aware of the fact that the singer is at first incapable of correctly estimating the value of his own voice as to the quantity or quality, hence the entire dependence of the singer upon the judgment of the master. By constant attention to the advice of the master, the singer's ear was educated to the recognition of both good and bad effects. The power of discrimination in the effect of their own voices was thus established. Coincidentally, familiarity with the physical effect upon the singer himself during the production of his own voice.

CHILDREN'S WORK IN MUSIC

CONDUCTED BY HELENA MAGUIRE

IDEA FOR A MARCH RECITAL

MARCH was, in the old days, the great month for "first performances," and an interesting recital might be given with the thought of bringing back again, in retrospect, those great "first nights," and the scenes connected with them, of which we read in the lives of the composers.

There are six which could be used with very good results:

Bellini's *La Sonnambula,* at Milan, March 6, 1831.

Verdi's *La Traviata,* at Venice, March 6, 1853.

Verdi's *Ernani,* at Venice, March 9, 1844.

Haydn's *Creation,* at Vienna, March 19, 1799.

Handel's *Messiah* at London, March 23, 1743.

Gounod's *Faust,* at Paris, March 19, 1859.

The overtures of all of these may be obtained, arranged for four hands; there are many pianoforte arrangements of each for solo, and a judicious selection of vocal numbers, together with readings describing the actual first nights (with some tableaux if possible) would make up a program both interesting and "different."

HELENA MAGUIRE.

ESSAYS ON GREAT COMPOSERS BY THE LITTLE CHILDREN

BY HELEN J. PHYFE

A COMPOSITION ON MUSCIAL FACTS

SOME of the greatest and oldest composers are Bach, Handel, Gluck, Haydn, Mozart, Beethoven, Schubert, Schumann, Mendelssohn, Chopin, Wagner, Gounod, Liszt, and Paderewski.

Bach's parents died when he was young. He then went to live with his brother. Every moonlight night he would go up in the garret, and copy his brother's music. When his brother found out about this he burned up all that had been copied. Bach died blind.

Handel's father did not want him to study the piano. One day Handel played for the Duke. The Duke told the father that he must learn to play. Later he became the court musician and composed water music for King George. He composed the great *Messiah* in twenty-four days.

Gluck was the first great opera composer. He put Greek fables to music, and also introduced the big drum into the orchestra.

Haydn, Mozart, and Beethoven were the three greatest sonata composers. Haydn became a court musician.

Mozart played the piano when he was three years old, and composed when he was five. He and his sister played before the Queen, and received many costly gifts. He composed a requiem which was sung to him just before he died.

Beethoven was the greatest of all composers. He composed out in the woods. He was the greatest sonata writer.

Schubert was the first and greatest song writer. He composed over 600 songs, and also set many poems to music.

Mendelssohn composed the great *Elijah,* an oratorio.

Chopin composed by improvising.

Wagner composed eleven operas: *Lohengrin, The Flying Dutchman, Parsifal,* etc. He took legends, put them in verses, and then set them to music.

Gounod would imitate street sounds in playing. He wrote *Faust.*

Liszt was a great friend of Wagner's and helped him greatly in financial matters.

Liszt gave many lessons to poor people free. Therefore he had many friends.

Dr. Samuel F. Smith, of Newton, Mass., was the author of *America.*

Verdi was a great Italian opera composer.

I study the Leschetizky method, which means a steel hand and a loose wrist.

WHICH INSTRUMENT?

BY LAURA ROUNTREE SMITH

I love the pleasant violin,
And tinkle of guitar,
And think the mandolin and flute
And zither are sweeter far;
I like the harp and banjo, too,
But think in days to come,
I'll let you learn these instruments,
And I will beat the drum!

JUMBLED SYLLABLES

BY JESSICA MOORE

A GAME that will both test and greatly improve one's hearing, a sense that cannot be too strongly developed in a student of music, is played as follows:

One of the guests is requested to wait in an adjoining hall or room until called. The leader then selects the name of some celebrated musician, for example, Frederic Chopin, and gives to each person playing a syllable from his name; to the first chair he gives *Fred,* to the second *er,* to the third *ic,* to the fourth *Cho,* and to the fifth *pin.*

The person outside is then invited in, and at the leader's signal, "Attention 1-2-3!" each person exclaims simultaneously the syllable the leader has given him (or her). The result will be, of course, a jumble of meaningless sounds, but the person who is "It" must endeavor to dissect these sounds and by putting them together find the name of the musician who has been in this manner disguised.

Should the guess prove to be correct he takes the seat of the person whose syllable had given him the cue to work upon, but, in the event of failure, he must return to the ante-room for another try.

The one guessing the most names correctly is the winner.

Syllables may also be divided equally among the guests. For instance, there are five syllables in Frederic Chopin. Should there be ten people present, numbers one and six may say *Fred,* two and seven *er,* three and eight *ic,* four and nine *Cho,* and five and ten, *pin.* In this way everybody may take part.

ETHEL'S MUSIC LESSONS

BY HARRIETTE BROWER

V

ETHEL IN LONDON

ETHEL, with her parents, stopped, while in London, in a hotel on the Strand, one of the busiest streets in the great city. There was so much to see from the windows that the little girl often stood watching the people passing up and down, the crowded omnibuses, and the roofs and towers in every direction.

Even in the hotel so many things were different from what she had seen before. The people, too, though they spoke English, were different. For one thing, everybody was so polite and ready to wait on her, from the nice elevator man who stood bowing outside the car until everyone was inside, to the dear little bell-boys, who looked like tiny gentlemen, with the rows of gilt buttons on their little coats, and the small round caps set so far on the side of the head that they seemed to hang only on one ear.

Ethel was taken to see many wonderful and beautiful buildings. She walked with awed steps through the great aisles of Westminster

Abbey, the most famous church in the world, heard the choir boys sing, and the great organ sound. She sat with her mother in that part of the church called the "Poet's Corner," and looked up at the monument to Handel, who wrote so many oratorios; and at the beautiful white marble head of Jenny Lind, the famous singer. She was also taken to old St. Paul's church, where she heard more organ music, which rang out so grand and powerful that the whole church seemed to tremble, and Ethel felt as if her whole body throbbed with the music.

One thing Ethel noticed was that everybody seemed to love flowers. People on the street often carried large bunches of them; many houses had windows and doors filled with blossoms, and many parts of the public parks were masses of bloom. One morning her mother took her to the great Covent Garden market, near by, and here Ethel saw more flowers at once than she ever dreamed existed in the world. Roses, pinks, and geraniums of every shade were piled up in huge masses. The flower sellers were so eager for her to buy, and the blossoms only cost a few pennies for a big nosegay, that Ethel came back with her arms full, and also with the determination that when she returned to America, she would try to get more blossoms from her tiny garden plot, to tend it with more loving care, and be sure to keep the weeds out.

Queen Alexandra's Day was called "Wild Rose Day," because everyone wore a wild rose pinned on coat or gown. Pretty girls dressed in white and carrying baskets of the flowers, stood on all the street corners, selling single flowers for a penny, or as many more as the customer would buy; the money received was all for charity. The wild roses were made of muslin, but looked very natural indeed, and had a pin at the back, so they could be easily attached to the dress. Some persons wore a dozen or even more. Ethel kept her flower and took it back to America.

You must not think that Ethel was forgetting her own practice in the excitement of sightseeing. No, indeed. Every morning after breakfast she and her mother did the table exercises together and recited triads and scales. She could now say all the triads of the major and minor scales without making one mistake—a very good record indeed. In the afternoon there was often a little time to devote to reading some interesting book about the composers, or to studying a few measures of a little piece which Ethel was learning by heart. She did this by reciting the notes of one hand and then those for the other hand,—thinking all the while where they were on the keyboard, and how they would sound if she played them. It was quite a short piece, to be sure,—only about a page,—but by trying to think out the notes, Ethel was learning to think music. She wanted to finish the piece and play it for her teacher when she saw her again, for she knew it would please Miss Dudley if she could do it well.

Our little American was taken to many concerts during her stay in London. She heard the great pianist, Paderewski, play in an immense circular concert room, which she was told was called the Albert Hall. It was all very wonderful to think that the softest note could be heard all over the vast space just as distinctly as the loudest. Ethel and her mother went to speak to the famous man afterwards; he smiled down at Ethel very kindly, taking her little hands in his strong, white ones,—telling her to study diligently, so that one day she would become a good musician. She promised to do this, and I am sure she will keep her word.

At each concert Ethel attended she learned something more about music and how to listen to it. The music that had seemed dry and somewhat dull when she first heard it, now was beautiful and full of charm; she began to love it more and more.

Ethel was enjoying herself so thoroughly in London, that she was almost sorry to hear that they were to start on their further travels the following day. What further experiences the summer held for her you shall know in good time.

STARS AND PRACTICE CARDS

If I had not used the practice cards I think I could have practised just as much without them. I like to keep a record in this way, and think it is very interesting.

I do not think I have really worked to win the stars, for I think I could practise just as well without them. In fact, I like to get stars when I really have a good lesson.

Helen Wakelin.

MUSICAL GLASSES

Fashion governed music even in the old days, and sometimes curiously. In 1764 there was a rage in England for the musical glasses. This was in reality a harmonica, an instrument made of glasses, and which, by employing a finger moistened with water, produced what were considered agreeable concords. It is odd to think of the great musical composer Gluck making his bow before the public as a performer on the "glasses" at the Haymarket Theatre. In one of Horace Walpole's letters he writes of this event as "stirring the fashionable world." Mozart and Beethoven both wrote for the "glasses."

WHAT IS "CLASSICAL MUSIC"?

To be classical a musical composition must be written according to the standard rules of art, and with a subject worthy of the setting. It may be very simple, yet it must contain the elements of true musical inspiration. To form a correct judgment as to what is classically good, you must have some knowledge of the laws of music, so you see how necessary the study of harmony is even for those who do not intend to become professional musicians. Music need not be "heavy" to be classical, as so many young folks imagine. The airiest of Bach's gavottes, the shortest of Schubert's *Moment Musicales,* the most brilliant of Mendelssohn's overtures—all these are purely classical as the most ponderous of compositions. It is doing a good theme justice which makes a work classical. It has been said that "to be classical is simply to be grammatical."

A LESSON IN HYMN-TUNE PLAYING

BY ELIZABETH H. DUNHAM

"My music teacher is going to give me special training in hymn playing."

"I don't see what she means by that," said Gladys. "Anybody can play hymns."

"Miss Zeissler doesn't think so. She says very many quite good performers of what people call piano music are failures in playing hymn tunes."

The next day, when Dorothy knocked at the studio door, her teacher said: "Good morning, girlie, I have been thinking that we would commence our hymn lessons today. Yesterday I heard a most inspiring rendition of the grand old tune of *Federal Street,* given by a fine brass band, and that reminded me that we were to give some attention to the execution of hymn tunes. How would you like to begin with this same *Federal Street?*"

"Very much, Miss Zeissler. It looks easy enough. Only one flat; four counts to the measure, and a quarter note the one-count note," said Dorothy, as she seated herself at the piano.

"That was a very good attempt," Miss Zeissler said, as Dorothy finished, "but do you think a listener could have followed four distinct melodies in your quartet?"

"Why no, I suppose not, because there is only one melody and that is the upper part which most people sing."

"I think I shall be obliged to disagree with you, and if you will play the parts separately you will find that each is a simple melody, though the upper or soprano part has more movement, and is consequently more pleasing than either of the other three."

"Why, that is so," Dorothy replied, as she ran through the parts. "Each one is a tune. Listen to me again, please, and I will put them all in. But you see it is more difficult than I thought to look at them all. My piano pieces are so much easier to read because the notes that are to be played at the same time are placed nearer together on the staff, and then, too, there are measures with groups of just single notes for either one hand or the other, and then again, one lost note in a chord doesn't seem to matter much."

"That is all true," said the teacher, "and the reason that one omitted note in a chord is not missed so much in compositions for the piano is because such chords frequently contain duplicates, so that one can be spared. A hymn tune is a vocal composition and is composed of four distinct parts, which may be sung by four voices, though any number of singers may be added to either one or all of the parts, as is the case in congregational singing."

Dorothy's second attempt was more successful because, being of a musical temperament, she could easily supply some notes which could harmonize with the upper part when she was not sure of the written one. As she struck the last chord she laughingly said: "There! I am sure I did not leave any voice behind that time!"

"No," her teacher smilingly replied, "but had you been accompanying singers who were familiar with their parts the result might have been more pleasing had you done so, for the notes which you selected to harmonize with the soprano part formed quite different chords from those which the composer intended to have sung. For instance, in the third bar, the note 'a,' second space, which you played in the alto part would have been quite disconcerting to the singer who would have sung the note below, and also to the bass and tenor, as it caused a dissonant chord. All dissonances are not unpleasant if they occur in proper places. Then again, in the fourth measure, the bass should have sung 'f,' fourth line, but you made it quite impossible by playing 'd.' While the notes which you substituted might harmonize with the upper part, in combination with the others, the result was harsh discord as you will see if you play them together."

"You are certainly right, Miss Zeissler, and I see that hymn playing must be perfectly correct above all things, and I will try once more. You know you often tell me that 'he who rises every time he falls, rises sometime to stay.'"

With determination to avoid all previous faults, Dorothy made sure that she knew each note of the first chord before she struck it and as the next two were like it she grew quite confident, but on the fourth the parts began to separate and she said to herself: "I will be sure of the notes for the left hand, anyway," and down came the keys alone, though soon followed by those of the right hand. In this manner she played on to the end.

"There!" she exclaimed, "not a voice lost nor a false note in any part!"

"I congratulate you upon that measure of success, my dear, and if I were not sure that my pupil had even more courage and persistence than she has already shown, I should refrain from making any more criticisms today, but I am sure that accomplishment to her will never end in vain satisfaction, but will become an incentive to further effort. So, I will ask you to let me play the tune as you have just done."

"Oh, how distressing!" Dorothy cried, after Miss Zeissler had played a few measures. "Did mine really sound like that? The hands seesawing over the keyboard, one trying to catch the other? Please do not go on!"

"Yes, of all the faults of hymn playing, this is, I think, the most distressing. But I am sure, if you will try once more, I can show you how to correct it.

"Let us go slowly. The first three chords you are sure of. Nevertheless, do not hurry them, for you will not be able to recognize the succeeding ones as quickly. While you are playing the familiar notes, look ahead to the unfamiliar chords. Be sure you know every note in the chord before you strike the keys. That is the way! Slow and sure! But do not hurry in this easy place. We must have an even tempo, not helter-skelter, haste and waits, else we shall not have played a tune, but just a number of unrelated chords. Bravo! Now let me show you what wonderful harmony and dignity of form this old tune possesses, and how you will make it sound when you have practised it more. Composed by H. K. Oliver, of Salem, Mass., as long ago as the year 1832, it has borne the test of time. No collection of hymns is quite complete without it."

As Miss Zeissler rose from the piano Dorothy said: "I see the skill in hymn playing is something to be desired."

"Yes, Dorothy, it may be a resource of much usefulness as well as pleasure to yourself and others. The pianist who is an accurate and sympathetic hymn player is always in demand. There are many public occasions on which hymns are sung and a good leader at the piano is a necessity. The person who can play the favorite hymns is a loved member of the family, and a welcome guest in other homes. Remember to play the notes that the composer has indicated, not some others that you think will sound just as well. Let both hands fall simultaneously upon the keys if the respective notes of the chords are intended to be heard together.

"Some time we will talk more about musical punctuation and interpretation of hymn tunes, but if you will perfect yourself along the lines we have discussed this morning, it will be a pleasure to listen to you. Goodbye until next week."

———*———

PUZZLE CORNER

BY NANCY P. MCKIBBIN

NUMERICAL MUSICAL ENIGMAS

I. My whole, a word of nine letters, is a certain succession of musical intervals—(Chromatic.)
My 9, 2, 4, 8, 3, a group of singers—(Choir.)
My 6, 3, 8, 6, one part of an opera—(Aria.)
My 7, 2, 3, 4, 6, 7, an organ used in singing—(Throat.)
My 5, 6, 3, 1, 2, military music—(March.)

II. A word of twelve letters, where music in all its branches, is taught—(Conservatory.)
My 10, 1, 9, 8, 7, 5, a division of the keys of the piano—(Octave.)
My 6, 5, 12, 5, 11, a French opera composer—(Reyer.)
My 1, 2, 6, 3, 5, 9, a musical instrument—(Cornet.)
My 11, 5, 4, 9, a pause or cessation in music—(Rest.)
My 5, 3, 1, 10, 6, 5, a request for repetition—(Encore.)

III. My whole, consists of ten letters, and is a boating song—(Barcarolle.)
My 4, 2, 3, 7, 8, an old form of song—(Carol.)
My 1, 5, 6, a division of musical writing—(Bar.)
My 7, 1, 7, 10, an orchestral instrument—(Oboe.)
My 1, 10, 8, 8 is used to make chimes—(Bell.)

LIVE BOYS AND GIRLS

Need the companionship of a live magazine like

LITTLE FOLKS

The Children's Magazine

IT is made just for little girls and boys between three and ten years old. It is a ***story teller***, a ***picture book*** and a ***playfellow***. Its fun is of a simple, sunshiny sort. Its little tales of children stimulate their readers and hearers to be fearless, cheerful, unselfish, and, above all, true and honorable. All stories of a painful kind are excluded, especially such as would haunt nervous and imaginative children.

The best children's writers, artists and editors make this the ideal juvenile magazine. You cannot bring too many good influences to bear on your children. The influence of such a magazine will be of inestimable value to you.

Special Introductory Offer

For 15 cents LITTLE FOLKS will be sent for three months to a new subscriber

LITTLE FOLKS MAGAZINE

Dept. B, Salem, Mass.

THE VIOLIN

CONDUCTED BY RAY G. EDWARDS

STUDY AT HOME

BY RAY G. EDWARDS.

If it were true ten years ago that a music student could perfect himself or herself in the technical and temperamental requirements of art in America, it is even more true today. With the best teachers in every branch of music residing here, and the great opera companies that have been organized in several of our largest cities, where the world-famed singers can be heard, what more is there for the student to pick up in Europe? But Europe, you say, is rich in memories. Yes, many sad memories for thousands of young men who have failed, and thousands of young women who learned of the shady side of life, thousands of miles from home; memories that they would fain forget.

What of the other memories that Europe has to offer our music students? Will the memory that Liszt played in this house, and that Wieniawski lived in that house, and that distinguished musicians ate at this restaurant, add in the least to one's technical attainments, or increase the power of expression? Everyone knows that it will not. To be sure, we must not ignore all sentiment. There is pleasure in visiting the old places of Europe. That, however, can well be reserved for later years, after the student has earned a vacation. Not only is the artist who has won his way to some degree of fame entitled to a rest, but it will be a real pleasure, then, to visit the old country and the former haunts of men who labored and achieved success and fame along the same lines.

But as for hearing good music, grand operas and symphony concerts, nowhere in the world are there greater advantages than right here in America. Why not? Do we not make long engagements with the greatest artists, vocal and instrumental, in the world? Has it escaped your attention that many of the opera stars are Americans? Do you not also know that American teachers in foreign cities draw large classes of American students, because they are the best teachers, and because, speaking one language, they, teacher and student understand each other better?

American concert artists are welcomed in the musical centers of Europe although in Italy they actually tried to boycott American singers, who have no trouble in securing opera engagements in competition with Italian singers. The demand for American music, or shall I not better say, music written by American composers, is so great in Europe that an American music house has been opened in London recently. The catalogs of all the largest music publishers in Germany contain the names of American composers and of cosmopolitan composers who spend as much time, if not more, in America than in Europe.

What shall we say of violin teachers, in particular? Only this: Scores of violinists in our great symphony orchestras, and many of those in the orchestras of Europe, received all their technical training in America. As for temperament, that comes from within the individual, and the only outside power that can help to bring it forth is the inspiration gained from hearing good musicians, such as we have in our native land. One does not have to stand up to his chin in a perfect muck of experience to know a thing. Power of interpretation comes from within, if it is any good at all. Artists "arrive"; their command of self and of the part they play is a matter of unfoldment, and this can take place as well in Illinois as in Italy, as well in Boston as in Berlin, as well in California as in any place in Europe. Everyone knows this if they will gather their mental forces and think about it.

No, there is absolutely no ground for assuming that musicians cannot develop to their full capacity right here at home. And as for opportunity to make good—look over the names of great singers in our grand opera companies, and the membership of our largest orchestras—see the names of Americans, and be proud.

———*———

THE SELECTION OF A VIOLIN FOR SOLO PLAYING

BY FRANK WALDO

By solo playing is meant, in the present connection, the public performance of violin solos in small and large halls with piano, organ, small orchestra, or large orchestra accompaniment.

The demands upon the violin are greater in solo playing than in any other musical forms. The instrument must sing as a voice, and must portray all the emotions of which the violin is capable; there must, too, be adequate power.

Just as in the human voice, it is quality that counts most in a solo violin; but power adds enormously to the value of a solo instrument. These two characteristics are unfortunately so rarely combined in an instrument that a good solo violin is a rarity indeed. Most solo players, however, look upon power as the first requisite, while to the sympathetic listener quality of tone and technic are what distinguish one soloist from another.

Solo violin playing is plainly divided into two sections or departments: The playing of the average soloist in halls of moderate size, seldom seating over 1,000 or 1,200 people; and the playing of the great soloist or virtuoso in large halls, seating from 1,500 to 3,000 or even more persons.

The average soloist plays with piano, organ or small orchestra accompaniment. The small hall in which such concerts are given is well within the "field of hearing" of most good violins. The accompaniment is of such contrast of tone quality, or of such slight volume, that the tone of a really fine violin is not masked except sometimes in playing chords on the lower strings.

The violin that is good for parlor playing has some of the characteristics necessary for solo playing in a small hall; but there must be greater power and volume of tone for solo playing. And that is the reason why good solo violins are not plentiful; because as violin tones become powerful they lose the beautiful quality so effective in parlor and solo playing.

For the finer effects in solo playing old age in a violin is absolutely essential. The more brilliant passages can be given on a fine new violin, although very rapid runs are apt to be blurry; but the deeper and more delicate shades of feeling can best be expressed by the old tone quality.

The exquisite tone quality of the old Italian violins make them the most desired for solo instruments; and it is simply amazing how the apparently thin tone of such instruments carries in a hall of moderate dimensions, so that it seems even louder in the rear of the hall than at the front. The soloist who has become accustomed to the Italian violin tone in his playing will never be satisfied with any other quality. In his desire for power he may try the apparently louder toned violins of French, German, or Tyrolean make; but his critics will complain of the hardness or roughness of his tone and he will be forced to return to his more flexible and smoother toned Italian violin—if he has not been so foolish as to part with it, as is too frequently the case.

I recall one eminent soloist who felt that he wanted more tone, and sold his old Italian instrument whose tone had entranced so many thousands of the best American musical public. A more modern Italian instrument of bigger tone was secured, but the former beautiful tone was gone and in its place a stiff, unsympathetic tone was produced which even the great technic of the player could not endow with the beauty which formerly distinguished his playing.

The lack of carrying power and of pliancy of tone in the new violins is a most serious drawback to their use as solo instruments. Among the old violins the coarseness of the German tone and sharpness of the French tone are accentuated and magnified in the concert hall.

The old English violins come nearer to the Italian tone than do those made in France and Germany, and consequently they serve admirably as solo instruments in small halls—their lack of power preventing their use in large halls. But it may be parenthetically remarked that most of the best old English violins are sold as Italian violins, in America at least. The Italian violins are, then, the solo violins *par excellence;* and they range in value from $400 up. Diligent search among old violins of other nationalities will, however, reveal an occasional instrument that will serve admirably for solo work, and which may be purchased for perhaps a couple of hundred dollars. The only true test of the suitability of a violin for solo work in a hall is to try it under concert conditions; theorizing about it is never safe.

The work of the great violin soloist presents the most exacting demands as regards the instrument employed. Modern social conditions have tended constantly to increase the size of music halls, and the development of musical knowledge and taste has greatly increased the frequency of orchestral accompaniment and made it the background of the violin soloist. The result has been the continued cry for more tone from the solo violin. In fact, the violin which is perhaps at its best in a music hall with 800 or 1,000 in the audience, if played in a big hall holding 2,000 or 3,000 people, its tones are forced to the ut-

most in order to make a satisfactory impression on the great air mass in such an enormous enclosure. And when the tones of the solo violin are riding on the great tone waves of the orchestra a mighty effort on the part of the soloist is necessary to make his instrument heard as it should be.

These extraordinary demands on the solo violin are really too much for the instrument, and not only must the great soloist prepare himself in technic for his work, but he must provide himself with an adequate instrument.

Contrary to the generally prevalent impression, that the great violinist early finds a violin for life and holds on to it, most of the great soloists are constantly changing instruments. There is the constant striving to obtain an instrument that will remedy that inadequacy for a great hall. So that the great artist is constantly hoping that in the last instrument acquired, and which promised great things, he has found a tone that will satisfy him, only to have it dawn upon him more or less gradually that it is still inadequate. Hence the search anew, with successive partial disappointments. So frequent are these changes of instrument, it is impossible for anyone except the most enthusiastic connoisseur to be informed regarding the violin or violins currently played by the great virtuoso violinists. Probably all of them carry two violins with them on their concert tours, and sometimes both instruments are used in one concert, the change being made to suit the composition played.

There is something almost pathetic in the eagerness of the solo violinist to try some instrument that has been recently brought to his personal attention, the glories of which have been heralded to him in enthusiastic terms by players or dealers. He is constantly hoping that there may thus be secured a violin which will satisfy him fully.

Sometimes violins thus presented to the soloist are bought at once without leaving his sight, if the player feels great possibilities in the instrument. And, on the other hand, a violin soloist will become so disappointed in what appears to be his favorite violin that even when on a tour he will sell it when offered a large sum by some musician, collector or dealer who has become enamored of it.

An instance of such disposal of a violin, which occurred a short time ago, comes to mind. A great soloist played in Boston and I was permitted to examine his Strad violin very minutely. A week later, happening to be in another large, but distant, city, I was examining the violin collection of a dealer, when he opened a violin case, and before he could say a word I exclaimed, "Why! that is Mr. Blank's violin!" naming a great soloist. "Yes," the dealer replied, "I have just bought it and received it only yesterday."

The virtuoso soloist requires a big, noble toned violin that will stand tone forcing to the utmost limit of the player's ability. Great carrying power is an absolute requisite. The violin tone must have breadth in order to permit the tone shading that is called for by the various compositions to be performed. It must have the Ra-a-a-a-h tone and not the O-o-o-o tone quality.

The tone must be smooth and sympathetic, for these qualities are just as desirable in public solo playing in a large hall as they are in parlor playing.

Lastly, the tone must be suited to the player's character of playing, for at most times he is using his utmost endeavors to bring out all there is in the musical composition that his own soul can express by means of the violin.

Only the greatest violins can even approximately satisfy the virtuoso violinist. It has been found that the best violins of Stradivari, Guarneri (del Gesu), and Maggini have been found more satisfying for virtuoso solo work than those by any other makers; and the violins of these makers form the great majority of great solo instruments. In fact, so marked is their excellence that the great soloists seldom look outside of this trio of makers for satisfactory instruments. Nevertheless, some of the other makers have occasionally produced a violin which possesses the qualities demanded for solo playing of the highest order, notably some members of the Guadagnini and Gagliano families. Whether violins of Lupot, Pressenda, and Rocca will ever rival those of the great Brescian and Cremona makers, it will take another fifty or hundred years of ripening to demonstrate.

When once a violin has shown its greatness in the hands of a virtuoso, how carefully is it treasured by him and how eagerly is it sought after by some successor in the concert field when its master has laid it aside forever!

The great solo violins change hands at prices ranging from $7,500 to $15,000. And many of them never actually come into the market at all, but the transfer is arranged on a private basis, and it is not known to the public that the violin was for sale until the sale has been effected.

The violin soloist, whether in small hall playing or in large hall concert work, who has a fairly satisfactory instrument, should be extremely cautious about parting with his violin, even though he finds one that apparently suits him better.

In closing, it may be remarked that even the greatest violins may not be equally good for all kinds of solo playing; so that a violinist can frequently select some composition or movement for execution that is especially suitable for his violin.

ARTHUR HARTMANN ON VIEUXTEMPS' FOURTH CONCERTO

(Recently the Editor of THE MUSICIAN received a letter from Arthur Hartmann, the celebrated Hungarian violinist, who, after a stay of several years in the United States, has returned to Paris, where he devotes his time to concert work, composition and teaching. In this letter Mr. Hartmann refers to Vieuxtemps and his own admiration for the composer. We quote from the letter:

"One of the adorations of my life has been Vieuxtemps and what he created for us on the violin.

"There is, unfortunately, only a too great tendency these days to decry Vieuxtemps and to claim that his very music implies what his name is *vieux* (old) *temps* (time).

"As a man, as an artist and an idealist (added to the fact that I am more or less of a musician) who, since early boyhood has played the fourth concerto (Vieuxtemps) hundreds of times in public, the sincerity of my admiration for this work of Vieuxtemps cannot, I believe, be doubted.

"I hope it may also be the means of partly checking the sneers and derision of the very youngest set of violinists who almost disdain to study Vieuxtemps (he who gave us our literature!) not to speak of any longer playing him in public."

In concluding his letter, Mr. Hartmann advises students to take the piano part of the concerto and peruse it note by note, phrase by phrase, up to the point where the solo violin is introduced. Mr. Hartmann's appreciation of the concerto follows.)

HE sits in a room, deeply meditative. Days and nights he has felt the air pregnant with moods, with shyly quivering shades, ecstatic, poetic. He now is enveloped in the mists of religious fervor, expectant, absorbed. One may well say, he is almost formless—a soul without a Being! From out of space infinite, he has caught one note, which he fastens, humbly grateful. From the realms of Love, another note springs to its side, then a third and now the quivering soprano supplicates in the great chorale, magnificent—sublime!

"In the beginning was Chaos," reads the world's history, and thus has this great magician conjured from Space his bouquet of vibrant colors. Now the pizzicati of the double basses, the short, sharp interruptions of the horns and trumpets pulsate warmth and earthly life. The risings, the falls, the almost pitiable attempts to re-establish the Heights of the Gods set in, and soaring mid-air, we soon reach the Climax of Despair. Then the crash, the sob, the relentless sharp pricks of the trumpet, the slow mumblings of the 'celli—the bleeding world looking up to its Creator!

That appeal is at once answered by the delicate clarinet. It sheds its mellow lights, it repeats and lingers caressingly on one note, while it floods the nether worlds with sympathy and fuses into one with the flutes, which are now soaring in the Beatitudes. Again the Benediction of God in the solitudes holds realm. The Purified Human is being carried up—the utter annihilation, evaporation of Being is achieved, the crystallization of Soul-supreme has become Life.

The orchestra has ceased, there is a long pause—we are facing God.

Vieuxtemps, great Poet, *this* is what the opening of the Fourth Concerto means to me. It is after this Introduction, that I tremble at the thought of my worthlessness in taking up the "Word"—in coming through Space and Eternities, bearing a silken thread of Light from the Sun; of Life, frail and timorous.

How wonderful of you to have left us that grand Pause in the "World's Symphony," so we may devoutly look up for the power and get the Divine Touch—that we may reverently take up the skein and weave on, in the marvels of your Creation!

If You are in the Market for a
RARE Old VIOLIN

This Book Will be Sent You Without Cost

If you appreciate the time, money, travel, experience and work necessary to produce such a book; if you realize that we have bought and sold more precious violins than any other house in America, then we know this book will be treasured by you.

Within white and gold covers, in the highest form of the printer's and graver's art are faithful color-type plates of rare old violins we own. Many of them are world renowned masterpieces.

From Stradivarius and Guarnerius violins at $10,000, down to genuine old violins at $50 and $100, we show and describe rare old instruments which have responded to the bows of masters of greater or lesser fame.

In this book you feel and breathe the atmosphere of the violin world and if you wish to buy a good old violin this book is for you.

It goes without saying when you buy a valuable violin it is most necessary that you deal with a responsible house whose word and guarantee will protect you.

To those who are soon to be in the market for a fine violin we extend this invitation to write us for a complimentary copy.

LYON & HEALY, 19-31 E. Adams St., Chicago
The world's largest music house. Owners of the famous Hawley collection.

LA FAVORITA STRINGS
Italian Gut. Best in the World. Warranted
VIOLIN
E, 4 lengths; A, 2½ lengths; D, 2½ lengths; each in separate envelope; and single lengths tested, each string with tag "La Favorita." For sale by Leading Music Dealers. Ask your dealer but insist upon "La Favorita."

IMPRESSIONS OF COLERIDGE-TAYLOR'S NEW VIOLIN CONCERTO

BY A. WALTER KRAMER

Someone has remarked—and with right—that though there are new symphonies, overtures, oratorios, sonatas for various instruments by present-day composers, there are scarcely any new violin concertos. And this is to a large extent true.

In recent years we have heard the Sibelius concerto from Maud Powell, the Conus from Kathleen Parlow, the Förster from Jan Kubelik, the Glazounov and John Powell from Efrem Zimbalist. They have been played and their qualities commented upon. No one need fear that critics will ever have to pray that they be spared hearing them twice a week, as one now hears the Max Bruch G minor, for violinists will not want to play them regularly. So they add and detract little from musical development in general and less from violin literature in particular.

Maud Powell has always shown a keen and admirable interest in novelties. It was not surprising then to have her introduce the new concerto in G minor by the late Afro-English composer, Coleridge-Taylor, at her New York recital, October 21, 1913. To be sure she had played the work at the 1912 Norfolk Festival a little more than a year ago, but it had not had a strictly public hearing until the New York performance.

There are doubtless many reasons why Miss Powell likes the work. She plays it as though she is fond of it. To begin with it is inscribed to her and, further, the pathetic demise of the composer at the early age of thirty-seven plays a part, which is not wholly removed from that of a sentimental influence. Miss Powell has taken the concerto with her on tour and played it with several orchestras as well as in recital with piano accompaniment. It is liked by audiences, which is, of course, a determining factor in whether or not an artist continues to play any composition. For, if there is anything rare, rare indeed, as snowstorms in the Tropics, it is an artist who plays a work which he or she believes in, to which an audience does not respond.

The work is cast in three movements: I—*Allegro maestoso;* II—*Andante semplice;* III—*Allegro con brio,* and the form is quite conventional. The opening theme, with its sweep and its squarely-cut harmonies is the most imposing thing in the concerto. It speaks out a definite thought and with considerable conviction. Less distinctive, though happily conceived, is the second theme. In the *Andante* there is melody a-plenty though hardly of a very individual type. The last movement has a dance theme which is clever, but none too original. In fact, no movement suffers from being weighed down with an embarrassment of melodic riches, as do many movements in Schubert where gem after gem of purest melodic loveliness abound.

Far beyond the province of this brief discussion is a detailed accounting of the various themes, their development and the more minute matters of the composition. It must be remarked too, that the work was presented with the orchestral part reduced for the piano.

What seemed of peculiar interest to me was to note how limited was the ability of even so well and favorably known a composer as Coleridge-Taylor to develop themes in sonata form. Best known as a choral composer this weakness has not been so widely recognized. Had he, on the other hand, made his name through sonatas, symphonies, etc., there would have been nothing of this nature to note. If he had a kinship with Dvorák in his harmonic scheme—and many believe he had—he surely shared with Grieg the fatal fault of *repetition* where masters have given us *development* in working their themes. Quite as the great Norwegian gives you a theme in the first movement of any of his sonatas in every imaginable key, instead of actually developing it, so does Coleridge-Taylor repeat his themes in various tonalities in this concerto until you find yourself quite anxious for a new treatment. It is again the failure of a composer to whom that form which Beethoven mastered so well is not congenial, to put it very mildly.

There is much color in the slow movement, though here too there is lacking something of that coherence which the *Larghetto* of Beethoven and the glorious *Romanza* in F major of the Brahms concerto (though Brahms never named it, it must needs be called a *Romanza*) each possess in their own way. With the orchestral part the concerto is doubtless more interesting, since those of us who know the work of the composer of *Hiawatha*—his most popular work, though not his most mature—are aware of his ability to write for the orchestra effectively and tastefully.

Coleridge-Taylor was to me a lyricist, a "singer of sweet songs," songs that had the tinge of African blood in them at times and again were as cosmopolitan as the work of a professed ballad writer. The grand manner was never his,—I mean the grand manner of Bach, of Beethoven, of Brahms, of Wagner, of Strauss, even of Edward Elgar. He has, to be sure, moments which just escape arriving at an inspirational summit, this, repeatedly, because of some little turn of a trivial nature. If there is something of this kind in the concerto it is the incessant passage work for the solo instrument, a good deal of which is quite as aimless as the cadenza material at the beginning of Sarasate's vapid *Zigeunerweisen* (Gypsy Airs). In fact, I know no other new violin concerto which contains so much technical show-work as this. And it is this that detracts; for we today have at last come to the point where we do not wish our soloists to disport themselves (and bore us) with meaningless pyrotechnics of no musical significance. The modern concerto—though it is almost idealistic to hope at arriving at the desired goal—should be of as great musical value as a new symphony, symphonic poem, sonata or overture. Our daily prayer should be that musical ideas conquer technical display. What a treat in store for music critics of the twenty-first century!!!

An almost contagious enthusiasm was displayed by Miss Powell in her playing of the work. She entered into it in a spirit that would bring joy to the heart of any composer. Previous to hearing it I had been over the score quite carefully; there were things in the music of which I expected more could be made and in these I was disappointed. Never once did the passage work baffle the popular American violinist, not even the difficult cadenza over a long tremolo in the bass of the piano (which I take to be a tympani roll in the orchestra). But I should like to hear the work played with more warmth, with a finer and fuller tone than Miss Powell produces today. This music requires a searching tonal quality, an emotional color which was hardly given it on this occasion.

As to the audience's reception of it it may be faithfully recorded that it applauded each movement earnestly.

It will be interesting to watch and see whether other violinists will study the work for their repertoire. I believe it will have a decade of popularity, possibly more, should it have the good fortune of being played by those rare artists who can make a work seem much greater than it really is.

THE CHOIR & CHORAL DEPARTMENT

CONDUCTED BY H. C. MACDOUGALL

MORE ANENT CHOIR ATTENDANCE

BY ABRAM RAY TYLER

WHY do people sing in choirs, anyway? Some of the reasons, aside from financial gain, are:

1. A love of music; 2, a desire to be in something, which desire the democracy of the average choir loft meets; 3, a thought of serving the church in some way; 4, pure curiosity, at first succeeded often by a real desire to learn all that the opportunity promises.

Therefore, to form a choir you must let people know that you promise a chance for the attainment of as many as possible of these ends.

This may be accomplished by newspaper advertising, word of singer to singer, or by proclamation of the pastor and leaders of church meetings. The larger the church the better the chance of success. A poor minister (mark I do not say preacher) can, however, do more to disorganize a good choir than the best choirmaster can to organize it.

Given the choir, to keep it you must convince the members of their interest, duty, and privilege in maintaining it. Never for one instant think you can do it. If they do not, you cannot. Practising will do more to accomplish this than all the preaching since Adam. So, if wise, you will observe the following:

I. Have interesting music to sing.

II. Make the members feel that, through their music, they are to appeal to, influence, or help the congregation. That, in much greater degree than in any other form of musical practice, they must give rather than get.

III. Aside from your immediate material, you will always have something extra in practice. This may be a cantata, an unusually difficult (technically) anthem, or some secular work. Always be prepared for something above and beyond routine, and always leave a rehearsal with something only partially read. Get every member of the choir to see "the star" *your* "wagon is hitched to."

IV. Urge the organizing of the choir as one of the church societies, and, as far as may be, teach them self-government.

V. Never rehearse your music twice in the same order. If you practise the anthem first at one rehearsal, take the response, the chant, the hymns, or the cantata first at the next meeting.

VI. Always begin on time. Yes, I've done it for twenty years.

Such a course will insure prompt attendance, hearty co-operation, and often, from mediocre material, surprising results. The development of solo material among volunteers will help the interest, but must be administered with absolute impartiality and patience as well as tact. Many a volunteer choir has gone to pieces because the leader uses one (or a few) gifted members to the exclusion of others less promising.

Finally: A potent aid to popularizing the choir and bringing it under the volunteer yoke of the discipline that must govern all team work in the world is the cultivation of a spirit of appreciation in the congregation. Make them praise the choir for good work instead of the director, suggest their dining or otherwise entertaining them, and you will reap the reward.

NAMES OF HYMN TUNES

BY CHARLES H. BOYD

[Every organist is, or ought to be, interested in hymn tunes. It is a good plan to annotate one's hymnals as one picks up, here and there, items of value. The following article is of special worth, since it brings within the limits of a brief article much information about pieces in this small musical form. In regard to the name *The Stilt* for *York* Dr. Mansfield suggests very ingeniously that if one will hum the tune and at the same time imagine oneself to be walking on stilts, one step to a tone, the pertinency of the name *The Stilt* will be apparent. —Editor Choir and Choral Department.]

TURNING the leaves of a modern hymnal one notices a large and sometimes curious collection of names designating the tunes. Many of them have been associated with certain tunes for long periods, despite the fact that some tunes have half a dozen or more names. Perhaps *Old Hundred* is the best-known name. Properly it is *The Old One Hundredth,* the tune in some of the Genevan Psalters and in the Sternhold and Hopkins English version for the one hundredth psalm. At first the English psalm tunes were known by the numbers of the psalms with which they were associated. After Tate and Brady's version of the psalms came into use the prefix "old" was adopted for the tunes of the older version. In Este's psalter of 1592 three tunes were named, and the fashion started.

Sometimes the words of the hymn provide a name for the tune. Thus we have Dykes' *Strength and Stay,* for the hymn "O Strength and Stay, upholding all creation"; Oakley's *Abends,* for "Sun of my soul"; Monk's *Eventide,* for "Abide with me, fast falls the eventide"; Monk's *Ascension,* for "Hail the day that sees Him rise"; Wesley's *Alleluia,* for "Alleluia, sing to Jesus," and Smart's *Nachtlied,* for "The day is gently sinking to a close." In this class is also Sullivan's *Golden Sheaves,* suggested by a line in the hymn for which the tune was composed, and Dix's "To Thee, O Lord, our hearts we raise." Wesley's tune *Aurelia,* usually sung to "The church's one foundation," was composed for "Jerusalem the golden," and the original name of the tune has been retained. The tune so often used for the latter hymn bears the name of the composer, Alexander Ewing, a Scotch army officer. Monk's *Wordsworth,* for "O day of rest and gladness," is named after the poet and author of the hymn.

Latin titles have appealed to many hymn-tune composers. A familiar example is Dykes' *Lux Benigna,* for "Lead, Kindly Light." Two more of Dykes' are *Requiescat,* for "Now the laborer's task is o'er," and *Dominus regit me,* for H. W. Baker's paraphrase of the 23d Psalm. Goss' tune for "Praise, my soul, the King of heaven," appears in either Latin or English as *Benedic anima* or *Praise, my soul. Adeste fideles,* for "Oh come, all ye faithful," is also known as the *Portuguese Hymn* because of its use a century ago at the Portugal Chapel in London. Monk's *Alleluia perenne* was composed for the hymn which has the reiterated line "An endless alleluia."

The council of Nicæa, A. D. 325, is remembered for its reception of the doctrine of the Trinity. Dr. Dykes, therefore, made a fitting use of the name *Nicaea* for his setting of the hymn to the Trinity, "Holy, holy, holy." Giardini's tune for "Come, thou almighty King," often called *Giardini* or *Moscow,* was originally designated *A hymn to the Trinity.* The tune known as *Dundee* in England and America seems to have first appeared in the Scottish Psalter of 1615, where it is called *French Tune.* In Ravenscroft's English Psalter of 1621 it appeared with Psalm 36 as *Dundy Tune.* The tune called *Dundee* in Scotland is here generally known as *Windsor,* a fact which should be remembered in connection with Burns' characterization of "Dundee's wild, warbling measures." Another widely-used tune from the Scottish Psalter of 1615 is *York,* or *The Stilt,* but the origin of the name is yet to be known The tune *York Minster* in the Historical Edition of *Hymns Ancient and Modern* is by T. Tertius Noble, recently organist of York Minster, but now of St. Thomas' Church in New York.

The names of churches where organists or singers were employed often appear in connection with tunes by these musicians. If William Croft wrote *St. Anne* the tune is doubtless named for the London church where he played before his election to Westminster Abbey. *Miles Lane,* usually credited to William Shrubsole, seems to have made its first appearance in a collection of Psalm tunes edited by Rev. Stephen Addington, minister of Miles Lane Meeting House in London. One of the few hymn tunes Handel wrote was named *Gopsal,* for the home of Charles Jennens, who compiled the words of *The Messiah.* By the way, Jennens is reported to have said of this oratorio that "Mr. Handel had made of it a very pleasant entertainment, but not so good as he could or should have done." *St. Bride* was composed by S. Howard, organist of St. Bride's, London. *St. Matthias* was doubtless named by W. H. Monk for St. Matthias' Church, Stoke Newington, where he was organist for many years.

It would seem that the catalog of saints was fully represented in the names of hymn tunes. Sullivan's tune St. *Gertrude,* for "Onward, christian soldiers," was named for a friend, Mrs. Gertrude Ker-Leymer. Rev. John Bacchus Dykes was rather partial to saint's names for his tunes. The Dykes' home near Durham is called to mind by his tune *Hollingside. Horbury* was the place where he went to make his first confession. Joseph Parry's tune *Aberystwyth* is named for the place where it was written. The tune *Leoni,* associated with Thomas Oliver's hymn, "The God of Abraham praise," is named for a cantor in the Great Synagogue, Aldgate, Lon-

don. According to the story, Oliver was much impressed with the music to which he heard the Doxology sung in this Synagogue, and obtained it from Leoni. The hymn was published "adapted to a celebrated air sung by the priest Signior Leoni." A. H. Mann adopted a fashion of using classical proper names for his tunes, and thus we have *Aristoxenus, Claudius, Lampadarius, Nichomachus,* and *Lassus.*

The German custom is to identify the tune by the first words of the hymn with which it is usually associated. Familiar examples are *Ein' feste Burg, Nun danket alle Gott,* and *Wachet auf.* One exception in this country and England is the title *Passion Chorale* for the tune used so much, *O Haupt voll Blut und Wunden.* Though associated with a translation of the same German hymn, Bach's use of the chorale in the *St. Matthew Passion* seems to have given it a new name for English-speaking people.

Richard Redhead seemed to have an aversion to names for his compositions and arrangements, and in his collections entitled *Church Hymn Tunes* he used numbers. These are sometimes retained in other collections, and the tunes are known as *Redhead No. 7, Redhead No. 35,* etc. David Grant's tune *Raleigh* was so named by a friend because the composer was a tobacco merchant in Aberdeen.

In general the titles of tunes in this country seem to have some justification, but from fifty to seventy years ago the composers seemed to experience a scarcity of names. From that period we have such names for tunes as *Captain Kid, Sandwich, Ar, Ae, Obo, The Leprous Jew* (the subject of the hymn), *Tejuco,* and *Dianondihew.* A striking feature was the partiality of the hymn composers of those days for the letter Z, which resulted in the choice of such names as *Zorah, Zeeb, Ziba, Zebulon, Zadok, Zilter, Zoan, Ozankee, Zoba, Zepho, Zelek, Zaboni, Zirleen,* and what should make a good close, *Yzenella.*

ECHO ORGAN

One of the well-known music schools in New York City is contemplating establishing a department of church music that shall so train the student that he shall be equally capable of conducting a Catholic, Protestant, or Jewish service. The course of study is to include organ, voice culture as applied to choir training, boy-choir training, conducting, theory of music (harmony, counterpoint and composition), congregational singing, hymnology, study and analysis of ancient church music, including the Gregorian chant, the old Flemish and Italian schools, ancient Hebrew, Bach, etc.

* * *

All church musicians who are in the least seriously engaged in their work are in favor of a high standard of preparation, but the program laid out for the students of the proposed music school is surely a staggering one. Years and years upon years would be necessary for the carrying out of such a curriculum,—life itself, in fact, is none too long for its adequate accomplishment. For example: To study the Gregorian chant means not simply looking up the ordinary manuals of Plainchant, but it involves going to the source-books. For example: One should study the large folio volumes of photographs of music in the mediæval notations that the Benedictines have published. One should be able to read these notations and to transcribe them. One should know enough about the rival schools of Plain-song to decide wisely between them.

In these undertakings alone is enough work to stagger any musician.

* * *

I presume, however, that the projectors of this magnificent, though impracticable, scheme do not wish to be taken too literally. Their prospectus is to be interpreted to mean, "The standard of church music is too low; is too low as regards its choice, its execution, its sincerity and dignity, and as regards the personal and professional qualifications of its practitioners." And with this we all agree. It would take a marvelous man, however, who should be so trained that he could feel an equal degree of sympathy with the rituals of the Roman Catholic, the Greek (why was this church omitted from the list in the prospectus?), the various Protestant churches, and the Jewish synagogue. But if he be not in sympathy with a ritual, how can he adequately serve the ritual? Take any eminent church musician you may have in mind and consider how extraordinary a man he would be if he were able to serve the other great branches of the church with equal success.

* * *

Such a scheme of study as planned by the New York school would do immense good if it were planned for a three years' course and taken by large numbers of churchgoers, much as "appreciative" courses are given and taken in our colleges.

INTRODUCTION RATES — ONLY 3 CENTS FOR A SAMPLE COPY

New Octavo Music

(PLEASE ORDER BY NUMBER)

Anthems : Mixed Voices

CAMP, JOHN SPENCER
No. 12,535. O Lord, We Come to Thy Holy Table $0.10
A short communion sentence, easy yet effective; may be sung without accompaniment.

CLOUGH-LEIGHTER, H.
No. 12,600. Magnificat, in B flat, Op. 58, No. 1 ..... .20
A setting in festival style, somewhat more difficult than the average anthem, but worth the work necessary to learn it; the organ part is brilliant and effective.

JOHNSON, NOEL
No. 12,510. There is a Green Hill Far Away ..... .12
A short easy anthem specially suitable for the Lenten season; solo for soprano.

STEANE, BRUCE
No. 12,534. Hear the Voice and Prayer of Thy Servants ..... .10
An easy, short introit anthem; may be sung unaccompanied.
No. 12,522. Sun of My Soul ..... .12
A very pleasing, melodious, and easy setting of this favorite text.

Catholic Choir Music

Men's Voices

GOUNOD, CHARLES
No. 12,473. Benedictmus $0.08
Easy and effective, highest note for tenor, G.

RHEINBERGER, JOSEF
No. 12,472. Sacerdotes Domini ..... .10
Within the reach of the average male choir; highest note for tenor, G.

Part-Songs

Mixed Voices

BUTTERFIELD, J. A.
No. 12,540. When You and I Were Young, Maggie $0.10
A four-part arrangement of the old song; makes a good number for a school concert.

KITTREDGE, WALTER
No. 12,457. Tenting on the Old Campground ..... .12
An unusually effective four-part arrangement of the old war song; the tenor carries the air in certain sections, a very pleasing effect.

RICHARDSON, T.
No. 12,532. Mary 12
A four-part arrangement of a favorite old Scotch song; with humming accompaniment and other striking effects.

WAREING, HERBERT W.
No. 12,462. Break, Break, Break ..... .12
Tennyson's beautiful poem has received a very effective musical setting, making an excellent concert piece of moderate difficulty.

Women's Voices

CONCONE, GIUSEPPE
No. 12,509. Concert of Nightingales (Ah! Silent Night), Trio $0.12
A delightful concert number for three-part chorus, with solo for the alto.

GRIEG, EDVARD
No. 12,560. Anitra's Dance, Op 46, No. 3 .. .12
An arrangement by Lucien G. Chaffin, for three-part chorus of one of Grieg's most beautiful melodies.
No. 12,559. Dawn's Awakening (Morgenstimmung), Op. 46, No. 1 ..... .16
Arranged for three-part chorus, without solos; this is one of the movements in Grieg's **Peer Gynt** suite.
No. 12,558. Spring, Lovely Spring. Op. 34, No. 2 ..... .12
An arrangement for five-part chorus of women's voices of No. 2 from **Elegiac Melodies;** it makes a fine concert number.

NEVIN, GEORGE B.
No. 12,561. When Portia Sings ..... .10
A bright little three-part song for women's voices, with occasional division into four parts.

RENGER, FRITZ
No. 12,585. Song and Echo (Hall under Widerhall), Op. 30, No. 2 ..... .16
A three-part chorus for women's voices, with English and German text, and piano accompaniment, making a good concert number.

Men's Voices

BUTTERFIELD, J. A.
No. 12,539. When You and I Were Young, Maggie $0.12
One of the old-time song favorites effectively arranged for quartet or chorus of men.

DINELLI, GIUSEPPE
No. 12,576. Come, Bring with a Noise the Christmas Log ..... .12
A rousing, lively glee for the Christmas time.
No. 12,575. There Be None of Beauty's Daughters ..... .10
A new setting of this favorite text that will measure well with the best of previous settings.

MENDELSSOHN, FELIX
No. 5,300. Rhine Wine Song ..... .10
New edition of an old favorite.

SULLIVAN, SIR ARTHUR S.
No. 4,241. The Long Day Closes ..... .10
One of the finest concert pieces, effective for men's voices as well as for a chorus of mixed voices.

NEW ORGAN MUSIC

The Organ Students Bach

Edited by JAMES H. ROGERS
Ditson Edition, No. 193
Price, 63 cents net

The purpose of the editor has been to make a selection from the organ works of J. S. Bach, of such pieces as will serve as an adequate introduction to the study of the greater works of the master.

Thirty Offertories for the Organ

Edited by JAMES H. ROGERS
Price, $2.00, postpaid

A new volume uniform with the popular **30 Preludes** and **30 Postludes.** The editor has drawn upon the best works by European composers, and has made a number of admirable transcriptions especially for this work. It is bound in cloth and is in every way a distinct addition to the organists' collection.

Thirty Organ Pieces for Use in Christian Science Churches

Edited by WALTER E. YOUNG
Price, $2.00, postpaid

This is the first collection of organ music published expressly to meet the needs of organists in Christian Science churches. The author, who is organist of the Mother Church in Boston, has a full knowledge of what is suitable. The book contains ten preludes, ten offertories, and ten postludes. It is bound in cloth. It is just as desirable for use in other churches.

A request by postal will bring one.

Austin Organ Co.
Hartford, Conn.

There is the grossest ignorance among church people as to all liturgical matters, as to the history and importance of church music, and as to the qualifications of church musicians. Much of the dissatisfaction with their church music among churchgoers is due to the lack of standards on the part of church and choir, or to the ignorance of such standards as may be considered accepted. As the prospectus quoted wisely says: "It does not occur to people that music in the service of the church is or should be as significant as any other part of the service; that the history of church music reaches back 2,000 years and includes

THE CRAFTSMAN PERMANENT HOMEBUILDERS' EXPOSITION

—RUGS—INTERIOR DECORATING
—DRAPERIES AND HOUSE FURNISHINGS
—GENERAL FURNITURE DISPLAY
—CRAFTSMAN FURNITURE DISPLAY

EVERY floor of THE CRAFTSMAN'S new twelve-story building—running through an entire block, 38th to 39th Streets, a step from Fifth Avenue, in the shopping centre of America—is devoted to the service of the home-loving, home-building public, as indicated above.

The display of furniture, rugs and draperies on the first four floors is full of inspiration for the homelover who is seeking to furnish a home in good taste. The next four floors are given over to the chief feature of the Building,—The Craftsman Permanent Homebuilders' Exposition, consisting of extremely valuable and attractive exhibits by manufacturers of world-wide reputation. On the tenth floor, The Craftsman Magazine offers the resources of its Architectural and Service Departments to those about to build or remodel a home. The Craftsman Club-Rooms on the eleventh floor are for the free use of the public; here are charmingly furnished rest rooms for men and women, a reference library, and a lecture hall in which lectures will be given on building and decorating. The Craftsman Restaurant on the top floor caters to the comfort and refreshment of visitors to the Building, and is one of the show-places of New York.

contributions from every known religion, from every race, and that all these streams have commingled more or less at different times and have influenced each other."

* * *

Now that the debate over free organ recitals has been discontinued, I feel that I can safely venture a word or two on the subject without identifying myself with either side. I was much struck with the fact that throughout the discussion too little was said as to the benefit accruing to the public from free recitals, though much was said as to the injury to the recitalist, that is, from the professional point of view. I presume, however, that the selfish side is bound to be the one most strongly presented. It seems plain to me that if from this moment no more free organ recitals were to be given the community would be much the loser.

* * *

I MAY be unduly sensitive to the lack of professional dignity, but I cannot help feeling that if an organist is to give free organ recitals, it is a mistake to have vocal or other assistance. It savors too much of trying to draw a crowd. A recital is not a failure if the church is only quarter full, and conversely the success of a recital is not to be measured by the size of the audience. The success of a recital is to be measured by the pleasure in it taken by the discriminating portion of the audience. If organists would give recitals of not more than three quarters of an hour in length and give the whole program themselves, I believe much of the objection to free recitals would vanish. It takes a very clever recitalist—one who has the virtuoso power—to keep an audience interested for more than forty-five minutes.

* * *

THOSE organists who read the interesting monthly *The Diapason* will recall the spicy articles on the respective advantages of movable and "dead" combinations. I do not care to take sides in the matter, but do want to call attention to a very sensible letter from Mr. A. F. M'Carrell. He writes:

"I wish to take a crack at that very smart saying that an organist can tell what is on when he hears the organ. That statement is only partly true, as many times conditions are such that the organist does not get the true condition of the organ through his ear. Every organist knows that a combination of stops of the same species will blend so that only part of the combination is apparent to the ear. In Aeoline, Salicional and Gedacht, how much of the Aeoline is heard? Add to this a Viol d'Orchestre and your Aeoline and Salicional are practically absorbed. You hear flute and string qualities. Go a little farther and add Open Diapason, a larger Flute and Oboe. Do you distinguish two flutes? Or add Cornopean and where does your Oboe show up?

"Now go to your Great Organ with, say, second Open, Gemshorn, Gamba and Gedacht. Close your Swell and couple Swell to Great. How much of the Swell do you hear? The Cornopean may show through, but your strings, flutes and Oboe—where are they? Suppose you add first Open, a large Flute, Octave and 16 foot Open to Great. Even full Swell, closed, is practically lost. I cannot see the absurdity of my statement that the eye *only* gives the correct condition of the organ to the organist."

* * *

THE organ nowadays is—at least the largest seem to deserve the description—a mechanical monster; its abnormal complexity distracts the attention from its purely musical uses and, unless one has a firm will, standards of stop-manipulation and combination-achievement are established over against standards of interpretation. For example: An organist with infinite difficulty will work out certain changes in an orchestral transcription, when the only thing gained is a pale imitation of orchestral instruments.

I venture to say that an organist who allows himself to be so impressed with his forty or fifty stoppistons and his twenty-five or thirty other mechanical devices, that he feels they must be worked for "all they are worth," is taking hold of his instrument at the wrong end. I am reminded of what Dr. E. H. Turpin told me in regard to mechanical contrivances in general let out contracts to the organ mechanism. "I do not use the pistons, but do as much of my registration as possible with the hands." Too much of our organ playing is done *en masse*, so to speak; we play by combinations instead of with stops; we make our crescendos with the crescendo pedal and in general let out contracts to the organ mechanism.

* * *

THE appointment of Edwin Arthur Kraft to the position of city organist to the Atlanta Festival Association at a salary of $5,000 is a proof that the Atlanta people know what good concert organ playing is. I have heard Mr. Kraft play once only and that under conditions not entirely of the best, as regards his instrument. I was greatly impressed with his clearness and his sense of rhythm. We have many good, even excellent players, who have never learned that clearness at the keyboard may be, and often is, smudge to the man in the audience. Kraft has the virtuoso sense and gets his music "over."

* * *

READERS of THE MUSICIAN will have noticed articles on the theatre organs; in particular, one that appeared in the January number. Here is the personal experience of an organist which we are allowed to quote: "After reading the advertisements of the ——— organ until I was tired of seeing them, I wandered into the theatre one day and was lucky enough to enter just before the organ 'turn.' How do you like the looks of that word in connection with the king of instruments? The instrument is of good size and the tone good; the audience was restless and seemed hardly to make up its mind what was going on; there was much changing of seats. The improvisation was a mélange of familiar airs loosely strung together; towards the end of it a two-step employing the drums was introduced. The effect of the whole on me was distinctly melancholy, not because in my opinion the organ is a church and not theatre instrument, but, specifically, because in the theatric atmosphere the fundamental weakness of the organ as a rhythmic instrument is more apparent than elsewhere. A little later on when the organist played while the moving pictures were put on, the effect was excellent; the organ helped, I think, in that it gave a certain atmosphere favorable to the visual attention."

When you write to advertisers, mention The Musician

¶ "The music of the spheres" is not nearly so attractive to humanity as a perfectly harmonious woman. To be such a one is every right-minded woman's highest ambition. To attain it, first of all there must be right thought and the ideal normal proportions in the body. This is music to the eye.
¶ In striving to attain an ideal in corsets, Mrs. Thresa M. Stockwell, general manager of the "Natural Line Corset Company" of Boston, had two thoughts in mind.
¶ First, to help her fellow women.
¶ Second, to have the corset models reflect her ideals.
¶ That is what the Natural Line Corsets do. Therefore, a musician in the highest sense of the word will desire to wear them, if she does not already do so.
¶ They "normalize the figure"; then the simplest gown worn at home or before a large audience expresses harmony.
¶ The Spring models in all their pristine beauty have arrived.
¶ The "Student" model, for the budding woman, made in light, durable French batiste, girdle-top-free-hip, boned to support the back, in sizes 19 to 24 waist. Price, $3.00
¶ The "Ultra-Fashionable" model for more mature figures made in mercerized brocade, long-skirted with rubber lacings over limbs to allow perfect freedom, also with elastic webbing in top of corset to allow correct action of diaphragm. Sizes, 21 to 30 waist. Price, $8.50
¶ Just a word about the "Maternity" models. To the expectant mother, each one means keeping the lines of her figure right, while supporting her in the critical months of her life. The sizes are 28 to 36 waist.
Prices, $5.00 and $8.50
¶ There are other models built to give grace, health and support. Send for illustrated catalog "M."

TEACHERS' FORUM

CONDUCTED BY BLANCHE DINGLEY MATHEWS

Address all questions relating to the work of this department to Mrs. Blanche Dingley Mathews, 25 E. 18th Avenue, Denver, Colorado.

"Is it possible or advisable to put an art like music on the same educational basis as public school teaching, requiring prospective teachers to pass an examination up to a certain standard? Are not the teaching standards higher in the small cities and towns in Germany?"—R. E. D.

For many years the question of forcing music teachers to pass an examination before beginning teaching has been discussed by prominent musicians, but the difficulties in making such a movement a law have seemed to make the movement impractical. Before such a law could be put in force it would be necessary to have normal schools where would-be teachers could take a course in teaching, including some practical experience in the class room under the eye of a specialist, after the course in performance had been successfully passed. It is thought by most persons that if they can play or sing acceptably they are ready to teach, and all that is necessary is to find a victim. Whereas experienced teachers know that the ability to play does not equip one to teach unless added to that is personality, a love for the work, and special study of methods and material of all grades, as well as the necessary knowledge of muscular and nerve activities.

It has been argued by many that if a state examination were required, persons who have no right to teach would be immediately eliminated from the profession. While undoubtedly examinations would help to raise the standard of work, still it seems to me that we could hardly expect to get rid of "quacks" any more than the medical profession has. The state examination for physicians has been in force many years, yet there are many quacks in the medical profession, drawing a dividend regularly from their admirers, and many shyster lawyers flourishing.

I have more faith in educating public opinion than in the state examination; and that is where every good teacher can help at once without waiting for the state to take a hand. If we all seek to do our best in our immediate following, dignifying the study of music by our own attitude toward our art, we will weed out the false in time and magnify our office.

If you would visit the public schools in your city for two days, you would soon see that while all of the teachers had passed examinations, only a few were really prepared to teach. Still all draw salaries from the county.

I am sorry that I cannot answer the last part of your question as I have no knowledge, first hand, as to what is being done in the small towns in Germany. My impression is that our work in the classroom is much better in this country; but there is hardly a small town in Germany that has not its orchestra playing good music, and generally a small opera subsidized by the government or municipality, so that the young people grow up in a music-laden atmosphere and the best of their music education comes by absorption.

* * *

"Will you tell me what to do with a pupil coming to me for work with a bad hand position? The hands look very bad, and yet she has had a good many lessons."—A. C.

It is always difficult to make a diagnosis, and the first lessons demand much thought on the part of the conscientious teacher. What always worries me is not so much how the hand "looks" as how it "is." If the pupil carries the wrist a little high it is not always rigid, but there generally is a tendency to rigidity, especially if the knuckle joints are depressed. Therefore it is not because the wrist is high that I worry, but because the proper relaxed conditions are not in evidence. You do not state just what the trouble is, and I would advise your examining the hand very carefully so as to locate the trouble. Then direct the pupil's attention, not so much to the looks as to the conditions and the feeling of the hand and arm.

There is no "right" position of the hand. It all depends on what you are doing how the hand looks. If the position is an extended one, the hand must of necessity lose some of the arch which could be easily acquired in five-finger positions. But there is such a thing as right conditions in whatever the hand is called upon to do, and that is where the teacher comes in strong. If the arm is rigid, it is often possible to combine relaxing exercises with pedal exercises, and there are many combinations which will secure the proper relaxation without taking the student off from music.

* * *

"I have requests from some advanced students to give them a lesson every two weeks. Is it a good thing to take them that way?"—E. B. F.

That all depends on the pupil. I have some pupils whom I would not take any other way. If a student is capable of doing original interpretative work and understands how to practise intelligently, I believe her development is better on one lesson in two weeks than on one lesson a week. With an advanced pupil, one who has studied a large part of the repertoire, I demand that the work assigned shall be memorized and an interpretation carefully worked out before the work is brought to me for criticism. I do not believe in students being tied to a teacher's apron strings all their lives. Neither do I believe in swallowing a large work whole as the pupil must if she tries to assimilate the work in a week. Musical indigestion is about the worst kind because calomel for the mind is harder to procure than for the stomach.

If we really teach our pupils how to think and what music is all about, should it not be possible for them all to do original work after a few years of study? Use the lesson period for the purpose of giving them inspiration through our larger musical experience rather than giving the time to the correction of technical faults and half-baked readings?

* * *

"I notice that much of your music for beginners has the pedal even in the First Grade. Will you be good enough to tell me why you use it, and what you can do with little children who can't reach the pedal?"—S. E. A.

I use the pedal from the first fifteen lessons on for many reasons: First, because the piano is merely a machine without the pedal. Second, in order to secure good chord playing the pedal is absolutely a necessity. Third, because the explanations and experiments given the pupils to illustrate "sympathetic resonance" always prove interesting and suggestive to even a very young pupil, boys especially. Fourth, in order to secure some "counting aloud" from the pupil without use of "the rod." Fifth, in order that the art of pedaling may be developed hand in hand with finger technic so that artistic and original effects may be secured in the advanced grades.

Most persons giving the first lessons to children, permit them to sit back in their chair, and of course it is impossible for them to reach the pedal. My pupils sit as artists sit, nearer the edge of the chair, and I have never yet had a pupil who couldn't reach the pedal in this way. The keyboard of the upright piano is higher than the grand, I believe, so if I had students who played on uprights it might be necessary for me to use a pedal extension.

If you will try using the pedal in Grade I and precede it by the "foot exercises" as illustrated in Mathews' *Pedal School,* having the pupils count aloud and practise the foot alone, depressing the pedal lever at different points in the measure and releasing it just at count "one," you will be surprised at the intelligent work they will do before the second grade.

Throw aside prejudice and give it a good trial. It will never fail.

———*———

BOOK NOTES

The Musicians' Guide. Edited by Arthur Elson and Louis C. Elson. Two volumes. The University Society, Inc., New York.

These two volumes have been compiled by the Messrs. Elson and published by the University Society as companion works to that fine series, *The World's Best Music.* The total number of pages in the two volumes is nearly 500, the size of the type measure being 7x9, giving contents equal to about five ordinary sized books. It is manifestly impossible to note the full material of the two books. The Editors announce as the purpose of the work the making of one that shall have value to teacher and to pupil and of general interest to the non-musical public. The articles are, of course, somewhat condensed in character, but on that very account will doubtless save the reader much time and research. They cover the field of music study and practice.

In looking over the table of contents, we note an exposition of the "Leschetizky Method," with articles on piano playing by Paderewski, Szumowska,

Kroeger, etc.; general theory, by Elson, Mason, etc.; violin playing, by Hartmann, Dunn, Judson, etc.; on singing by Caruso, Sembrich, Schumann-Heink, De Guichard, Shakespeare, etc.; on the organ by Lemare, Carl, and others; with papers on orchestras, choral training, program music, MacDowell (by H. T. Fink), and "How to build up a class" by successful teachers. The work closes with a concise dictionary of musical terms and biographical sketches of musicians.

Irish Minstrels and Musicians. With numerous dissertations on related subjects. By Capt. Francis O'Neill. For sale by Lyon & Healy, Chicago. Price, $2.50.

This book should take its place as a standard work on the subject. The author, who was formerly chief of police of Chicago, has written other books on the subject, but in the work under consideration he has treated it in a most comprehensive and thorough manner. He has included a chronological account of Irish musicians of the past centuries, beginning with the bards and coming down to modern times, and covering the two Irish instruments, the harp and the bagpipe. Especially interesting to the general public will be the chapters on Irish folk music, and those on the famous fiddlers of Ireland and the national dances.

Altogether here is a book that deserves a high place in the musical library, as covering a subject not often taken up by the average music lover.

Choral Technique and Interpretation. By Henry Coward. Novello and Co., Ltd.

Musicians who are working with choirs and choruses will welcome this treatise by an eminent English choral conductor, the one who made the Sheffield choir distinguished for choral excellence in all respects. As Dr. Coward says in his preface, "There is no padding or mere theorizing in the book. Everything written is the outcome of living experience and has stood the test of many years' experience." In another place he says that his purpose was "to give such hints, advice, and instruction that no single problem connected with choral singing shall, if possible, remain unsolved." As the reviewer reads the book he is struck most strongly with the value of all the directions in the book in preparing both conductors and singers toward a realization of the new choral technic such as is demanded by modern audiences as well as the composers of the present day. We consider this the most valuable book of its kind in the market.

The Teacher's Manual. A work designed to supplement and explain the use of the musical examples found in *The first ten weeks at the piano.* By Romaine Callender. Carl Fischer. Price, 60 cents.

A well-planned and effective little book of instructions for use with young pupils.

First Year Counterpoint (two and three voices). By Thomas Tapper. Arthur P. Schmidt. Price, $1.00.

A handy, concise work, continuing the series of theoretical works begun in *First Year Harmony. First Year Melody Writing,* etc. It is worth while for teachers to impress upon their pupils that harmony study is not sufficient in itself. The student who rests content with his work in harmony never comes into close, intimate touch with a great part of our musical heritage, that which is in the contrapuntal style. Even modern music, which has a harmonic basis, can be much better grasped by the student of counterpoint than one who passes the latter by as out of date. We recommend this as a work worth while examination.

My Vocal Method. By Franz X. Arens. Published by the author, 308 W. 56th Street, New York. Price, 10 cents.

A concise statement of the principles of vocalization.

The Mandolin Orchestra. A book for Directors, Teachers, Managers, and Players. By Herbert Forrest Odell. H. F. Odell & Co., Boston, Mass. Price, 50 cents.

An authoritative manual on the subject of organizing and conducting mandolin orchestras, the instruments, the effects obtainable from them, arranging and playing the music, etc. A valuable book for those interested in these instruments.

The Lost Vocal Art and Its Restoration. By W. Warren Shaw. Introduction by David Bispham. J. B. Lippincott Co. Price, $1.50 net.

This work states clearly the various vocal difficulties usually encountered by singers and, which is better, it shows how these difficulties may be overcome. It also offers much practical aid to teachers and clear light to singers who are uncertain as to the best methods of using the voice. A particularly interesting section of the book is that in which the author presents his own method of teaching by the use of twenty vocal exercises and how to sing them. We recommend this work to those of our readers who are interested in the voice and its use in singing.

How to Sing (Meine Gesangskunst.) By Lilli Lehmann. Translated from the German by Richard Aldrich. New and revised edition. Macmillan Co. Price, $1.75.

The first edition of this admirable work made a place for itself in the musical world worthy of the distinguished author, whose art as a singer was known and valued in Europe and the United States. By her own example as a singer and her work as a teacher since her retirement, she has had a strong influence upon the vocal art. In this new edition Mme. Lehmann has aimed to correct misinterpretations of the contents of the first edition and to express better and more clearly her ideas on the subject of singing. It is a book for teachers and singers.

A New Type of Player Piano

The most important musical announcement of recent years has just been made by Sohmer & Co., who have put on the market a new type of player piano with a fundamental improvement for controlling the expression—a means of graduating the tone of the piano evenly, positively, and naturally with the fingers, obtaining that indescribable "sympathetic" touch heretofore heard in only the most skilful hand playing.

Sohmer

"The Player Piano with the Gradutone Buttons"

Best of all, this advanced type of PLAYER has been combined with the Sohmer piano, "The Piano of Permanent Tone," one of a few American pianos of the very first rank, whose makers have always kept artistic ideals uppermost in their work, yet have never charged anything additional for their justly earned reputation.

A brochure with illustrations of case designs and full details, prices, etc., will be mailed to you upon request. Please mention The Musician.

NEW MUSIC BOOKS

The Organ. By Walter G. Alcock. Novello & Co., Ltd.

A new work for use in teaching the principles of organ playing; contains preliminary explanations in regard to the organ, stops, use of pedals, etc., with illustrations showing positions at manuals and pedals. The various musical studies seem well adapted for the purposes for which they are intended.

Dexterity and Style. By Moritz Moszkowski. Twenty modern studies for the piano, Op. 91, Book I, Book II. Arthur P. Schmidt. Price, 75 cents each.

Very useful and interesting studies for the promotion of agility of the fingers of both hands; about Grade III, progressing to one grade higher.

Greeting of the Gypsy Queen. By Thomas Facer. Arthur P. Schmidt. Price, 25 cents.

A short piece in cantata style for two-part chorus

Principles Endorsed by Many of the Greatest Artists

OLIVE FREMSTAD:
"The preface to your book interested me very much, as I have always held that the voice is not a physical attribute. It belongs to one's soul rather than to one's body.

JOHANNA GADSKI:
"The further away we get from the physical the greater our development artistically. I am glad to see the advancement made in Vocal Culture along scientific lines in this country, and I heartily agree with the principles set forth in your preface."

FLORENCE HINKLE:
"'The Lost Vocal Art' is most interesting, and I believe that every artist who is in pursuit of the ideal of the beautiful in art will agree with you, that this ideal will be more nearly found through psychological means than through (physiological) scientific research."

TITTA RUFFO:
"The theories set forth in the preface of your book, 'The Lost Vocal Art,' are substantially the same that I have maintained for years. I congratulate you and wish you every success."

Columbia Ave., and Randolph St. Philadelphia, Pa.

of melody and form. He founded and directed a music school in Paris.

THE Clef Club Chorus, Buffalo, N. Y., Mr. Alfred Jury, Director, sang Mendelssohn's *Elijah*, Jan. 8. The soloists were: Mrs. Alfred Jury, soprano; Mrs. Margaret Adsit Barrell, contralto; Mr. Reed Miller, tenor; Mr. Horatio Connell, baritone.

THE Chicago Madrigal Club, D. A. Clippinger, director, gave a concert of choral music at the People's Institute, Chicago, Jan. 23.

VICTOR HERBERT'S new one-act opera, *Madeleine*, had its first performance at the Metropolitan Opera House, New York, Jan. 24.

MR. JAMES H. PARK, of Pittsburgh, writing to Mr. T. Carl Whitmer, who contributed to THE MUSICIAN for Dec., 1913, a most interesting article on Stephen Foster, claims that the latest evidence shows that Foster was not born in the house shown in a picture accompanying the article, but in another one farther out Penn Avenue, at the head of 36th Street. This property Mr. Park has offered to present to the city on condition that it be maintained as a museum and park.

JOSEF STRANSKY'S contract as conductor of the New York Philharmonic Orchestra has been extended three years from the expiration of the present one.

AT a sale of old violins in London, last December, a Stradivarius violin purchased by Piatti in 1862 for $800 was sold for $2,750; a Guadagnini realized $2,000, a Presenda $500, a 'cello by Ruggeri $625, and another by Tonini $725.

ERAIM MIRIAM DELABORDE, a French musician of eminence, and a leading teacher at the Conservatoire, died in December last. He was born at Paris, Feb. 7, 1839, and became a pupil of Alkan. After some time spent in travel, he returned to France. In 1873 he was named professor at the Conservatoire, where he enjoyed high esteem as a teacher.

RUDOLPH ARONSON, a well-known American impresario, has taken the direction of the Riviera Italian Grand Opera Company, Porto Maurizio (near San Remo).

THE annual convention of the Sinfonia Fraternity, of America, met at Chicago, Dec. 29-31, with twelve chapters represented. The Fraternity offered a prize of $100 in gold for a chorus for male voices, with organ and piano accompaniment. Another feature of the work of the convention was the organization of a Musicians' Pilgrimage, to be conducted by Thos. Cook and Sons. The next meeting will be at Baltimore, Nov. 30-Dec. 2, 1914.

EUGEN D'ALBERT'S new opera, *The Dead Eyes*, is slated for performance at the Dresden Court Theatre.

THE Brockton Philharmonic Orchestra, Mr. George S. Dunham, conductor, gave a successful concert Jan. 11, assisted by Miss Nora F. Burns, contralto, of Boston, and T. Francis Burke, organist, of Brockton.

OLIVER DITSON COMPANY, Boston
CHAS H. DITSON & CO., New York

sic evening at Aeolian Hall, Jan. 7. Their second and last concert will be given March 31 at the same hall.

VICTOR HERBERT'S comic opera, *The Madcap Duchess*, with Ann Swinburne, finished a long season at the Globe Theatre, and last month started on the road. In this company we find Mr. Glen Hall, a former concert singer.

THE Von Ende School of Music is active in presenting to its students and friends many concerts of interest. A reception was tendered Mr. and Mrs. Carl Flesch, which was largely attended.

AT the Little Theatre, Jan. 19, Mr. Karel Havlicek, a talented young violinist, gave a recital. Miss Mabel Bennett proved a good accompanist.

A COMMEMORATION concert for Stephen Collins Foster was given by the Modern Music Society, Benjamin Lambord, conductor. Miss Maggie Teyte was soloist in an American program.

THE Clef Club, one of the oldest organizations, composed of men musicians, gave its annual Ladies' Night banquet at the Hotel Gerard, Jan. 20. Mr. Hubert G. Main is president. The speakers were Mr. Griffith, of Brooklyn, Mrs. Marx, who spoke of woman's work with children in a musical way, Maj. Richardson, organist of Calvary Baptist Church, and Marie Cross-Newhaus.

THE Iowa New Yorkers held their "Social Program" Jan. 23, at the Hotel Astor. Miss Mary E. Latey and Miss Helen Van Winkle, Mrs. Richard E. Bishop, and Miss Marie Kaiser sang.

THE Philadelphia-Chicago Opera Company gave four extra performances at the Metropolitan last month. The operas were Massenet's *Don Quichotte*, Gior-

WILCOX SCHOOL OF COMPOSITION
C. W. WILCOX, Director
Dept. "A." 225 Fifth Avenue, New York City

Book VI of Graded Studies

For the Piano

Compiled by MRS. CROSBY ADAMS

is now available. This book contains a wealth of good material. The list of composers represented:

MOSCHELES	KIRNBERGER	HANDEL	KESSLER	SCHMITT
JEAN VOGT	JENSEN	BERENS	SPINDLER	WOLLENHAUPT
STERNDALE BENNETT	LOESCHHORN	REINHOLD	CZERNY	BACH (Chorale)
KIRCHNER	PARLOW	GLUCK	BURGMUELLER	HABERBIER
				GURLITT

gives some indication of the scope covered.

Writings by the older masters largely predominate. The preparation for polyphonic playing is interestingly presented through a number of the simpler selections of that nature by Handel. The book contains many other fine examples of writing by the old masters, that adapt themselves fittingly to the grade of difficulty involved in this series.

The contents of Book VI is largely supplemental to Books IV and V, except that greater demands are made for musical interpretation. It is indeed a unique volume, one that teachers will thoroughly appreciate.

Price uniform with the other books ($1.00), subject to sheet music discount

In the Bottoms

A Characteristic Suite for Piano

By R. NATHANIEL DETT

Summy Edition, No. 61 - - - - - - - - - - Price $1.50

This Suite consists of five numbers—Prelude, His Song, Honey (Humoresque), Barcarolle, Dance (Juba)—and pictures scenes peculiar to Negro life in the river bottoms of the Southern Sections of North America. As "Program music," characteristically American, it is no doubt the most representative of anything that has been issued for some years. An ideal is portrayed through it all, which is significantly sincere, and it is done with a degree of musicianship that is not only fully satisfying but that commands admiration for its skill and finish. No attempt has been made at elaborate ornamentation consequently the difficulties are not beyond such as the average good pianist can manage. It is simply a free and spontaneous expression of a concept, masterfully done.

SUCCESSFUL PUPILS:

Sue Harvard, soprano, recently appeared with Philadelphia and New York Symphony Orchestras.

Henrietta Wakefield, contralto, formerly with Metropolitan Opera.

Max Salsinger, leading baritone, Montreal Opera.

Lucille Miller, one of Pittsburgh's best-known sopranos.

J. Weibley, bass soloist, Church of the Messiah, New York.

Dan Beddoe, tenor soloist, Grace Church, New York; well-known oratorio singer.

Edward Strong, tenor, toured with leading orchestras, now head vocal department, Carleton College, Minn.; tenor soloist for 11 years at 5th Avenue Presbyterian Church, New York.

Emma Kramlich, Marion Hebbard, Lillian Waldron, supervisors of music New York public schools.

VICTOR TALKING MACHINE RECORDS FOR MARCH

SEVERAL new features are shown in the records for March, notably the duet by Caruso and Ruffo, and the records by Martinelli, an Italian tenor, who made a great success at the Metropolitan Opera House.

Caruso and Ruffo: *Si pel ciel* (We swear by heaven and earth) from *Otello*, Verdi's great opera.

Giovanni Martinelli, tenor: *E lucevan le stelle* (The stars were shining) from Puccini's opera *La Tosca. Racconto di Rodolfo* (Rudolph's narrative) from *La Bohême.*

Alma Gluck: *The swallows,* by Cowen, and the *Berceuse* (Lullaby) from *Jocelyn,* by Godard.

Titta Ruffo, baritone: *Aime fanciulla ancora* (Whilst yet a simple youth) from Massenet's *Thaïs,* and *Sei vendicata assai* (Thou art avenged, dear love) from *Dinorah,* opera by Meyerbeer.

John McCormack, tenor: *Nearer, my God, to Thee.*

Emilio de Gogorza, baritone: *La paloma* (The dove), a celebrated Spanish song by Yradier, sung in Spanish.

Vladimir de Pachmann, pianist: *Nocturne* in G major, Op. 37, No. 2, by Chopin.

Florence Hinkle, soprano: *Dreaming of you* (vocal waltz), by Lehar, and *Good-bye,* by Tosti; a fine double number.

Tollefsen Trio, violin, 'cello, and piano: *Song without words,* by Van Goens, Op. 12, No. 1, and *The dream* (Le rêve), by Thomé, Op. 55.

SMART STYLES

THE MAGAZINE OF INDIVIDUALITY

THE PERFECT COSTUME!

Do you want this Spring's costume to be the most attractive, stylish and becoming you have ever worn? Do you want it to follow fashion with a taste and discretion that will adapt the prevailing mode for the perfect expression of your own personality?

Six Splendid Issues of SMART STYLES

March --- The Spring Fashions

The lure of Spring openings in Paris and New York. The first authentic and complete portrayal of Spring styles.

April --- The Millinery Modes

Milady's hats --- her veils --- her coiffure. All the millinery triumphs of Spring, contained in one issue of SMART STYLES.

May --- Brides

For the June Bride --- her gown, her gifts, her traveling equipment, her trousseau. Luxuries and necessities for the toilet table.

June --- Summer Fashions and Traveling

The Summer's styles complete, for form and comfort both. Vacation hints, where and how to go, travel clothes and luggage.

July --- Life in the Open

Sports and sporting garb. How to be correct and at ease for tennis, swimming, motoring, riding, golf and all outdoors.

August --- The Younger Generation

With school days drawing near, juvenile desires and needs are uppermost. Clothes for school, younger society and Autumn sports.

On the news-stands --- 25 cents for each copy. Delivered at your door --- $1.00 for all six, **if you use the coupon opposite**

SMART STYLES

THE MAGAZINE OF INDIVIDUALITY

offers you a unique service of advance style presentation that is authoritative, and style adaptation that will exactly meet your personal requirements.

For "the perfect costume" this Spring, you want the help of the March and April issues of SMART STYLES advanced, complete to the finest detail, correct, smart, **personal.**

The news-stand price is 25 cents per copy --- but there is a better way. Glance over the schedule of issues to the left. Every one of them contains just the information you want for your fashion needs of the changing season --- seasonable, entertaining, and, once again, **personal.**

June brides --- everybody likes to read about them. Travel hints --- going away this Summer? Summer frocks --- combining style, comfort and inexpensiveness. Sports and sporting clothes --- "kiddies'" school outfits. Everything you want to know of fashion and fashionables, for six whole months, told just as you want it told, **for just one dollar** --- the price of four copies.

Six Months of SMART STYLES For A Dollar Bill

Of course, this offer is only introductory, and is open only to new subscribers. If not already a subscriber, send the dollar at our risk, with the attached coupon, for six splendid issues of SMART STYLES beginning with the Spring Fashion Number. And send it today, the edition is limited.

PUBLICATIONS OF THE MONTH

Oliver Ditson Company
Boston, Mass.

NOTE—Compass shown by letters in brackets [ ]. First letter is lowest note; notes below the staff indicated by small letters; on the staff by CAPITAL letters; above the staff by *italic* letters.

SECULAR SONGS

HIGH VOICE

CHAPMAN, GEORGE

Mistress Rosebud. [F] [d-*g*]..$0.50
Somewhat in the old English style in point of melody and rhythm; light and graceful; suitable for encore.

MEDIUM VOICE

MAY, T. G.

Juanita. [F] [c-F]..... .30
New edition of an old favorite.

SACRED SONGS

HIGH VOICE

SHELDON, LILLIAN TAITT

The Ninety and Nine. [E] [d♯-F♯(*g*♯)]..... .60
A simple, melodious, and singable setting of this favorite old text; a useful number for the church service.

LOW VOICE

WOOLER, ALFRED

The Homeland. [A♭] [c-E♭].. .60
A new setting of a favorite hymn, with broad, strong melodic quality and true churchly character.

PIANO SOLO

STEINFELDT, JOHN M.

Lupita. Op. 44, No. 2. IV...$0.60
A good piece for recreation or social use in mazurka rhythm; a brilliant number for recital programs.

VIOLIN and PIANO

CHOPIN, FRÉDÉRIC

Valse in D (*Minute Waltz*). Op. 64, No. 1. Transcr. by Karl Rissland..... .60
One of the most popular piano pieces from the classical repertoire transcribed for the violin.

DVOŘÁK, ANTON

Humoreske. Op. 101, No. 7. Concert transcr. by Karl Rissland..... .50
A favorite number from the artist's repertoire, carefully edited for use with advanced pupils.

GRIEG, EDVARD

Album Leaf in A (*Albumblatt*). Op. 28, No. 3. Arr. by Hans Sitt..... .40
One of Grieg's finest melodies; used in fancy dancing.

HOLLAENDER, GUSTAV

Cavatina in G. Op. 36..... .75
Moderate in difficulty, with a most attractive melody; a good number for pupils' recital use.

In the Mill (*In der Mühle*). Op. 38, No. 4.....$0.75
Somewhat descriptive in style, and a good novelty for use in recital programs as well as an interesting number for home and social use.

Op. 67, No. 1. Spanische Serenade..... .75
No. 2. Scherzo..... 1.00
No. 3. Adagio-Romanze. .75
Three new pieces for advanced pupils or for artists' use in recitals. No. 1 is full of Spanish color in melody and rhythm; No. 2 is a brilliant concert piece to be played at high speed; No. 3 calls for a broad, rich, pure singing tone, sustained in style.

PAPINI, GUIDO

Serenade Andalouse. Op. 100, No. 3..... .50
A melodious captivating piece in the Spanish style; has several strains for the G string.

VIOLIN, 'CELLO and PIANO

MIERSCH, PAUL

Op. 33. Four Christmas Pieces.
No. 1. Dreaming of Santa Claus..... .60
No. 2. Christmas Bells..... .60
No. 3. Watching the Snowflakes..... .60
No. 4. Frolic Under the Christmas Tree.....$0.60
A welcome addition to the repertoire of easy music for trios; while suited, so far as titles are concerned, to the Christmas season, they can be used at any time good music is wanted.

YOUNG, WALTER E., Editor.

30 Organ Pieces for Use in Christian Science Churches. Bound in cloth..... 2.00

NEW YORK NOTES

(*Continued from page 212*)

17. Miss Barstow had the assistance of Harold Osborn-Smith at the piano.

As a result of Mr. Carl Flesch's enormous success in New York and Chicago, so many offers of engagements have come to his managers, Messrs. Haensel and Jones, that Mr. Flesch has found it necessary to postpone his sailing until after April 15.

WITH THE SCHOOLS AND TEACHERS

Mr. Walter L. Bogert, musical director of the People's Institute, New York City, reports audiences of more than 2,000 at these concerts, which are free. The following artists have assisted in the concerts to date: Eva Emmet Wycoff, Donna Easley, Estelle Bloomfield Adler, sopranos; Grace Whistler, Dorothy Bolton Call, altos; Albert Quesnel, tenor; Heinrich Meyn, Chas. M. Granville, baritones; Frederic Martin, bass; Egon Pütz, piano; Salvatore de Stefano, harp; Graham Harris, violin; Jas. Liebling, 'cello; Max Liebling, accompanist.

Miss Edith Martin, harpist, gave three concerts during February: the 6th at Jordan Hall, Boston; the 12th, at Worcester; and the 18th at Springfield.

The choir of the Church of the Holy Communion, St. Louis, gave selections from *The Messiah*, Jan. 4, under the direction of Mr. Ernest Prang Stamm, organist.

Mr. T. Carl Whitmer, director of music in the Pennsylvania College for Women, Pittsburgh, gave a lecture recital, *The Story of Opera*, Jan. 16, assisted by Mr. Charles E. Mayhew, baritone, and Miss Vanda E. Kerst, reader.

Mr. Abram Ray Tyler, organist of Temple Beth El, Detroit, is continuing his series of recitals on Sunday afternoons, under the designation *A Quiet Hour of Music.*

The Chaminade Club, of Dayton, Ohio, has not suspended activities although most of the sixty members lost their pianos and music in the flood. The year book for 1913-14 shows fifteen programs for the season.

Pupils of Mr. Hiram R. Goldman gave a program of violin music at Mr. Goldman's studio, Boston, Feb. 4.

Mr. Walter H. Keller, director of the Sherwood Music School, Chicago, gave a concert at the Ravenswood, Ill., Methodist Church, Jan. 22. Mr. Keller was organist of the church for seven years.

The Faelten Pianoforte School, Boston, gave a series of weekly recitals during January of unusual interest and educational value.

A "Midwinter Recital" was given at the Kroeger School of Music, St. Louis, Mo., Jan. 23. Twenty pupils took part in the program.

Figure III. Position of the Left Hand

THE PUBLIC SCHOOL CLASS METHOD FOR THE VIOLIN

By Albert G. Mitchell, Mus. D.
Assistant Director of Music, Boston Public Schools

DITSON EDITION, No. 176
Price, 50 cents, net; by mail, 5 cents extra

THAT the violin may be successfully taught to classes of beginners in schools has been abundantly proven abroad. Dr. Mitchell is proving it right here in Boston in the Lowell, Mary Hemenway, Prince, Norcross, Shurtleff, and Dillaway Schools, where this book is used.

By the aid of pictures, diagrams, text, and easily memorized exercises, the author presents his subject with great clarity, in a manner stimulating and unconventional. Though designed for class use, the work is also suitable for individual instruction.

A BREAKDOWN

In the Printing Plant at the time when the March issue of

The Musician

was almost ready for mailing caused a regrettable delay in reaching many of our subscribers.

We beg their indulgence, and trust that we shall be as prompt as usual with the issues to come.

The Musician

Twenty Nursery Rhymes

SET TO NEW TUNES

By EDMOND RICKETT

Price, Postpaid, $1.00

There is always a demand for songs for children or songs to be sung to children. The composer of the songs in this collection has kept close to the qualities demanded in music for little folks and his tunes are easy, pleasing, melodious and full of spirit and attractive rhythms.

The accompaniments are easily playable and are suited to the hands of the little pianists of the family. All the old favorites are included, such as Ride a Cockhorse; Little Bo-peep; Goosey, Goosey, Gander; Little Boy Blue; Little Jack Horner; Tom, the Piper's Son, etc.

KITTY CHEATHAM SAYS:

"I have used **Rickett's Nursery Rhymes** in all my German Programs with great success."

A MONTHLY PUBLICATION

W. J. BALTZELL, Editor

PUBLISHED BY

OLIVER DITSON COMPANY

SINGLE COPIES.....$ .15
SUBSCRIPTION PRICE, PER YEAR 1.50

The Subscription Price of $1.50 per year applies to subscribers residing in United States, Mexico, Panama, Hawaii, Philippines, Alaska, Cuba, Porto Rico, Guam, Tutuila, and the city of Shanghai. The price to Canada is $1.75; to Great Britain and the British Colonies, 9 shillings; to Germany, 9 marks; to France, 11 francs. To all other countries the yearly subscription price is the equivalent of $2.20 in American money.

The entire contents of this magazine are covered by the general copyright, and articles must not be reprinted without special permission.

REMITTANCES should be made by Bank Draft or Check, Post-Office Money Order, or Express Money Order. *Where none of these can be procured,* money may be sent in a Registered Letter.

NEW SUBSCRIPTIONS may commence at any time during the year.

EXPIRATIONS AND RENEWALS.—When a subscription expires a notice is sent with the request to renew. Renewals should be sent promptly as subscriptions are not continued after the time for which they are paid.

NOTE.—Customers with charge accounts in good standing may have their subscription charged to their regular account, if desired.

COMMUNICATIONS ARE WELCOME from all interested in the teaching and study of music, and in furthering the success of THE MUSICIAN. All articles or communications submitted for publication should be clearly written on one side (only) of the sheet. Those which cannot be used will be returned. These communications must invariably be addressed to the Editor of THE MUSICIAN.

We decline to be responsible for unsolicited manuscripts. We shall always be glad to consider them for publication in THE MUSICIAN and we will return them if postage and full address are enclosed.

SPECIAL NOTICE: The publishers should be notified of a changed address before the 5th of the month. Otherwise the next month's issue will be sent to the old address.

All REMITTANCES should be addressed and made payable to

NEW MUSICIANS LIBRARY VOLUME

Anthology of German Piano Mus. Volume I. Classic Composers. Edited by Moritz Moszkowski.

IN this volume of THE MUSICIANS LIBRARY the editor has indicated the field from Frohberger, who brought the best traditions of Italy into Germany, down to Beethoven, in whom the classic culminated and the romantic school was born. This great period of German art produced masterpieces in the contrapuntal style of Bach and Handel, and in the homophonic forms of Haydn and Mozart, and the editor has chosen wisely from this rich storehouse, bringing together pieces of conspicuous excellence to form a collection of general significance. As past master of the pianist's art, Mr. Moszkowski's helpful editing, annotation and fingering leave nothing to be desired.

SPECIAL SUBSCRIPTION OFFER:—One copy with The Musician, one year, paper covers, $2.25.

NEW PIANO WORKS

Isidor Philipp: Exercises for the Development of the Higher Pianoforte Technic. Ditson Edition No. 196.

ISIDOR PHILIPP is known to pianists as one of the most distinguished teachers of piano playing connected with the celebrated Paris Conservatoire. His system, which has been the educational basis of the training of many of the younger French pianists, consists in using exercises to give drill in variations of intensity of tone, or duration of tone; practising passages in legato, detached and portamento styles; changing of key; special practice with one finger; alternate extension and contraction of the fingers; modifications in all possible forms, scales, arpeggios, repeated notes; exercises for acquiring suppleness; passing under of the thumb; velocity in scales; the use of the fingering of C in all keys; studies in double notes, octaves, octaves with intervening notes, etc.

The price has been fixed at $1.50; until published we will accept orders at 50 cents per copy.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $1.85.

Orvil A. Lindquist: 100 Exercises for the Weak Fingers. Ditson Edition, No. 195. $1.00.

MATERIAL of a very useful character such as every teacher needs in his work with pupils. The weaker fingers require special drill and specially prepared exercises, a need which the author has admirably met and filled. Try this work in your efforts to develop strength of attack in your pupils' fingers. It can be used with any method or course of studies.

SPECIAL OFFER:—With The Musician, one year, $1.65.

Arnoldo Sartorio: Twelve Melodious Studies in Velocity in Broken Chords. Op 1018.

As the title implies, these very useful studies employ chiefly arpeggios in many and varied forms and applications. They are remarkably melodious, whether it be in the style of accompanied cantabile themes in one hand or the other, or developed entirely from figuration. As new and valuable pedagogic material, these studies by a well-known composer of technical works are heartily recommended to progressive teachers; they are moderate in difficulty and do not exceed Grade IV.

This work will be added to the celebrated Ditson Edition. In advance of publication we will accept orders at 40 cents, postage paid, if cash accompanies the order; if a charge is to be made on our books, postage is additional.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $1.75.

Ernest R. Kroeger: The Whole Tone Scales.

THIS little work is designed to meet a need which has arisen since latter-day composers have been employing with increasing frequency the whole tone progressions. Twelve possible scales are given with their corresponding arpeggios both in parallel and contrary motion, all equipped with their most convenient fingering. The work will be a boon to teachers and to all pupils who have encountered in their studies this new and at times perplexing musical resource.

This work will be added to the Ditson Edition. In advance of publication we will accept orders at 25 cents, postage paid, if cash accompanies the order; if a charge is to be made on our books, postage is additional.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $1.60.

A NEW ORGAN WORK

30 Offertories for the Organ. Ed. by Jas. H. Rogers. $2.00.

A NEW volume uniform with the popular 30 *Preludes* and 30 *Postludes*. The editor has drawn upon the best works, by European composers, and has made a number of admirable transcriptions especially for this work. It is to be bound in cloth with gilt top, and is in every way a distinct addition to the organist's collection.

SPECIAL OFFER:—With The Musician, one year, $2.50.

A NEW VIOLIN WORK

Cecil Burleigh: 12 Short Poems, Op. 18. Ditson Edition, No. 94. $1.25.

A set of fine pieces for the use of advanced pupils and in concerts. While they have exceptional value for teaching use in the matter of training for style and interpretation, they were composed primarily for purely musical ends, are poetic in conception and content, and thoroughly violinistic in form and expression.

SPECIAL OFFER:—With The Musician, one year, $1.85.

MISCELLANEOUS

James H. Rogers: From the Rubaiyat. Five Quatrains

The tempting quality of Omar's immortal verses has inspired the composer with most felicitous musical imaginings. For this set of five songs quatrains have been chosen which are in themselves among the most beautiful and which are adroitly contrasted in mood. To meet their poetic content Mr. Rogers' melodic vein was never more fluent, his harmonic scheme more vital, nor his economy of means to produce just the right emotional effect more sure. These songs, the latest product of his muse, may be used as a cycle or singly, and will adorn any artistic recital program.

The price has been fixed at $1.25; until publication we will accept orders at 75 cents per copy.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $2.10.

Laura Rountree Smith: Sixty Musical Games and Recreations.

This stimulating little book is the work of one who understands not only the needs of kindergarten teachers, but the interests of and mode of approach to the child mind. It is, in part, a reprint of material which appeared in The Musician department for children, and greatly appreciated. The Games are very simple at the beginning, and in various forms wherein the children can all take part; and they convey in an agreeable manner much valuable musical instruction. The Recreations, or "Recitals," as the author calls them, are more elaborate, and consist of well-planned entertainments wherein recitations, piano pieces, and songs are happily introduced, all bearing on the central idea of the recital. Costumes and scenery may be employed in many of them, there is opportunity for pretty dances, and the scheme may often be elaborated or simplified at pleasure

The price has been fixed at 75 cents; in advance of publication we will accept orders at 40 cents, postpaid, if cash is sent with the order; if a charge is to be made on our books, postage is additional.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $1.75.

———*———

"INTERPRETATION OF PIANO MUSIC," BY MARY VENABLE

A RECENT ADDITION TO THE "MUSIC STUDENTS LIBRARY," PRICE $1.25, POSTAGE PAID

"Many of the statements in your excellent book will give musicians cause for reflection. If you had written only the volume on the pedals it would alone have been worth while. The book is invaluable You have solved many problems which heretofore only have been in the minds of artists, and now are in the reach of students and those interested in the advancement of pianoforte playing. I will gladly recommend it. My best congratulations."—Dr. Wm. C. Carl, Director of the Guilmant School of Music, New York City.

FREDERICK A. WILLIAMS

Mr. WILLIAMS was born at Oberlin, O., March 3, 1869. When he was about five years of age his parents moved to Cleveland. He showed talent for music at an early age, but did not begin the serious study of music until he was well along in the teens. His first lesson in piano playing he received from his sister; later he studied piano and organ with James H. Rogers; and still later, piano, harmony and composition with Wilson G. Smith, also of Cleveland. In 1899 he studied piano with the late William H. Sherwood.

For over 20 years Mr. Williams has been teaching piano playing in the city of Cleveland, and is one of the leading teachers of that city. He has devoted much time to composition, and at the present time his published works number over 100. His compositions have been very successful, and are being used extensively by many of the leading teachers and in many of the best schools in all parts of the country.

Thirty Exercises for the Development of the Hand and Finger Muscles, Op. 80

By FREDERICK A. WILLIAMS

Ditson Edition, No. 201. Price, 50 cents net

The 30 exercises contained in this work are intended to develop the muscles of the hand and fingers, in the shortest possible time. The exercises are so arranged, that if practised correctly, every muscle of the hand will be brought into action. Special work is given to the fourth and fifth fingers in order to equalize the muscular action of hand and fingers.

What Leading Musicians Say:

I am much pleased with your Op. 80 for finger development. The field has been so thoroughly gone over that it seems almost impossible to get anything new in finger exercises, and yet your ingenuity has proved that there are still new forms, new ways of doing things that are practical and should be exceedingly helpful to the student. I congratulate you on your excellent work.—Wm. B. Colson, Pianist and Teacher, Cleveland, O.

I want to congratulate you upon having done something of real practical worth in your Thirty Exercises. You have divided the work so equally between the hands that each receives proportionate development. They ought to prove a valuable acquisition to every player's and teacher's technic aids.—Wilson G. Smith, Teacher and Music Critic.

Your Op. 80 reached me a few days ago. I am very glad you have written such a set as they are just what I have been wanting for years. I do not know of any other studies that cover this very necessary ground. I shall use them in my teaching and recommend them to my teachers.—Francis L. York, Director of Detroit Conservatory of Music.

In your Thirty Exercises you have presented some excellent material in the way of increasing the strength and flexibility of the fingers. Your work will, I am sure, find a wide field of usefulness.—James H. Rogers, Composer and Teacher, Cleveland, O.

The Organist's Journal

The Largest, Best, Most Useful and Most Practical Organ Periodical

Each issue of The Organist's Journal contains sixteen large pages of Pipe Organ Music, selected from the latest compositions of the leading English, French, German, and American Organ Composers. There are also many transcriptions from the scores of the world's greatest masters.

The music is edited in the most careful manner, special attention being given to the phrasing, pedal, marking, registration, etc., etc.

It is printed from specially engraved plates in the finest style of engraver's art. The lithographing is exceedingly clear, and the paper of the best quality.

None of the pieces are too difficult for the amateur or the organ student, while the professional organist will find an abundance of choice material exactly suited to his requirements.

There are 196 of the largest size music pages in 12 issues, with an average of about 80 pieces. This music cannot be bought in sheet music form for a dozen times the cost of a year's subscription.

Subscription price $3.00 a year. Sample copy 25c.

The Organist's Journal $4.50 / The Musician—value } Both for one year $3.75 { Postage additional on Canadian and Foreign Subscriptions

Personal Conferences with World Famous Virtuosos

GREAT PIANISTS ON PIANO PLAYING

By JAMES FRANCIS COOKE

Price $1.50

Invaluable Practical Opinions upon Technic, Interpretation, Expression and Style

Bauer	Carreño	Godowsky	de Pachmann	Rachmaninoff	Schelling
Bachaus	Gabrilowitsch	Hofmann	Pauer	Sauer	Stojowski
Busoni	Goodson	Lhévinne	Reisenauer	Scharwenka	Zeisler

ONE chapter is given to each of the above keyboard masters. Each chapter is prefaced by a fine portrait and a concise biography, and followed by ample test questions for club and class use. Mr. Cooke, a teacher of wide practical experience here and abroad, learned through his long active contact with earnest pupils just what kind of information and artistic advice ambitious pianists and teachers would desire should they have the privilege of becoming acquainted with famous virtuosos. The book is finely bound in cloth, stamped in gold, and contains 300 pages. It was introduced at once in the Pedagogy classes of Dr. Frank Damrosch at the Institute of Musical Art, New York, and by Miss Mary Venable at the College of Music in Cincinnati—both remarkable endorsements of its practical value. Mr. Henry Schradieck, the eminent violinist, says of it: "Every piano student ought to study this book. In fact, it ought to be in the library of everyone who studies music earnestly, as many of the ideas apply just as well to other instruments as to the piano."

THEO. PRESSER CO., Philadelphia, Pa.

MAX HEINRICH

Both as a composer and editor, Max Heinrich commands the admiration, attention and esteem of the entire vocal world. His original songs offered herewith are the products of ripest musicianship and highest artistic aim.

VOCAL WORKS

His editions of Schubert and Schumann prove his absolute mastery of the classic song and the volumes offered herewith may justly be claimed as far superior to any existing edition.

Fifty Selected Songs by
FRANZ SCHUBERT

The appearance of this new edition of Schubert songs, revised by Mr. Max Heinrich, is an event of great importance to vocalists In these revisions, Mr Heinrich perpetuates his own artistic ideals, his personal methods as well as his style and remarkable individuality.

Special translations of the text in which the true meaning, poetic beauty and rhythmic metre of the original German versions have been retained with remarkable success are provided by Miss Alice Mattullath.

MAX HEINRICH

THREE SONGS

In these original songs, Mr. Max Heinrich proves himself as accomplished a master in the setting as in the singing of a song.

Distinguished by individual originality and surprising melodic invention, these compositions are written with delightful consideration of vocal needs and effects, and may justly be hailed as a most important addition to the very best of modern concert songs.

ROBERT SCHUMANN, Op. 48
POET'S LOVE

This new edition of one of the greatest song cycles ever written, carries with it the same degree of importance and genuine interest which has attended the publication of a volume of Fifty Selected Songs by Franz Schubert mentioned on this page. With the utmost care as to detail, phrasing, breathing, enunciation, rhythmical accuracy, interpretation, tone formation, and a highly artistic new English version of the text by Miss Alice Mattullath, this new edition of Schumann's masterpiece, takes rank as the best one ever offered.

CONTENTS

When all the world was fair in May
Whene'er my tears are flowing
I once loved the rose and the sunbeam dancing
All grief and sorrow buried lies
My soul in a lily sleeping
The Rhine is peacefully flowing
I'll not complain, though torn my heart with pain
If only the dear little flowers
The music's festive and sprightly
Off in my heart is ringing
A youth once loved a maiden
I wandered about the garden
and others

CARL FISCHER COOPER SQUARE NEW YORK

NEW YORK NOTES

THE Metropolitan Opera House had two notable productions in February, the première of Henri Février's *Monna Vanna*, Feb. 17th, with Mary Garden and Lucien Muratore in the title rôles, and Charpentier's much discussed *Julien*, with Caruso and Farrar. The chief interest in the Chicago-Philadelphia Opera Company's production of *Monna Vanna* seemed to be centered in the splendid art of Muratore, the French tenor both musically and histrionically; while Caruso's superb mastery of the difficult Charpentier score seemed far afield from his customary Italian rôles.

MR. AND MRS. HERWEGH VON ENDE gave a reception Feb. 23d, in honor of Mr. and Mrs. Godowsky, which brought together a large gathering of prominent musicians. An enjoyable musical program was presented by artists from the Von Ende School, and the affair was pronounced one of the most delightful of the season.

CARRIE BRIDEWELL, contralto, gave a song recital at Aeolian Hall, Feb. 16th, after a period of retirement from concert work. Her program included songs in French, German, English and Italian, three of the French songs being accompanied by the organ. The audience was large and a highly enthusiastic one.

MISCHA ELMAN gave his second recital in Carnegie Hall, Feb. 14th, playing two sonatas, Mozart's, No. 10, and the Handel sonata in E major; also the B minor concerto of Saint-Saëns. Other numbers were the Beethoven *Romance* in G major, Paganini-Vogrich *Etude*, Brahms' *Hungarian Dance* and Wieniawski's familiar *Souvenir de Moscow*.

MADAM PEROUX-WILLIAMS, mezzo soprano, gave a recital in Aeolian Hall, Feb. 18th, before a large and critical audience. Madam Williams is a singer of distinct talent and displayed much versatility in her work.

THE Philharmonic Trio consisting of Morris Kaufman, violinist, Alexander Rihm, pianist, and Jacques Renard, 'cellist, gave the fifth of the chamber music series at the Brooklyn Academy of Music, Feb. 29th. The Trio played with excellent ensemble and was heartily applauded.

WALTER L. BOGERT, director of the Sunday night concerts at Cooper Union, under the auspices of the People's Institute, had as soloists during February, Ada Sassoli, harpist; Helen Reusch, soprano; Rebecca Davidson, pianist; Johanna Kristoffy, soprano; Franz Kaltenborn, violinist, and John Finnegan, tenor.

MADAM OTTILLIE METZGER, the famous contralto, gave her first American recital at Aeolian Hall, Feb. 28th. Her voice possesses great dramatic qualities, and her recital was particularly interesting for its Schubert and Brahms' lieder. A capacity house attested its appreciation of her fine artistry.

THE New York Symphony Orchestra, Walter Damrosch conductor, gave its third concert of the Beethoven series at Aeolian Hall, Feb. 25th, with the assistance of Oscar Seagle, baritone, as soloist. The *Fourth* and *Fifth* symphonies were given brilliant readings, the audience being particularly appreciative of the *Fifth* symphony. Mr. Seagle sang effectively a German group, with Coenrad V. Bos accompanying.

MR. ALAN MACWHIRTER gave a recital on *Traditional Folksongs of Great Britain and Ireland* at the MacDowell Club in February. He rendered a program of interesting songs.

CARL FLESCH gave his first violin recital, Feb. 5th, in Carnegie Hall. Mr. Flesch's success was instantaneous.

PIANO STUDIES

The Willis Music Company :: :: Cincinnati, Ohio

Material for the Study of Pianoforte Pedals

BY

ALBINO GORNO

PART I—First (loud) Pedal

The first nine exercises consist in connecting chords by means of the first pedal. The next four, in connecting tones of the melody by the first pedal.

Exercises 15 to 24 show effect of sustaining a note or chord with pedal, while the hand is removed to play accompanying chord.

Exercises 24 to 30 are exercises in **superlegato.**

Exercises 30 to 33—Pedal effects produced by hands.

Exercises 33 to 36—Pedal used to sustain acciaccaturas.

Exercises 37 to end—Left hand used in complement with first pedal.

Price, $1.50

PART II—First and Second (soft) Pedal

This second book treats of and explains how to vary tone-color by use of first or second pedals both used together, or how to obtain this variation by use of both pedals and sustaining notes or chords with the hands. For example, "The hand and pedal together can produce the greatest possible contrast in volume of tone.

"Legato impossible by fingers alone, therefore use the first pedal."

"Louder effect than fingers alone can produce."

"Notes of melody sustained by First Pedal, repeated softly in the accompaniment." "Effect to be imagined."

"Right hand alone, left hand alone—a study in contrast of tone coloring."

These and many other points are exemplified—giving a complete system of material for pedal study.

Price, $1.50

Material for the Study of Pianoforte Technic

SCALES AND ARPEGGIOS WITHOUT NOTES

By J. Rode-Jacobsen **Price $1.00**

Piano teachers should use this great work. It teaches the major, melodic as well as harmonic minor scale in all keys, in 8ths, 6ths, 10ths and 3ds; also arpeggios. It is so simple and easy that child beginners can play scales and arpeggios from the first lesson. Can also be used by adult beginners and advanced pupils. Sent on approval to piano teachers sending their professional cards or letterheads; or, if out of cards, send 25 cents.

PIANO

Exercises for the Development of the Higher Pianoforte Technic

By ISIDOR PHILIPP
Ditson Edition, No. 196
Price, 75 cents net

This system of the distinguished teacher at the Paris Conservatory has been the educational basis of many noted pianists, and consists of valuable original exercises which deal with the advanced technical problems that confront the modern teacher and pupil.

Thirty Exercises for the Development of the Hand and Finger Muscles, Op. 80

By FREDERICK A. WILLIAMS
Ditson Edition, No. 201
Price, 50 cents net

The thirty exercises contained in this work are intended to develop the muscles of the hand and fingers, in the shortest possible time. The exercises are so arranged, that if practised correctly, every muscle of the hand will be brought into action. Special work is given to the fourth and fifth fingers in order to equalize the muscular action of hand and fingers.

100 Exercises for the Weak Fingers

By ORVIL A. LINDQUIST
Ditson Edition, No. 195
Price, 50 cents net

Material of a very useful character such as every teacher needs in his work with pupils.

First Studies for Young Pianists

Twelve Progressive Studies, Op. 112
By L. STREABBOG
Edited by Karl Benker
Ditson Edition, No. 192
Price, 38 cents net

Useful for development of style and technic. Grade III.

VIOLIN

Twelve Short Poems, Op. 18

By CECIL BURLEIGH
Ditson Edition, No. 194
Price, 63 cents net

A set of fine pieces for the violin for the use of advanced pupils and in concerts. While they have exceptional value for teaching use in the matter of training for style and interpretation, they were composed primarily for purely musical ends, are poetic in conception and content, and thoroughly violinistic in form and expression.

Scale Studies for the Violin

By HENRY SCHRADIECK
Edited by Franz C. Bornschein
Ditson Edition, No. 172
Price, 38 cents net

These splendid studies need no word of commendation. They have a distinct educational value recognized by all teachers. Mr. Bornschein has not only edited these studies in a masterly manner, but has also extended them.

The Violin

By BERTHOLD TOURS
Revised and Enlarged by Franz C. Bornschein
Ditson Edition, No. 198
Price, 38 cents net

A splendid new edition of one of the most popular violin methods ever published. New engraved plates are used, and the editor has greatly amplified the old material making this the best and the handsomest edition in the market.

ORGAN

The Organ Students' Bach

Edited by JAMES H. ROGERS
Ditson Edition, No. 193
Price, 63 cents net

The purpose of the editor has been to make a selection from the organ works of J. S. Bach, of such pieces as will serve as an adequate introduction to the study of the greater works of the master.

Organ

Thirty Offertories for the Organ

Edited by JAMES H. ROGERS
Price, $2.00, postpaid

A new volume uniform with the popular *30 Preludes* and *30 Postludes*. The editor has drawn upon the best works by European composers, and has made a number of admirable transcriptions especially for this work. It is to be bound in cloth with gilt top, and is in every way a distinct addition to the organists' collection.

Thirty Organ Pieces for Use in Christian Science Churches

Edited by WALTER E. YOUNG
Price, $2.00, postpaid

This is the first collection of organ music published expressly to meet the needs of organists in Christian Science churches. The author, who is organist of the Mother Church in Boston, has a full knowledge of what is suitable. The book contains ten preludes, ten offertories, and ten postludes. It is bound in cloth, with gilt top.

For the Children

Sixty Musical Games and Recreations for Little Musicians

By LAURA ROUNTREE SMITH
Price, 75 cents, postpaid

Teachers of children are constantly on the lookout for material in the style of little musical games, plays, and entertainment specialties, with and without stage setting and costuming, to use in their recitals and concerts. The present work meets exactly the want specified above and gives a very great amount of material, varied in character, using quite young children as well as girls of fourteen to sixteen. It is in every way the best book of the kind in the market.

OLIVER DITSON COMPANY, Boston

Chas. H. Ditson & Co., New York — Lyon & Healy, Chicago

Just Issued

Songs of Britain

A COLLECTION OF ONE HUNDRED ENGLISH, WELSH, SCOTTISH AND IRISH NATIONAL SONGS

SELECTED AND EDITED BY

Frank Kidson and Martin Shaw

THE TUNES NEWLY ARRANGED WITH ACCOMPANIMENTS FOR PIANOFORTE

BY

Martin Shaw

Vocal Score, $1.00 Voice Part only, 50c.

ENGLISH PRESS NOTICES

The "Songs of Britain" makes an admirable companion volume to Sir Charles Stanford's well-known collection, "The National Song Book," but one is surprised to find how rarely it trenches on the same ground, although the greater part of its matter is drawn from traditional sources . . . . and so we have here a book of songs, the majority of which are likely to be quite fresh to most singers, old and young, and every one is a living song with words that mean something, and a tune that means more.

The accompaniments are artistically devised, but as Mr. Shaw has avoided the profuse style they are never difficult to play. . . .—*The Times Educational Supplement.*

Many of them are little known, but they have been rescued from their obscurity because of their beauty.

We heartily commend the selection as being calculated to give the song-lover many happy hours.—*The Schoolmaster.*

GITANJALI

(Song Offerings)

Poems by RABINDRANATH TAGORE

Music by

JOHN ALDEN CARPENTER

Price, Complete, $1.25 net

This set of Song-Offerings (Gitanjali) represents the latest musical output by one of America's most gifted composers. Set to words written by the leading poet of India—Rabindranath Tagore—whose verse reveals an Oriental warmth of color and a sensitiveness to every passing mood, these songs touch the entire gamut of human emotion; they penetrate to the depths of consciousness, as in "On the day when death will knock at thy door," where "the dread universal essence (which is not wisdom, or love, or beauty, or power, but all in one) is that for which all things exist, and that by which they are." In this song one feels the doom of death and the rich, full sacrifice of life. Again, they reach a climax of riotous and Bacchanalian joy, as in "Light, my Light," where the composer has heightened the intensity of mood by making use of the device of repeating the first phrase of eight measures a semitone higher. In "When I bring to you colored toys," a light and transparent harmonic structure suggests the play of colors on clouds and water, and there is a well-defined figure as of a rippling brook. "On the seashore of endless worlds" consists of several distinctly characteristic themes: one, light and graceful, and representing children at play, accompanies each reference to the children in the poem. The picture of the sunlight gleaming through the darksome clouds is vividly portrayed by a slowly ascending D major triad, after the manner used by Weber in "Oberon." Then the composer affords a glimpse of the tumultuous surging of the sea, and reproduces the death knell for those who are lost; and at the end calls back the children's laughter, this time accompanied by the distant tolling of the knell, as if to suggest the thinness of the barrier between life and death.

These songs have already made a place for themselves on the programs of such artists as Julia Culp, Christine Miller, and Oscar Seagle.

MILTON'S

Knowledge of Music

Its Sources and Its Significance in His Works

By SIGMUND SPAETH, Ph.D.

Price, $1.00 net

While primarily a work of scholarship and research, this dissertation possesses also a general interest not only because of the unusual quality of its material, but also through the attractiveness of its style. The body of the dissertation is in five chapters, containing an historical sketch of the English music of Milton's time, a biographical account of Milton as a musician, a detailed study of his knowledge of the practice and theory of music and finally a careful examination into the significance of this knowledge. The author shows that Milton stands alone among poets in the completeness and accuracy of his musical understanding, and that he adapted this wealth of material in poetic fashion to his religious and philosophic beliefs, idealizing harmony and giving it a mystic universality in the manner of the Pythagoreans.

There are five appendixes, containing significant quotations from Milton's works, notes on Milton's friendship with Henry Lawes, the composer, and Leonora Baroni, the singer, a translation of Milton's Latin essay on the "Music of the Spheres" and a summary of the most important sources of his knowledge of music. There is also a very thorough glossary of the musical terms used by Milton.

Dr. Spaeth's book will appeal to every lover of English literature because of the new light which it throws on the personality of the great epic poet. Its interest is as great for the general reader as for the painstaking scholar, and its value as a book of reference is equaled by its delightfulness as an essay in literary and musical criticism.

MADELEINE

A LYRIC OPERA IN ONE ACT

Adapted from the French of Decourcelles & Thibaut

By GRANT STEWART

Music by VICTOR HERBERT

Vocal Score, $2.00 net

Libretto, 35 cents net

In Madeleine Victor Herbert has followed closely the conversational style used by the librettist. The music thus has a marked "modern" flavor. Yet passages of great lyric beauty are not wanting; and one there is of exquisite beauty—the theme that sings the thought of the mother. The vocal parts often attain heights of genuine lyric beauty; and the orchestration always impresses by its charming piquancy or by its richness of color and appropriateness to the action, never sounding blatant, even in the climaxes. In the orchestration, too, are here and there touches of local color, for the attaining of which the composer has introduced little suggestions of eighteenth-century music; as when Didier sings of his parents of lowly birth, accompanied by a suggestive little shepherd's-dance motive. Considered as a whole the score is truly characteristic of Herbert's music; it shows originality of invention; it contains melody; and it is always pleasing in its harmonic structure.

Madeleine received its premiere performance on the afternoon of January 24th, at the Metropolitan Opera House, New York City. The title-role was sung by Mme. Frances Alda; the part of Nichette was taken by Miss Leonora Sparkes; and that of the artist Didier by Mr. Andrea de Segurola. To judge by the success of its first performance, Madeleine is likely to take its place among the successful operas of the Metropolitan repertory.

SECULAR SONGS

HIGH VOICE

COVERLEY, ROBERT

Russian Peasant's Lullaby. [G min.] [d-g]..... $0.50
Full of the so-called Russian color; it is as pleasing as it it is different from the average song.

JOHNSON, WM. SPENCER

From Oversea. [E♭] [E♭-a♭]..... .40
A light, graceful song with charming melody and accompaniment; a good encore number.

RICH, MARIE

Call Me "Sweetheart"! [D♭] [E-F].. .50
A short, charming lyric set to an attractive melody; suitable for use with a first year pupil.

MEDIUM VOICE

HYATT, N. IRVING

If Love Be Dead. [F] [c-F]..... .40
A short song, filled with pathos and appeal, the melody is pleasing.

In Two Sweet Eyes. [A♭] [c-F]..... .50
A simple, effective little love song; can be used to advantage in teaching.

JAKOBOWSKI, ED.

Lullaby (*Erminie*). [F] [b-F]..... .40
A new edition of a popular opera song.

RICH, MARIE

Call Me "Sweetheart"! [B♭] [c♯-D]. .50
For description see Secular Songs, High Voice.

LOW VOICE

CHAPMAN, GEORGE

Mistress Rosebud. [D] [b-E]..... .50
The text is somewhat in the old English style, to which the composer has given a dainty, pleasing setting; will make a good lesson in blending registers.

JOHNSON, WM. SPENCER

Even Song. [B♭] [b♭-D]..... $0.50
A song of quiet character that admirably displays the strong points of a low voice, particularly the contralto.

PÜTZ, EGON

Longing. Op. 27, No. 3. [D♭] [b♭-E♭] .50

Love and Life. Op. 27, No. 1. [D] [b-F] .60
Two songs of concert character, modern in style.

SACRED SONGS

HIGH VOICE

BENNETT, SIR W. STERNDALE

His Salvation is Nigh Them that Fear Him. [A] [E-F♯]..... .40
From the oratorio, *Woman of Samaria*; a fine song for church use on general occasions.

MEDIUM VOICE

GALBRAITH, J. LAMONT

Beyond the Moaning of Earth's Restless Sea. [E♭] [b♭-F]..... .50
A sacred song of broad, prayerful style, just the thing for a full, rich voice.

LOW VOICE

SAAR, LOUIS VICTOR

A Petition. [B♭] [b♭-E♭]..... .50
A splendid song of unusual value and interest; modern in style, and calls for a good singer to bring out the possibilities.

PIANO SOLO

HARMSTON, EDWARD

The Bird's Message (*Message d'oiseau*) III-IV..... .50
A new edition of an old favorite; a good number for a recital program.

MOZART, WOLFGANG AMADEUS

Andante con espressione. (From Sonata in D, Kockel No, 311). III.... $0.40
A fine piece for teacher's use, and to interest pupils in the classical repertoire.

SETACCIOLI, GIACOMO

Canzone-Serenata (*Chanson serenade*) III-IV..... .50
A charming piece in the modern style, with sprightly themes and rhythms and well-colored harmonies; a very good recital number.

WOLLENHAUPT, H. A.

Le ruisseau (*The brook*). Valse etude, Op. 25. IV..... .50
A splendid teaching piece for technical ends; it is really a study in broken chord playing. Once it has been learned up to the right tempo it loses its technical aspect and becomes a concert etude.

VIOLIN and PIANO

AULIN, TOR

Humoreske in D. Ed. by Franz C. Bornschein..... .75
An effective concert piece of moderate difficulty from the modern repertoire.

GRIEG, EDVARD

Asa's Death (*Åses Død*). *Peer Gynt* Suite. Arr. by H. Sitt..... .40
A piece from the standard repertoire; full of color.

HOLLÄNDER, GUSTAV

Adagio-Romanze. Op. 67, No. 3 .... .75
A splendid concert number of moderate difficulty; the opening section calls for full, broad, sustained tone, part on the G string in the higher positions.

RUSSIAN FOLK-SONG

Song of the Volga Boatmen. Tr. by Franz C. Bornschein..... .50
A fine study in sustained tone and melody playing.

SAINT-SAËNS, CAMILLE

Prelude to "The Deluge." Op. 45... $0.75
A transcription of one of the composer's works for the orchestra.

SCHUMANN, ROBERT

Nocturne (*Nachtstuck*). Op. 23, No. 4. Arr. by Henry Tolhurst ..... .50
One of the composer's loveliest melodies; it makes an astonishingly good violin piece.

'TCHAÏKOVSKY, P. I.

Chant sans paroles (*Song without words*). Op 2, No. 3, Tr. by Karl Rissland..... .60
A favorite piano melody which gains, if anything, by being transcribed for the violin; a good teaching and recital number.

MUSICIANS LIBRARY

JENSEN, ADOLF

40 Songs for Low Voice. Edited by W. F. Apthorp. Cloth, gilt..... 2.50
Paper 1.50
Jensen's songs deserve a higher place and more frequent use than the concert singers of today accord to them. The translations are adequate, a matter of importance when the demand for singing in English is increasing.

DITSON EDITION

CZERNY, CARL

The Art of Finger Dexterity (*Die Kunst der Fingerfertigkeit*). Op. 740, Book III. Ed. by Clemens Schultze. Ditson Edition, No. 105.. .30

The Same. Complete. Ditson Edition, No. 102 ..... 1.25

MISCELLANEOUS

TWO PIANOS, FOUR HANDS

OTTO FLEISSNER, Polonaise Brillante **$0.65**
TH. LACK, Op. 271. Marquise. Menuet. **.60**
LUDWIG SCHYTTÉ, Op. 139, No. 2. In the Ball Room. Waltz. **.60**

PIANOFORTE DUETS

CARL BOHM, Op. 357, No 4. **Rosetta.** Mazurka. **.75**
GEORG EGGELING, Op. 120. **La Capricieuse.** Waltz. **.75**
CARL HEINS, Op. 271. **March of the Tartars.** **.50**
EMIL SOCHTING, Op. 63. No. 1 Bohemian Dance. **.65**

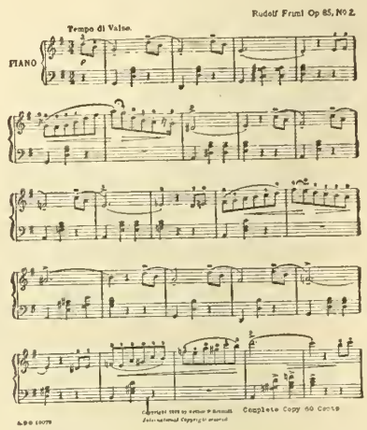
ARTHUR P. SCHMIDT

BOSTON 120 Boylston St. | LEIPZIG | NEW YORK 11 West 36th St.

RUDOLF FRIML

JUST ISSUED

BUTTERFLY WALTZ
(VALSE PAPILLONNE)



Op. 35. SUITE MIGNONNE

(*Schmidt's Educational Series, No. 3*). **Price 75 Cents**

Solitude---Morning Song---Valse Romantique---A Little Story---Danse Bohemienne---Contemplation

(Also Published Separately)

Op. 32. REVEIL DU PRINTEMPS **$0.50**

(Awakening of Spring)

A brilliant but not very difficult composition specially adapted for Recital Use.

Op. 36, No. 2. TWILIGHT **$0.50**

Contains a broad singing melody in the left hand, accompanied by simple chords in the right hand.

Op. 61. ETUDE FANTASTIQUE **$0.60**

A brilliant and effective Concert Etude for the earlier fourth grade.

HYMNE CELESTE **$0.50**

A sustained inner-voice melody richly harmonized

LUDWIG SCHYTTÉ

10 MELODIOUS ETUDES

from Op. 66

(*Schmidt's Educational Series, No 7*)

Price 75 Cents

Contains "Hide and Seek" "Hunting Butterflies," "Witches Revel," and other favorite numbers.

INSTRUCTIVE RECREATIONS

8 MELODIOUS COMPOSITIONS

(*Schmidt's Educational Series No. 48*)

Price 75 Cents

Contains "Sylphes and Nixies," "In the Ball Room" and six other pieces

VITAL POINTS IN TRAINING FOR ARTISTRY

As Told by Putnam Griswold to William Armstrong

[The article that follows had already gone to the printer when the news came of Mr. Griswold's death, following an operation for appendicitis, Feb. 26, in New York City.

Mr. Griswold was born in Minneapolis. His boyhood was spent in Boston, but he went to California as a young man and entered business life. Through the generosity of Mrs. Hearst he was able to begin study to develop his fine natural voice, with San Francisco teachers, then in New York, later in Europe where he was under Randegger, Bouhy, and Emerich. During his stay in Germany he sang in several opera companies, gaining much valuable routine. When *Parsifal* was given by the Savage Company, Mr. Griswold was engaged to take the part of Amfortas. At the end of that season he returned to Berlin, to the Royal Opera, where he was very successful in the basso rôles.

Three seasons ago he was engaged for the Metropolitan Opera, New York. His *Wotan* and *Hans Sachs* were among his best rôles. He also sang in the American operas, *Mona* and *Cyrano*.

During his stay in Berlin he was much in demand as a teacher.—Editor.]

PUTNAM GRISWOLD

THERE is that in the result of Putnam Griswold's experiences which makes them peculiarly of practical interest to Americans; having gained an international reputation as an opera singer, he met with and conquered exactly the conditions and obstacles that other Americans who succeed in the profession will be called upon to vanquish. Furthermore, he remained in outlook and point of view purely an American, undisturbed by the effect of foreign sojournings.

Born in Minneapolis, and starting out at the age of thirteen to make his way alone, he wandered, with a boy's thirst for adventure, to California, which he regarded as his home. There he engaged in his beginnings in about as wide a range of occupations as can well fall to the lot of any. Fresh air and outdoor life had developed his physique, when, finally, he turned as amateur choir singer into the long road in which he was to go so far.

London and the Royal College of Music made the scene of his first studies in vocal training. At the end of one year he set a record by making his début in opera at Covent Garden. Following that came a brief period under the guidance of Bouhy, in Paris, where he learned the vital fact that upon the student alone, through concentration and acquiring of the habit of study, depends his progress, the teacher being able only to suggest. This practical appliance and working out of suggestion, the forming of the habit of study, that independent dependence upon oneself, he regarded as his best foundation and asset. Before discovering this very important truth, like many another, he had regarded the teacher as assuming all responsibility, whereas the real situation places ninety per cent of it upon the student, the teacher being able only to indicate the course which the young singer must practically work out himself.

For a short time subsequent to his London début, Mr. Griswold sang at the opera in Frankfort-on-the-Main; after that came his engagement at the Royal Opera in Berlin where, in the course of five years' engagement, he mastered one hundred and fifteen rôles, studying meanwhile German, French, and Italian. The value of that German training, demanding as it did wide versatility in the rôles assumed, and complete exactness of detail in acting, meant a ripening process and the command of an authority which combined to make convincing art. Then, being fully fitted to assume it, came his engagement at the Metropolitan in heroic parts, and instant recognition; this spring he was to have entered upon a series of performances at Covent Garden as chief basso in French and Italian répertoire. This brief outline will serve to demonstrate the extent of his achievements, more complete than those of any American male singer yet entering upon the career.

As to Mr. Griswold's formative period in Germany, where four performances a week are regarded as natural consequence, routine was nothing if not thorough, once requiring him to make seven appearances in as many days. To recapitulate them will be of interest, as showing what crises can be met in such training, as well as the schooling in versatility which is so great a part of the régime: Monday, the King in *Lohengrin;* Tuesday, Escamillo, *Carmen;* Wednesday, and entailing a twelve hour railway journey to another city, the basso part in Bach's B minor *Mass;* Thursday, Hagen, *Götterdämmerung;* Friday, King Mark, *Tristan;* Saturday Mephisto, *Faust;* Sunday morning, a rehearsal for the *Salome* of Strauss, followed by a public presentation of the opera that night. To meet such a situation on the physical side would suggest as first requirements an extraordinary physique, yet Mr. Griswold's opinion, one oversetting popular acceptance, was that normal health only is requisite. But the method of life which a singer leads in order to sustain normal health, in meeting such conditions, is self-understood.

Every artist has an individual plan in pursuing study, it is a first necessity of equipment; that of Mr. Griswold, and springing from hard won personal experience, bears the stamp of logical practicality. He regarded it as of tremendous importance at the outset, and throughout the career, to plan for two years ahead how to get the greatest results. One set of achievements mastered, another in process, and a third in view was his fixed rule. The detail of costuming a part, for instance, was under consideration from sketches for a year before choice was finally determined. Everything was reached by a process gradually digested, but always foreseen in outline.

To go back to the student stage, Mr. Griswold's words relating to a fixed plan were: "In my own career I consider that through misguided energies and lack of formulated effort, two out of the four years I studied were wasted. The reason was absence of common sense and executive ability on the part of my teachers. There are some who fail to look ahead, losing themselves completely in a single point occupying the moment, and they pursue that single point to the exclusion of all else. The moment a pupil has developed a system and régime himself he avoids twenty per cent of such and kin-

dred dangers, because planned, systematic study means the development of concentration, and concentrated study will very shortly enable him to detect the flaws in any system of education.

"Failing to look into things intellectually means merely lack of concentration and of methodical plan, and, as all know, in the moment of interpreting rôle or song, nothing can be left to chance. When I sit down to study a new part my process is first to get the notes, then the drudgery is done, for memorizing the notes becomes an aid to memorizing the text. Following that, for special study, I take up the opera act by act; this done, as the next step in study, I subdivide it into scenes, and, finally, I subdivide again, for the same purpose, into moods, for each succeeding section presents a different mood to be expressed.

"When I feel comfortably secure in things, I imagine, in seclusion, what the special scene under study should be like, taking into consideration other rôles related to mine in the ensemble, and their effect upon it. Through that course comes the gradual building up of the creation as a whole, leaving no vagueness of mind, nothing to chance, because when one is on the stage in the middle of a performance musical and dramatic technicalities must be mechanical in their response in order that one may live in the rôle which one is singing. Through such realistic interpretation one sometimes achieves that rare moment of inspiration which makes one feel all the struggles of a career to have been worth while. Curious it is, too, how long we idealists will work until we reach exaltation above human elements, and realize that it is a gift from the divine Creator.

"Songs require identically the same plan of study as a rôle, only ten times more, for in the song, brief in itself, one stands with the voice alone as medium to paint a picture against the slender accompaniment of a piano. In studying a song I first get the verses as a picture; then work it out section by section, then phrase by phrase, afterward combining the whole. In an opera presentation while singing one mood, the artist must subconsciously realize the next to be conveyed. The same idea must be applied in songs, which are more difficult in this sense, as a change of mood may come with every single line. Again, to apply full resource in moods in a song become more difficult than in opera, for the reason that in the latter we have the tone mass of the orchestra to spur us on.

"Without imagination no singer can give expression that will create impression, excepting only when the natural quality of tone is of a rare sensuous beauty, and such voices are seldom met with, only twice in my experience have I heard them. Too often vocalists are so lost in the matter of securing beautiful tones, that they forget entirely the spiritual interpretation which those tones should be made to convey. They look only upon the outer shell, the notes and their dynamic shading, the heart which is enclosed in it, the poetic contents of the words, they do not realize. And yet *these are* the song. Those words have inspired the composer to write his music, and just as truly they must inspire the singer who would sing it.

"Imagination and sympathetic literary sense, which search out the hidden, maybe at times almost obscured meaning, come to the singer's aid in a study of the poem line by line, after the outline of the whole as a picture is fixed clearly in mind. Every word in many a classic, a page, perhaps, or two pages long, must be regarded as a jewel receiving coloring from the singer's breath. The mood is indicated unescapably, but not this detail, requiring both heart and brain to evolve. Yet without just this heroic painstaking, this spiritual insight, no good or great song reaches interpretation on the high plane of which it is capable. And the singer's aim should be not to sing it as well as does any other, but to sing it better.

"Some there are, devoid of the vital quality of imagination, and while hard work and intelligence on their part may demand recognition, they do not awaken interest. Few, however, fail entirely to possess imagination, even though its degree may be the minimum. But that minimum is capable of cultivation and development. Imagination can be cultivated, but, first of all, only through a spirit of generosity. To do that means to place ourselves in other's circumstances; in other words, to cultivate another's point of view. Then we are able to see things in more ways and more lights than our own narrowed ones, just as we may eventually see the vision of a poet instead of an artistic arrangement of words. Beyond all this, the man remaining eternally locked up in self-centeredness remains lacking in sympathy as well as in imagination. And without these two qualities as full resource to be fully drawn upon, what does the best of songs become? An array of notes.

"Cultivation of the powers of observation is a most valuable factor in aiding imagination. This means also a retention in memory of the things observed. For example, let us go down the street alone, stop at a shop window, look into it intently, pass on, look at other things, then try to recall the contents of the window and return there and see how nearly we have it. Pictures observed in the same manner, powerful passages in plays closely watched, and acted through in fancy afterwards are other strong helps in stimulating observation.

"Eternal singing in the studio, instead of getting out and practically using our wits in doing things, is dangerous, first of all, because only one teacher out of fifty demands concentration of the pupil. And absolute concentration means turning to our own individual use and development everything within us and about us. Complete study properly directed by an authority inspiring perfect confidence, should bring in two years such a foundation for experience and experiment, with occasional correction by the same authority, that all which is necessary for a career of unlimited possibilities will be established.

"There are thousands of methods, thousands of systems claimed to impart vocalism, meaning correct voice placement for development. If everything concerning a method of study is simmered down it will mean this: Establishing a vocal basis from which mathematically to build up a technic that shall automatically be the vehicle of expression for the singer's interpretation. There is one common-sense plan of avoiding the awful running about and indecision relating to selection of a teacher—and to which many feel themselves necessarily subjected—and the discs of a gramaphone give the cue to it. When you find records of good singers, search out their masters, and also what other pupils of those same masters have accomplished. By that plan you can come very near to forming a correct opinion as to whom you shall entrust yourself.

"A very simple and direct hint for those who are unable to choose for themselves correct idea of a placed tone, or how to place one, is to listen to the discs in which several of the great singers have been recorded. Then select a tone on a certain vowel, in the speaking or middle range of the voice, and practise it until the imitation is perfect. Afterward take the next tone below it in the scale and practise that in conjunction with the other until the two, technically speaking, become a whole. The development of those two tones can be extended throughout the whole range of the human voice, with the necessity of other guidance minimized."

COMPOSERS' DAY

BY RAY G. EDWARDS

MUSICAL art in America has reached a point where some special recognition should be given to our native and resident composers. Most graciously would our music-loving public bestow its approval and acknowledge its gratitude if there was some special manner in which all could express themselves.

I would like to see the first Saturday in some one month set aside annually as "Composers' Day," making it an occasion for concerts in all the large cities of the country, the programs to be made up entirely from the works of native and resident composers. The music, I would suggest, should be played from manuscript or from music published during the year. Manuscript societies, like the one in Philadelphia, would spring up in all the music centers and the art of competition would receive a great impetus.

There are towns of twenty thousand population that even today could muster up a group of composers whose works would be a revelation to their townsmen. These men and women need the inspiration of public recognition, such as "Composers' Day" would afford, an inspiration to better work than they have yet timidly offered to the public. The certainty of public recognition, and the great helpfulness of a special occasion of this nature, would also benefit music publishers, helping them in their quest for meritorious compositions.

Cities would vie with each other annually in an effort to discover and do honor to their local musical talent, although they would, of course, have the entire country to draw on for their programs. It would seem appropriate that on this special day native performers be given the preference in making out the programs.

The foremost need of the musical world, and especially of music in America, is a strong impetus to the creative instinct, to be brought about by a more serious and widespread study of composition. The setting aside of one special day for American composers would do much to bring this about in a natural way, and the public would be brought to a realization of the fact that during the past twenty-five years there has been a rapid and substantial advance along all art lines in America. It would seem in keeping with this advance to have one special day for music, as we now have Labor Day, Arbor Day, Children's Day, and special days for work horses, flowers, birds, and even dead men's days when we do honor to our artists and other great men. Let living artists have a day.

I suggest Saturday as the best day of the week, as it would then be practical to have the regular symphony concerts for the week without any change of dates and to present symphonics and large orchestral works by our more ambitious composers.

Composers' Day would reveal to a larger public each year the state of development of music in America, and leave the memory and inspiration of a pleasant occasion.

———*———

WANTED HER MONEY'S WORTH

A FEW years ago Madame Schumann-Heink was to appear for the first time in an Ohio city. During that week Mrs. A. called on Mrs B. In the course of the conversation Mrs. B. asked Mrs. A.

"Are you going to hear Schumann-Heink on Wednesday evening?"

Now, Mrs. A. had evidently never heard of the great prima donna, for she replied:

"No, indeed, when I pay such a price I want to read the book first."—Horace Zimmerman.

MAKING THE MUSIC ROOM ATTRACTIVE

BY FREDERICK H. MARTENS

STUDIO OF MR. FRANK HEMSTREET, TEACHER OF SINGING, NEW YORK CITY.

IN this present age of endeavor and uplift when concentration means success, the studio of the busy musician and teacher is no longer the home of that "artistic disorder" which was formerly associated with all forms of musical activity. The day when disorder was considered "artistic" has passed, and it is now regarded as a direct incentive to waste, the waste of the most valuable of all modern valuables—time. It is safe to say that order, in the broad sense of the word, does more than anything else to make the studio attractive. And making the studio attractive is of first importance where the work of the music teacher is concerned.

The teacher who can give atmosphere to his studio, and have it a place of quiet refinement, harmonious in furnishing and decoration, a room which the pupil likes instinctively, that teacher begins each lesson under ideal conditions. His pupils are with him, their receptive interest and sympathy are developed from the start and, of course, the results are in proportion.

Naturally, one is inclined to ask, what is the ideal recipe for "Making the Music Room Attractive"? The answer is: Each studio presents an individual problem which must be solved with due regard to a thousand and one varying factors: size, light, shape, accessories, etc. In each case individual good taste must be relied upon to attain the best result which circumstances permit. There are any number of attractive studios which differ in almost every detail, one from another. As a general thing, it may be said that a good plan is to take the piano and music cabinet, which in the studio of both pianist and singer are the dominating pieces of furniture, in that they establish the character of the room, and build up around them.

If your piano has a mahogany finish, the music cabinet should have the same. Should it be built on plain mission or craftsman lines, have your music cabinet conform to them as well. If these two articles of furniture, which give the music studio its special character, harmonize, greater latitude may be allowed as regards the rest of the studio fittings, though of course, consistency in matters of detail is always desirable Some teachers who read this will remember, perhaps, unsuccessful attempts made in department stores and furniture shops to secure music cabinets which would harmonize, in color and design, with their pianos.

It might be remarked here that it is now possible to get music cabinets which harmonize perfectly in every respect with the piano and other furniture of the studio. Such cabinets may be had to accommodate any quantity of music, from 400 to 1,500 pieces of sheet music, and with a simple filing system that is a direct incentive to order. When the piano and other furniture is of special design or of a certain period, the cabinet should be made to conform.

Music certainly should not be kept in disorderly piles on top of the piano, and the practice of storing it in large quantities on shelves is small improvement. This causes much waste of time, energy, and music too. One's music does not grow torn and tattered if arranged in shallow drawers that prevent unnecessary handling.

In connection with the cabinet might be mentioned the unit bookcases which can now be obtained with a few of the choicer collections of bound music, notably with the MUSICIANS LIBRARY. We are careful to preserve your well-bound books, and it is another sign of the times to find that we have reached the point where books of *bound music* seem quite as much entitled to consideration. Reference books on music and other books of musical character are not alone decorative, but add a note of refinement and comfort. Where the music library (in bound volumes) is small, it is often possible to house it in one of the superimposed bookcases with which many of the new style music cabinets are provided.

On a foundation of harmony in color and design as regards the furniture of the studio, it is not difficult to build up a decorative scheme which is attractive without being too studied. Of pictures it is better to have few and those good; though in one studio I have seen an entire side of the wall above the wainscot was covered with photographs of celebrated artists and composers, framed under glass in section panels, and the effect was admirable. There are photogravures and excellent reproductions of famous paintings of a musical character which aid in giving individuality to the music room.

Dirk Hals' *Lady at the Clavier,* Kriehuber's *An Afternoon with Liszt, Beethoven, Mozart, The Young Handel, Bach,* and Aubrey Beardsley's clever *Tristan and Isolde* drawings are only a few which occur to one in this connection.

Then again we have the statuettes, busts, and bas-relief medallions of the great tonal heroes, varying in size and price, and for the most part well done in composites which neither gather nor retain the dust like plaster. A group of medallions of great musicians may be used to form an attractive frieze along the wall. Nor is the European art poster to be disdained as a decorative item, especially in large studio rooms. The Italian and French operatic posters are particularly artistic and full of rich, glowing color. I remember in particular various ones designed for operas by Puccini and Zandonai, which are not only admirable in drawing, but have remarkable color values as well. They are usually mounted on linen and can be effectively framed.

The possibilities of cut flowers or flowering plants in making the music studio attractive are endless; but here as in everything else the effect of harmony and contrast should be studied—there should be no jarring notes. It is well to avoid cloth-covered or burlaped walls because of their tendency to deaden sound; for the same reason bare floors should be the rule, and a few good rugs should take the place of a carpet.

"Making the Music Studio Attractive" will not make a dull pupil bright, nor will it, necessarily, directly influence better scale work or sight reading; but indirectly it counts for much. Children in particular are sensitive to external impressions. Anything we undertake to do with them is accomplished with less effort and is productive of better results if only we begin when they are in the right mood.

And nothing serves so well in the case of the average pupil to establish that mood as having him enter a room where all is in harmony. Such a room appeals at once to the imagination through the medium of color, light, and warmth, that seems to say: "Lessons are pleasure" — not a cold, lifeless torture chamber whose motto to the sensitive child appears to be "abandon hope all ye who enter here."

PERSISTENT EFFORT

BY CHARLES BANCROFT

HE was taking a course through the "Conservatory of Hard Knocks," a conservatory which graduates more successful teachers than any other conservatory in the world.

He knew that although he held a teacher's diploma, he would have to pass that way before he could sign the letter "S" after his name, which stands for the "Degree of Success."

Every morning when he went to his studio he always tried to make it one day nearer attaining that Degree.

There were days of failure; days of disappointment; days of missed lessons; days when everything went wrong. How often, at these times he felt like handing his key to the janitor of the building, and giving up the music profession for some line of commercial activity.

Then his eyes would be caught by a success motto which hung on his studio wall, causing him to realize that he was only one of the many who had to overcome obstacles, if they wished to achieve the degree he was after.

He felt that to make a success of himself as a teacher would be much better than stamping himself as a "failure" before his friends; and, besides, such a result would weaken the confidence he had in his own ability to "make good" in any other business or profession.

Into every lesson he gave he put his whole energy. And the good work shown by the majority of pupils he turned out brought him other new ones. He realized that the music profession as an easy means of making a living has no foundation with the teacher who wishes to sign the letter "S" after his name.

Of course he had troubles, but he developed the habit of tracing them to their origin, and often was surprised to find that he had made a "mountain out of a mole hill."

In time he began to realize that he was holding his own with the leading teachers in his community, which made him feel that the "Degree of Success" was worth all the "Conservatory of Hard Knocks" demanded of him, in the way of persistent effort.

ELEMENTARY PEDALING

BY ERNST C. KROHN, JR.

To the young and perhaps inexperienced teacher, the subject of pedaling is one which, sooner or later, will pop up and cause no end of trouble. When to teach it, and how to teach it, are points of vital importance. Time was when pedaling was considered a subject of such great mystery, that only the very gifted ones could ever hope to divine its highest secrets. There are still enough teachers left who deem it a subject of so little importance that its systematic study is, to them, unnecessary.

To the wideawake instructor it presents a problem which must be solved. The pedals are there, ready for use. And as soon as our promising beginner's nether extremities get long enough to reach them they are promptly utilized. The favorite pedal, of course, is the "loud pedal," which is usually held down *ad infinitum*. The music thus produced is usually remarkable for its volume and its mixture of dissimilar harmonies. This perfectly natural desire for greater sonority, for loud and even noisy music, can be trained up to a more discriminating level and correct pedal habits formed.

With the average beginner it is not always an easy task to determine when to impart pedaling instruction. The size, age, and stage of progress of our scholar must all be taken into consideration. When a child has reached the third grade and can comfortably reach the pedals, symptoms of "pedalitis" will begin to show themselves, and the case will have to be dealt with promptly. Where it is not practicable to use one of the larger pedal methods available, the following brief directions may prove of value:

The first step should be to clear up the student's hazy ideas regarding the true function of the pedals. As the soft and sostenuto pedals are only used in exceptional cases, it will be best to confine our attention to the damper or "loud" pedal.

Its function is not to make the music merely sound louder. To prove this play a number of loud chords with and without pedal. Be careful to lift the pedal when the fingers leave the keys. The difference between the pedaled and unpedaled chords will be found to be very slight. The difference that we note is due to the sympathetic vibration of related strings. This "sympathetic vibration" must be explained to fit the comprehension of the pupil.

Every child has noticed the rattling or sounding of some glass or metallic object on or near the piano, when a certain tone is sounded. This is due to the fact that the outer object sounds at a rate of vibration similar or related to that which causes the string to sound. From the shaking and sounding of this object in tune with the piano string, it is but a short step to the shaking of the strings themselves in tune with each other.

This can be illustrated by silently depressing a low key and then vigorously sounding the octave above. Upon releasing the struck key, the silently depressed key will be heard humming in tune with the key just sounded. The child will readily understand that piano strings of related nature can sound in sympathy with each other, just as children of similar emotional natures can laugh and cry in sympathy with each other. It will also grasp the fact that the slight increase in volume, when pedaling, is due to this sounding of related strings.

The true function of the "loud pedal" is to sustain or connect tones or chords which cannot be retained by the fingers alone. By practising the following simple scale study the student will soon realize this important use of the pedal.

Play the C major scale with one finger, in three-quarter time, making each degree of the scale a half note with a quarter rest ("sounding rest") intervening. On the first beat depress the key and hold it. On the second beat depress the pedal and hold. On the third beat release the key; the tone will be retained by the pedal. On the next first beat depress the key and release the pedal simultaneously. Repeat this proccdure until every tone of the scale has been pedaled.

The fundamental idea to be brought out in this exercise is this: The pedal must be depressed after the tone has been sounded, it must be held down until the next tone is sounded, and must be released exactly when the next tone is sounded. This depression of the pedal after the tone has been struck is commonly called secondary or syncopated pedaling. It is the most used and is perhaps the most difficult to acquire and should be taught first. The upward movement of the foot combined with the downward movement of the fingers and hand which occurs on every first beat of this exercise, is often very confusing to a beginner, so that this apparently simple study may require quite a lot of practice before it is mastered.

The next step would be to repeat this study as a scale in double thirds, using the same fingering (1 3 or 2 4) throughout. After this play a scalewise series of chords of the sixth (E G C, F A D, G B E, etc.) in the same way. By this time the pupil will have absorbed the idea of changing the pedal with every change of harmony.

It will now be advisable to study some simple hymn tune or choral with pedal. Suitable material can be found in any good church hymnal. If necessary the teacher can write out a few simple chord progressions, which will do just as well. In elementary work of this sort the simpler the material and the more thoroughly it is practised, the quicker will results be obtained.

As it is not always possible to spend much time on pedaling strictly four-part music it may be necessary to take up an appropriate piece and study it according to the ideas on pedaling thus far absorbed. The best piece would be one with a left-hand part consisting of a fundamental bass note and two similar chords in each measure, as is found in most waltzes. This left-hand part should be studied alone as a pedal exercise. As a preliminary study play and pedal only the first bass note in each measure. By changing this bass note to a half note with a quarter rest following the pedaling will be the same as in the scale study.

The next step would be to play the entire left-hand part with first bass note changed to a half note. In pedaling this, raise pedal on first beat, depress on second, and hold down through third and fourth beats while the two similar chords are being played. As soon as this has been mastered the left-hand part can be played as written, it being only necessary to pedal twice as fast; the first bass note being a quarter note, the pedal would be raised on "one" and depressed on "and." A further step would be for the pupil to play the left-hand part with pedal while the teacher plays the right-hand part.

Finally the scholar would play the entire piece with two hands and pedal. It would be a good idea to have the pupil play the piece while the teacher does the pedaling. In this way the student can be led to listen to pedal effects and they can be better explained. It is of the greatest importance that the student form the habit of listening to all pedal work. It is only by doing this that the ear becomes trained to the high degree of discrimination necessary in all artistic piano playing.

In time it will be found necessary to pay some attention to pedaling according to the melodic and rhythmic elements involved in a composition, instead of only pedaling harmonically. Whenever such special pedaling is necessary, the teacher should always carefully mark same and give his reasons for doing so, to the end that the pupil may be led to think out his own pedaling.

Should the teacher desire guidance in studying the more complicated forms of pedaling it would be very advisable to refer to Mathew's very thorough *School of the Piano Pedal*. The finest survey of the entire field of pedaling is to be found in the chapter on "The Pedals" in Mary Venable's recent excellent work on *The Interpretation of Piano Music*. Chopin once said: "The correct employment of the pedal is a study for life." It would seem to be every teacher's duty to master this subject as thoroughly as possible and to teach it as thoroughly as possible.

———*———

INTERPRETATION ACCORDING TO A PLAN

BY JOSEF HOFMANN

Some time ago, Mr. W. J. Henderson, music editor of the New York *Sun*, in discussing the subject of interpretation, made the statement that the true artist works out every detail of the plan of an interpretation at home; in public work his aim is to reproduce that plan. He continued, but without special emphasis, that the plan may be modified in some of the details even in the process of public presentation, provided the plan itself remains the same in all its fundamentals.

Some time later Mr. Henderson received a letter from Josef Hofmann commenting on the remarks of the former. We quote from this letter as printed in the *Sun*. They have great value to all players who aspire to artistic work in public or private, and with special force to singers, who frequently base their interpretation of songs on the spur of the moment, according to their feeling of the text at the time. The result is unevenness and a generally unsatisfactory presentation of a song. A song worth singing has more in it than the average singer can bring out offhand. There is room for thought in the study of a song, and a need for a fundamental plan which the singer may safely follow absolutely or depart from in minor details under pressure of circumstances. Mr. Hofmann's remarks follow:

"With one point only, if I understand you rightly, I cannot quite agree. It is the thought that the reproduction of a piece should be the same at *every* performance and in *every* detail. I know that there are some artists who plan every detail at home and perform the work, as well as they can, in the same way before an audience. Yet I cannot believe that this is the only way. I, for instance, never do it, and neither did Rubinstein. Far from inviting comparison with my great teacher, I can nevertheless freely state that he never played a piece precisely as he played it before, and that I cannot do it either.

"It was no doubt on this account that he never allowed me to play a piece before him more than once; for when I asked him the reason he said: 'I might possibly show you many things in it in a different light and thereby confuse your conception of the piece.'

"I think that the model made at home can and ought to establish the general lines and that the performance in public may differ in so far as it admits certain improvisatory elements. This results in a much higher function of artistry, because it is, within certain limits, free, in *statu nascendi*, spontaneous, and, if you will, personal.

"That this freedom presupposes the artist's mind and taste to be so well trained as to warrant him in relying upon his inspiration is a matter of course, and also that however quickly, with flashlight speed, the plan may be made, a plan there must be."

THE JOLLY DIALOGUES IN THE VERNACULAR

BY C. W. FULLWOOD

"Professor, how long will it take to learn music?"

"My boy, after thirty-five years' experience as teacher and student of music, I have come to this conclusion: A life of one hundred years would be too short to learn all I want to know and to do all I desire to accomplish."

"Gee whiz!"

"Now, don't get scared, my son. You can become a musician if you will work for it."

"Work? I want to play."

"Well, make your work play and your play will be work; play the work is play and—"

"Whoa! Professor, you're getting me all twisted."

"In other words, you must be interested in your work."

"But what do you mean by wanting to learn more? I came to you because I thought you knew all about music."

"Why, youngster, no man knows it all. Does Edison know all about electricity? Does Marconi know all about wireless? Did Morse know all about the telegraph? Does Wright know all about aviation?"

"That's so, Professor. You score one. How shall I begin to study music?"

"How did they build that brick house across the street?"

"Why, they first built the foundation."

"Exactly. What then?"

"Then laid one brick at a time."

"You've got it, my boy; you are on the right track. Now, how must you commence?"

"Say, Professor, I see it; get a good foundation and learn one thing at a time."

"Right, my son."

"Then I must first learn fingering?"

"No, you don't learn technic first."

"What!"

"Use your brains."

"You're deep, Professor."

"How can you do a thing before you know *how* to do it?"

"You've got me."

"How do you play ball?"

"Why, I practise with ball and bat."

"But before your practise?"

"Sure, I study how to pitch, catch, hit the ball, and learn the rules of the game."

"Well, in that respect, music is somewhat like baseball. You must know the rules of the game before you practise them."

"What is the first rule?"

"What is music?"

"Give up, Professor, that is too deep for me."

"Open that dictionary. What does it say?"

"'Music, science of harmonical sounds; melody or harmony.'"

"Now, what is science?"

"'Knowledge; collection of general principles; philosophical knowledge.'"

"Turn to harmony."

"'Concord of musical strains that differ in pitch and quality.'"

"What is concord?"

"'Union; agreement; consonance; harmony.'"

"What is consonance?"

"'Agreement of sounds; concord; accord; consistency.'"

"There you are. See how one word leads back to another? Now, what is music study?"

"Why, I suppose it is knowledge of musical sounds that differ in pitch and quality, yet agree, that is, are in harmony."

"You are coming on. How can we know that they are in harmony?"

"By the ear."

"Yes, but how can the ear recognize that they are right or in concord?"

"Oh, I see, Professor, the ear must be trained."

"Eureka! We are getting on. Now, we are ready."

"Well, Professor, what is the first step in ear training?"

"Time is up. We will take that up at the next lesson."

BACHAUS ADVISES BACH

SUCCESSFUL YOUNG ARTIST ON SCALE AND ARPEGGIO PRACTICE

EDITED BY W. F. G.

In a talk Wilhelm Bachaus recently said a good deal that is of interest to piano students, particularly, concerning scale practice. In the days when pianolas are taking the place of practice, graphophones the place of grit, and victrolas the place of vigorous work on the part of students, his dictum as to scale practice sounds a bit old fashioned—but it is sense.

Said Bachaus: "Scale practice is my great technical mainstay. Such ability as I have depends on scale practice. It is the secret of the pianist's success. It keeps every muscle used in piano playing in proper condition. I find it necessary, even now, to practise scale playing half an hour every day."

Adding to the scale practice, Bachaus defines the necessary technical work of an artist as "Bach and arpeggios." He says the only secret of keeping a piano technic is "brains and hard work." Which is not so much of a wise aphorism as it sounds, for brains and hard work will carry a man anywhere, in any profession or employment.

It is admitted that to play Bach means "brains"; and it must be admitted that a practice of arpeggios is almost as necessary as a practice of scales; as all the literature of modern piano music requires a facility for arpeggio playing as marked as that for scale work.

Says Bachaus: "If you want to see an example of Bach, scales, and arpeggios, look at DePachmann. He has been a virtuoso for many years, yet he practises his scales and arpeggios daily; nor does he forget his Bach. After all, what can be put into piano pieces but scale passages, arpeggios, and chords?

"Busoni and Godowsky have gone to the extreme in creating technical difficulties; but what are they but these three things? I cannot see how technical difficulty can go beyond the Godowsky arrangements of the Chopin studies. Two hands and ten fingers can do no more!"

And Bachaus brought out the idea that the mechanical players sold in the stores are killing off the former popular demand for elaborate displays of virtuosity on the part of the concert pianists. Said he: "The public can buy its astonishment at the stores; it wants something more elusive, more purely musical, more truly artistic. It asks brains and sentiment from the artist.

"So the pianists are playing simpler things nowadays than formerly, and playing them better. They are thinking of getting the soul of the composition to the soul of the audience. They are not worrying about how much they can surprise the audience with bursts of speed and tumults of tone. They know the audience has these at home, in the records of its machines. And they know their auditors come to their concerts not to see how fast or how loud they can play, but to be brought into touch with the heart of the masters.

"Nor is this easier on the artists. To play a Mozart concerto or a Haydn sonata perfectly is a work of years. A pianist can in half an hour work up a dazzling piano effect that is frivolous and senseless, but it would have brought cheers in former years. The pianist must now get more to the heart of things and depend less on superficial effects. This is good, both for the player and for the public.

"Why bother so much about how difficult a thing is? Why not ask, how beautiful is it? As I have said, why 'try to make a bouquet of oak trees when the ground is covered with flowers?' The piano is not an orchestra. Why try to make an orchestra of it? Let the orchestra have its own music, and play on the piano the music which comes within the scope of that instrument.

"That is where the school of modern French composers seems to me to excel. They think in terms of the piano, they write piano music for the piano. That is the reason Debussy appeals so strongly to me—he puts color into his pieces without suggesting or needing the orchestra."

VICTOR TALKING MACHINE RECORDS FOR APRIL

Familiarity with good music is essential to learning to love it. There was a time when musicians felt anxiety lest the mechanical appliances for making music should prove a drawback to their means of a livelihood.

Today, however, one hears but little of such sentiments. Professors of music in universities and colleges use the talking machine and mechanical player to furnish illustrations to their lectures, teachers of singing reproduce the records of the great artists when their classes are studying opera rôles; and in our high schools we find both machines in frequent use for the classes in appreciation.

The experience of the present writer with two children is interesting on this point: They hear only leading opera arias and well-known compositions for the orchestra or string instruments. They have no difficulty in becoming familiar with this music, and also with the composers. By this means they learn good music and their taste is being formed at the same time. For the month of April the offerings of the Victor Talking Machine Company are interesting to the lover of good music. One must acknowledge that in some cases it is the "artist" who is the attractive feature; yet that is a part of our present day environment which must recognize the "star" system. Here are a few which we specially note:

Caruso, Enrico: *Amor mio* (My love), a vocal waltz by Ricciardi, sung in Italian.

Culp, Julia, soprano, who made so great a success last year as *lieder* singer: *Drink to me only with thine eyes*, an old English song, given in English; and *Wiegenlied* (Cradle Song), by Brahms, in German.

Melba, Mme.: *Magdalen at Michael's gate*, by Lehmann, sung in English.

Hempel, Frieda, soprano, a famous singer of coloratura arias: *Deh vieni non tardar* (Oh, come, my heart's delight) from *Marriage of Figaro*, by Mozart, and, *Parla* (Oh, speak), vocal waltz song of very brilliant style, by Arditi.

Gluck, Alma, soprano: *Carmena*, a vocal waltz in the Spanish style, by Lane-Wilson.

Ruffo, Titta, baritone, sings the famous drinking song from *Don Giovanni*: *Fin ch'han dal vino* (Wine, flow a fountain.)

Williams, Evan, the popular American concert tenor, sings the favorite *Holy City*, by Adams.

For those who are interested in a lighter style we note two new Harry Lauder records: *The Portobello lass*, by Wells, and *It's nice to get up in the mornin'* (But it's nicer to lie in bed), by Lauder.

In the line of instrumental numbers are *Siegfried's funeral march* and the *Ride of the Valkyries* by Wagner, played by Vessella's Italian Band.

IS SUMMER MUSIC STUDY WORTH WHILE?

THE VALUE OF SUMMER WORK FOR MUSIC TEACHERS

BY GUSTAV L. BECKER

More music teachers, at the present time, find the summer a "golden time" for brushing away mental "cobwebs." They do this either by giving a considerable part of their time and attention to diversified or special reading and to a thorough overhauling of their technic, while also increasing their repertoire; or, better yet, they do all this more rapidly and effectively with the guidance and assistance of someone who is still more advanced and experienced. Four ears and four eyes are better than only two!

The ambitious and conscientious young teacher feels the need of storing his mind as much as possible with new and helpful ideas, knowing that this will give him greater power for thinking clearly and for deciding or acting with judicious discrimination when problems arise.

Of course it is to be regretted that so many of our young music students begin to teach while they have, as yet, by no means completed their own musical education! Yet often it is the need of earning a livelihood which leads them too soon into a career wherein they must forever try to "catch up" to that which, by rights, they should already know.

To reach the craved-for greater ability then, there is usually found insufficient time or occasion during the regular teaching season.

During a number of summers now, upon request, I have adopted a period of about six weeks to giving a condensed course for music teachers. The plan is for private lessons, three or four each week, all work mapped out according to the student's greatest needs. Copious memoranda are taken of all valuable points explained, demonstrated, or applied, these then to serve for guidance during further self-development.

Among a large number of students, with a great variety of deficiencies, there were particularly many who had been brought up on, and had always played and taught according to the old method of straight up and down, high-raising, and hard-hitting finger motions, with a fixed hand and arm position, but who, after only one short summer's course, had sufficiently grasped and learned to apply the superior principles of motion and touch of the modern "Natural Technic."

Many letters, received later on, from such converts to the new and better ideas in music teaching, show how the summer students were able to develop much further, through their own effort and research, and apply, in their routine work, most of the new points and suggestions for teaching and studying which they had gained.

What helped in this, as much as anything else, was the rekindling of their ambition and enthusiasm through contact with their teacher and the fellow teacher-students — these all gaining valuable points from each other by comparing notes regarding each other's shortcomings or advantages.

———*———

ON SUMMER STUDY

BY D. A. CLIPPINGER

There is no way of telling, without a table of statistics, just how many persons are engaged in music teaching throughout this great country, but we know that the number is large, very large. We also know that a majority of these are comparatively young musicians who have not yet reached their full stature, who are full of ambition and who have no idea of settling down permanently where they are. They have gone far enough with music to see the vista opening before them. They have learned that a college commencement is not the end, but the beginning. They fully intend to give themselves the advantage of further study.

What does a summer term in the city offer to these who, perhaps, are engaged in teaching throughout the school year?

If done in the right way it offers much. It takes one out of the groove in which he has been running. It furnishes the stimulus of another's point of view. It furnishes new teaching material which both he and his pupils will attack with keener relish the coming season. It means new and better recital programs next year. It means new ideas which he will use and develop throughout the year, and this means a larger usefulness.

What does it mean to his own voice if he be a singer? If he studies in the right way it will mean a great deal. In taking a summer term one should arrange to be with the teacher as much as possible. In vocal practice it is not so much a matter of time as of correct guidance. Therefore, be with the teacher at short intervals. Have daily lessons if possible. In a term of six weeks with daily lessons one will accomplish as much as in a term of six months with one or two lessons per week. Following this plan of study most of the work is done under the ear of the teacher; hence it is done correctly. Further, with daily lessons one is kept in the spirit of study which is easily half the battle.

One who had taken such a course reported later that she did her work the following year much easier and better, and was happier about it. Another accomplished such a marked improvement in her singing that her recitals and those of her pupils the following year excited so much favorable comment that it resulted in a much better position for her at the end of the year.

In many instances it is better for the teacher to give up his summers to study than to give up a permanent position in order to spend a winter in some music center, desirable as that may be.

OPPORTUNITY THROUGH SUMMER STUDY

BY H. W. GREENE

The advantages of summer study lie primarily in the conditions under which summer schools are conducted.

A bracing climate in the country or mountains, with no distractions save those afforded by Nature; a group of earnest young people who work together in a way sufficiently intimate to make each student's work of benefit to every other student; and, greatest of all advantages, that of comparing oneself in daily work with one's professional or semi-professional fellow-students. The weak places in one's equipment are thus discovered and energy is concentrated on those points.

To take a typical example: Three summers ago a boy of twenty entered the Brookfield Summer School of Singing. He had always lived in a small unmusical city, having very limited opportunities for culture. His voice was a tenor of not exceptional quality, and he was a fair example of the average or ordinary singer. A faculty for close analysis was discovered in him, he was encouraged in criticising other voices in the Normal Class, while perfecting his own. After three seasons at the summer school, at the age of twenty-three, he secured, through the influence of the director of the school, a position as voice teacher in a large Western school, where, according to reports from his dean, he is "making good."

He now has an opportunity to broaden and apply what at first were to him only theories. He is developing initiative, the most important asset for success, and, best of all, he realizes that he is one of the world's real workers in a field that is not only pleasant, but useful in the extreme.

We could cite many such cases of young people directed on the path of opportunity through their summer school work, and we are confident that the summer school idea is of real import, since it opens the doors of opportunity to those who might otherwise feel that they were given talents which they could not make available.

———*———

TO WHAT CLASS OF STUDENTS IS SUMMER SCHOOL WORK ESPECIALLY VALUABLE?

BY A. D. JEWETT

First of all, the busy teacher whose work prohibits either study or practice during the regular season.

Every intelligent teacher recognizes this fact, that without some definite study one's work gets "rusty," "rutty," and "relegated." Rusty for want of contact with people of new ideas, rutty from the natural inclination to take the easiest way, and relegated because even the dull pupil is not too dull to sense poor work.

Usually the teacher who has once taken a summer teacher's course goes again, which is proof of its value. Secondly, students along general lines can find much value in taking a special course in summer, concentrating attention upon some one phase of work, and success is attendant upon concentration.

And last, but not least, the establishment of a summer session by an earnest teacher, in a section where opportunities for study are somewhat limited, furnishes stimulus to students and teachers in that vicinty. Interest and activity are contagious.

Summer schools are a good thing for all concerned and are an antidote to laziness.

———*———

THE SUMMER NORMAL SCHOOL

BY WALTER SPRY

The summer normal school may be made of great use to ambitious teachers who are so busy during the winter season with their teaching that they do not get as much time for reflection and practice as their ability to progress warrants. In the great musical centers, we are able to hear such men as Hofmann, Busoni, Bauer, or Godowsky, and many of us are fortunate enough to come into personal contact with these men and receive the secrets of their arts, at least to some extent.

But what of the music teacher in the remote districts who seldom has the inspiration to go beyond his own present knowledge? Are they not apt to sour and retrograde in their art? They may have had even excellent training, and still if they are not ambitious to add to their knowledge, they are apt to get behind their rivals.

Chicago is one of the greatest musical centers

of the world and one of the pleasant places to study in summer. I have mapped out a summer course of study which not only includes private lessons in the principal studies such as Piano, Voice, Violin, or Organ, but includes classes in Harmony, Teaching Material, Interpretation, and for pianists a special Technic Class.

Schools and private teachers should work more along these lines, so that their pupils may become more musical and better equipped as teachers. The late Emil Liebling was one of the few private teachers who pursued this line of instruction. That this is the best course to pursue is proven by the fact that I have received many messages from teachers who have taken our summer courses and found the work they have done invaluable in their teaching.

It is therefore a pleasure to know that this helps towards raising the standard of instruction.

THE VALUE OF SUMMER STUDY

BY RALFE LEECH STERNER

THE amount of teaching done by schools and private teachers in the summer has greatly increased the past few years. During my personal observation along these lines I have been amazed at the great increase in the number of pupils coming to New York City each year from the South and West for the six and ten weeks' summer courses given at the New York School of Music and Arts. So successful have we been in this work that this summer we are going to hold "The Congress of American Musicians and Students" at this School. The advantage of this course is not only to let those who desire to take private instruction during the summer do so, but to hold a sort of continual musical festival, daily concerts and lectures by artists, teachers, and students, besides innumerable other classes.

The tired music teacher comes to New York in the summertime on a sort of knowledge hunting trip, besides wishing to have a little recreation. Certain days are set aside for sight-seeing trips and other amusements, and this helps to make the stay in New York City more pleasant as well as profitable. Although the courses given are only six or ten weeks long, yet the teacher or student can derive the greatest kind of good, as there are a large number of lectures on which they can take notes, as we do not expect them to do the actual work while at the school.

I believe that teachers in small towns and cities would not be able to keep up their work if it were not for the added knowledge they get by taking these summer courses; so many new ideas and valuable studies are given in these courses that the teacher's mind is constantly stimulated to new and better things, and there is that constant ambition to get higher in their profession.

ADVANTAGES OF SUMMER MUSIC STUDY

BY GEORGE CHADWICK STOCK

SUMMER pupils are invariably in earnest and enthusiastic; also experienced. It is a help to all concerned to come into contact with such a class of students, for they have something to *give out* as well as to *get in*. Interchange of ideas helps. They are loaded with questions and enthusiasm. This keeps the teacher alert and active, and fits him the better for the coming fall teaching. Whereas a comparatively idle summer brings on a species of decay or dry rot.

The pupils that come in the summer often become permanent followers and so influence others to study. The prestige of having been under instruction with a well-known teacher is an asset of value to young teachers. Prospective students of song are always on the alert to study with the teacher who has devoted a part of his summer time to study with some prominent teacher who, in all probability, is beyond their means as to price or too far distant.

SUMMER STUDY FOR MUSICIANS

BY F. W. WODELL

EARNEST, ambitious music teachers have proven the practicability and value of summer study for a number of years past by undertaking it and showing good results from it. Here follows a true story; the reader can draw his own conclusions.

This singer had studied voice production and singing with three teachers of moderate attainment, the best she could find under the circumstances. She had sung successfully, so far as pleasing church congregations and concert audiences testifies to success. But she had an active mind and an ambition to excel, and she realized that there were some things about how to sing that she did not understand. She turned to the books on singing, but they confused her thinking, so contradictory were the theories set forth. Her living must be earned by public singing and by teaching. How to get the needed instruction from competent teachers?

In those days summer schools were not much heard of, and metropolitan teachers had not begun to advertise to keep their studios, in any considerable number, open in the summer for at least part of her vacation time. She attended summertime conventions of music teachers; talked with every vocal teacher there who would talk with her, and took a few lessons when she could find someone of good standing who would consent to teach while the convention was in session. One such teacher advised her: "Teach a while; then study a while; and again teach a while. You will thus put your instruction to the proof and learn your own weak points—exactly what it is you most need."

Just then she heard of a real summer school, with sessions in midsummer, when her own pupils had stopped lessons. She attended it, had daily private lessons from a fine teacher in charge of the school, and in the afternoons attended class lessons on vocal study and teaching. Her musical, mental, and vocal ability was such that this summer work acted on her like rain on a parched field; she fairly drank in, absorbed everything of good that she heard.

Returning home for the fall work, to her delight, she found she had strengthened her knowledge of the principles underlying good tone production to such an extent that now she had something definite to work upon. She knew a few essential things thoroughly, and could work intelligently with pupils of different gifts and needs. Formerly this had been possible to but a limited extent, and there were cases in which she was "not just sure" of her teaching. She had exercises, to be sure, but she did not understand the principles underlying them clearly enough to be certain why they were used, and therefore when they were indicated.

Now that uncertainty was, to a large extent, overcome. Result—stronger, more efficient teaching, and in two years a largely increased class at better prices. She has since more than once "Studied a while" in summer, then "Taught a while," and her progress in efficiency as singer and teacher has been steady and marked.

BOOK NOTES

Music Notation and Terminology. By Karl W. Gehrkens, A. M. A. S. Barnes Co., New York. Price, $1.50.

We recommend this work as a suitable and valuable text-book in music notation and terminology for classes in conservatories and in music departments of colleges and normal schools. Musicians are generally aware that there is much loose use of terms connected with music; as a result there is much loose and inaccurate thinking and explanation. A teacher or a writer will make a statement using one or more musical terms which pupils or readers will only partially understand. The result has been anything but advantageous to the cause of music education.

The author of the book, who is Associate Professor of School Music at Oberlin Conservatory has used the material upon which the work is based, in his own classes with success, and we believe that other teachers will secure equally good results with it.

Of special value to musicians are the suggestions for reform in terminology, which are worthy of careful consideration, and acceptance.

The Story of the Flute. By H. Macaulay Fitzgibbon. Charles Scribner's Sons. Price, $1.25, net.

A new volume of the valuable *Music Story Series*. While the flute, in name, is one of the oldest of musical instruments, in its form as known to us and as now played, it is of comparatively modern origin. The book explains the old instruments termed flutes, which properly belonged to the pipe family. Of special interest are the chapters explaining the improvements which have gradually perfected the flute, its use in the orchestra, sketches of famous players, styles of playing, etc.

Scales—Keys. By G. M. Mason. J. S. Coogan, 21 Leslie St., Paterson, N. J. In pamphlet form. No price given.

An explanation of the various scales with rules for fingering.

BOOKS OF MUSIC

Latin Songs, Classical, Medieval, and Modern, with Music. Edited by Calvin S. Brown. G. P. Putnam's Sons, New York. Price, $2.00.

A collection of songs with Latin text for various occasions. Among them we find ancient lyrics from Catullus and Horace, medieval church hymns, such as *Dies Irae, Stabat Mater*, etc., old Christmas carols, convivial songs (*Gaudeamus, Lauriger Horatius*, etc.), folksongs, lullabies, songs of the famous English schools, and Latin renderings of popular English and German songs. The book should appeal to scholars who have a knowledge of music and to clubs and societies of an intellectual character.

Elizabethan Love Songs: Second Set. Arranged by Frederick Keel. Boosey & Co., New York, Price, $1.00.

A second volume of comparatively unknown songs of the Elizabethan period, transcribed from the lute tablature, and furnished with piano accompaniments. The airs are charming and melodious, with the simplicity of style characteristic of the period. Recital singers will find it worth their while to place a group of these airs on their programs.

Songs of Great Britain. A collection of 100 English, Welsh, Scottish, and Irish national songs. Selected and edited by Frank Kidson and Martin Shaw, the tunes newly arranged with accompaniments for pianoforte by Martin Shaw. Boosey & Co., New York. Price, $1.00

The character of the book is amply explained in the title. The editors have wisely omitted a number of well-known songs in favor of others equally deserving but which for various reasons have remained in obscurity. It is a valuable collection for recitalists.

A CARD FROM LESCHETIZKY TO MR. HUGHES

A VISIT FROM LESCHETIZKY

BY EDWIN HUGHES

THE balmy airs of the Austrian Riviera, its warm, bright sunshine, and the deep blue of the Adriatic have made the charming little guest-town of Abbazia Leschetizky's favorite resort during the summer months for a number of years past. Thither he flees for refuge from his troops of pupils, although some of the more persistent ones, unwilling to grant him the unalloyed pleasure of a completely lessonless vacation, find means to follow him to his summer lair on the Southern coast, so that even the Austrian Riviera has been initiated into the secrets of the "Leschetizky Method."

Through the end of the summer, far in fact into the fall, lasts Leschetizky's vacation. It is hard to get back into harness again after the easy-going life in Abbazia, where every day is a holiday and where everyone's business is just laziness. At the thought of the pupils waiting in Vienna a *Wanderlust* seizes him; the gay cities of Western Europe beckon gladly to him, and he is not the man to resist their call.

And so it really happened that last fall, after many promises in the past, Munich received a visit from the grand old man of the piano *in propria persona*. Abbazia ménus must be both tempting and comprehensive, for he took on several kilograms during the summer months; his face has the old-time ruddy glow, and is as round and wrinkleless as of yore. The journey from Abbazia is a long one; to a man halfway through his eighty-fourth year it is an undertaking not to be made light of, and yet, after the tiresome night sitting up in the sleeper and the five o'clock breakfast in the dark at Salzburg, Leschetizky was quite fresh and wideawake upon his arrival at the hotel in Munich.

If Leschetizky were to pay a visit of a week to any one of the German music centers during the season, he would be quite sure to find one or the other of his numerous pupils concertizing at the time. So in Munich this season some twenty concerts by former Leschetizky pupils were announced before the Christmas holidays, and the master arrived during a week when two of his most illustrious disciples, Ignaz Friedman and Arthur Schnabel, were appearing in concert. With Ossip Gabrilowitsch a permanent resident of Munich, and Mark Hambourg a fleeting visitor during the time of Leschetizky's stay, there was opportunity enough to renew bonds of artistic sympathy and for pianistic gossip galore.

After having been a guest of the master so often in Vienna, it was a privilege to have him at last at my own table. Leschetizky's hospitality is proverbial, and there is no host who is more capable of spreading an atmosphere of good cheer among his table guests. As guest himself he is equally charming, a *raconteur* and wit without a peer, possessing a fund of anecdotes and reminiscences that is seemingly without end.

Around a table at which Ignaz Friedman also sat, the talk grew naturally pianistic after jokes had been bandied to and fro and the latest "loop-the-loops" of Pegoud had come up for discussion. The aerial antics of the French flyer had just been drawing thousands of ready lookers-on in Berlin and Munich.

"Yes," said Leschetizky, "this matter of performances in the air is quite a serious one for us pianists. It keeps the people away from the concerts. And there are two other great enemies of the pianist nowadays who are equally as bad, the orchestra director and the moving-picture show. I wrote an article last year for a Berlin paper which began thus: 'In fifteen years from now if one throws anything out of the window it will be sure to land on the head of a famous conductor.'"

From the old days in Vienna I had been used to Leschetizky's antipathy to orchestral conductors, and well remember one particular instance after supper at his villa when he got so completely wrought up over the matter that he wished for two of the most notorious examples of the type then holding forth in Vienna, in order that he might knock their heads together until they dropped to the floor! So I asked him when this not all too brotherly feeling had originated and how.

"That dates back to the years when I was Court Music Director at St. Petersburg. Among my other duties, such as engaging artists and arranging concerts, I often had to conduct the orchestra which took part in these events. On one particular occasion I had placed the *Tannhäuser Overture* on the program as a novelty. We went through the rest of the program at the rehearsal and finally began with the overture, which was quite new to the members of the orchestra. Things went fairly well until we came to the *Venusberg* music, which simply wouldn't go, although there were excellent musicians in the band, among them Davidoff, the 'cellist, and others. After several attempts I quite lost my patience. The long rehearsal had tired both the men and myself, and rapping sharply with my bâton I called out, 'Gentlemen, the rehearsal is over!'

"Imagine my feelings when, coming to the concert in the evening, I discovered that the overture had been placed at the very opening of the program. The house was packed, royalty was present, and there was no backing out. With fear and trembling I mounted the conductor's stand and rapped for attention. The opening theme went very well, and also, much to my surprise, the figuration in the violins which comes later and with which we had had difficulty at the rehearsal in the morning. But the *Venusberg* music was yet to come. To my utter astonishment this went straight through without a flaw, and, warming up to my work, I led the orchestra on to such a brilliant climax at the end that the piece fairly brought down the house.

"Since that evening I have had a feeling very much akin to utter scorn for orchestral conductors. I realized that directing an orchestra is the cheapest way to success in music; that anyone who has that much musical talent" (indicating an extremely small amount with thumb and forefinger) "can become a successful conductor if he wishes."

Very similar to Leschetizky's views on orchestral conductors are his feelings in regard to most of the modern composers, particularly the men who compose the really "new" music. Although he himself is the most modern of moderns in his treatment of the instrument, his tastes are firmly rooted in the classics, to which, however, he is always seeking to give some newer interpretation.

He has a perfect antipathy toward that form of musical snobbishness which finds its outlet in such matters as the playing of the composer's cadenzas to the Beethoven concertos, or the pedantic observation of every repetition in such long drawn out works for piano as the Handel-Brahms *Variations* or the Schumann *Symphonic Etudes*.

Having studied himself as a lad with Beethoven's most illustrious piano pupil, Czerny, he is in fact a pianistic grandson of Beethoven, and there is therefore no living piano master who is in possession of the true Beethoven piano traditions to such a degree as Leschetizky.

"Czerny told me," said Leschetizky, "that Beethoven himself did not think much of his own cadenzas to his concertos. He even admitted to Czerny his inability to write a suitable cadenza that would be just as acceptable to the concert public a hundred years after the composition of the concerto, saying that if his concertos lasted as long as that it would be the province of each musical generation to compose cadenzas suitable to the taste of the period and the improvements made in the instrument."

In spite of his advanced age, Leschetizky is still busy with compositions of his own, and every gets up in the night to jot down a musical idea that may have occurred to him. His latest compositions are two preludes for piano, the first of a prospective series of twenty-four.

About his own piano-concerto, which he says lies securely sealed up in the bower of his Vienna villa, doomed by a clause in his will to be burned after his death, there was a little news forthcoming. The cadenza, he says, has the origina

feature of being a sort of dialogue between the piano and the various instruments of the orchestra, instead of the usual bit of bravura playing for the solo instrument alone. All efforts to persuade Leschetizky to make this work public have so far been in vain; but as yet I have been unable to discover why it is that Leschetizky insists upon its being destroyed *after* his death. The secret of why he does not want it published I have.

"I found," said he, "that I was becoming too much influenced by Brahms in the work." And knowing Leschetizky's attitude towards Brahms, the piano composer, this was enough.

If Leschetizky's plea for short programs, uttered in the presence of two of the most successful virtuosi in Europe, were only heeded, what joy there would be in the ranks of the patient and long-suffering concert-goers. This is a matter upon which everyone seems to be in perfect agreement except the givers of the concerts themselves, who often play their audience into a complete state of apathy with their two-hour-long programs. There is a limit to the possibility of enjoyment of all music, and particularly is this true of piano playing, no matter how beautiful the performance may be. An audience which leaves a concert hall feeling that it has not had enough will come again; not so if it has been made to sit in an ill-ventilated room until the tone of the instrument, in spite of the best efforts of the performer, has begun to pall upon its sense of hearing.

Leschetizky sets one hour's actual playing as the ideal length of a piano recital, making, with the pauses between groups, a program of an hour and a quarter to an hour and a half. If the people in the house want more they will be slow in their demand for encores, so that the program can be lengthened at the end to suit the audience without the risk of wearing out their nerves with an ill-chosen and never-ending series of heavy works.

During his stay in Munich Leschetizky heard for the first time some of the records which he had made a number of years ago for the Welte-Mignon piano. After listening to the performance by himself of his own *Barcarolle, Mazurka* in Eb, *Les deux, alouettes* and other numbers, he turned and said, "One thing is too bad—that this invention came too late for records of Anton Rubinstein's playing to have been made upon it. What a lesson it would have been for pianists of today to be able to hear him! Then they would know something about tone production at the piano."

Leschetizky also asked to hear Alfred Grünfeld play a Viennese waltz on the apparatus and for the record of Liszt's *Mazeppa* played by Emil Sauer, of whom he is a great admirer. He told of going back into the green room after one of Sauer's concerts last season in Vienna, an evening of wonderful playing. "You are a pianist!" said Leschetizky, and Sauer was so touched by this tribute from the oldest of his colleagues that he wanted to kiss Leschetizky's hand.

"Sauer has a certain sensuous quality in his playing, and this, aside from all his other traits, is what makes it so beautiful for me." Thus did Leschetizky express himself in a conversation which had turned to the subject of present-day pianists. "And," he added, "without the sensuous there can be no great art."

Leschetizky's admiration for Anton Rubinstein, dating from the time when they were colleagues at the St. Petersburg Conservatory, is absolutely unbounded, and he never misses an opportunity to enlarge upon the great Russian pianist's art. At the lessons in Vienna there were always frequent references as to how Rubinstein did this or that. In fact, Leschetizky seems to treasure in his mind's ear the recollection of Rubinstein's performance of nearly everything of importance in the whole of pianoforte literature. His reading of Rubinstein's D minor concerto, based on the remembrance of Rubinstein's own performance of the piece, differs very radically in a great many points from the editions now before the public, and Leschetizky was induced by his publishers a few years ago to issue an entirely new edition of the concerto based on his recollections of the author's own playing of it.

A visit to one of the Munich theatres led up to a discussion of present-day playwrights, for whom Leschetizky has even less sympathy than for most of the modern composers. He has always been in more or less close connection with the stage through his warm friendships with some of the leading lights of the past generation at the Court Theatre in Vienna, and his tastes incline very decidedly to the classic drama. Rather surprised I was at his excellent knowledge of Shakespeare, his very warm defence of the historical plays and the expression of his views on the Lord Bacon controversy.

I had again many an opportunity to marvel at Leschetizky's enormous vitality, and can well believe the story of his pulling the piano towards the chair instead of moving the latter up closer at an orchestral concert once when he found himself sitting too far away from the instrument. This superabundant vitality finds its most superb expression in his teaching, and has spread itself abroad to such an extent over the whole of the musical world that in every nook and corner where the art of piano playing is looked up to, the name Leschetizky is a password of deep significance.

The simple motto of which he is fond contains a world of meaning for those who have been privileged to come in contact with an artist whose life has been such a full one:

"Keine Leben ohne Kunst,
Keine Kunst ohne Leben."

"No life without art,
No art without life."

———*———

THE CHOICE OF MUSIC FOR PIANOFORTE PUPILS

BY EGERTON LOWE

[At a meeting of the Music Teachers' Association of England, during the past year, the program included a discussion of the above subject. We quote from Mr. Lowe's paper.—The Editor.]

THESE are the three principles which I would suggest for governing the choice of music for pianoforte pupils:

1. Let us only select music we entirely approve of and appreciate ourselves.
2. Let there be a definite motive behind each selection.
3. Let us take the pupils' leanings and environment into consideration.

1. THE TEACHER'S OWN TASTE

If we select only music we thoroughly approve of, it stands to reason we shall never give a piece we do not already know. First learn your piece, then teach it. One of the first and important duties is to make a list of pieces suitable for teaching.

Again, if we select only music we thoroughly appreciate we shall not do a composer the injustice of giving our pupils a half-hearted, insincere, and probably unsatisfactory interpretation of works about which we care nothing or next to nothing. A teacher is not of much value unless his own enthusiasm and his own ideals are reflected in his pupils.

A teacher must be broad-minded and cosmopolitan in his views; therefore it behooves us to overcome, as far as possible, any prejudice we may have against this or that composer. Schumann's advice, "Highly esteem the old; but take also a warm interest in the new. Be not prejudiced against names unknown to you," is even more vitally important today (when the art is undergoing such a remarkable and bewildering transformation from the classic ages) than it was when first uttered some 70 years ago.

2. THE NEED OF A MOTIVE

Let us think of the motive always to be behind our selection. Primarily, it must be to improve the pupil, either from a technical or intellectual point of view; secondarily, it may be for recreative purposes—a piece, let us say, to play rather than to study.

But successfully to grade our pieces we must also grade our pupils (put them into classes, as it were, in the same way as is done in schools with all other subjects), and this is the surest plan for avoiding haphazard, happy-go-lucky selections.

The younger the pupil the shorter should be the piece. Youth cannot digest long, stodgy sonatas. A mother came to me recently for advice—her little boy of seven had been kept for two terms at one horribly dry sonata. "He hates it," she said, "but his teacher says he will not change it until he can play it perfectly." How many of us, I might ask, can play a piece perfectly? We must change a piece if we find it unsuitable and doing no good, as unconcernedly as a doctor changes the food or physic for his patient. It is unwise always to wait for perfection, or even something near perfection, before we make a change; for often we are justified in giving a piece considerably in advance of the actual attainments of the pupil, so as to stimulate his energy, perseverance, and ambition.

I might put it that a piece for technical improvement may well be ten per cent in advance of present attainment; but one for playing or concert purposes should rather be ten per cent to twenty per cent below.

3. THE TASTES OF THE PUPILS

Only one more subject will I touch on, that is, the individual tastes of our pupils. Although we should endeavor to elevate them to the highest possible standard, we must not try to coerce them; if so, when they leave us they will possibly go backwards from sheer reaction.

I often have in mind a story told by Grieg. When a boy of fifteen he had lessons at the Leipzig Conservatorium under Louis Plaidy—remembered to this day as the compiler of a book of *Technical Studies* as desiccated as any ever written by a dry-as-dust old pedagogue to knock out all the musical soul of the unfortunate student set to practise them. "I was bungling one day," said Grieg, "over a repulsive sonata by Clementi which Plaidy had forced on me, when he suddenly snatched the book from the instrument and pitched it with a great curve through the air into the farthest corner of the room. As he could not very well try the same experiment with me he thundered at me, 'Go home and practise!' The punishment was a terrible disgrace," added Grieg, "as there were so many scholars in the room. I went away blood-red with shame." We can learn a moral from this story. Don't let us imagine that the same pieces are suitable for all pupils, as Louis Plaidy probably did.

THE AMERICAN PIANIST AND HIS FUTURE NEEDS

BY WALTER SPRY

(Paper read at the convention of the Music Teachers' National Association, Dec. 1913)

THE question may arise: What is an American pianist? My answer is: One who was born or resides in America and has the best interests of the country for musical development at heart. Certainly there are various types of Americans, but those who are in sympathy with conditions as they find them and are able and willing to aid in the growth of music in our national life are the best Americans, and of these there are, of course, many grades of pianists, according to their ability.

It is unnecessary, at this time, to classify American pianists; but I feel that all could try to follow the example of Mme. Carreño, who, we know, has done much for MacDowell's music. Mme. Carreño told me herself of an experience in Europe when she had announced the D minor MacDowell concerto. After the rehearsal the conductor sent word for her to change the concerto. Her reply was, "If no MacDowell, there will be no Carreño!" When I speak of following this noble woman's example, I do not wish to intimate that we should all be a propaganda for one special composer; I have reference to doing something that will stimulate musical art in this country.

There are scores of musical educators in various cities of our land who are doing a noble work. I believe they should be called American educators. No doubt, the most notable example of patriotism was the late William H. Sherwood, who was perhaps the best known pianist of his time amongst the American people. He had the most remarkable repertoire of any pianist I have known, for he knew the entire classical literature; and I have heard him play most wonderfully the works of MacDowell, Templeton Strong, Arthur Foote, Arthur Whiting, Henry Holden Huss, Mrs. Beach, Preyer, Sternberg, and many other American composers. Mr. Sherwood's influence was powerful and I am glad I came under it. It was a satisfaction to me recently to have played the *Balkan Variations*, Op. 60, of Mrs. Beach, and to have had Mr. Emil Liebling state that it is a work which compares with the *Symphonic études* of Schumann.

I do not believe in favoring a musician merely because he was born in this country. Neither do I believe in saying that it is impossible for him to be as marked in his ability as the pianist from Berlin, Paris, or St. Petersburg. It is, of course, possible to generalize and compare the talents and musical advancement in the various countries; but I believe that American talent is of as high an order as related to instrumental and vocal ability as any of the European nations. Whether American musicians are distinctive is not a matter under discussion at this time, although I should like to relate an experience I recently had in listening to a new invention on the order of the Victrola. I heard singers of four different nationalities, including an American. I distinguished each nationality correctly without ever having heard these particular voices before. This would prove that in our singers, at least, there is reason to believe we may look for a distinctive vocal quality.

And then there is such an abundance of talent developed and undeveloped in our own country. A large part of the undeveloped American talent comes from European study. Their stay abroad is generally a short one, and they are frequently unsuccessful in their choice of teachers. True, there are splendid schools abroad and excellent teachers; but often they do not understand the Americans, and the Americans often do not understand them. The individuality is certainly weakened by such experiences. Here is, therefore, a point to be considered in the future of the American pianist. If a distinctive national character is to be developed, the student should at least in his foundation be a product of American teaching.

American pianists at present may be divided into two divisions: Virtuosi, and teacher-pianists, or those who play for pleasure and teach for a living. This latter class far exceeds in number the former class. American virtuosi are comparatively rare, because they receive little encouragement. Last Fall, for the first time in the history of the Thomas Orchestra (now known as the Chicago Symphony Orchestra), there appeared as soloist one who received her entire training in this country. I am glad to state that Miss Edith Thompson, who played the MacDowell D minor piano concerto, sustained the high reputation that these concerts have always held.

The future of American pianists would be solved if the various orchestras and clubs throughout our land would follow the example of the Chicago Symphony Orchestra and give our own native or resident artists an equal chance with those from abroad. Then the small class of virtuosi now existing would become large, the large class of teacher-pianists would be reduced, and some of those who dislike teaching become concert artists. We should thus be doing only that which other musical nations are glad to do, namely, encourage national art. In Europe music is put on the same level with the other fine arts and given the opportunity to develop. Is not France proud of Saint-Saëns, Belgium of Ysaye, Germany of Von Bülow and Strauss, Russia of Tchaïkovsky, and Norway of Grieg? I think even now there is a decided affection in our country among the classes for the music of Nevin and MacDowell, and in time we shall learn to appreciate the many fine artists residing amongst us.

There is, however, a great future for teacher-pianists who may be educators if they use their powers as interpreters to benefit and inspire their pupils. After reaching the age of fifty, many artists find that public performance is a dangerous affair. If by playing programs for classes of piano students they would find appreciation for their labors, it seems to me a far better work than trying to compete with those who devote their entire time to their concert repertory. A notable example of this we find in Mr. Carl Faelten of Boston, who plays a program of standard piano music every week for the pupils of his school.

The future of the American virtuoso depends, to a large extent, upon his own efforts toward attaining that standard which the best artists in Europe have attained. It means often much sacrifice of that which would offer a pleasant social life. We Americans are often afraid of hardships and wish to rival our neighbors in good clothes, rich food, and pleasant quarters in which to live. We know how De Pachmann absented himself for years from the world so as to devote himself to special study. And many other artists have done the same, and in this way only attained perfection in their art. If the time comes that the American public is ready to receive its own artists and we are not ready to supply the demand, it will retard the development of our national art.

So it would seem that the present needs are that the teachers turn out more young players who rank with such pianists as Yolande Mero, Myrtle Elwyn, and Tina Lerner, and from this stage of progress will come some who will rank with such giants as Hofmann, Sherwood, Bauer, or Busoni. In order to do this, teachers should have more consideration from parents. In the case of the foreigners, music is their principal study from the age of ten years to twenty years, at the end of which time they are fully equipped artists. In America, music students are so engaged with school studies that they often do not practise more than one hour a day. This lasts until they are eighteen or twenty years of age, at which time it is difficult to build a virtuoso technic.

I strive to show parents how much more important it is for their talented children to perfect themselves in their natural calling than to have a smattering of studies that will be of no practical use to them later, and all of which they only grow to dislike. I suppose many will accuse me of discouraging higher education and culture; to which I answer, "Yes, *if it is of no use.*" But if home influences are right, there will be the proper incentive toward that true culture which makes forceful character. Young people should know their Longfellow, Whittier, and Emerson rather than write stupid essays on the old Greek and modern French writers. These latter are better digested by trained adult minds.

Every teacher of the piano should bring his pupils and the parents of his pupils together and adjust matters satisfactorily. We can give our very life blood in striving to train our pupils; but comparatively little is accomplished if we do not have the co-operation of the parents. Then we can be as severe as the teachers of Europe are, and get results just as good. I know of single instances where the teachers have had full sway, and the results show that the playing is as good as anything which I have heard abroad. I feel sure that American pianists have a future, and that if the country develops in the next twenty years as it has in the past twenty, we shall see my prophecy fulfilled; for there will be many true artists to perform and there will be the right-minded public to listen.

———*———

JEAN DE RESZKE'S CHANGE FROM BARITONE TO TENOR ROLES

THE Paris correspondent of the *Musical Courier* gives the following account of the circumstances which led Jean de Reszke to change from baritone to tenor rôles.

While a student Jean's voice was developed as a tenor and he had studied tenor rôles. Just before the beginning of his professional career he heard Verdi's opera *Don Carlos*, which has a magnificent rôle for a baritone. His enthusiasm for the splendid vocal opportunities led him to study the rôle, and began his professional career as a baritone in consequence, adding other baritone part at various times.

It was in 1875 that he appeared in the Théatre des Italiens in Paris as Figaro in the *Barber of Seville*. His father had come on from Warsaw to attend the performance. After the first act he went to the dressing room and expressed himself in noncommittal statements in reply to his son's queries as to the merits of the performance.

"But you are disappointed, aren't you?" said Jean.

"Yes, I am," replied the father.

"But why?"

"You know as well as I do that you are a tenor, and that all this baritone singing is false," answered the father.

After the performance Jean said to his brother, Edouard, "If father thinks that way about it, I'm afraid he must be right."

And he never sang another baritone rôle, but went to work with Sbriglia and in a week had mastered the tenor part in *William Tell*.

A LULLABY

Assistant (in music department)—What can I do for you, madam?"

Lady—Sing me to sleep, please.—Horace Zimmerman.

LETTERS TO THE BEGINNING TEACHER
VI
THE PANTOMIME, OR THE TRUE OFFICE OF MUSIC

Out of a talk with Edward B. Hill

BY HELENA MAGUIRE

"Periodicity exists throughout all art as well as nature." Most beginning teachers like discovering this all over again for themselves, when, the feverish years of student life over, they sit down to think over the knowledge acquired.

Think of the Pantomime, and the evolution of this one form will seem like a long preparation for what is happening in music today.

Think through this sequence:

The pantomimic-chant, a part of the religious ritual of antiquity.

The *pantomimus* of the Mystery plays.

The opera-ballet.

The drama-opera

The choreographic-music-drama—and the last is like the dream come true of Gluck, Dwight, Beethoven, and Wagner.

In 1779 Gluck said—"My purpose was to restrict music to its true office, that of ministering to the expression of poetry without interrupting the action."

In 1841 John Sullivan Dwight, addressing the Harvard Musical Association on "The True Office of Music," said—"Music is clipped at both ends; sacred and secular run away in opposite directions. each with its own half, and Art is left, a minus quantity, in the middle. The music of the church. in dread of the secular spirit, grows lifeless, dull and cold; the music of the world, in dread of solemn dulness grows altogether trivial; while true music, conceived in the exalted sense of art, is tolerated in neither place, since it falls under neither head." Then follows a plea for music that is both good and gay.

In 1879 Wagner said—"Beethoven, in his leap from instrumental to vocal music in a professedly symphonic composition, quickened the work of Art toward that form, in which, as for the drama, so also for music, every conventionality must be abolished."

In November, 1913, the *Harvard Music Review* said—"America is prepared and eager for the Pantomine-Ballet (the choreographic-music-drama) in which the dance interprets the drama, and music, scenery and costumes unite in a harmonic combination of esthetic appeal."

Another sequence in the preparation for a new combination of the arts into something the church need not condemn occurred to me after I had talked to Mr. Hill. . . .

It was William Shakespeare, poet, dramatist, and, yes, musician, who brought together the man and woman whose son, John Harvard, churchman, man of God, founded Harvard University, which university, recognizing ,in good time "the true office of music," established a Music Department; and it is one of the professors in this department, Mr. Edward Burlingame Hill, lecturer on the History of Music, who sees in this present development of the interpretative ballet a movement analogous to that in the opera in the time of Gluck, and the possibilities thereof.

Gluck made his revolt against the opera as "a congerie of musico-gymnastic forms, put together for the sole purpose of the display of the individual artists" at a time in the world's history in which were fermenting, with noisy fervor, new and strange ideas in art, literature, politics and society. Have we not today just such a "noisy fermentation"?

While the pessimists tell us that machine music and rag-rhythm are fast bringing about the ruin of the art of music, and the moving picture business is destroying the dramatic art; while good people are holding up their hands in honest horror at the dancing of today, and lovers of art are gasping at the daring of the cubists and the synchromists—optimists see in all this defiance of tradition and conventionality a movement which will result is as much *good* as did that of Gluck's time.

The talking machine has made it possible for the people to hear, understand, and love music as never before; moving pictures have trained actors to express themselves in gestures as clearly as in words. Opera in foreign languages and non-understandable English has taught us to enjoy vocal music without words; the orchestra has learned to "picture" emotions as vividly as can the most eloquent of words; rag-rhythm is but the first crude effort of a people to be free, to be *themselves,* and not a "copy of something brought over"; it is an appeal to the elemental, but it will develop into something of worth; the synchromists are proving that color can express emotion more truly than form; and, lastly the Russians, in breaking away from the conventional ballet, have established a new school of dancing which is the medium for the expression of their

EDWARD B. HILL

wonderful native imagination and temperament. "Their art is strong because it is a native art."

Mr. Hill gives all the credit for the interpretative-ballet to the Russians, yet years ago, when the Russians were only just working out their ideas, and before Mr. Hill had even heard about their new school of interpretative dancing, he himself wrote and produced a pantomime, *Jack Frost in the Summertime,* in which he experimented with the very ideas which the Russians have since so successfully developed.

The Russians went to Paris; the Parisians went wild over their art and immediately began to imitate. Debussy has written two remarkable pantomimes, *Jeux* and *A Box of Toys.* The Russians went to England and the English went wild over their art, and although not so quick perhaps to imitate, as the French, already the Englishman Johnson has published a book on the modern pantomime which is the best thing on the subject in English and modeled after V. Svétlow's on the same subject. We have had oddments of the Russian ballet and we are now having Pavlova; but why should we wait to *imitate?* Why?

Well, the opera people in our country say—"We cannot have pantomime because we have no *maître de ballet,*" no one who could do the choreographic part,—"If we had a Michel Fokine now"—they are intensely interested, oh, yes—but—One truth is that the opera for the majority of Americans, even of today, means the singer not the music, the artist, not the art. "The World is divided into two kinds of people," quoth Madam Oreska (Tante), "the few who care for the music, and the many who care for the musicians." And there is work for an American Gluck to do before artists will sink their individuality in their art, and be willing, each one, to put "the all together" before himself.

Our theatre people shake their heads when approached as to the pantomime—well, for one reason—because of the excellent and expensive orchestra which is necessary. So this unification of the arts brings its own difficulties, and, knowing the long "fight" Gluck went through for his "purpose," we know that something of the same thing must happen to bring this "noisy fermentation," this exciting upheaval, to its certain good result.

Mr. Hill has just finished another pantomime, *Pan and the Star.*

The scenario, written by Mr. Joseph Smith, tells the story of the fall of the great pagan god Pan on the appearance of the Star which appeared in the East to the shepherds whose god he had been.

Mr. Hill makes good every opportunity which this wonderfully conceived story gives him; there is an Egyptian theme, there is Oriental music to suggest the star, there is music for the Pandean pipes, dances for nymphs and fauns and shepherds, marches for pagan priests and vestal virgins, a chorus for women's voices without words; Gregorian music ushers in Christianity, and Dante, Raphael, Palestrina, and many others who have glorified Christian art are present at the closing scene of the reign of the pagan god. It is wonderful, beautiful music, and is waiting to be heard; it is the music that America is waiting to hear from her men. I myself heard it only on what Mr. Hill calls "the relatively brutal piano," for all the delicacy and color of it must have the orchestra, but the opportunity for the choreographist, and for an American "Bakst" to revel the one in gesture and motions, the other in color, scenery, costumes, that was evident!

I believe that you Beginning Teachers will live to see the announcement of any great new work, not that of *one* man, for the exploitation of *one* "star," but as the joint work of musician, dramatist, artist, and master of the dance, and of a group of splendid artists more interested in producing a great work of art than in being a poor, lonely, succession of "stars"; a work of art in which the energies and abilities of *all* concerned are subordinated to the *result,* as they must be in a pantomime.

A last word. A pantomime is neither an adaptation nor an interpretation of music written by the composer with no thought of this. When Beethoven replied to a request for the key to a sonata—"Read Shakespeare's *Tempest,*" he did not say that it was a translation of *The Tempest* nor did he say that *The Tempest* translated the sonata. Neither the music, nor the poem, nor the dance, nor the setting, can be an afterthought; all must be worked out together.

Choreography, or orchesography, is the art of committing the dance to writing in the particular manner in which the gestures and movements must be made for the expression of the scenario, and, as the English Johnson puts it, "the polyphony of the music must be parallel with the polykinses of the dance." Therefore is the pantomime the combined thought of at least three artists.

Next year being Mr. Hill's sabbatical year he is to spend it in Paris, in further work on composition, and in "getting a new outlook."

A TALK ON MUSICAL CONDITIONS

TRUE EDUCATION---FOREIGN STUDY---SUPERFICIALITY---SUMMER SCHOOLS

BY "THE PROFESSOR"

WELL, well! How *do* you do, my dear Editor, after all these months? Eh, what? You thought I was roaming about the world? On the other hemisphere, imbibing the delights of modern French music, or lost while trying to find a melody in an intricate maze constructed by the renowned Schönberg? No, my dear boy; nothing so delightful, or so—dreadful, has been my lot. Far from roaming about, I have been buried—yes, absolutely buried—in the depths of music, real practical music: music writing, music criticism, music instruction, 'teaching the young idea (also the old, likewise the middle-aged) how to'—music.

"In all those elements I have been buried alive. And a very lively buried life it has been: full of energetic strivings to get to the very heart of Art, full of earnest endeavors to educate all that is best in the yearnings of enthusiastic students of musical truths; crushing fallacies by the way; living the life of the zealous seeker after musical expression; rapt in the contemplation of the great masters of every epoch and swathed in their tone-poetry and atmosphere; above all, aiming ever at the highest *Perfection in Art*—the most elusive of all relative things, for it is never attained. We near it and thrust out our hand to grasp it, when, will-o'-the-wisp like, it flits from us, yet, by its fire, lures us ever on and on, ever higher and higher, until Renown comes to reward our constancy and the grimmest friend of all writes *'finis'* to our striving lives—while unseizable Perfection still shines and shimmers and scintillates to encourage other earnest seekers in their arduous pursuit.

"I would hesitate to talk like this to others. You understand me and are in sympathy with the thoughts expressed and the ultimate object: perfection in art. Whereas they would treat me as a dreamer, an idealist who is losing their main object: the 'long green.' It is curious, this constant desire to put a money value, therefore a money goal, to every act and aim in life! To a man who, like me, is a philosopher—and a cynical philosopher at that—this low-down grubbing for dollars and cents, nose down to the grindstone in the money-making mill, without ever a look upward at the patient figure of the Muse waiting to be wooed for her sake alone—all this would be very risible if it were not so painfully pitiful!

ART FOR THE SAKE OF ART

"How many of our great Masters toiled with money for their object? And how many of them went on their whole-souled, single-minded way, creating great masterpieces, ignoring alike the praise and the blame of the crowd and dying in comparative poverty? The names of Beethoven, Mozart, and Schubert are ever present in our minds as the chiefs of a noble band that placed all that was best in them of art at the feet of Art: art for the sake of Art.

"Quite so. I agree with you that we must live by our Art; but it must be by its use and not its abuse; we must not prostitute our Art, in its teaching and practice and aims, for the sake of dollars and always dollars. We must not receive everyone, who comes to us for lessons, just because he has the price. We must no longer have Conservatories of Music, Colleges of Music, Schools of Music—yes, and teachers of music—which (and who) keep pupils as long as they pay their bills, irrespective of the progress that they do *not* make.

"By all means, let us live by our Art; let us make all we can; let us pile up a good, fat bank account and a supply of automobiles, laces, furs, diamonds and a well-stocked cellar, if your taste runs that way. But let us do it legitimately; let it be a case of 'money for value received.' Let there be no obtaining of pupils by illusory advertising and deceptive promises. If we 'have the goods' let us give them, and let them be the best we have, in return for our price. And if we have them not, let us be humble and honest and go and learn them from some one, ere we pretend to teach that which we do not ourselves know. Then, if we cannot at first 'live by our Art,' let us *live for our Art* and go and do chores for our material life, even as an ambitious young man will work his way through college.

HECTIC HYSTERIA ABOUT FOREIGN STUDY

"That state of being buried alive, which I described to you just now, is one of bliss compared to what I find on my return to the surface of this very earthy Earth. Such a 'pother' about our music students abroad, with a whole lot of hectic hysteria, frantic fulminations and incoherent irreflection about some of our girls who, ill-advised, have braved the Gaul and the Teuton with an insufficient supply of living-money and a less amount of elementary musical talent and training. If true, the matter calls for our heartfelt sympathy and demands protective measures for the future. But whose fault is it? First the teacher's, for allowing the girl to go abroad insufficiently equipped; then the girl's for not having measured her powers in comparison with some of the visiting artists from those countries, to see what chance of success she might have; then, finally and chiefly, the parents, for allowing themselves to be hoodwinked both as to talent and money required and letting the girl go off alone, insufficiently provided with the latter.

"But why all this 'pother' about what will probably turn out to be a few isolated cases abroad, when we have only to look at home and see much more of it going on around us? It reminds me very forcibly of the frenzied and fanatical zealots who send, year by year, thousands and thousands of dollars (to say nothing of blankets, coats, nethergarments and stovepipe hats) to the interesting savages—some of whom, being cannibals, are more interested in the missionary—of Central Africa, or the South Sea Islands, or similar salubrious spots, when these same zealots have within striking distance of their own dwellings any number of benighted yet deserving poor of their own race and color! Truly 'Charity begins at home.'

MUSICAL INDEPENDENCE NON-EXISTENT

"So, in this matter, it would be well if more rigorous methods and searching surveillance were adopted for the protection of our girls and of our boys in the chief centers of musical education, before going any farther afield.

"As for the so-termed 'musical independence of the United States,' it is a grandiloquent name for that which cannot exist. Music is universal; it depends upon no one country, but is common to all; all countries are linked together by music. France, Germany, Italy, America, England, etc., all give and take to and from each other. So also, no country can be musically independent of other countries having the same scales and modes. Music is like the air, common to all. We can be absurd and try to shut the door to any but our own, by a protective and prohibitive tariff; but it will find its way in, in the minds of our traveling fellow-citizens. Students will still go to Europe to study at the word-famed centers of musical art, and then come back to propagate their foreign acquirements. Where will the independence be? The title is perhaps a misnomer. Instead of 'Musical independence of *the United States*.' which signifies nationalism, should it not be 'of *American citizens*'? Which is a very different matter.

'Such independence is a most laudable goal to strive for, but it can only be attained by three great qualities: thoroughness, perseverance and patience.

"The great fault of nearly all our learning is superficiality. The teacher is not to be blamed for it as much as the pupils. These simply *will not* consecrate enough time to the study they have undertaken, be it music or anything else. A singer who has studied for six months or, say, for a year, expects to go out and earn from thirty to sixty dollars a week with some show or other. Show him or her the folly of such a proceeding, explain that it takes from six to eight years to train a voice properly so that it may withstand the wear and tear of a professional life and, in many instances you will hear the reply: 'Well, there's Bill Smith (or Polly Jones, as the case may be), who has never taken a lesson in his life, earning thirty-five a week and giving me the laugh for wasting my time and money with lessons.' If the pupil is intelligent enough to ignore his friend's bad advice, there is hope for him. But how many drop away from study, even among those who possess the best qualifications!

SUPERFICIALTY THE GREAT EVIL

"Then there are the pupils who have not the patience and perseverance to apply themselves to *deep* study. Oh, yes; they want to know something about it all, but they do not wish to know *all* about it. The instrumentalist avoids technical studies as much as possible, the vocalist neglects solfeggi, both acquire as little harmony as possible; just a smattering of the various subjects is not only all they desire, but all they will consent to learn.

"The only way to put an end to so unsatisfactory a state of things is for the teacher to have a proper understanding with the pupil or his parents, or both, at the very first lesson. If the teacher be thorough, looking for progress in the Art, he will not pander to the pupil's attempts at superficiality, but will insist upon thoroughness every time. In this way alone can he produce successful pupils and thereby enhance his own reputation and standing.

"As for the student who exhibits a complete want of musical intelligence, so that he can never reach the goal he had in view, the teacher must have no hesitation whatever. In the kindest but firmest manner possible the pupil must be sent away to other studies from which he will derive more profit. But how many teachers are there who will do it? The attraction of the 'long green' is a wonderful hypnotizer and a powerful anaesthetic for weak consciences!

"Then again, it must not be forgotten that there are teachers and teachers. Just as there are student-pupils at different stages of development, so there are teachers similar. It is a trite saying, but one that can never be heard too often: 'Of learning there is no end.' If the teacher is to be a successful teacher and to keep his position (or better it) in the teaching ranks, he must never cease studying. His own technic must be practised regularly day by day; he must keep in touch with the progress of his art by careful investigation of new ideas, new inventions and new methods. How many of the older teachers who were brought up on Bertini, Plaidy, Czerny, Kuhlau, Scarlatti, Haydn, and so forth, are able to play and to teach Ravel, Reger,

Florent, Schmitt, Strauss, or Debussy? Why not? Because they have not kept in touch with the progress of the arts of composition and piano technic. I number many teachers among my pupils and, with them all, the foregoing is the great difficulty that I have to contend against.

"There is no doubt that the power of receptivity becomes duller and duller as we grow older, *unless we keep it constantly furbished.* Herein lies the whole secret. If you would keep a receptive mind, use it each day for the reception of new ideas. Study,. *study,* STUDY ALWAYS, and you will never be behind the times, or, like Samuel Johnson's veteran, 'lag superfluous on the stage.'

SUMMER SCHOOLS FOR TEACHERS

"There is no valid excuse for you, Miss, Mrs., or Mr. Teacher; none whatever. You may advance the seemingly legitimate excuse that your teaching occupies so much of your time that you have none left for study. Perhaps so. But 'where there's a will there's a way,' and you can surely find a way to curtail some household or social task so that you may have, say, half an hour for reading about your art.

"But there is another means of the greatest value to you, my dear Teacher (my very advanced age will excuse the liberty of the adjective!), and the name is Summer School.

"The immense amount of good that may be derived from Summer Schools is now well known. Pupils, who cannot spare the time to wait from June to September or October in order to resume their lessons, know that there are Summer Schools, which may be recommended to them by their regular teacher, where they may go and continue their studies with the positive knowledge that they will make appreciable progress in them.

"But if the Summer School is helpful to the pupil, it is highly beneficial to the teacher, especially to the one who 'has not had the time' to keep pace with the progress of the Art. To such a teacher the Summer School is a perfect godsend. There is to be found teaching for teachers, talks with and exchange of views and processes with other teachers, change of scene and repose combined with change of atmosphere and ideas, accompanied by the inevitable sharpening of the intellect, a new fund of knowledge and a new incentive for the brightness and freshness of the coming season's work.

"Every teacher who can must resolve to devote some time this year to work in a Summer School. Why, dear me, I have become so enthusiastic over the subject that I believe I will hold a Summer School myself! Good-bye, dear boy!"

NOTES ON THE MUSIC IN THIS ISSUE

HAVE you made your plans for the closing recitals for the present season? If they are not absolutely complete we want you to consider using as many of the pieces in the present issue as will suit the grade and character of pieces you need.

The music included in this issue is distinctly educational in character, and therefore well designed for use in instruction with a view to being placed on the program of a recital. It has always seemed to us an inexcusable waste of the time of a teacher and a pupil to learn a piece of music rather brilliant in character, it may be, but without value to the pupil's technical upbuilding. We have aimed to help teachers in selecting music for this purpose, and feel certain of the good results following the use of the music in this issue.

Mazurka, No. 1, in G minor, by Camille Saint-Saëns, Op. 21, is one of this famous composer's most attractive easier compositions. Mr. John Orth has prepared it for teaching and the editing can be followed with confidence. In the opening section keep the touch somewhat light and throw out the rhythmic effects quite sharply. When the theme returns after the middle of the composition, played in three different octaves, put body in the tone but without pounding. The bravura effect of this passage is very striking. This *Mazurka* is one of a collection of compositions which the publisher has issued (in sheet form, not in book) under the general title *Modern Piano Music.* Teachers should examine these pieces and make themselves familiar with the works of modern composers.

Daphne (valse caprice), by H. Engelmann, is a good sample of this popular composer's facile, melodious style; he is particularly happy in his musical effects in waltz rhythm, and *Daphne* is equal to the best of his previous efforts. The general effect is not loud or noisy; on the contrary the player must have in mind a rather delicate and dainty style, particularly in the second half of the opening section. The C major part, especially at the beginning where the theme is in the alto register, demands a broad, full, singing tone quality. Note the *stringendo* effects in the Coda; very effective in drawing to a close.

Impromptu, in B, by Anton Arensky, is a fine example of the Russian musical spirit, expressed in melody. It demands a full pressure touch so as to produce a singing quality of tone. The violin will be a good ideal to keep in mind. The section marked *Allegro,* in G major, is in strong contrast to the first in tempo as well as in melody and rhythm. Note, first, that a quarter note has the same time value as an eighth note in the first theme; also the shifting of the melody notes from the upper to the lower staff. The arpeggios in the right hand must not be too prominent, they are accompaniment notes, not melody. Teachers will find this a useful piece for pupils who have fine musical sensibilities.

A la valse (Petit impromptu), by Carl Bohm, Op. 301, is in this favorite composer's best vein, although not among his difficult compositions. It demands a light, facile touch, and can be played at a rather high speed once it has been learned. Light fingers, clear rhythm, and good tone will make this an attractive piece for the pupils' recital program.

Saltarello, in B♭, by James H. Rogers, Op. 81, No. 4, is the work of an American composer, who always writes well for the piano, making pieces which have grace and charm in style, as well as attractive melodies and interesting harmonies.

Saltarello is an Italian word from a root which means "to leap," and is a rapid dance movement somewhat approaching the more familiar *Tarantella;* although not so high in speed. Needless to say the touch is to be light and crisp, pressing the keys lightly with quick release, no hard strokes from the arm or wrist.

Romance in A♭, by Nikolas Rimsky-Korsakov, Op. 15, No. 2, also belongs to the Russian school of music, and is excellently adapted for use on a program of music by Russian composers. It is a most interesting example of a piece built on a single theme and, one may almost say, on a single motive. This theme is sometimes in the lower register, at other times in a higher one. Note also the counter theme which is generally present, the effect being that of two voices singing together, but in independent rhythms. We consider this a piece of unusually fine musical quality, calling for good taste and discrimination in tone values on the part of the player, who must have a splendid ideal in mind before he undertakes to play the piece.

Chattering (Plauderei), by Friedrich Baumfelder, Op. 391, No. 1, for four hands, will commend itself to teachers for use with the class in ensemble playing. It is easy and within the playing ability of young pupils. As usual in this kind of work players should learn both parts so as to be able to play one or the other at the teacher's request. In the middle section the *Secondo* player has the melody which is to be made prominent.

Orientale (Kalcidoscope No. 9), by César Cui, Op. 50, for violin, is an effective piece, quite out of the conventional style. The mingling of pizzicato and bowed execution is most striking, and arouses the interest of the young pupil, thereby stimulating technical work. Cui was a Russian composer who was also in the military service. He was a prominent leader in the nationalistic movement in Russian music. We hope that teachers of violin playing will add this to their repertoires and put it on their next programs. We are sure that it will please the average audience.

Before the mirror, by Wilmot Lemont, Op. 5, No. 5, is one of a set of melodious teaching pieces which are all worth the attention of those who have young pupils under their instruction. The tempo is that of the waltz, and the flow of the melody is so pleasing as to make the piece attractive to player and to audience. It is also worth while to caution players against giving an equally strong accent to the first beat in each measure. Usually the stronger accents come on the first beat of every other measure, as if the time signature were 6-4 instead of 3-4.

The night has a thousand eyes, by Wm. Arms Fisher, Op. 17, No. 1, is a new setting of a beautiful text that has made a strong appeal to a number of composers. We feel sure that singers will find this a strong competitor for their favor as against other settings they may know. It is short and can be used acceptably for encores. An edition for medium voice, in E, is also available.

Daddy's lullaby, by Charles Huerter, is an effective lyric that will certainly appeal to singers. The melody is singable, and marked by simplicity and sympathetic quality. It is hardly necessary to say that the singer must pay careful attention to diction, for in the perfect delivery of the text will be found a large proportion of the effect of the song. Also published for low voice, in B♭.

Love in Spring, by Victor Harris, is appropriate to the season, in some sections of the country at least. The spirit of spring is in the text and the composer has caught it most effectively and as cleverly transferred it to music. The song is easy and can be used for instruction with pupils in the first year of study. The low voice copy of this song is in E♭.

Such a li'l' fellow, by William Dichmont, is a most appealing setting of a poem that has won the hearts of the public. The composer has given us a song simple and effective in its melody and harmony, which has been used with success by several American concert singers. It is worth a trial, for it can be used as a teaching song or in artist recitals. The high voice key is G; the medium voice, F.

EDITORIAL NOTES

ON SUMMER MUSIC STUDY

FOR some years past teachers have noted a tendency on the part of pupils to shorten the period of study. Ten, fifteen years ago pupils began lessons early in September and kept up their study well on to the close of June, thus giving to teachers an active season of nearly ten months.

But of late years the vacation season has begun earlier and ended later, and teachers find that their working season has been curtailed from six to eight weeks, with the result that the eight months when they meet pupils in the studio are strenuous ones, for they must earn a year's income in that short period. This entails a strain that is not easy to endure.

Besides it is not a good thing for a musician any more than a business man or a mechanic to be comparatively idle, so far as his special work is concerned, for so long a time. The teacher of music owes it to himself to devise a method whereby he may be occupied for a portion of the time when pupils ordinarily begin their summer vacations. What shall this method be?

Perhaps it is worth while to follow the example of the country school teacher of a generation or more ago and "keep a summer school." In those days the school season, the teacher being paid out of public funds, was rather short. To eke out the rather small income, teachers were accustomed to offer a summer course of six or eight weeks, especially for the children, the parents paying individually according to the number of pupils they sent.

There is a parallel here to the situation in which many music teachers find themselves. Their season has been shortened, and their income reduced. The moral is plain:

Offer instruction in the period of enforced idleness to those who are free to take up their studies at that time. Make the course of study such as will specially appeal to such persons.

European artist teachers have been accustomed to do this kind of work for a number of years. During the winter season concert tours interfered much with their work in teaching. But when summer came they retired to some quiet place in the country, permitting the most promising among their pupils to accompany them, devoting a portion of the day to instruction, class and private.

American teachers have learned the merits of this plan and have adopted it, in some cases with excellent results and satisfactory financial returns.

Many of the conservatories and schools of music in the larger cities, particularly those situated favorably as regards climate, are open for a time during the summer months, and offer fine opportunities to students.

Still another phase of summer instruction may be found at the various "Chautauquas," which are, in effect, simply aggregations of summer schools for various subjects, and for extension work. These Chautauquas do a fine work, reaching an earnest class of students.

Someone has raised the question as to who are particularly benefited by opportunities for study in the summer time. The question is an easy one to answer from the personal observations of the present writer.

1. In schools and conservatories connected with colleges and other educational institutions are teachers who are ambitious to improve themselves in their profession, not only as executants, but especially as teachers. In addition to this class of persons are the many private teachers in cities, towns, and the country districts who cannot leave their pupils during the regular teaching season, to go away for study.

Teachers belonging to the classes just mentioned are in position to profit greatly by the opportunity to study teaching methods and their application, a course of study which is a prominent feature in the work of summer schools.

The fact is that daily lessons, class meetings, semi-weekly (or more frequent) recitals, lectures, etc., covering a period of six or eight weeks, places before pupils a very considerable amount of work and study, equal to that done in the regular season in five to six months' semi-weekly lessons.

2. Teachers and students often wish to work under a certain teacher, representing some well-known "method," but find it impossible to go to him during the regular music season. A summer course makes possible the needs and desires of this class of teachers.

3. There are times when teachers and advanced students wish to specialize on certain lines of technic or interpretation, for concert, oratorio, opera, etc. For such persons the summer courses offered by experts in certain lines are a great boon. There is no reason why coaching need be confined to the winter season.

4. Another class of persons who profit by summer study are advanced pupils who wish to enter the teaching profession, and find that the atmosphere of a summer school is just what they need. Emphasis is laid on acquirement and personal development, on practical methods, those which have proven capable of securing results. Young teachers need to know plans of work and study which have stood the test.

5. Still another class of persons who are specially helped by summer study are pupils who have given up their work with local teachers for the time being and feel the need of advanced study under artists or teachers of high reputation. Contact with the wide experience and different ideals is no inconsiderable part of the opportunities offered in summer school work.

It is almost unnecessary to say that the summer months are far more conducive to good work than some think. Pupils are out of doors nearly all the time, a certain amount of time is devoted to exercise suitable to the season. The resulting physical efficiency reacts on the nervous and mental systems, making a high quality of work almost certain.

It is the hope of THE MUSICIAN that the coming summer may see at work double the number of last year's season.

—*—

MORE ABOUT MUSIC CREDITS IN THE HIGH SCHOOL FOR OUTSIDE WORK

THE question of credit in high school work for music study carried on outside the school has been referred to in these columns quite frequently. The movement has the influence of a number of prominent men and women behind it, and has been tried so successfully in a number of places that we consider that it has gone definitely beyond the experimental stage. Yet there are localities in which progress has not been possible along these lines, we much regret to say. Recently we received a letter from a piano teacher in a thriving Western city, the school authorities of which are not in sympathy with the efforts of our friend and reader of THE MUSICIAN. Part of the letter reads:

"Our town of 6,000 inhabitants has a large percentage of boys and girls who are studying music under difficulties. The Superintendent of Schools discourages everything musical, and does not even permit a chorus or glee club in the High School. The School Board are pioneer stock, out of sympathy with all Eastern ideas of progress and culture. So you can realize I have a battle to wage."

Our correspondent, and all other persons who are interested in this question, should write to the Department of Education at Washington, D. C., and ask for a copy of the Bulletin relating to music in the public schools prepared by Mr. Will Earhart, director of music in the schools of Pittsburg, Pa. It contains the fullest available information on the subject, and should be adequate to carry conviction to the minds of the most prejudiced. Keep at the work and you will win out.

The SINGER and HIS ART

EMMY DESTINN

EMMY DESTINN; AN OPERA SINGER WHO IS A MUSICIAN, A MUSICIAN WHO IS A CULTIVATED WOMAN

BY KATHARINE M. ROOF

We often hear a rather shallow maxim to the effect that the artist must be selfish to succeed. There is this much truth in it, no doubt, that the artist must sacrifice many other things and sometimes, perhaps, persons, to the achievement of a great success; but, one might add, the aspirant wants to be quite sure that the end is worth the sacrifice.

On the other hand, there is a danger of the footlight existence that comparatively few artists escape,—the disease of the exaggerated ego, a state of mind that most unfavorably affects character, not to speak of the sense of humor!

The lack of general culture which results from the exclusive focusing upon one phase of one branch of an art is a danger that has already been recognized by the thoughtful; but this other affliction, the ludicrous self-centeredness of the artist whose talents are displayed behind the footlights before an audience, seems not to have been sufficiently realized or at least emphasized. I have heard an opera singer discuss Wagner as if his rôle in life had been the writing of parts for prima donnas, a task which, most reprehensibly, he had not performed with due consideration for the comfort of the singer.

It is true, of course, that the majority of opera singers—especially those of Continental origin—were born of poor parents ("Else why," said the delightful Bonci, commenting half humorously upon the fact, "should I sing upon the stage instead of in the drawing room to some charming woman!"). This being the case, opportunities for general education—early education—would be lacking. But this accident of birth aside it is a fact that the majority of opera singers and many professional musicians as well suffer from a lack of the broadening influences of general culture both in personality and art. For the more the specialized artist knows of the great world of art the more he or she can bring to their musical interpretations. Or, to put it another way, the more *Brünnhilde* or *Tosca* realizes herself as part of the large scheme of things instead of regarding herself as the central pivot of the universe, the greater artist she will be. One cannot blame the undeveloped person for this attitude in view of the intoxicating nature of personal applause and the elaborate write-ups that the people of the footlights receive—not in the critic's column, but in the news sheets of the newspapers. It is surely human to enjoy and even to be somewhat upset by this tribute; nevertheless the artist needs all the self-discipline which culture and a larger viewpoint bring to stand up against the destructive influence of the professional life. The artist should be able to face adverse criticism instead of receiving it in such a spirit that members of the household have to edit an unfavorable newspaper criticism into flattery in reading it to its subject.

It seems sometimes easier to find examples of what not to do and be than those worthy of following, yet Emmy Destinn, the Bohemian soprano of the Metropolitan Opera Company, furnishes an illustration of the operatic singer who is interested in a whole world of things besides her own career, her personal affairs, and those of the opera house. Indeed Mme. Destinn is most reluctant to discuss the topic of herself, like any other healthy-minded cultivated woman. The facts that one gleans about her life and career must be picked up in the casual allusions of conversation. The direct compliment or allusion is usually received with some light self-mockery and parried in a manner assuredly not characteristic of the average professional celebrity. Even the enthusiasm of her friends she turns aside with a joke—very unlike the serious, not to say thirsty, attention given such tribute by the real egotist.

The first impression of Mme. Destinn in her home is not theatrical, but it is alien. Her facial type has that "foreign" quality that we feel in the Chech, the Slav, and the Magyar—something that touches the imagination with suggestions of more remote and picturesque origins. It is a somber face until she smiles. She has an abundance of dark hair simply braided and drawn about her head, peculiarly set dark eyes, and white teeth. Perhaps the somberness belongs merely to racial type, for her quick smile is the smile of humorous appreciation, not of mere amiability or friendliness. In talking with her one is immediately conscious of the mentality of the cultivated woman so different from the childishness and naïveté—attractive from another standpoint—often found in these specialized artists.

In discussing other singers—delicate and dangerous ground upon which the celebrity is sometimes forced to tread—Mme. Destinn will compliment cordially where she honestly approves and murmur some graceful generality where, one may infer, she perhaps does not admire. Once when an acute comment was made upon another singer's defect it seemed that in her quick critical recognition of its truth she was about to agree, then instead, with a little smile and gesture, she dismissed the subject,—"One does not criticise one's colleagues."

Mme. Destinn was fortunate in her early life and environment. Her father was a wealthy mine owner and art lover, and artists of all description, sculptors, painters, writers, musicians, were guests in his home; so the child grew up in the atmosphere of art. Her mother had a voice, but was not a professional musician. The little girl, who exhibited musical talent at an early age, studied the violin and at twelve was reckoned a prodigy. The fact that she, like Mme. Sembrich, was first a musician and then a singer, is highly significant as an explanation of her present position in the musical world, for a beautiful voice is not infrequently bestowed upon an unmusical person by some strange trick of fate, and even when the possessor of a voice is naturally musical the cases are rare where an instrument has been studied except, for practical convenience, a smattering of the piano. To use the voice like a perfectly played instrument is the advice of all good singing teachers. Mme. Destinn says that her teacher advised all pupils, for that reason, to study an instrument, preferably the violin.

When Emmy Destinn was thirteen the quality of her voice was discovered and she was allowed to study singing. She studied for six years with the same teacher. She had but one and for her professional life took her name. At the end of the six years she made her first professional appearance as Santuzza in *Cavalleria Rusticana,* with instant success.

She says that for a long time her teacher would not allow her to sing songs or to sing in public. One time after she had begun to study songs, she asked her permission to sing upon some occasion. By her own account, her teacher did not flatter her. "Oh, yes, you may sing it if you wish; but of course you won't sing it very well."

Mme. Destinn is generous in her praise of her teacher—a Viennese with the old Italian method—and generously says she owes her everything. Alas, how many teachers can tell a different story about their successful pupils! She strongly advocates having but one teacher, and, like all singers who have achieved a real vocal art, insists upon a long study period.

In answer to the remark that her voice in duo with Caruso's was particularly effective, Mme. Destinn replied: "When I first sang with Caruso

in London, before I came to this country, I studied his breathing and phrasing, so that I might use the same method in singing with him."

Mme. Destinn speaks French perhaps even more readily than German and Bohemian, for in Austria, of which country she is a subject, the upper classes use French as freely as German.

She retains her old home in Prague and has recently bought a beautiful old castle in the hill country between Prague and Vienna. But her Berlin home she has given up and has moved all its furniture and belongings to her New York home, near Riverside Drive, which she purchased this fall.

This versatile singer is also an author, having written verses and plays in her own language and in German; some of the plays have been produced. She owns a large library of old and rare books in several languages, including Latin, which she also reads. When the subject of an opera calls for serious attention, Mme. Destinn looks up the literature of the subject, interesting herself in its history. Yet she is essentially the musician and it is from that end first and last that she approaches her work.

An opera audience is largely made up of pleasure seekers rather than art lovers, and among these Mme. Destinn is, of course, a favorite; but it is among the musicians in her audience that she receives her most adequate appreciation, for the opera singer who is completely a musician is rather a rare bird. There are even several cases of successful opera singers who cannot read music.

It is a fact to be regretted that the complicated management of the opera house chess board should deprive the public of the pleasure of hearing this singer oftener in the Puccini operas, for which her voice and art are so peculiarly adapted—for the Italian operas were written to be sung, not declaimed.

In *The Girl of the Golden West* she has been heard many times, but very few in *Madame Butterfly,* and in *Tosca* only once. While less adapted physically for the impersonation of *Butterfly* than its usual representative, her exquisite treatment of the music, like her singing of *Tosca,* is a thing of unforgettable beauty. Then, too, it seems unwise from the art standpoint that a musical work should be associated exclusively with one personality.

Mme. Destinn's single appearance in *Tosca* was one of those frenzied last minute occasions when the singer originally cast for the part has become "indisposed." She had not sung the part for many months and "went on" in it entirely without rehearsal and gave a humorous account of her eleventh hour rummaging in her trunks for a possible costume. Yet in spite of this unpreparedness my memory, which includes all the *Toscas* who have sung here, with the exception of Olive Fremstad, finds nothing to compare musically with Mme. Destinn's singing of that rôle. In the descending intervals at the end of the prayer, she used an effect, quite her own, of exquisite technical manipulation and tonal beauty that the musical ear cannot but long to hear repeated. Even if Mme. Destinn's performance of *Tosca* were quite lacking on the dramatic side—which it decidedly is not—her total absence from the cast of *Tosca* would remain a loss.

Mme. Destinn is always interesting herself in something new. Last winter she started to paint, first on china, then in oils. Her first model was her cat—she complained, not a quiet one. Although her results from the standpoint of first efforts were most creditable, she treated them entirely in the light spirit as she does most personal matters. When she goes shopping this famous singer is quite likely to carry her packages home herself, although she was brought up in luxury; an interesting fact to note in this country of rapidly-made fortunes where we often have the opportunity to observe quite the opposite condition in the affections and assumptions of the newly rich.

Indeed, the whole effect of Mme. Destinn's personality, even at a brief meeting, is that of a delightful naturalness, the naturalness of the serious person with a serious object in life combined with the habit of expression of the cultivated woman.

She uses the directness and the eliminations of the busy woman, but without neglect of the courtesies and amenities, and has a consideration for the time of others most unusual with the professional of the footlights. With all this she has a certain almost primitive force that suggests easily the courage that made it possible for her to sing in the "lions' den" in Berlin. Mme. Destinn is, in short, an excellent illustration of the "well rounded" artist who is aware not only of her immediate sphere, but is open as well to the manifold impressions of life and the world.

STYLE IN SINGING

BY S. CAMILLO ENGEL

JOHN FISK says somewhere, "We live in a hurried and not over-intelligent world, wherein the wariest of us do not always pay due heed to what we are told and the keenest do not always divine its sense." The age of steam, electricity, and mechanical player-instruments does not seem conducive to the cultivation of style in singing, and the few artists now before us, who are masters of it, confirm this statement by being the exceptions.

What is style? It is the form or mode of expression, characteristic of and peculiar to the epoch in which the work of art was created. To be perfect it requires completeness in each of its details and their harmonious adjustment. The details are pure, untarnished vocal sounds, free from the nasal, guttural, throaty quality or the tremolo; a flawless technic, decisive articulation, and a distinct enunciation. Consequently it can easily be seen that inasmuch as these details also form the very basis, the very foundation of artistic vocalization, their lack makes it impossible to sing with style, no matter how deeply one delves into the history of music, or carefully deliberates over the air to be sung, both of which conditions are of paramount importance.

Steam seems to have dissipated, electricity to have burned, and mechanical player-instruments to have relegated into the limbo of desuetude the necessary but comparatively little time, the painstaking patience and dauntless perseverance required to overcome all difficulties.

To give one illustration, the noble and grand style required to represent Wagner's heroes and heroines, as that Jupiter of the tonal world imagined them, is replaced by a mere stentorian effort of the lungs, under which both the auditor and the singer suffer, the latter, however, the longest. The old masters differentiated between three styles, according to the place for which a composition was written, namely, church, opera, and concert style. Tosi characterizes them as follows: "For the opera, vague and mystical; for the church, ardent and serious; for the chamber, miniature and florid." The progress which the art of music has made in the last three centuries compels us to subdivide this, for our day, restricted division of the church style into two distinct branches, and the old *stile d'opera* into three. We divide the church style into Catholic and Protestant music.

In the *Mass, Te Deum, Requiem, Ave Maria,* etc., we have the Catholic church music; whereas the *Motet, Cantata* and *Oratorio* are Protestant church music, created by Luther's choral and the activity of his German contemporaries. Papal authority decided that the style of Palestrina's music be the church style, which it remained until about the middle of the seventeenth century. The style of that music is characterized by loftiness and truthful simplicity, which must be borne in mind when singing it.

Italy's influence on every branch of art affected the Protestant church music, too. Rhythm and dynamics asserted themselves, the organ became the constant companion of the *Motet,* the *Cantata,* the *Oratorio,* new forms which took the place of the Catholic *Mass.* The decided taste for the musical drama, created by Monteverde, in the endeavor to revive the classic drama, causes the *Recitative,* the *Aria,* the *Duet,* the *Terzet* and *Quartet* to conquer for themselves a place beside the Catholic church music and the *Choral* of the Protestant church music, brought to perfection by Handel and Bach. Handel's music is noble, truthful, gigantic. Bach's motets, masses, cantatas and *Passion Music* are decidedly more ecclesiastical in character than Handel's oratorios. The more one studies Bach, the more the infinity, the profundity of his music reveals itself. It is music written for all times; its scientific aspect (which underlies all music, though it be an art divine) forms an adamantine monument to human genius.

From these remarks it is not difficult to infer that the music of each epoch must have its own interpretation. The delivery of Palestrina's music and that of his immediate successors demands simplicity, serenity, and dignity; ardent, but not passionate devotion. More shading and a more decided expression have to be put into the music of the later composers, who stand already under the influence of the opera, until the epoch of Handel, whose oratorios demand a dramatic interpretation. Many of his arias and duets show Italian influence and require perfect technic. To sing them, however, emphasizing only the technical skill which they demand, would be a great mistake. Brilliancy of execution is required in singing the music Graun, Hasse, and their contemporaries of the eighteenth century, because it was written to exhibit the skill of the singers of their day and must be called showy. They sacrificed everything to the display of vocal beauty and technic.

Bach, again, demands sincerity, lyric expression, almost entirely excluding the animated energy which Handel's music calls for. The intellect predominates in Mendelssohn's oratorios, but does not exclude a certain dignity and loveliness which the singer must try to impart to his voice. To interpret the church music of Beethoven, Mozart, and Haydn, the imagination must be aflame and guide the singer like a beacon light. Kindled by the sacred fire of their genius, he must be now fervid, now tranquil, now glowing with religious passion, now subdued and humble. In a word, he must give utterance to the whole gamut of human emotions, must be pervaded by genuine, sincere feeling, but beware of pompousness.

The radically different character of the French, Italian, and German opera compels us to recognize three defined styles of opera in place of the one of Tosi's time.

Voltaire once said to Grétry, "How now, you are a musician and have brains?" It is this *esprit,* intellect, brain, which enters into all French music, constituting its principal feature, and leaving little or no room for feeling. Its cause may be attributed to the expressiveness of the French language. Of melody, the language of the soul, not much can be found, even though a few operas, like Gounod's *Faust,* abound in it. They are the exception. Owing to this character of their music, which is intellectual, sprightly, and ingenuous, perfect diction is of the highest importance, and it is an acknowledged fact that the French are masters of it. The utmost distinctness of articulation and enunciation is required. Great attention must be paid to the rapid interchange of long and short syllables, to pregnant ac-

centuation, and ever-present gracefulness. On the other hand, the rendering of the French song often calls for tenderness, fervency, and refinement, its character being mostly lyrical.

Quite in contrast with the French style is the Italian. Melody replaces diction. Joy, passion, fervor, rage, love, the whole gamut of emotions are reflected by her alone. To do full justice to the music of Bellini, Donizetti, etc., the singer has to aim, first of all, at a perfectly beautiful sensuous tone quality. Rossini's firework-like runs require absolute mastery of the field of technic; whereas considerable lightness and pliancy of tongue and lips are necessary for the buffo or comic rôles. All this applies, also, to Verdi's first operas. His later ones, written under Wagner's influence, demand, to a great extent, sharp accentuation by means of the periodical use of the *stentato,* the *marcato* and *martellato.*

The German style of opera music demands of the singer, first and foremost, dramatic truth, warmth, and depth of feeling, characteristic tone coloring. Whether Mozart, Weber, or Wagner is sung, the composer's music must be produced with an intensity of feeling so strong as to awaken an echo in the heart of the auditor. All this also applies to the singing of the German *lied,* which, principally lyric in form, appeals to the tender emotions; while, for the rendering of such songs as the *Erlking,* the *Two Grenadiers,* etc., dramatic interpretation is essential.

The *Recitative* is musical declamation. In it we recite with well-defined, clear-cut, properly emphasized accentuation, on tones of a definite musical pitch. There are two kinds of recitative. In the older one, the *recitativo secco,* the voice is accompanied by occasional, short, and decisive chords only. In the newer one, the *recitativo stromentato,* the orchestra plays a very important part, reflecting, illustrating, and emphasizing by its multi-colored accompaniment, with its independent melody and harmony, the sentiment expressed by the singer. In short, the *recitativo secco* is a declamatory style in which the prosodic accent takes precedence over the musical one, whereas in the *recitativo stromentato* it is the reverse.

It is easy to see from all this, how important the study of the history of music is to the singer who wishes to acquire style. He must be able to identify himself with the spirit pervading the music he wishes to interpret. He must be familiar with the characteristics of the epoch in which the music to be sung was written and the life history of him who composed it. He should develop his imaginative faculty by reading some, at least, of the literature of the period in which the composer whose work he intends to sing lived, absorbing the spirit of his time. He must have an analytical mind, able to dissect to its minutest details the character he wishes to represent, identifying himself so completely with it that his very voice reflects it.

Singing is a lifelong study, made doubly attractive by its many-sidedness, one of which is style, without which the best vocalist remains incomplete and unsatisfactory to the public.

———*———

TALKS ON SINGING

BY ENRICO CARUSO

I

[An English musical journal, the *Monthly Musical Record,* published some interesting suggestions for singers, by Caruso, from which we take the following. Mr. Caruso rightly says that conditions vary with individual singers, and in these articles he tells what he has found true in his own experience. —The Editor.]

MY DIET

As regards eating—a rather important item, by the way—I have kept to the light "Continental" breakfast, which I do not take too early; then a rather substantial luncheon toward 2 o'clock. My native macaroni, specially prepared by my chef, who is engaged particularly for his ability in this way, is often a feature in this midday meal. I incline towards the simpler and more nourishing food, though my tastes are broad in the matter, but I lay particular stress on the excellence of the cooking, for one cannot afford to risk one's health on indifferently cooked food, no matter what its quality.

On the nights when I sing I take nothing after luncheon, except a sandwich and a glass of Chianti, until after the performance, when I have a supper of whatever I fancy within reasonable bounds. I am careful never to indulge to excess in the pleasures of the table, for the condition of our alimentary apparatus and that of the vocal chords is very closely related, and the unhealthy state of the one immediately reacts on the other.

My reason for abstaining from food for so long before singing may be inquired. It is simply that when the large space required by the diaphragm in expanding to take in breath is partly occupied by one's dinner the result is that one cannot take as deep a breath as one would like, and consequently the tone suffers, and the all-important ease of breathing is interfered with. In addition, a certain amount of bodily energy is used in the process of digestion which would otherwise be entirely given to the production of the voice.

These facts, seemingly so simple, are very vital ones to a singer, particularly on an "opening night." A singer's life is such an active one, with rehearsals and performances, that not much opportunity is given for "exercise," and the time to do this must, of course, be governed by individual needs. I find a few simple physical exercises in the morning after rising, somewhat similar to those practised in the army, or the use for a few minutes of a pair of light dumb-bells very beneficial. Otherwise I must content myself with an occasional automobile ride. One must not forget, however, that the exercise of singing, with its constant deep inhalation (and acting in itself is considerable exercise also), tends much to keep one from acquiring an oversupply of embonpoint.

DRINKING AND SMOKING

On the subject of whether one should or should not drink intoxicants, you may inquire what practice is, in my opinion, most in consonance, with a singer's well-being. Here again, of course, customs vary with the individual. In Italy, we habitually drink the light wines of the country with our meals, and surely are never the worse for it. I have retained my fondness for my native Chianti, which I have even made on my own Italian estate, but believe and carry out the belief that moderation is the only possible course. I am inclined to condemn the use of spirits, whisky in particular, which is so prevalent in the Anglo-Saxon countries, for it is sure to inflame the delicate little ribbons of tissue which produce the singing tone, and then—*addio* to a clear and ringing high C!

Though I indulge occasionally in a cigarette, I advise all singers, particularly young singers, against this practice, which can certainly not fail to have a bad effect on the delicate lining of the throat, the vocal chords, and the lungs.

———*———

DEVELOP THE INTELLECTUAL SIDE OF SINGING

BY HORATIO CONNELL

With the voice so developed as to be a perfect means of expression the singer faces his most difficult task. To sing well and correctly is merely a matter of sufficient study and intelligent effort. But to interpret a song—in other words to be an artist—is most difficult. Unless the singer possesses intellect, unless he can apply concentrated thought to the interpretation of his songs he will remain merely a singer, not become an artist.

The time to develop the intellectual side of the singer is while he is studying voice. Many pupils imagine that once vocal technic is acquired the intellectual side of art will be added in some miraculous way. There is no miracle about the ability to interpret great songs. It is simply long continued and concentrated thought and study applied to the work in hand in an intelligent way. And along with this work must go a good musical or artistic environment, atmosphere, if you will, a choice of good musical associates, and the placing of oneself in the way of breadth of culture along many lines.

Do You Sing?

Do You Teach Singing?

Have You Fallen into a Groove?

Do You Wish to Keep Abreast of the Times?

THE BROOKFIELD SUMMER SCHOOL OF SINGING is in session from June 1st to October 1st. We want you to enroll in the school for all four months if possible. If you cannot, we will welcome you for as short a time as you like, and promise to give you some new ideas and a happy outdoor life in a beautiful section of New England.

701 Carnegie Hall, N. Y. City

CHILDREN'S WORK IN MUSIC

CONDUCTED BY HELENA MAGUIRE

THE VIOLINIST

THE JOY BELLS

A Song for Eastertide
I will break forth in singing,
  In singing on my way.
As I go faring onward
  To where the joy bells play.
They play for me "Mark time! Mark time!"

Before the dawn I heard them chime,
  And trembled at their ringing.
The Lord, *He* set them swinging
  The hours of this day,
And I go onward singing,
  Oh, singing on my way.

MARY STEWART CUTTING.

A TRUE INCIDENT

EACH of my pupils has a copy of Elson's *Pocket Music Dictionary*. I often include in their lessons something to look up in this or in THE MUSICIAN, and tell me about at the next lesson.

This morning I said to Helen H——, a little girl of ten:

"Do you remember that band that came here last fall?" She promptly recalled the name "Sousa," and I told her to look Mr. Sousa up in her dictionary and be able to tell me where he was born, and when, and what he is noted for.

Then I said, "And have you ever heard of Caruso?" For a moment she looked blank, then her eyes lighted up as she said: "Oh, *Robinson* Crusoe?"

WHAT DO YOU SEE?

A MUSIC LESSON FROM THOMAS A. EDISON

CHILDREN, Mr. Thomas A. Edison wants to know what you *see* when you study music?

He says that "one glance, if a boy *sees* is better than two hours' study on something that he does not 'see through,' or understand."

Any boy wants to *know* about what he sees, and for that reason a boy is willing to spend time on anything that he can *see through;* but no one is interested in what he cannot understand. So Mr. Edison makes it clear that if you do not like to practise it is because you have not yet seen through music or what it is you are trying to do when you practise.

When a boy says he does not like music that is not what he means. No boy dislikes *music;* no boy dislikes a Victrola. What he means is that he does not like what he has to do to learn to make music himself on an instrument, and that is because he does not see what it is that he is doing.

If a boy once sees that he has got a circuit to make and keep up that is like the electric circuit, he will like to do it. This is your circuit: From page to eye, from eye to brain, from brain along the arm to finger, from finger to key, from key to wire, from wire to ear, from ear again to brain; and there you are. You have made a tone.

And on how continuously a boy can keep up this circuit without breaks depends how much muscle and brains he develops in the process. The sooner you work out for yourself ways and means of correcting all uncertainty and faultiness of eye, the sooner you train your brain to be a quick and accurate receiver and transmitter of messages, the sooner you learn how to get rid of all unnecessary motions of hands and arms, why, the sooner will you establish a smooth and continuous circuit as good as any Victrola, and the less time it will take you to accomplish the tasks your teacher sets you. In other words you will have learned to apply to your practice the sign which hangs in Mr. Edison's own laboratory:

Save the juice,
Save the juice,
Turn off the light
When not in use.

HELENA MAGUIRE.

A MUSICAL AFTERNOON

BY ANNIE GLENN CROWE

THE season of spring always brings a feeling of lassitude; especially is this true with music pupils; even the brightest students become careless and lose the enthusiasm that means so much to a successful teacher. Noting this lack of interest I issued invitations to a musical party at the studio, one spring day.

For the first contest, objects were placed on a large table, and each one numbered. The pupils were seated near the table with pencil and paper. These were the names guessed by the class:

1. A door key (key).
2. A note written and addressed (note).
3. A written note with a twenty-five cent piece on top (a quarter note).
4. A small scale for weighing (scale).
5. A ball of twine (chord).
6. A sheet of paper with "Yours truly" and a name underneath, with a key on it (key signature).
7. A note with a hole in it (a whole note).
8. A note torn in half (a half note).
9. A knife with a sharp blade (sharp).
10. A man's tie (tie).

A box of candy was awarded to the winner. Going to the piano I struck keys that formed these words: "Age," "bed," "bad," "Ada," "Ed," "add," "egg," "cab," "beef," etc. This served as an ear test, as the class sat with their backs to the piano.

The maid then passed cookies made in the shape of letters of the alphabet. These represented musician's names, and each child told what their cookies represented: B (Beethoven), C (Chopin), S (Schumann), etc. A Perry picture of the composer was given for a correct answer, while those missing paid a forfeit, to be redeemed by playing a piano solo.

One last contest was a musical puzzle written on the blackboard.

As souvenirs, small boxes of candy shaped like musical instruments were presented to each pupil.

THE SPRING SONG

A MUSICAL DIALOGUE

BY LAURA ROUNTREE SMITH

(For use in musical club or class-room)

THE stage is darkened a little, and the persons who take part in the entertainment either carry the musical characters and terms mentioned, or have them pinned on their dresses and coats. The first speaker carries a torn piece of music.

First Speaker. I am a fine old piece of music, but I feel quite worn out and my nerves are all on edge!

All. Why, what is the matter, you have a very pretty name? They call you a *Spring Song!*

First Sp. Well, if you could have heard the pupils in that music class today; how they thumped me and bumped me! One little girl made faces at me, and one boy said he hated a *Spring Song,* and he wanted to go fishing!

Notes. Oh, yes, we were played in the wrong place; it was really dreadful!

Three Sharps. Some one said, "How I do hate sharps," and that hurt my feelings dreadfully!

P(piano). You know the piece starts *softly,* and no one even noticed me!

Grace Notes. We ought to sound as pretty as though we were played on a harp, and some of the pupils played us as though we were ordinary notes; and some of them left us out altogether!

Pedal. As for the poor pedal, they used me too much, or not enough, and never in the right place!

Rest. I am very important in this piece, but little attention was paid to me.

Sf. One little girl did not know what I stood for. She said she guessed I was like a postscript to a letter, and she thought Mendelssohn's *Spring Song* was long enough without anything being added.

All. Mendelssohn's *Spring Song!*

Sf. Yes, to be sure it was Mendelssohn's *Spring Song.* Didn't anybody recognize it?

First Sp. It was so badly played, no wonder no one recognized it. Where was the song of rain? Where was the song of birds? Where were the little flowers springing up in the grasses?

Crescendo. At *crescendo,* how I do like to swell out, but the pupils played along with no notice of me as a rule, and one little girl played *gradually decreasing* the tone!

All. How dreadful!

Diminuendo. They never noticed me, or *dolce.* I am sure.

Grazioso. When one child saw me she just wrinkled up her nose, and said it was bad enough to read notes, without having to know the meaning of the words.

(At this point many little children run across the stage and back. They represent the *Accidentals.*)

Accidentals.

We are *Accidentals,* ha, ha, ho, ho,
We puzzle the musical children so.
We like to appear,
Just why is not clear;
What note's to be played next?
Oh, dear and oh, dear.
We are *Accidentals,* ha, ha, ho, ho,
We puzzle the musical children so!

First Sp. What a pity the children did not ever hear Fanny and Felix Mendelssohn play the *Spring Song.* Hush! listen, there was one little boy who studied the piece.

All. Did he study the marks? Did he know his notes? Did he know what the words meant?

Accidentals. Did he play us in the right places? Did he know that we are really not called *Accidentals* any more? Did he know that we ought to be called *Incidentals,* for there are no accidents in music?

First Sp. Hush, listen! The little boy is practising now, soon he will be able to play Mendelssohn's *Spring Song!*

(They all quietly retire and an older pupil, or teacher, concealed behind a screen, plays Mendelssohn's *Spring Song.*)

VOICES OF SPRING

TEN LITTLE SOLDIERS

BY ANNA S. WEST

REGINALD wanted to take "music lessons," because "all of the fellers on our street play the piano—why can't I?" he would continually say to his mother. But mother would take those stubby little hands in hers and say, "Just look at the dirt and those *awful* finger nails; do you think I could let you go to Miss Thomas with *those* hands?"

"But mother," he would say, "I would wash my hands *good* and *clean* as soon as I come home from school; *honest* I would!"

Mother would smile to herself and say, "I wonder how long that promise will 'hold good' if I let him try?"

But one day when Reginald same in from playing ball, Miss Thomas was seated in the living room with mother, waiting to have a talk with the little boy who wanted so much to play the piano.

Now Miss Thomas had taught music to many little boys and many little "grimy" hands and finger nails which were not always elegantly manicured came to her studio. So she did not show any great surprise when she took Reginald's little hand to find that it was most wofully black after a "dandy ball game." Miss Thomas knew that she had a "cure" for those little dirty hands, which even Reginald's mother had not tried.

They talked of the day when Reginald would take his first lesson, and what a happy little boy he was when he knew that mother had decided that he might really take music lessons.

Never before had Reginald scrubbed his hands so clean; and when the first lesson day came, never were a boy's hands any cleaner and whiter. Miss Thomas noticed the difference, of course, and while she said nothing, she, too, thought like mother: "I wonder how long it will last?" But she felt sure of her "cure," and the very first thing she said to Reginald was:

"How is your regiment of soldiers today?"

"My regiment of soldiers?" said Reginald, looking very much puzzled.

"Why, yes; you are Captain of a regiment of ten soldiers. Didn't you ever know that before?" said Miss Thomas. "Just count your fingers and see how many soldiers you have to drill each day."

"But those are not soldiers—not *real* soldiers," said Reginald.

"No; not *really true* soldiers, dear," said Miss Thomas; "but we will have a little play that they are, and I am sure that you want to be a good Captain, don't you?"

"Sure!" said Captain Reginald; "I'll make those soldiers be *good,* too!"

"I believe that you will," said Miss Thomas; "and remember, Reginald, that no one but *you* can command that little army of ten soldiers. Mother will tell you how to use them in many ways, and I can tell you how you must manage them so they will make the sweet music; but *you* are their Captain, and *you alone* can command that little regiment.

"Now one of the first things will be to keep their little faces clean when they are on 'dress parade'—and, of course, they will be on 'dress parade' whenever you are having them 'on drill' at the piano.

"Another thing you must command your soldiers to do is to stand up fine and straight on the piano keys, and obey you each time you tell them to move."

By this time Reginald felt his importance as the Captain of his little army of ten fingers; and how hard he worked to make them obey him when Miss Thomas told him just how they must strike the keys. He never forgot that he was a Captain, and very brave he was when the unruly little fingers would sometimes almost refuse to strike the correct notes. He kept right at his music, making those little soldiers give so much pleasure to mother and father as he played the bright little melodies which Miss Thomas taught him; and one of the very best things about his music lessons, mother thought, was that Reginald was always very particular to keep his ten soldiers' "faces clean," as he would say, when he scrubbed away at them. And so one more boy had taken Miss Thomas's "cure."

How much it would help mother and what nice clean hands would go to the piano, if all of you little chaps would be a good Captain of those ten little soldiers on your hands, and see to it that they keep "their faces" good and clean.

A SPRING FANTASY

ETHEL'S MUSIC LESSONS

BY HARRIETTE BROWER

VI

ETHEL IN MOZART-LAND

"Oh, mamma, are we really going to the town where Mozart lived, and shall we see the very house where he was born?" Ethel's eager eyes sought her mother's face.

"Yes, dear, we shall start tomorrow for Salzburg."

Ethel, with her parents, had been resting at Innsbruck, among the Tyrolean Alps. Her windows looked toward the snow-capped mountains which surround this quaint old town. The swift flowing river Inn divides the city into two halves. In all her travels through the summer, she had never seen such queer, funny houses as here; many of them had pictures painted on them, and the windows were so odd and tiny. She always noticed that every window, even in the poorest houses, was filled with flower pots and vines, so that the houses seemed covered with blossoms. Another thing she learned in Innsbruck was to listen for the bells. There are many churches in the old town, and they each have their set of bells that ring out not only the hours but the quarter hours as well. Each set has a different tone, are tuned to various keys; some are deep and rich, while others are high in the treble.

There was a band of musicians who gave concerts and dances every evening. They were dressed in the pretty costume of their country,—the short skirts, gay silk aprons, laced bodices and white chemisettes for the girls; and the embroidered velvet coats, knee-breeches and pointed hats for the men. The melodies they sang and played were bright and gay, and the dances full of vigor and charm.

All the way from Innsbruck the road wound among the mountains, until at last the train approached Salzburg, lying in a lovely valley surrounded and sheltered by great hills, with mountain peaks rising all around. Ethel's mother had said, "We must be by the river," for here, too, was a rushing green river, like the one at Innsbruck, only here it was called the Salzach. So they found a hotel close to the water, and right by the big bridge which connects the two parts of the town.

Ethel will always remember the first walk they took through the streets of Salzburg. She kept saying to herself: "Little Mozart walked these very streets, just where I am walking now; and just think how long ago,—more than a century and a half! And when he was only my age he was a great composer and pianist, and had played before the crowned heads of Europe. The little *Menuetto* of his that I have learned, he composed when only six years old. I shall love it all the more because I have come to his birthplace, seen the river and mountains that he used to look upon, and have walked through the very streets where he used to go."

A BALLAD SINGER IN OLDEN TIMES

They first found the house, in the Markart Platz, where father Mozart took his family when he moved across the river. After this it was but a few moments' walk over the bridge to the narrow, busy street in which stood the very house where the little Prince of Music first saw the light. Father Mozart and his small family had lived on the third floor of this house. Ethel stood in the street before it and spelled out in German, the gilded letters, which read, "Mozart's Birth-House." Then they entered the wide doorway,—which had double doors painted black, with big brass handles in the middle of each,—and climbed the narrow stone stairs,—the very same stones over which little Mozart's feet pattered as a child, so many years ago.

Ethel had kept a notebook during her trip, writing down the important things she saw and heard, especially those about music, so that she would not forget. She now looked carefully at every object in the three rooms which are shown to visitors, intending to put it all in her little book. Here was the small spinet upon which the tiny musician practised, the harpsichord on which he played in public, in Vienna. Here were many portraits of himself, his father, mother and sister. ("How strangely the girls wore their hair in those days," thought Ethel, as she noticed Nannerl's high, powdered pompadour.)

"Oh, mamma, just see this picture of Mozart's ear," and she drew her mother's attention to it. "See how much larger it is than other people's." "And how delicately formed and curved," added her mother.

Ethel wished she might play the Mozart *Menuetto* on the little spinet, but knew it would not be allowed. She sat, however, just for an instant, on the little parlor sofa, and on one of the parlor chairs. The Mozarts must have lived very comfortably in those old days, as the relics of their belongings show.

From the man in charge of the rooms she bought many postals as souvenirs, some to send to her teacher and young friends in America, and others to keep, to remind her of all the memorable things about Mozart and his birthplace.

Ethel and her parents spent a week in Salzburg, visiting every spot of interest in and around it. They were never-to-be-forgotten days, and seemed to make dear and familiar the very spirit of Mozart and his music, of which they heard much. Ethel determined some day to play everything the composer had ever written for the piano, and I believe she will do it.

How many of my little readers love the music of Mozart?

THE VIOLIN

CONDUCTED BY RAY G. EDWARDS

THE STRING CHOIR

I

BY RAY G. EDWARDS

I HAVE been asked to explain the reason for so many violins and other stringed instruments in an orchestra, why there are sometimes twenty-five violins and only one or two each of the "band instruments." In the first place, band music is usually heard out of doors, in parades, and on festive occasions, where the general populace is gathered for some patriotic demonstration. Most bands are connected with some military organization, and we think brass instruments and drums as used in the calling of men to arms. Primarily these are the uses to which all wind instruments are put. Although we must admit the shepherd's pipe and the flute can rouse the finer emotions.

It is to the stringed instruments, however, that we turn when we wish to express thoughts of love and the soul's deepest yearnings. The quality and flexibility of the strings are such that they can be made to express every human emotion. For this reason composers give the violin, viola, 'cello and bass the chief places in the orchestra. An orchestra is not at home in the open air, but finds it proper place within four walls, associated with home ties, affections, and the finer emotions, although seldom heard in the private home—requiring the concert hall, the larger home of the people, the public parlor we might say.

Opera performances are supported by an orchestra because this form of organization has been found best in the portrayal of all the emotions of the human heart. The strings do not accomplish this alone, however; so a limited number of wind instruments are employed. The tendency of the time is to add more wind instruments, while also increasing the number of strings. This varies the tone color, giving greater opportunity for high lights and shadows, yet keeping a preponderance of strings with which to weld and direct the whole. The strings usually introduce new thoughts and themes, or are saved for the climax.

Twenty or more flutes would give a tone color suggestive of some modern schools of painting in which a blue or yellow dominates the entire canvas. But as the impressionists and cubists are seemingly getting the upper hand over the pre-Raphaelites, so may we expect, sooner or later, to submit to the fourth dimension composer who injects great splashes of brilliant piccolo and rich horns into his symphonic efforts.

This is the "why" of so many violins in the orchestra. Now as to the manner of their use, it is not that each instrument may have a different melody or note, for such is not the case. The entire body of strings plays the four parts of harmony as heard in a vocal choir. In the string choir the first violins take the soprano, the second violins the alto, the violas the tenor, and the violoncellos the bass; the double bass, as its name implies, doubles the bass an octave lower than the regular bass of the violoncellos. Modern composers occasionally divide the strings and give the 'cellos two distinct parts and the violins three or four parts. The leading first violinist, or concertmaster, takes the solo parts or obbligato if there are any.

The technical possibilities of the stringed instruments are about equal in the hands of their respective masters, but the violin is the better solo instrument on account of its small size, fitting the hand and reach of the average player. The viola, in order to have the same proportionate size as the violin (considering its greater depth of tone and need of larger vibrating chamber) would have to be much larger than it is. Such instruments have been made but are not a success, as few players can command the reach necessary. The depth of tone must be gotten in some other way, and this is done by using thicker strings and less tension.

The 'cello, being of a size more in proportion to its depth of tone (an octave lower than the viola), and being played in an easy position, with the neck and fingerboard toward the performer, has a great charm for both player and listener. In the time of Haydn the 'cello had an unimportant part. Although Haydn is always considered the father of the trio, quartet, and symphony, his 'cello part in the trios did little more than double the bass of the piano, while the violin doubled the melody to a marked degree. Mozart found more for both of these instruments, and it was he also who revealed the beauty of the clarinet in the orchestra. Beethoven and the later composers have given the 'cello even greater freedom, and have delighted in its voluptuousness, its tender passion, and depth of feeling. Theoretically the 'cello, viola, and violin have the same compass, but the violinist finds greater use for the four and a half octaves of range than do the viola and 'cello players. In the orchestra there is little need for their upper notes as the 'cello encroaches on the viola, and the viola on the violin when they approach the top notes.

While the violin and viola are tuned in fifths and fingered alike, the 'cello (also tuned in fifths) is fingered quite differently, one finger being omitted on each string to facilitate the reach. In the upper positions the thumb is used to shorten the strings, it being used chiefly at the middle note an octave above the open string.

While all of these instruments are tuned in fifths, the double bass is tuned in fourths. This also is to facilitate fingering. Thus, the strings of the violin, reading from the highest, are tuned to E, A, D and G; the viola is tuned to A, D, G and C; the violoncello likewise, only an octave lower, and the double bass to G, D, A and E. Remember the double bass in this way: its lowest string is tuned to E, as is the highest string of the violin. Thus extremes meet and the names of the double bass strings are the same as those of the violin, only reversed in order. This low E is not quite an octave lower than the 'cello's lowest note, but all of the double bass notes are actually played an octave lower than written, in order to avoid using so many ledger lines that the player would be confused. In spite of its size the double bass is in greater favor than would be imagined, and has its masters who perform upon its strings solos and even concertos written for violoncello. In the part written for the bass it is quite common to indicate pizzicato, as for example in the Schubert *Unfinished* symphony. The kettledrums can almost be claimed for the string section, for when the double bass is played pizzicato these instruments are hardly distinguishable.

VIOLIN TEACHING

BY FRANZ C. BORNSCHEIN

II

IN the opening article of this series on the subject of Violin Pedagogy, which appeared under the title, "First Impressions, Given and Gained," the novice violin teacher will have obtained considerable insight as to the manner of proceeding with the preliminary essentials which should precede the earliest stages of actual violin instruction. Ample advice as to the proper selection of an instrument was given. Its correct adjusting and balancing through the guiding support of the assisting teacher were thoroughly explained. Detailed directions about the beginner's physical attitude were stated, and the general principles pertaining to the comfortable holding of the violin were carefully outlined.

In the present article the fundamental requirements of bowing are entered into for the enlightenment and benefit of the young teacher. The difficulties experienced by the average beginner in grasping this subject are manifold. The young teacher perhaps, may be capable of splendid bow control, yet, not having given sufficient analytical thought to the basic principles of bowing, may not be able to impart this knowledge intelligently, by adequately chosen verbal description or by practical example concretely given. The object is to present these early problems clearly, with as much simplicity as is possible, so that the beginner can at once grasp them without the chance of any foggy impression being conveyed. It should be understood that this article does not represent a treatise on bowing. Instead it is meant to offer some interesting pedagogical suggestions to the inexperienced teacher for imparting the rather vague subject of bowing in a more tangible manner, showing to some extent how these fundamental problems can be made to appear attractive and become more feasible to the beginner's mind. As the various actions of the right arm in bowing are rather complex, and as no particular method of bowing can be applied to the letter with *all* cases, the teacher will, of course, use his judgment and be governed by the physical conditions that exist with each individual pupil. Ultimately these bowing actions will represent the voice of the young violinist, for chiefly by these, rather than through the finger motions of the left hand will a good quality of tone be produced. For this reason the greatest care should be taken to convey correct impressions regarding the control of the bow from the offset.

THE FUNDAMENTAL PRINCIPLES OF BOWING

The teacher having selected the suitable size bow for the aspiring violinist, as ascertained through

the measurements given in the previous article (I), the task of unfolding the problems of bow control can now begin. Before proceeding, however, impress upon the pupil that certain preliminary exercises are necessary, not merely as a bit of superficial play, but intended to bring about proper muscular relaxation, in order to have the arm in a pliable condition, joints loose, and in flexible readiness for action.

Ex. 1*a*. Let the beginner relax the right arm at the side of the body, palm backwards, then lightly lift the arm, keeping it flexibly extended, and describe the curves of a large circle. Have the movement directed from the shoulder through the action of "the ball and socket joint" (as if gently swinging an Indian club in a circle at the side of the body). Practise this exercise by starting in a forward direction; also with the reverse direction. Be sure that these motions rotate from the shoulder joint.

Ex. 1*b*. Then describe similar large circles, in both forward and backward directions, but in front of the body instead of at side.

Repeat both exercises until considerable grace is apparent. This will instil a free shoulder movement and, incidentally, relax the entire arm for future actions which govern the full stroke.

Ex. 2. Have the right arm relaxed at the side of the body, palm backwards, the teacher gently holding the upper arm with his hand placed over the pupil's biceps to note any stiffness,—or the pupil may do this himself with his unoccupied left hand,—then have the forearm describe a small circle in front of the body, beginning in either direction, to the right (downward), to the left (upward). This must be done with a free movement of the forearm, the circles gracefully rotating from their axis, the right elbow.

Have the pupil do this exercise many times, until some ease is shown, always cautioning against awkwardness or stiffness, as these motions of the forearm form the physical process of the half strokes.

Ex. 3*a*. With the right arm extended, the teacher gently holding the pupil's forearm,—or the pupil may do this himself with his left hand,—have the hand *alone* describe smaller circles through a movement rotating from the wrist, keeping the forearm steady, yet not stiff, and the elbow and shoulder quiet but loose.

Ex. 3*b*. Repeat these motions with the arm in a half closed position.

Ex. 3*c*. Also in a closed position, the hand being brought nearer the face in each exercise, and, of course, slightly changing its elevation with each new position of the arm.

These hand exercises convey the underlying principles which eventually will govern the control of short, detached strokes, and also form an essential feature in the future execution of such bowings as *portamento, sostenuto,* and other well connected strokes.

Ex. 4. Have the pupil hold his right hand at the wrist, or the teacher may do this in order to be convinced that there is no strain or stiffness. Now by means of the fingers, resting lightly next to each other, the thumb-tip placed gently against the tip of the first finger, as if holding a pencil, describe a series of very small circles, rotating only from the root-knuckles with but a slight sympathetic motion at the wrist. Repeat many times until ease and flexibility are noticeable.

Convince the pupil of the special import which this finger exercise carries, as it not only brings about suppleness of the various joints of the hand, but from this flexibility future problems of bow tilting, string crossing, and the execution of very rapid strokes, such as the several forms of detached strokes, *martellato, staccato, spiccato,* and the many kinds of accented or abrupt strokes, will have had the germinal idea properly impressed. Insist upon the pupils remembering that all the joints from shoulder to those in the hand and fingers, must be loose, active, and perfectly relaxed during the process of each of the foregoing exercises.

After going through these various physical movements—not very much time being required until grace, ease, and some sense of balance are displayed even in the most obdurate cases — a moment's rest should be granted. The teacher should meanwhile demonstrate the holding of the bow, showing the balancing functions of the thumb, how its joints are to be bent outward so that they may come into use, also describing how the fingers are to bend around the stick from above, thus practically covering the rod and governing it at all angles. Bear in mind that it may not be possible for the beginner to copy exactly what is being shown to him, owing to the difference in the formation of his hand. Here let it be said again, and forcefully, too, that the manner of holding the bow will need special modification or slight alteration from any given rule or method in order to meet the physical conditions of each individual. To force the beginner to adopt what apparently seems unnatural to him, even though it may be quite easy for the instructor without having carefully weighed the actual drawbacks or the needs in the case may be courting drastic consequences. For example, a short thumb with a stubby tip, or a long, slender thumb with a tapering or flat tip, will need different attention as to the arching, as would also any finger which might not be of proportionate length. In fact, the exact spreading of the fingers, their adjustment upon the stick, and the amount of bending of the thumb will necessarily depend upon the physical growth. Hence, the teacher, through a quick examination of the length of the beginner's fingers, especially of the end finger and thumb, must form an idea as to what will be the natural and comfortable hand position upon the bow. Remember that if caved-in joints are noticed mention should be made of this defect, demonstrating how such locked joints are beyond all possible flexible utility.

(*To be continued*)

BOWING SUGGESTIONS

(The following paragraphs are taken from *Modern Violin Technique, How to Acquire It, How to Teach It,* by Frank Thistleton, recently published by Longmans, Green & Co., New York.)

To complete the bow stroke without applying too much pressure on the strings at the nut, where the weight of the bow on the strings is greatest, the last inch or so is accomplished by means of bringing up the wrist and fingers. In this way unnecessary pressure and scratching are avoided and it is possible to join the two strokes—the upward and downward—together. Usually, at the nut the tone is either broken or tensity lost by too much or too little pressure. However free the wrist may be, it avails nothing unless the fingers are correspondingly free, just as it is useless for the arm to be free if the wrist is not also in the same state, and *vice versa.* Fingers, wrist, forearm, and upper arm should all remain in a state of controlled looseness.

THE COMBINED MOVEMENT

By keeping the whole arm in the same plane, the pressure on the stick is maintained equally throughout the stroke without the slightest variation at any point. This enables the player to obtain a perfect legato. The principle is the same as in a piece of machinery where all the connected parts are moving in the same plane. The slightest variation of this principle will cause a break where the two planes cross one another. This is how springing bowings are produced, that is, by moving in two planes. When the bow is accidentally made to jump in the course of a legato passage a movement, however slight, has been executed in a different plane. Hence a legato is obtained by moving in one plane; staccato and all springing bowings by working in two planes. It will be seen, therefore, that there must be some definite rule for executing each different bowing. As legato and staccato are opposite effects, the methods employed to execute the one will not be found successful in the case of the other. However, only the slightest variation is necessary in each instance.

WHICH PART OF THE ARM SHOULD BE USED FOR EACH DIVISION OF THE BOW

To make quite sure that this most important matter is thoroughly understood, the different movements may be briefly recapitulated. From the poin

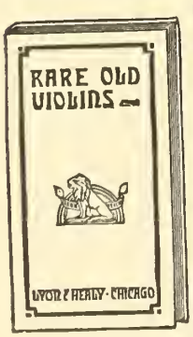
If You are in the Market for a
RARE Old VIOLIN



This Book Will be Sent You Without Cost

If you appreciate the time, money, travel, experience and work necessary to produce such a book; if you realize that we have bought and sold more precious violins than any other house in America, then we know this book will be treasured by you.

Within white and gold covers, in the highest form of the printer's and graver's art are faithful color-type plates of rare old violins we own. Many of them are world renowned masterpieces.

From Stradivarius and Guarnerius violins at $10,000, down to genuine old violins at $50 and $100, we show and describe rare old instruments which have responded to the bows of masters of greater or lesser fame.

In this book you feel and breathe the atmosphere of the violin world and if you wish to buy a good old violin this book is for you.

It goes without saying when you buy a valuable violin it is most necessary that you deal with a responsible house whose word and guarantee will protect you.

To those who are soon to be in the market for a fine violin we extend this invitation to write us for a complimentary copy.

When you write to advertisers, mention The Musician

to the middle only the forearm and wrist are brought into use, the latter gradually rising until it forms a straight line with the forearm, and the whole is parallel to the fingerboard. From the middle to the nut the whole arm from the shoulder is employed, the wrist and forearm continuing the upward movement while the elbow moves forward across the chest, all taking place in one plane.

THE WRIST MOVEMENT AND FINGER FLEXION

I will now describe as clearly as possible how the wrist and fingers effect the change of bow—a difficult matter to explain on paper.

Place the bow on the strings to within about two or three inches of the nut. The arm should be in the position I have described as being necessary at this part of the bow, with the elbow moved forward across the chest. Now continue moving the hand upward, from the wrist only, in the plane in which the arm has previously been working. At the same time allow the joints of the little finger and thumb to curve slightly outward in opposite directions. This will have the effect of bringing the nut a little towards the center of the palm of the hand, which will counteract any inclination that the point of the bow may have towards turning over the left shoulder. This would be the result if the hand were only moved from the wrist, without allowing the thumb and fingers to "give" at the same time. In addition, this flexion of the fingers keeps the bow control delightfully loose, and the whole effectiveness of the wrist movement depends on its taking place, each time and at whatever part the bow is changed. Flexibility of the thumb joint is essential. It will be seen, therefore, that wrist movement by itself is quite useless.

THE FUNCTIONS OF THE FINGERS

Each finger has its own separate function to perform while holding the bow. The first finger maintains the tensity, and where necessary applies pressure; the second and third, together with the thumb, support the stick; while the little finger—really the most important of all—relieves pressure and keeps the bow from weighing too heavily on the strings when at the nut. In a smaller measure, the second and third fingers help respectively to apply and remove pressure, thus assisting the first and fourth fingers in the performance of their duties. It is quite easy to understand that in this way the player retains an admirably sensitive hold on the stick. The control becomes as nearly perfect as it is possible to make it, and is constantly improving, and adding to the ease and freedom of the bowing.

THE FOURTH FINGER

The tip of the fourth finger should remain touching the stick at all times, with the possible exception of upward staccato bowing, wherein its assistance is not required. The habit, noticeable in some players, of allowing the little finger mechanically to leave the stick each time the point of the bow is reached, as nothing to recommend it. If the wrist is lowered sufficiently, and the hand always retains the same position, towards the bow (as it should), this movement is quite unnecessary; it is, indeed, merely an affectation to be avoided. No violinist of distinction disputes the fact that it is not productive of any particular benefit, and that the fourth finger must, in any case, be replaced when the nut of the bow is reached. Therefore, why take it off at all when the fourth finger plays such an important part in the control of the stick in every bowing, with the exception of upward staccato? I do not suggest for one moment that the *artist* may not exercise his own discretion in the matter, but merely that it is inadvisable for the pupil to be taught to do this.

CROSSING OVER THE STRINGS BY MEANS OF THE WRIST MOVEMENT

The next step is to obtain ease in crossing over the strings without allowing the bow to "kick." The best method is to practise this with small bows played with the wrist and fingers near the nut. The notes are played in exactly the same way as the last portion of the bow, namely, with a flexion of the fingers and wrist. In fact, all short or quick notes only requiring a small portion of the bow, at whatever part of the stick, are executed in this way. I advise practising the small strokes near the nut first in *pianissimo,* as it is over this part of the bow that it is always most difficult to obtain a perfect control. Afterwards practise the movement in the middle, and finally at the point of the bow. If the player desires to cross from the G string to the A or E, or *vice versa,* when the point or middle of the bow is on the strings, it is not necessary to raise it from the strings during the process. The whole arm should be dropped or raised, straight from the shoulder, until the bow rests on the string required. If the bow is neither moved upward nor downward across the strings, there will be no sound produced by intermediate notes during the process.

———*———

DON'T LISTEN TO THE BAND

The voice of the 'cello,
Exquisite and mellow,
  Is sweet to a soul that's in pain.
I love the "toot, toot,"
Of the resonant flute,
  And the violin's sobbing refrain.

The cornet and fife
Help me bear up with life,
  While the note of the trombone is balm,
And the sweet pi-an-o
Razes sadness and woe
  With its softly melodious psalm.

The organ is there
With the molody rare,
  End even a jew's-harp will do;
But save us, alack!
From the torturing rack
  Of the band and its hullabaloo.

The Choir & Choral Department

CONDUCTED BY H. C. MACDOUGALL

TWO OLD PSALTERS

BY CHARLES N. BOYD

Two old Psalters stand side by side in my library. Both were printed in London, and the one of 1609 is simply a later version of its companion, printed in 1583. They represent not only the prototypes of our modern hymnals, but the culmination of some years' effort to provide a complete English version of the Psalms with a tune for each. To give a complete account of this work would require a volume rather than a magazine article, so only a few facts concerning the books may be noted here.

The full title of these books, practically the same in each except for the spelling, is: "The Whole Booke of Psalmes, collected into English meter by Thomas Sternhold, John Hopkins and others, conferred with the Hebruc, with apt Notes to sing them withall. Set forth & allowed to be song in all Churches, of all the people together before and after Morning and Euening prayer: as also before and after Sermons, & moreover in private houses, for their goodly solace and comfort, laying apart all vngodly songs and ballades, which tend onely to the nourishing of vice, and corrupting of youth." To this title are appended two scriptural injunctions for the singing of Psalms.

Following the example of the Genevan Psalters, the English books had a rather slow growth. The first edition of the Sternhold and Hopkins' version was in 1549, but in that year Thomas Sternhold died, and the work of preparing the English version was continued by others. It appears that the first English edition of the Psalms, with tunes, was printed by John Day in 1559, but for some reason this edition was not allowed to go into general circulation and no copy is known to exist. In the next year an edition was issued, probably from Day's establishment. In 1561 a version based upon Genevan models introduced to England three tunes which have been in common use ever since, the Old 100th, 113th, and 134th, the latter often known by its later name of *St. Michael.* The following year (1562) appeared the most important edition of the series, which seems to have fixed a standard for the numerous succeeding editions. There was much shifting of tunes; the *Old 100th* tune, introduced in 1561, did not appear in the book of 1562, but in later editions.

Until 1563 there seems to have been little interest in a complete four-part harmonized setting of these melodies. In that year Day published the part-books, most of the harmonizing having been done by W. Parsons. The melody is most often found in the tenor, and usually but one verse of each psalm is printed with the music. In addition to the Psalms these books contained a sort of supplement of four numbers, and one of these was "Remember not, O Lord God," "set anthemwise" by Thomas Tallis.

John Day, the printer of these Psalters, began publishing in London about 1547. Two years before his death (in 1584) he was elected Master of the Stationers' Company. Many of the books he issued bear his motto "Arise, for it is Day," with a design showing an angel arousing a sleeping man; the rising sun is in the background. Some have read into this motto a religious significance.

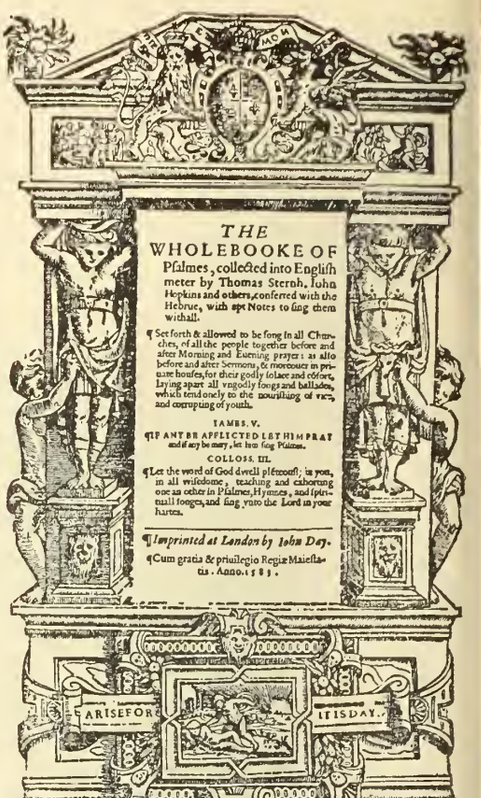
The edition of 1583 mentioned at the beginning of this note was printed by Day, in black letter. Only the melodies are given, and forty-eight tunes are made to do duty for all the psalms. In cases where the tune is lacking there is a direction such as "Sing this as the first Psalm," but these directions are sometimes misleading. In the absence of a tune for Psalm 138 the reader is directed to sing it as Psalm 47. Turning back to it, no tune is found, but a note to sing that Psalm as No. 45. Psalm 45 is referred to 26, and 26 to 14, where the tune is finally located.

The edition of 1609 is much more modern in both letter and music type. There are not quite as many tunes in this book, and the same remarkable system of locating the proper tunes prevails. in size it is about the same as ordinary sheet music.

Two stanzas from Psalm 137 in the older book must suffice for examples of the versification.

When we sat in Babylon, the rivers round about,
and in remembrance of Sion, the teares for grief
brast out.
We hanged our harpes & instrumentes the willow
trees upon,
for in that place men for their use,
had planted many one.
Then they to whom we prisoners were, sayd to us
tauntingly:
now let us heare your Ebrue songes, and pleasant
melody.
Alas sayd we, who can once frame, his sorrowfull
hart to sing:
the prayses of our louing God, thus under a
straunge Kyng.

The pages reproduced herewith show the *Old One Hundredth* tune as it appears in these books. The tune originally appeared with Psalm 134 in a Genevan Psalter of 1551. Louis Bourgeois was musical editor of these psalters from 1541 to 1557, and he is usually regarded as the composer or perhaps the compiler of the melody, for its structure seems to show that it is a compilation of phrases which could scarcely have been original with Bourgeois.



THE WHOLEBOOKE OF Psalmes, collected into English meter by Thomas Sternh. Iohn Hopkins and others, conferred with the Hebrue, with apt Notes to sing them withall.

¶ Set forth & allowed to be song in all Churches, of all the people together before and after Morning and Euening prayer: as also before and after Sermons, & moreouer in priuate houses, for their goodly solace and comfort, laying apart all vngodly songs and ballades, which tend onely to the nourishing of vice, and corrupting of youth.

IAMES. V.

¶ IF ANY BE AFFLICTED LET HIM PRAY and if any be merry, let him sing Psalmes.

COLOSS. III.

¶ Let the word of God dwell plenteously in you, in all wisedome, teaching and exhorting one an other in Psalmes, Hymnes, and spirituall songes, and sing vnto the Lord in your hartes.

¶ Imprinted at London by Iohn Day.

¶ Cum gratia & priuilegio Regiæ Maiestatis. Anno. 1583.

ARISE FOR IT IS DAY.

FRONTISPIECE OF 1583 PSALTER

EASTER ORGAN MUSIC

BY HARVEY B. GAUL

THE approach of Easter is usually a joyous tim
It means Lent is over and spring is here. It als
means that the uphill work of the church year wi
soon abate and we can coast—not skid—for a brie
period.

There is one difficulty, however, that East
brings, and that is the exceeding worry of findin
appropriate Easter organ music. Organ music fo
Christmas is comparatively easy to find—compose
have left us a vast heritage relative to the Nativi
—but for the Resurrection there seems to be litt
available literature.

The following compendium of Easter organ mus
is not all inclusive. Nor is it intended to includ
every organ piece with the title or suggestion th
Christus resurrectus est. It is compiled with th
desire—Baedeker fashion—to lighten the search ar
point out the advantageous works. Also to en
courage organists in the belief that there are oth
works more appropriate for Easter than Men
delssohn's *Spring Song* and Grieg's *To Spring,* eve
if Easter is the sapping, budding *printemps.*

In preparing this list it was deemed advisable
catalogue the pieces into four sections, starting wi
preludes.

The Prelude to *The Resurrection,* Bullard, offe
a splendid opportunity for opening the service.
the same capacity the *Prologue* to *Christ, the Vi
tor,* by Dudley Buck, may be placed. Mozar
Resurrexit also has excellent preludial effects, a
with it may be included Springer's *Easter Allelu
For melody Parkhurst's *In the gloom of East
morn* is to be recommended.

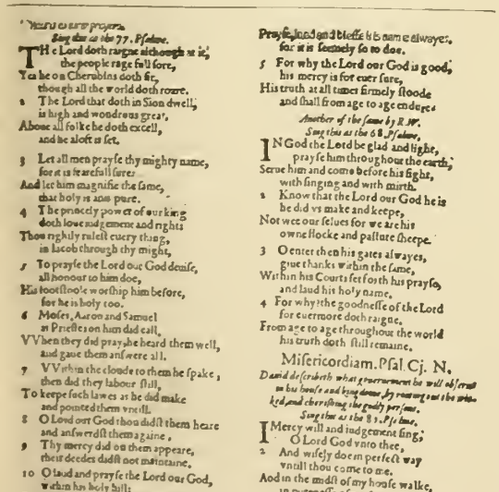
In the matter of Interludes or Offertories the fo
lowing pieces are good: *Anthem for the Sund
after Easter,* Guilmant; *Offertoire pour la fête
paques,* Grison; *Easter Hymn,* Oliver; *Air de
Pentecôte,* from Easter cantata, Bach; *Gloria
excelsis,* Burger. These works will supply the nee
for Interludes, some of them may be used for Pr
ludes. For the purpose of concluding the serv

Easter Recessional, Flagler; *March on Easter Themes,* Mark Andrews; *Easter March,* Merkel, are all strong virile works, with the march rhythm firmly announced. Also in the class of Postludes may be included, *Hosanah Chorus Magnus,* Dubois; *Hosanna,* Wachs; *Hosanna,* Granier; *Hosanah,* Lemmens. For organ recital pieces—and Easter is a very good time for the organ recital on account of the vast congregations to be seated—the following works will be found suitable; they are not only more ambitious, and of larger calibre, but they offer passages for telling solo effects: *Easter Morning,* Malling; *Old Easter Melody,* John West; *Easter Morn* (a Meditation) West; and *Resurrection Morn,* Johnston; commended not only for melodic work, but for varied and interesting structure and passage opportunity.

Also for concert work, *Alleluia! O filli et filliae,* Loret; and *O filli et filliae,* Lizst, and *Paques fleuries,* Mailly. For display purposes, requiring full organ effects these works should be considered: *Fantasia on Jesus Christ is risen today,* Peter Lutkin; *Fantasia on an Easter Plain Song,* Wilan; and *Fantasia on a Carol,* West.

For the person who was educated in the English School of church music and who firmly believes no better or more fitting works were ever written than the oratorio choruses the following transcriptions are advisable, they may be used for Preludes, Interludes, Postludes *ad libitum,* or even *da capo*: *Achieved is the glorious work,* Haydn; the inevitable *Hallelujah Chorus,* Handel; the *Halleluiah Chorus* from *Mount of Olives,* Beethoven; *Gloria in excelsis,* Mozart; and *All glory to the Lamb that died,* from *Last Judgment,* Spohr. Really good transcriptions may be found, or made, from the following oratorio solos: *The trumpet shall sound, I know my Redeemer liveth,* and *Thou didst not leave His soul in hell,* from Handel's *Messiah.* The last two have the charm of being unhackneyed and if good solo stops are employed they are most acceptable pieces.

There are two things that impress a reader when he picks up the Monday after Easter newspaper and



PART OF PSALM 100 IN THE 1609 PSALTER

irns to the column labeled "Music in the Churches," nd they are the absolute paucity of Easter organ iusic and the inappropriateness of the average or-anist's selections. Publishers could alleviate the rst if they would encourage composers to write iusic especially designed for the Easter service. (Up date few publishers have done so.) Organists ight obviate the second if they would choose their pieces, pre- and post- with discrimination. An organist in the Middle West once said "When in doubt play Batiste's *Communion in G,*" and there seem to be many organists who labor under the shadow of doubt; while they may not all cling to the *Communion,* many of them do profess outwardly their faith in Mendelssohn's *War march of the priests,* Elgar's *Salut d'amour* and Wagner's *Pilgrims' Chorus.* There is one day when these compositions, tried and true as they are, yea, truly, very much *tried,* should not be resurrected and that is Easter; as somebody sagely observed anent matrimony and Broadway, "these things do not belong."

M. EUGENE GIGOUT

(From the French of A. Mangeot, in *Le Monde Musical*)

Among musicians, the rôle of organist is the one which is most kept in the background.

Halfway up from the floor of the church, on the way to the bells, this invisible yet very present divinity is the occupant of a kind of mystic haunt, whence he diffuses the waves of his harmonious and sonorous incense. When at his post, he seems like a captain commanding the winds: obedient to his order, Zephyr and Aquilon blow in the flutes of the Swell or in the Pedal bourdons. Then is heard the concert of angels in Heaven's blue, or the howling of demons in the tempest.

Without the organist the crowd of the faithful would feel quite alone in the church. Neither the *oremus* of the officiating priest, nor the word of the preacher, nor the benediction of the bishop, all dressed in purple nor even the mystical ciborium possesses his divine power over their souls.

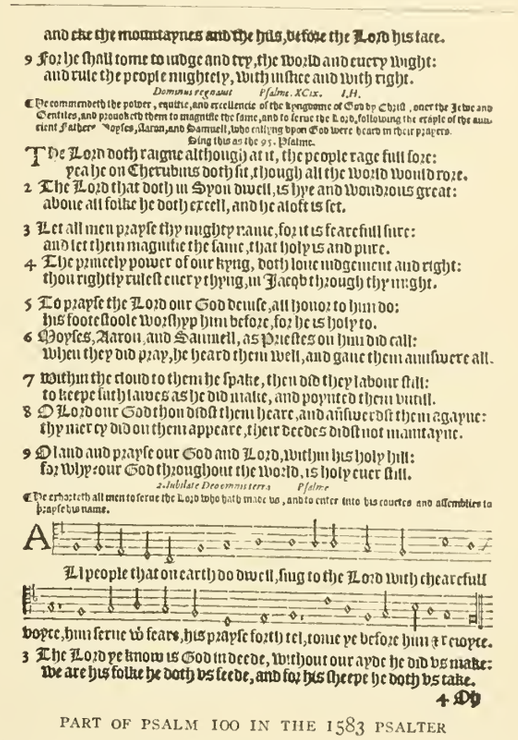
It might be said that an organist is born old; because he quickly assumes the age of his church. Even if he were a novice, in a few years he becomes the contemporary of the old stained-glass windows upon which he gazes with a far-off look, of the much worn stones upon which he walks, of the relics hidden yonder under the altar, and of all those robust things which remain young through all the centuries. . . . He becomes part of the church . . . the church becomes part of him.

Eugène Gigout has been a part of the church of St. Augustin and the church of St. Augustin a part of Eugène Gigout for fifty years. When he first came there, in 1863, he was nineteen years old. He had come from the Niedermeyer School, where he had made an excellent record, beyond that, well prepared by his work at the school of the cathedral of his native city, Nancy, where from the age of twelve he replaced, in the chorus and on the gallery, his first masters.

In 1863 St. Augustin had only a harmonium, with which the young organist had to be contented until 1868, when a large organ with electric action was installed by Barker, one of the first of the kind in France. At the end of thirty years it was declared that electricity is not suited to organs and a return was made to the system of Cavaillé-Coll, whose organ was installed in 1899 and is still in use.

At the Niedermeyer School he was in the piano class of Saint-Saëns, whose work at the Madeleine he also followed with great assiduity. Gradually he perfected himself in improvisation to such an extent that César Franck said of him, "Gigout! What a great organist, and what an astonishing improviser he is!" Gounod, who was a faithful attendant at St. Augustin, would give him themes upon which to improvise, and Saint-Saëns called him the finest organist that he knew.

It was at the Trocadéro, in 1878, that the reputation of Gigout was firmly established. Afterwards he gave numerous concerts in Paris, in the provinces and abroad, notably in England and Spain, where he was in demand for organ inaugurations. His services at St. Augustin have always drawn musical connoisseurs of all nations. So much for the virtuoso. When he finished his studies at the Niedermeyer School he was retained as a teacher, which connection he kept up for twenty years, instructing classes in solfège, plain-song, piano, harmony, counterpoint, fugue and organ, giving up the work to open, with the support of the state, a school for the organ which turned out some brilliant pu-



PART OF PSALM 100 IN THE 1583 PSALTER

pils. This was given up later when he succeeded Guilmant at the Conservatoire.

His list of compositions is a fairly extensive one, including about fifty pieces for organ, the best known being *Grand choeur dialogué, Toccata, Rhapsodie sur des Noëls, Introduction et thème fugué,* etc. Of great interest to the organist who uses the old liturgical music are his *Album Grégorien,* in two volumes, containing 230 pieces in all the plain-song modes, the *Cent pièces brèves* (100 short pieces), also in plain-song modes, and the *Orgue d'eglise,* a collection of pieces for use in the service. In addition to the above he has written motets, music for piano, solo and four hands, songs, choruses, etc.

In 1895 he received the decoration of Chevalier of the Legion of Honor.

PIPE ORGAN CONTRACT AWARDED FOR THE PANAMA-PACIFIC EXPOSITION

The contract for the mammoth pipe organ, one of the five largest in the world, which is to be installed in Festival Hall at the Panama-Pacific International Exposition, has been awarded to the Austin Organ Company, of Hartford, Conn.

This organ will be a feature of the great singing festivals to be held during the Exposition, and will be played by the world's foremost organist.

It will be 71 feet high, 40 feet wide, and 20 feet deep. There will be 113 stops, the largest of which will be 32 feet long. The organ is to have five keyboards, which will make the huge instrument equivalent to six individual organs—a great organ, a swell organ, a choir organ, an echo organ, a solo organ, and a pedal organ. The echo organ will be in the dome of the building. It will require a 35 horse power electric motor to run the huge instrument.

The terms of the contract provide for the removal of the organ at the close of the Exposition to the Municipal Auditorium in the Civic Center. The instrument will be larger than the famous organ recently installed in the auditorium at Portland, Oregon.

INTRODUCTION RATES ONLY 3 CENTS FOR A SAMPLE COPY

New Octavo Music

(PLEASE ORDER BY NUMBER)

ANTHEMS: MIXED VOICES

GILCHRIST, W. W.
No. 12,556. The Day is Past and Over.....$0.12
An anthem of unusual value musically and of interest to singers; it includes a fine solo for mezzo soprano, with accompaniment of the chorus.

KREMSER, E.
No. 12,606. Prayer of Thanksgiving (Folksong of the Netherlands).....10
A fine choral work, broad in style; partly in unison. A good number for festival use.

REED, WILLIAM
No. 12,586. Crown Him with Many Crowns..16
A festival anthem, for Ascension or general use, strong in melody, rhythm and harmony, and very effective; includes solos for soprano and tenor, and a duet for those two voices,

SCOTT, CHARLES P.
No. 12,562. I Cannot Find Thee.....12
This anthem has some very attractive features. Opens with a two-part chorus for the women's voices, followed by an effective baritone solo, then by a section for soprano, alto and tenor, closing with the full chorus.

WOOLER, ALFRED
No. 12,602. Te Deum in F Minor.....16
An easy, effective setting; special features are solos for soprano, tenor and bass, with a duet for soprano and alto.

ANTHEMS: MEN'S VOICES

BUCK, DUDLEY
No. 12,400. Te Deum in B Minor. Arr. by Sumner Salter $0.16
A very practical arrangement for men singers, as used by the Williams College Choir; includes a solo for tenor, and a duet section for tenor and baritone solo.

SALTER, SUMNER
No. 12,581. Eight Responses.....$0.12
Interesting and effective setting for use in the service.

PART SONGS: MEN'S VOICES

KRATZ, LEE G.
No. 12,415. Since Pa Has Bought a Limousine $0.08
A humorous part song in this favorite composer's best style.

THOMPSON, H. S.
No. 12,289. Cousin Jedediah. Arr. by G. B. Nevin 08
A four-part arrangement of a popular humorous song of a generation ago.

ANTHEM: WOMEN'S VOICES

GAUL, HARVEY B.
No. 12,536. Two Responses.....$0.12
Unusually interesting and effective; set for four-part chorus, with independent organ accompaniment.

PART SONG: WOMEN'S VOICES

WAGNER, RICHARD
No. 12,500. Song of the Rhine Maidens (Gotterdammerung) $0.20
A fine concert number for girls' glee clubs; arranged for three parts.

THE ECHO ORGAN

BY H. C. M

WE are so much interested in well-arranged programs that we sometimes fail to remember that, after all, no matter how good a program may be the real test is suggested in the question "How well was it played?" Musicians do not often program pieces that are beyond their technical acquirements; they are afraid of criticism. It is not, however, given to every musician to hear himself as others hear him, and it occasionally happens that an excellent program, made up of important works, is a failure simply because it is badly done.

I recall an extraordinary instance of this, the case being that of a man long since dead, an earnest and hard-working musician. His case presented the strangest instance of technical facility accompanied by almost no sense of either time or rhythm. His programs were models of proper sequence and contrast, and invariably included some most difficult works. The performances of these works were travesties to the point of grotesqueness. It was a pitiful case and one of the rarest in my experience.

In music for the church service it seems to me that we pay undue deference to names. I remember well one of my old masters telling me "Be sure to have a good-looking service list; the names of Barnby, Stainer, Stanford—these make your list look well and impress the important people with your musicianship." If that advice were usual and habitually followed the new composer would have a poor chance.

* * *

Musical America, our sprightly illustrated weekly contemporary, has incurred the ire of certain Berlin circles by stating that American girls can better acquire a musical education here in the United States than in Europe. There is no doubt as to the truth of this assertion. Our large cities have symphony, opera and chamber music concerts, competent teachers in abundance. In reading the New York *Evening Post*—Saturday edition—I was particularly impressed with the advantages offered to students of the organ in our greatest city. There are three or four excellent music schools making a specialty of the organ and church music; there are many virtuoso players, and many organ recitals are given. The "provincial organist"—to use a rather absurd English expression—has little idea of the large number of excellent instruments in New York and Brooklyn. An organist of great experience and catholic taste told me that he considered the organ of the College of the City of New York to be an absolutely perfect instrument in all respects. The organ in St. Bartholomew's, in St. Thomas', in the Church of the Divine Paternity, in the Broadway Tabernacle—these are samples of the extraordinary variety and richness in organ construction to be found in the metropolitan churches.

* * *

SEVERAL recitalists are offering to play request-numbers, according to the pleasure of their audiences. Clifford Demarest (Church of the Messiah, New York City) leaves on each program a space or ballot on which the name of the composition chosen may be written; at the close of the fifth recital the "votes" are to be counted and the sixth program made up from the request numbers. I do not envy Mr. Demarest his task of making up a good program from the heterogeneous list that will infallibly be submitted; it will, however, exercise his ingenuity and do him no harm. James T. Quarles, who is now organist at Sage Chapel, Cornell University, plays on each program one or two numbers "by request." It may interest some one to note that among these on recent programs were *Clair de lune* (Karg-Elert), *Largo* (Handel), *Meditation* (Sturges), *Liebestod* (*Tristan und Isolde*), *To a deserted farm* and *To a wild rose* (MacDowell). In passing let me suggest that the phrase "by desire" is somewhat less worn than the one commonly used.

* * *

I HAD occasion some time ago to speak of the great increase in the number of really interesting things written for the organ by Americans. I can imagine the uptilted nose of the superior person—the sort of musician who knows Bach only or who, perhaps, as a great concession to human frailties, allows Mendelssohn an entrance to the list. By "interesting" pieces I mean melodious, well-constructed works that a good organist likes to play and a musical audience enjoys hearing. These compositions are of all styles and lengths from the unpretentious *Berceuse* of Ralph Kinder or the *Evensong* of Johnson, to the ambitious sonatas and suites of Mark Andrews, Rogers, and Becker. It was very satisfactory to observe that out of 443 numbers played by various organists in 65 recitals during last December and January, 62 were by American composers.

* * *

Now and again one sees programs "by American composers," in which the fact that a composer was born or now lives in the United States—are not Canadians Americans?—is made the basis for an inclusion in the program. I have no fault to find with such a program if well unified and made up of good music. Some years ago, when Whiting Whitney, Dudley Buck, and J. K. Paine were about the only men on this side of the water who had made any organ music, in the course of a series of organ recitals I devoted one entire recital to the works of Americans. I was actuated by the desire to make

an impression, by sheer quantity *and* quality, of the genuineness of native music. I included Buck's sonata in G minor—a work seldom if ever now played—among several other works those titles I am now unable to recall. I sent Buck a copy of the program. He replied promptly with a cordial letter of acknowledgment, closing it somewhat in this fashion: "I hope you will not think me ungracious in view of your enthusiastic championship of American composers; but whenever I see a program by American composers I am reminded of the sign which, before the war, was to be seen in churches south of the Mason and Dixon Line—'these seats reserved for niggers.' What will really help us is the free inclusion of our compositions along with composers of other nationalities; only as our works stand successful comparison with those of every other people will our place be secure." MacDowell's objection to concerts of music by American composers only was of the same nature. Who shall say that Buck and MacDowell were not right?

* * *

At the opposite pole from the modern organist's intense occupation with mechanisms was the older organist's study of figured basses—a purely musico-technical problem. I presume that all readers of The Musician have seen old editions of services for the English church with merely a figured-bass accompaniment for the organist. We have so much done for us nowadays that we are losing something of our artistic initiative.

A vastly different thing from the old *basso continuo* is the modern organ accompaniment, written in full, sometimes on three staves, and with suggestions or actual prescriptions as to registration. Would it not be a wonderful experience to hear an accompaniment played by Handel or J. S. Bach? To get a violinist friend to play his part in an old edition of Corelli while one takes the figured-bass part oneself is to have a salutary experience! After all, there is such a thing as musicianship.

CONGREGATIONAL IMPULSE

BY WILLIAM REED

Hymn singing constitutes the people's part in the church service and, generally speaking, their inclination is to make the most of their prerogative. The business of stimulating this department and keeping it alive is, consequently, one to which every organist is bound to devote special attention. During the hymns he listens to and plays for the congregation and not the choir, which can, usually, be counted on to take care of itself. The choir may second him ably and carry forward the tempo persistently; but this alone will not suffice. The stimulus needed must come from the player himself in such manner that it is felt by everyone as an irresistible force, a permeating element, creating what may be termed *congregational impulse.*

How can this be done? For done it can be.

In the first place, the temperament of the organist is the fundamental factor. Warmth and a regulated enthusiasm must be his; a cold player is uninspiring. One man, efficient otherwise, fails to accompany the hymns with convincing leadership, while another, instinctively and with knowledge gained by observation, exemplifies, by his manner of playing, the results desirable, and gets them.

Here are some points which he observes:

1. Accompaniment of a broad, general nature.
2. Registration full-bodied but without thickness.
3. A firmly-maintained tempo.
4. A clear touch; metrical emphasis well defined.
5. Occasional enrichment of the harmony, fundamentally unaltered, of course.
6. "Soloing" the melody, when necessary.

To which must be added that indescribable undercurrent of urgency which is *felt* rather than heard.

It is, of course, easier to control the singing of some hymns than others; but the common tendency to drag occurs specially in the case of the more favorite ones, hurrying being far more rare, even in churches which affect rapid hymn singing.

In this connection, it should be noted that a uniform speed for all hymns, as sometimes attempted, is incorrect, both musically and sentimentally. On such a principle, not only is the musical effect bad, because of the too rapid succession of chords, but the character of some texts becomes inevitably distorted and vulgarized.

If only for this reason, it is, perhaps, just as well that few churches use more than a limited number of the hymns included in our voluminous collections, not a few of them being practically sacred part-songs and, as such, more suitable for choir than congregational use.

The choice, also, of the hymns usually being in the hands of the pastor, it may happen that the organist has to adapt familiar tunes to unfamiliar hymns—when he can. When he cannot, the congregational singing suffers accordingly, since unfamiliar tunes are apt to result in a "frost." The singing by the congregation alone of an occasional stanza is an excellent experience, inducing a feeling of independence and making even more apparent the leading of the organ.

And successfully to effect this leading, a large organ is by no means indispensable. A two-manual instrument, containing good tonal resources and well-voiced reeds, should, in the hands of a player who knows how, be adequate for the purpose.

Considering the limited expressional possibilities in congregational singing, these should be only of a general nature. Some hymnals are riddled with expression marks, sometimes ranging suddenly from *pp* to *ff*. Such markings, if observed, prove as disturbing as they are untimely. It is unfair to boycott the congregation; their prerogative should be respected and assisted.

As to "giving out." Most tunes should be played over in their entirety and at the tempo to be maintained. Presuming a good start, it remains with the organist, after the first stanza, to keep the atmosphere warm and encouraged. This should not be difficult, provided the hymn is popular, and that he observes the points above enumerated.

As to registration, it cannot be too emphatically urged that trivial, fancy effects are both useless for the purpose of congregational accompaniment and unecclesiastical at all times. What is needed is broad, diapason effect coupled to one or two eight-reeds, the pedal (when used) being of sufficient weight and balance to do its share of assistance.

I have mentioned the enrichment of harmonics. By this, I mean the full, but not thick, effects obtained by a sonorous doubling of inner parts, somewhat akin to those produced similarly by the medium wind and brass of the orchestra. This is a resource which does not lend itself to every type of tune, its usefulness depending on key, rhythm and the lay-out of the harmony. Valuable in its place, it should be used, not abused.

Similar considerations hold good regarding the "soloing" of a hymn tune. While necessary at times, the excessive use of this device becomes tiresome and cheap in effect.

If, as is said, a singing congregation makes a popular church, every organist should, if only for this reason, cultivate the points necessary for stimulating congregational impulse. And, were this matter regarded less as routine than as being an important specialty, we might hear fewer pulpit injunctions on the subject of congregational singing.

Trinity School of Church Music

A TRAINING SCHOOL FOR ORGANISTS, CHOIRMASTERS AND CHORISTERS

Headquarters - - - 90 Trinity Place, New York

FELIX LAMOND, Director

Daily Training in the Liturgy and Music of the Episcopal Church

FACULTY:

ORGAN; Felix Lamond, R. J. Winterbottom, F. T. Harratt, and Moritz Schwarz.

BOY CHOIR TRAINING: G. Edward Stubbs, M. A., Mus. Doc.

MIXED CHOIR TRAINING: Edmund Jaques

HARMONY, COUNTERPOINT, FUGUE AND EXTEMPORIZATION: A. Madeley Richardson, M. A., Mus. Doc., Oxon.

COMPOSITION: Mark Andrews.

EXAMINERS:

Arthur Foote, T. Tertius Noble and Professor W. R. Spalding.

For particulars address:

The Secretary, Trinity School of Church Music, 11 West 12th Street, New York

Church Organs

Latest Approved Methods. Highest Grade Only. Established 1827.

A thoroughly modern two-manual instrument of our make—in use less than one year—for sale at a bargain. Built for exhibition purposes. *Excellent opportunity.*

TEACHERS' FORUM

CONDUCTED BY BLANCHE DINGLEY MATHEWS

WHILE the object of this department is to help the teacher and student in every possible way, by advice, inspiration, and practical suggestions, and is always at the service of our readers, still it is necessary to call attention to the fact that it is obviously out of the question for us to discuss personalities or give opinions on the quality of the work done by private teachers or conservatories in different sections of the country.

In this connection perhaps a word on professional courtesy might not be out of place, as the wholesale criticism which members of the profession sometimes indulge in, without really knowing anything about the work of the teacher they are discussing, seems in the worst possible taste and wholly unwarranted.

As a rule teachers know very little of the work of their colleagues, and that little is based on the work of some pupil who has not succeeded; whereas possibly the pupil is more to blame than the teacher. We all have our failures as well as our successes, and if we can keep the failures in the minority we are doing well.

It seems a pity that teachers are not better acquainted, that they visit one another in the classroom so seldom, and that "consultations" are almost unheard of in the teaching profession. No one teacher has it all; if we would speak of the work of associates with more respect and at least give them the benefit of the doubt when we really know nothing of the work they do, it would seem that only good could come of it.

* * *

Speaking of learning from other teachers brings to my mind a case in my own experience in connection with this department.

In the January issue of THE MUSICIAN I answered a query as to lack of interest in classical music and failed to bring out a very important side of the teachers' work. This failure was brought to my attention in a very fine note which I take pleasure in printing, and at the same time I want to thank my correspondent for taking the trouble to send the suggestions which will prove a help to me as well as every other earnest teacher.

"I have been thinking of the teacher who wrote about the lack of interest in, and desire to play classical music. Possibly if her pupils knew more about the well-known composers and their music they would change their musical tastes.

"My pupils commence in the first grade to study the lives of the famous composers and having become interested in them they are anxious to play their music.

"The pupils of the more advanced grades have a musical club, and the programs consist of musical numbers and papers about musicians whose music is being played. Our programs are varied. An entire meeting will be devoted to one or two old masters, another to two or three well-known American composers, etc. Each pupil answers to roll call with a sentence about a composer.

"I find the more the music student studies and reads about the well-known composers the greater is his desire to play and to listen to the higher standards of music. The pupils tell me of the music they hear in churches, concerts, and other pieces that have been written by musicians they have studied.

"Some pupils come to me who have not been taught the love for good music, but they soon lose their taste for the 'popular' after listening to the other pupils playing and discussing the better music.

"THE MUSICIAN has helped my pupils to keep up their interest in the good by publishing a few of their papers on the great masters.

"HELEN DOUGLAS."

* * *

What can I do about my ears? My hearing is perfect, but have noises in them for the last six months, and more so when I play, which annoys me. My physician told me the piano was the cause of it and wouldn't suggest any way of getting rid of the noises.—F. S. G.

Ear diseases are divided into two general classes, suppurative and catarrhal, and noises in the ear generally come under the latter. I have known them to come in young people from some slight trouble in the nose or throat which was easily corrected by a first class specialist. Music could not aggravate it more than any other sounds, unless it might possibly be a nervous condition.

By all means see a good specialist at once and I feel sure the trouble can be easily corrected.

* * *

I am a young teacher, twenty years old, have studied such things as MacDowell's *Polonaise,* Schubert-Tausig *Military March,* Chopin selections from preludes, études, polonaises, the B♭ minor *Scherzo,* etc. I have these memorized. Do you consider this good progress for six years' study?—E. S.

You have covered a good deal of material in the concert grade and if the necessary technic has been covered as well as plenty of Bach, so far as material is concerned you have done very well indeed.

You must remember, however, that it is not only *What* you have studied that counts, but *How.* A careless student could go over that much music gaining technically but little, and musically not at all. So while you have doubtless done some fine work I would caution you against swallowing your music whole. Taste everything well as you go along and make haste slowly.

* * *

On page 858 of THE MUSICIAN (issue for December, 1913) in an article entitled "A Vocal Teacher of the Olden Time," the statement is made that many leading professors have practised carrying the head tones down into the territory of the chest tones for improving the voice, and, further, that David Palmer argues in favor of the one-register voice. What I would like to know, or see discussed, is just *how low* leading professors usually carry this head tone, and whether the low notes of a tenor, say his low C, can be pleasingly taken in a head tone? That is, can the head tone entirely displace the chest tone, however low it may be? If not, where is the supposed limit or best place to stop?—J. C. N.

Your question seemed worthy of the attention of an expert in voice placing and I give below a very clear explanation of the much disputed question of "Registers," written by John C. Wilcox, of Denver.

One of the pernicious effects of "register" thought is this assumption that the vocal scale is divided into two or three sections, each with a special and *exclusive* type of resonance within its arbitrary boundaries. As a matter of fact, the correct tone, regardless of its pitch, is composed of a *blend* of resonance. In the lower part of the scale the so-called "chest" resonance predominates; in the upper part the so-called "head" resonance predominates; and between these two extremes, in that part of the scale sometimes termed the "middle" or "medium register," there seems to be an almost equal division between "head" and "chest." But at *no* point should there be exclusively one type of resonance. All chest resonance would mean a coarse-fibre tone, lacking in mellowness and overtones; all head would mean an emasculated, colorless tone, without power or character.

Most successful teachers advocate the carrying downward of the head resonance because in this way they secure an even graduation of quality throughout the range scale, a tone of high poise and forward resonance-focus, freedom from throat-grip, and a freer multiplication of overtones. No physical danger results from overlapping the so-called register divisions downward, whereas very grave danger lies in overlapping them upward. This is true because in ascending the scale there is constantly increasing tension and in descending the reverse is true. "Breaks," which make us believe in "registers" whether we wish to or not, are caused by this overlapping upwards, and are not, as many seem to suppose, a natural feature in the normal voice, but rather a punitive result from abnormal use of the voice. A truly natural voice will show no such "breaks," and will seem a "one-register voice." The wise teacher knows, however, that when called upon to eradicate "breaks" he can only succeed by working downward over the uneven spots, with a tone "placed" very high.

Referring again to the blending of resonance, I should have explained that this "blending" is not a conscious operation. With a tone placed high and forward — what would be generally termed "head placing" — one may descend the scale to the bottom of the range with no conscious change of placement, and if the throat be unresistingly open and the breath support adequate, the proper reinforcement of "chest" resonance will come in that part of the range where it belongs. Nature will do the trick if not interfered with.

There is no way of developing the tenor voice that is different from the correct way of treating other male voices. Deep breath support, open, non-resisting throat, and the highest possible placement thought — these elements, co-ordinated, indicate the proper procedure for *all* voices. Scale work should always be downward, for the reasons that I have given in a preceding paragraph.

JOHN C. WILCOX.

* * *

In the beginning of music study at the piano is there any better way of teaching tonality than by the use of the syllables, *do, re, mi,* etc.?

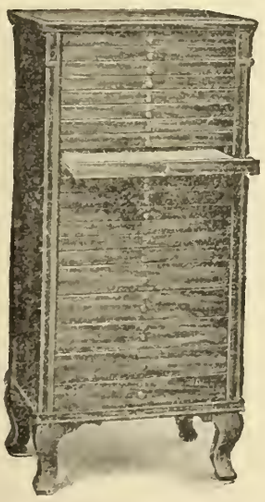
There is a great difference of opinion among

teachers of children as to the best way of teaching tonality. It has always seemed to me as if it was one of the things which could not be "taught," but that it was more or less like Boston, "a state of mind." I do not mean to say that we cannot help our children toward an appreciation of tonality, for we can and must, but still the feeling for the "home tone" cannot be built up in a minute.

In my classes I do not use the syllables for the reason that when the minor keys are given it complicates the work and we are constantly running into the public school teacher.

Tonality is nothing more or less than relationships, and I have been successful in the presentation of key only when I used the "family" idea. As soon as a child realizes that we have musical families just as we have "families" in every-day life—that it is as easy to go "visiting" in music without losing her identity as it is to run over and play dolls with her neighbor's little daughter, then her musical salvation has begun.

TINDALE MUSIC CABINETS



DECIDEDLY AN ORNAMENT to the music room; built on simple, artistic lines, and not over ornate. Style E affords an ideal means of keeping about 700 pieces of music. Every copy is instantly at hand when wanted. No more time lost hunting for that missing piece. Price, in Oak (any finish), $25; Mahogany, $29.

Tindale Cabinets are made in a wide variety of styles and sizes---some with book compartments. A simple, satisfactory index system is furnished with each cabinet. Prices from $15 to $85. Monthly payments, if desired.

The "home tone" is very easily heard by a child through little melodies of four or five notes like 1, 2, 3, 2, 1; and if they realize that it's an EAR effect and must be *heard* to be appreciated, rather than something indicated by a signature at the beginning of a piece which must be taken in by the eye, it is possible to secure much finer work through Grade I.

* * *

Should the minor scale be sung, and if so, what syllables should be used, *do, re, mi,* etc., or *la, si, do,* etc.?—C. B.

Everything in music should be sung. The child should always be "saying something," whether through the finger or through the voice.

I have all scales sung as a melody, and in the first presentation of the minor scales, which should come in Grade II or, if possible, the last of Grade I, I teach the three forms. They are simply hummed through or, many times after the intervals are mentally mastered, I use the numbers, as it helps them in finding the scales from the signature.

I could never reconcile myself to calling the 1 of the minor scale *la,* and so I avoid the question by not using the syllables.

The "home tone" is to me an effect which the ear of the musician immediately recognizes, and whether it is minor or major, it is still the "home tone," the tone of repose around which our musical structure must be built.

GENERAL NEWS ITEMS

THE ninth Bach Festival will be given by the Bethlehem Bach Choir, Dr. J. Fred Wolle, director, at Lehigh University, South Bethlehem, Pa., May 29 and 30. The program will include the B minor *Mass,* the *Magnificat,* and the motet, *Sing ye to the Lord a new made song.*

THE Marshall Field & Co. Choral Society, Chicago, will give its next concert April 16. It will be assisted by the Chicago Symphony Orchestra. The Society will sing Sullivan's *Golden Legend,* and Grieg's *Olaf Trygvasson.*

THE Modern Music Society, a new organization, gave its first concert in New York, Feb. 10. MacDowell, Blair Fairchild, Benjamin Lambord, Arthur Farwell, John Alden Carpenter, Henry F. Gilbert, Edward B. Hill, David Stanley Smith, and Stephen C. Foster were represented on the program. Maggie Teyte was the leading artist.

THE 1914 North Shore Music Festival will be held at Evanston, Ill., May 25, 26, 28, and 30. The choral works to be performed are *Creation,* Pierne's *St. Francis,* and Hamilton Harty's *Mystic Trumpeter.* The choral performances will be directed by Prof. P. C. Lutkin, dean of the School of Music, Northwestern University, Evanston, and the Chicago Symphony Orchestra will assist. Among the soloists engaged are Florence Hinkle, Alma Gluck, Evan Williams, Lambert Murphy, Pasquale Amato, Charles W. Clark, and Herbert Witherspoon.

NEXT year the Boston Opera Company will reduce the length of the season from eighteen to twelve weeks, beginning Jan. 4, 1915. Twenty-four operas will be included in the program. The Boston Opera Company in combination with the Covent Garden Company of London will give a series of performances in Paris during the early summer, closing about the middle of July.

THE Boston Festival Mandolin Orchestra, 300 players, under the direction of H. F. Odell and G. L. Lansing, gave a concert at Jordan Hall, Boston, March 24.

ITALIAN musicians have an opportunity to compete for vacancies in two conservatories, namely at Milan, for the position of teacher of harmony and counterpoint, salary $700; at Naples for history of music at a salary of $800.

CARL GOLDMARK, now almost eighty-three years old, is busy on a new work which is either an opera or a symphony. He will not say which, until it is ready to place before the public.

ITALO MONTEMEZZI, composer of *The Love of Three Kings,* was born in a small village in the province of Verona. He studied at the Milan Conservatory, and his first opera, *Giovanni Gallurese,* was a one-act work, later recast into three, and performed at Turin, in 1905. The second opera was *Hellera,* given at Turin, 1909. He is said to be at work on a fourth opera.

THE New York Board of Education has made further extension of its system of lectures on music to be given in school assembly halls. A short time ago $10,000 was appropriated by the city for sixty free orchestral concerts and recitals to be given in all the boroughs under the auspices of the Board of Education.

A BACH FESTIVAL will be given in Vienna, May 9-11, under the auspices of the New Bach Society.

THE Orpheus Club, of Springfield, Mass., celebrated its fortieth season by a concert, Jan. 27. The Club has 150 men members, making a fine chorus. Mr. John J. Bishop, the conductor, has been associated with the Club for nearly twenty years.

SIEGMUND FEUERMANN is the name of one of the latest musical prodigies. He is eleven years old, and lately played with the orchestra of the Vienna Konzertverein presenting the violin concertos of Mozart in D major, Brahms in D major, and Ernst in F sharp minor.

WEINGARTNER'S new opera, *Cain and Abel,* is to be given for the first time at Darmstadt. May 17 is the date selected.

FORT WORTH, TEX., has an organization of the local musicians to improve professional conditions and increase the public interest in music. Mr. Carl Venth is president.

THE next May Festival of the University of Michigan is to be held May 13-16. The Festival forces are the University Choral Union, 300 voices, a special children's chorus, 400 voices, and the Chicago Symphony Orchestra, 70 players. Prof. A. A. Stan-

. . . . . *before you purchase any piano*

be sure to read "The Pith of the Piano Problem," the 32-page booklet which we are prepared to send free without obligation to all readers of The Musician who may be contemplating the purchase of a piano.

¶ This booklet tells the important things to look for, and the pitfalls to avoid, in selecting a piano.

¶ Far too many pianos have merely a beautiful exterior finish, while the interior of the piano—the part you don't see, but by far the most important—is slighted or cheapened. The pleasure derived from such pianos is ephemeral and fleeting. Not so the world-renowned

Sohmer

"The Piano of Permanent Tone"

¶ A piano is for a great many people a *life-time* purchase! Why make such an important purchase without knowing for yourself just what you are doing? "The Pith" tells you. It gives TESTS by which you can judge the quality of different pianos.

¶ Write for this booklet if you contemplate, even remotely, exchanging your piano or purchasing a new piano. You will find it not at all dry or technical, but live and interesting.

¶ When you write, we shall consider it a favor if you will mention the make and age of your present piano (if you have one), so that we can classify your inquiry and take proper care of it. Writing for this booklet does not put you under the slightest obligation. Write *today,* mentioning The Musician.

J. B. LIPPINCOTT COMPANY WASHINGTON SQUARE PHILADELPHIA

ley, of the department of music, is the festival director. Some of the soloists are Florence Hinkle, Alma Gluck, Ricardo Martin, Henri Scott, and Reinald Werrenrath. The choral works selected for performance are *The Messiah, Caractacus,* by Elgar, and *Into the World,* by Benoit, in which the children's chorus will assist.

Six concerts will make up the contribution of the Portland, Ore., Symphony Orchestra to the musical life of the city during this season. Mr. George E. Jeffery is the conductor of the orchestra.

Omaha musicians have organized an association to promote the interests of music in their city. The Musician wishes them a big success in their efforts, which are on the right track. Other professions and most business occupations are organized for mutual benefit, and musicians should do likewise.

The Sinfonia Fraternity, Phi Mu Alpha, offers $100 in gold for the best musical composition submitted under certain conditions the most important being that the composer must be an American citizen; that the work submitted must be a male chorus, with soli, and organ or piano accompaniment, or both; that the composition must not have been published or given public performance. The competition wil close Aug. 15 and the award will be made at th next Convention, Nov. 30-Dec. 2, at Baltimore. Th text to be set to music is Joseph Rodman Drake's *The American Flag.* For information address F Otis Drayton, New England Conservatory of Music Boston.

Putnam Griswold, bass, member of the Metro politan Opera Company, considered by many as th foremost American operatic basso, died in Ne York, Feb. 26, after an operation for appendicitis An article by William Armstrong based on a tal with Mr. Griswold appears in the present issue.

A new Greek letter fraternity among men musi students has been organized at the New Englan Conservatory, Boston. The name chosen is Kapp Gamma Psi.

Granville Bantock's new choral symphony *Va ity of Vanities,* was given its first performance Liverpool, Eng., Feb. 14, by the Welsh Chor Union. The choral parts call for two parts each sopranos, mezzo-sopranos, contraltos, tenors, bar tones, and basses, that is, a twelve-part chorus.

WITH THE SCHOOLS AND TEACHERS

An interesting program comes from the Faelt Pianoforte School, Boston, given Feb. 12. It co sisted entirely of ensemble playing and exercises transposition. The compositions used in the latt work graded from I to IV.

A mid-season musical was given in Washingt

Columbia Ave., and Randolph St. Philadelphia, Pa.

D. C., Feb. 20, by pupils of Mr. Douglass Miller.

Mr. Frank Frysinger, of the School of Music, University of Nebraska, gave an organ recital, Feb. 17, at Grand Island, Neb.

Mr. Clarence Cameron White of Boston, violinist, gave a recital of music for the violin, March 5. About thirty pupils assisted in the program.

Miss Eva Beauparlant, of Lynn, a pupil of Mr. G. Frank Martin, assisted by Miss Ethel Bentley, soprano, gave a concert at the Lynn Women's Clubhouse, Feb. 12.

A successful concert, the last in a course, was given at Skowhegan, Me., Feb. 10, by Mr. Harris S. Shaw of Boston, organist; Mrs. Elise Fellows, violinist, and Mrs. Marion Drake Flanders, soprano. Next year the course is to consist of eight concerts.

The recently organized Choral Society of Dayton, Ohio, will give Mendelssohn's *Elijah* at the close of the present season. Next year's program includes *The Messiah* and Elgar's *Apostles*. Mr. Urban A. Deger is the conductor.

Miss May Rees, violinist, gave a recital in the "Artists' Course," at the University of Arkansas, Feb. 7. This is the 413th program since 1908. Mr. Henry Doughty Tovey is the director of the school.

The University Oratorio Society, Heidelberg University, Tiffin, Ohio, presented Gounod's *Faust* in concert form, Feb. 9, under the direction of Frank W. Gillis, of the School of Music. Miss Helen M. Tarr, also a member of the faculty, was the accompanist.

Dr. Orlando A. Mansfield, professor of music, Wilson College, Chambersburg, Pa., gave his fifth organ recital for the present season, Feb. 14. Dr. Mansfield's own composition, *Molto maestoso e fugato*, in B♭, Op. 23, appeared on the program.

Davis and Elkins' College, W. Va., has added a department of music of which W. E. Hauff has been made director.

In February the following concerts were given at the Von Ende School of Music, New York City; Feb. 7, piano recital by Miss Elsie Wisewell, pupil of Stojowski, and Miss Cécile Heller, soprano, pupil of Miss Remenyi; Feb. 14, concert by pupils of the violin, piano and vocal departments; Feb. 21, recital by Anton Witek, concertmaster of the Boston Symphony Orchestra, and Mrs. Witek, pianist; Feb. 24, the first of a series of cultural lectures.

The Cecilia Choir of the Western Theological Seminary, Pittsburgh, gave a program of church music, Feb. 16, under the direction of Mr. Charles N. Boyd. March 10, the Wilkinsburg, Pa., Choral Society, of which Mr. Boyd is director, gave a program of national songs, representing various countries.

Martha Aronson, an eighth grade grammar school pupil, gave an unusual piano recital, Feb. 12, at the Shepard School of Music, Orange, N. J., demonstrating Mrs. Shepard's new ideas in music education.

We have received four very interesting pupils' recital programs given at the Strassberger Conservatories, St. Louis, Feb. 4-7. More than 100 pupils took part in the solo and ensemble playing.

The Musician is indebted to Mr. James T. Quarles, formerly of St. Louis and now organist of Cornell University, for copies of programs of his Sunday recitals. We note the following American composers on the programs: MacDowell, Kroeger, Clark Andrews, Foote, and Edward Kreiser of Kansas City.

"Newark Knows How, or, The Suffragettes," a comic operetta by Mr. Charles Leonard-Stuart, honorary organist of St. John's Church, was given Feb. 9. Mr. Leonard-Stuart is connected with the Mac-

The Victrola gives everybody the kind of music they like best

Its mission is to bring to you the best music of every kind—and just as it presents to you the beautiful voices of the world's greatest opera stars and the superb art of the most celebrated instrumentalists, so in the lighter forms of music it offers you entertainment by the most noted talent.

With a Victrola you can change at will from the classical to the mirth-provoking—one moment you are in fancy transported to the Metropolitan Opera House and hear Caruso and other famous artists, the next you can be in any of the myriad of theatres along Broadway listening to the "song hits" of the latest musical successes.

And as you sit and enjoy all this wonderful variety of music on the Victrola, your enjoyment is all the greater because of the knowledge that the music you are hearing, you can hear again and again, whenever, and as often as you wish.

There are Victors and Victrolas in great variety of styles from $10 to $200, and any Victor dealer will gladly demonstrate them and play any music you wish to hear.

VIOLIN CASES

THE DITSON HOUSES present herewith a price list of VIOLIN CASES that is comprehensive, and describes styles that are exclusive, original in design, made of selected materials, by expert artisans, both serviceable and moderate in price, considering the care and time spent in the manufacture of each number. Many things have been considered. The LEATHER CASES are all made with a desire to have them strong and light, and the materials entering into their manufacture are what we represent them to be.

NO.		EACH
101	Brown canvas, flannel lined, leather bound, opens at end	$1.00
4	Wood, black varnished, half lined with flannel, hooks and handle, without lock, swell top	1.25

millan Co., well known as the publishers of Grove's *Dictionary of Music and Musicians.*

THE Golden Musical Club, of Los Angeles, gave a successful musical reception, Feb. 6, presenting a program of vocal and instrumental numbers. Mr. Leo Oehmler, the well-known composer, played a group of his works, including some still in manuscript.

MISS EDNA MONTAGUE'S pupils, assisted by violin pupils of Mr. Charles Blank, gave a recital at Oakland, Cal., Jan. 24, presenting a program of classical and standard compositions.

PUPILS of the Vocal Department of Cottey College Conservatory of Music gave "An Evening of Song" Feb. 6. The program consisted of solos, duets, quartets, and choruses.

MR. ERNEST R. KROEGER, of St. Louis, gave his annual Lenten Pianoforte recitals, weekly, during March, beginning March 3. The subjects were: *Beethoven and his sonatas, Chopin and his preludes, Musical water scenes, Adolf Henselt and his works,* and *Old and modern dances.*

MR. J. WARREN ANDREWS, organist of the Church of the Divine Paternity, New York, gave his usual series of organ recitals during Lent, assisted by pupils from his organ school.

A NOVELTY idea for a recital was presented at the Faelten Pianoforte School, Boston, March 5, when an ensemble class, assisted by Miss Gertrude I. McQuesten, reader, of the Emerson College of Oratory, gave Reinecke's dainty tone-poem, *The Nut Cracker and the Mouse King.*

1000 Madison Avenue, New York City

Book VI of Graded Studies

For the Piano

Compiled by MRS. CROSBY ADAMS

is now available. This book contains a wealth of good material. The list of composers represented:

MOSCHELES	KIRNBERGER	HANDEL	KESSLER	SCHMITT
JEAN VOGT	JENSEN	BERENS	SPINDLER	WOLLENHAUPT
STERNDALE BENNETT	LOESCHHORN	REINHOLD	CZERNY	BACH (Chorale)
KIRCHNER	PARLOW	GLUCK	BURGMUELLER	HABERBIER
				GURLITT

gives some indication of the scope covered.

Writings by the older masters largely predominate. The preparation for polyphonic playing is interestingly presented through a number of the simpler selections of that nature by Handel. The book contains many other fine examples of writing by the old masters, that adapt themselves fittingly to the grade of difficulty involved in this series.

The contents of Book VI is largely supplemental to Books IV and V, except that greater demands are made for musical interpretation. It is indeed a unique volume, one that teachers will thoroughly appreciate.

Price uniform with the other books ($1.00), subject to sheet music discount

In the Bottoms

A Characteristic Suite for Piano

By R. NATHANIEL DETT

Summy Edition, No. 61 - - - - - - - - - Price $1.50

This Suite consists of five numbers—Prelude, His Song, Honey (Humoresque), Barcarolle, Dance (Juba)—and pictures scenes peculiar to Negro life in the river bottoms of the Southern Sections of North America. As "Program music," characteristically American, it is no doubt the most representative of anything that has been issued for some years. An ideal is portrayed through it all, which is significantly sincere, and it is done with a degree of musicianship that is not only fully satisfying but that commands admiration for its skill and finish. No attempt has been made at elaborate ornamentation consequently the difficulties are not beyond such as the average good pianist can manage. It is simply a free and spontaneous expression of a concept, masterfully done.

MME. AMELIA VON ENDE, of the Von Ende School of Music, New York, gave four lectures on *The Correlation of Art, Ibsen, Maeterlinck* and *Romain Rolland,* during March.

MR. WILLIAM CONRAD MILLS, director of the Arizona School of Music, Phoenix, Arizona, sends THE MUSICIAN a very interesting program *of Old-time Music,* given by the Phoenix Choral Society, under his direction, Feb. 3. Later in the season the Society will present Stainer's cantata, *The Crucifixion.*

SUMMER TEACHING ANNOUCEMENTS

Faelten Summer School

FOR MUSIC TEACHERS

From Wednesday, July 1, to Tuesday, July 14, 1914

BOSTON, MASSACHUSETTS

Supplementary Course for music teachers in addition to the Summer Course announced on page 33 of the Prospectus.

By **CARL FAELTEN**:—Ten lessons in technique and interpretation, including programs of instructive literature and concert repertory.

By **REINHOLD FAELTEN**:—Ten lessons in method and school conducting.

By **MARIE DEWING FAELTEN**:—Ten lessons on class instruction, illustrated by pupils of the School.

The above Special Course of class lessons for music teachers is IN ADDITION to the series of private lessons for music teachers, which, as announced on page 33 of the Prospectus, may be taken at any time.

The purpose of this Special Course is to show teachers how to apply the instruction given in the private lessons, in order that they may most successfully employ Faelten ideas in their own work. It is therefore suggested that all teachers who can do so should arrange to be in Boston between the dates mentioned above in order to take advantage of this Course.

The tuition for the Course, which will be open only to teachers taking the series of 12 private lessons at $50, will be $25, making a total of $75. Application for membership should be made as early as possible in order to insure the Course being given.

No other system of teaching music has ever been devised which so completely meets the demands for THOROUGHNESS and PERMANENCE, and which at the same time satisfies the present-day requirements of QUICKNESS. Future progress in the Art must be made along these or similar lines. Versatility is now a necessity. Cultivated persons are expected to know something of a wide variety of subjects. The music teacher, therefore must possess every available means for engaging and utilizing to the utmost the small fraction of the pupil's attention that is at his disposal.

Some system is absolutely necessary to meet these conditions. One's individuality is not submerged by using a system. The exact opposite is the case. A good system reduces the drudgery to a minimum and gives scope for original ideas. Even in our own School the System is not used today as it was ten or even five years ago. New ideas are constantly coming up for consideration and if found more effective than those in use they are adopted forthwith.

These new methods of presenting the System will occupy a prominent place in the Summer Course. Those teachers who are using the System should also be present and get in touch with them. An opportunity will be given to all for a discussion of local conditions, and difficulties and means proposed for overcoming them. MAKE YOUR ARRANGEMENTS NOW.

IN JANUARY, 1912, we gave, as a supplement, a copy of the above picture, representing CHOPIN, as a boy, playing for his schoolmates, printed in colors. To meet the continued demand for copies of this picture we have secured a limited edition, in *photogravure*, by one of the leading American art publishers. We offer it as follows:

For $1.50, we will send THE MUSICIAN, one year, and one copy of THE BOY CHOPIN, postpaid. This offer is good until June 1, 1914. Copies of the picture, separately, 35 cents. Size of picture, 8⅛x11⅞; mounted on heavy paper, 12x18½, equal to line sold for 75 cents and $1.00 in stores.

Address, THE MUSICIAN, Boston, Mass.

Music for Memorial Day

WAR SONGS

ARRANGED FOR MIXED VOICES

This new and enlarged edition of War Songs contains all the songs found in the volume for Men's Voices, together with fourteen important additions. It contains 124 music pages, and its general scope and excellence entitle it to a place in every patriotic American Home. Price in paper covers, cloth back, 50 cents, postpaid.

ARRANGED FOR MEN'S VOICES

A collection of forty-nine songs, of which thirty-three are suitable for anniversaries and gatherings of soldiers, and sixteen for Memorial Day services. Ninety-six pages of music, bound in heavy paper, cloth back cover. Size, octavo. Title in colors. Authenticated portraits of Generals Grant, Sherman and Sheridan, on both books.

Price in paper covers, cloth back, 50 cents, postpaid. Price in cloth, gold edges, $1.00, postpaid

WAR SONGS FOR SCHOOLS

Edited by Frederic H. Ripley

(Principal of Longfellow School, Boston)

A collection in inexpensive pamphlet form of ten of the best songs written at the time of the Civil War. The editing is the work of Mr. F. H. Ripley, principal of the Longfellow School, Boston, and is a result of his ripe experience. The songs are all eminently practical for use in schools or by young voices generally. Most of the numbers are for solo (or voices in unison) with the refrain in four-part harmony—the alto part being written as a second soprano, the tenor part written on the treble staff where it may be sung by an alto voice (boy or girl), and a simple bass part added on its own staff. Price, postpaid, 15 cents.

"FOREVER WITH THE LORD"

A MEMORIAL SERVICE

Music composed and selected by GEORGE B. NEVIN

As years roll on, one by one our loved ones pass on to that city which hath foundations, whose builder and maker is God. The high and mighty, the humble and poor, must all fall before the sickle of the great harvester of souls. This Service is offered that once in the church year an appropriate service may be held in memory of those who have gone before. Price, 5 cents per copy, postpaid; $4.00 per 100 copies, not prepaid.

Send for our complete catalog of Memorial Day and Patriotic Music, free on request

Note.—These books will be sent with return privilege to those with accounts in good standing, and to those with no accounts upon receipt of price, which will be returned, less postage, if not satisfactory.

OLIVER DITSON COMPANY, BOSTON

Chas. H. Ditson & Co., New York — Lyon & Healy, Chicago

A NEW VIOLIN METHOD
FOR CHILDREN AND YOUNG PEOPLE

FIRST LESSONS IN VIOLIN PLAYING FOR CHILDREN

BY
ALICE H. PARMENTER

IT has been the author's aim, in this book, to introduce exercises and melodies that were in every respect adapted to young pupils; that were not only easy and attractive, but that would afford material for progressive elementary study.

The bowing and fingering have received very careful attention, having been thoroughly marked throughout the lessons.

The principles of fingering employed will greatly aid the cultivation of correct intonation.

The fanciful names of the keys and the use of words with some of the melodies will arouse the pupil's imagination, and imbue simple notes with life.

Price, 75 cents ***Special price, postpaid, 50 cents***

NEW PIANO WORKS

Isidor Philipp: Exercises for the Development of the Higher Pianoforte Technic. Ditson Edition No. 196.

ISIDOR PHILIPP is known to pianists as one of the most distinguished teachers of piano playing connected with the celebrated Paris Conservatoire. His system, which has been the educational basis of the training of many of the younger French pianists, consists in using exercises to give drill in variations of intensity of tone, or duration of tone; practising passages in legato, detached and portamento styles; changing of key; special practice with one finger; alternate extension and contraction of the fingers; modifications in all possible forms, scales, arpeggios, repeated notes; exercises for acquiring suppleness; passing under of the thumb; velocity in scales; the use of the fingering of C in all keys; studies in double notes, octaves, octaves with intervening notes, etc.

The price has been fixed at $1.50; until published we will accept order at 50 cents per copy.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $1.85.

Orvil A. Lindquist: 100 Exercises for the Weak Fingers. Ditson Edition, No. 195. $1.00.

MATERIAL of a very useful character such as every teacher needs in his work with pupils. The weaker fingers require special drill and specially prepared exercises, a need which the author has admirably met and filled. Try this work in your efforts to develop strength of attack in your pupils' fingers. It can be used with any method or course of studies.

SPECIAL OFFER:—With The Musician, one year, $1.65.

Arnoldo Sartorio: Twelve Melodious Studies in Velocity in Broken Chords. Op. 1018.

As the title implies, these very useful studies employ chiefly arpeggios in many and varied forms and applications. They are remarkably melodious, whether it be in the style of accompanied cantabile themes in one hand or the other, or developed entirely from figuration. As new and valuable pedagogic material, these studies by a well-known composer of technical works are heartily recommended to progressive teachers; they are moderate in difficulty and do not exceed Grade IV.

This work will be added to the celebrated Ditson Edition. In advance of publication we will accept orders at 40 cents, postage paid, if cash accompanies the order; if a charge is to be made on our books, postage is additional.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $1.75.

Ernest R. Kroeger: The Whole Tone Scales.

THIS little work is designed to meet a need which has arisen since latter-day composers have been employing with increasing frequency the whole tone progressions. Twelve possible scales are given with their corresponding arpeggios both in parallel and contrary motion, all equipped with their most convenient fingering. The work will be a boon to teachers and to all pupils who have encountered in their studies this new and at times perplexing musical resource.

This work will be added to the Ditson Edition. In advance of publication we will accept orders at 25 cents, postage paid, if cash accompanies the order; if a charge is to be made on our books, postage is additional.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $1.60.

A NEW ORGAN WORK

30 Offertories for the Organ. Ed. by Jas. H. Rogers. $2.00.

A NEW volume uniform with the popular 30 *Preludes* and 30 *Postludes*. The editor has drawn upon the best works, by European composers, and has made a number of admirable transcriptions especially for this work. It is to be bound in cloth with gilt top, and is in every way a distinct addition to the organist's collection.

SPECIAL OFFER:—With The Musician, one year, $2.50.

MISCELLANEOUS

James H. Rogers: Five Quatrains From the Rubaiyat.

THE tempting quality of Omar's immortal verses has inspired the composer with most felicitous musical imaginings. For this a set of five songs quatrains have been chosen which are in themselves among the most beautiful and which are adroitly contrasted in mood. To meet their poetic content Mr. Rogers' melodic vein was never more fluent, his harmonic scheme more vital nor his economy of means to produce just the right emotional effect more sure. These songs, the latest product of his muse, may be used as a cycle or singly and will adorn any artistic recital program.

The price has been fixed at $1.25; until publication we will accept orders at 75 cents per copy.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $2.10.

J. C. Macy.
Young People's History of Music
New Edition, $1.00

THOUGH prepared for "young people" this book will be found interesting by all who do not care to study the longer histories, dictionaries, etc. It gives, in necessarily condensed form, valuable information, and is written in an easy colloquial style, free from technicalities. For this new edition much material has been added as was needed to indicate the trend of latter-day composition: and the biographies of the great masters have been supplemented by sketches of modern composers who have earned a universal reputation.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $2.00.

Standard Anthems For Men's Voices. Edited by George B. Nevin. $1.00.

IN this excellent collection are included, besides valuable numbers written originally for men's voices, arrangements of standard and popular works. The majority of these arrangements are from the practised and practical hand of the editor, and all are skilfully done with a view to use by choirs of moderate ability. The subjects chosen and their treatment show wide diversity, so that singers in possession of this collection are equipped to meet the varying requirements of the church year without going outside its pages.

Franz C. Bornschein
Zorah: Cantata
For Women's Voices. 50 Cents.

THIS short cantata is composed to a highly picturesque text, descriptive of the desert, an Arab raid and capture. The music is in the modern idiom and breathes, at times, the warmth and languor of Oriental scenes, and again is eloquent in its dramatic and vigorous mood. There are extended solo passages for soprano (Zorah), the beautiful captive of the raiders, who is rescued by her lover's warriors.

"INTERPRETATION OF PIANO MUSIC" BY MARY VENABLE

A RECENT ADDITION TO THE "MUSIC STUDENTS LIBRARY," PRICE $1.25, POSTAGE PAID

"I have read your book with much interest. It treats upon a subject which is of vital importance to the piano student and pianist. I shall endeavor to bring it to the knowledge of all the students of this school and hope it may be placed on sale here where it will be convenient."—WILLARD KIMBALL, The University School of Music, Lincoln, Neb.

"A noteworthy publication, enthusiastically welcomed by experts. It is something of an achievement for a woman to produce a technical work that will instantly command the attention of the ablest and most critical authorities in the country."—THE HERALD, Dayton, Ohio.

"*The Four Piano Pieces,* Op. 107, by Eugenio di Pirani, are masterly composed. I take special pleasure in recommending them most warmly."—CORNELIUS RUBNER, New York City.

REED MILLER, TENOR

AMONG the American tenors of today the name of Reed Miller stands out prominently. The past ten years have seen him grow in artistic stature and establish him as a singer whose voice, musicianship, style and personality are of the quality demanded in these days of rigid discrimination. Especially notable has been his success in oratorio, for he has sung with the leading choral organizations of the country, including six appearances with the New York Oratorio Society and eight with the Chicago Apollo Club.

In his professional work Mr. Miller has used with success the following compositions published by the Oliver Ditson Company:

Since Laddie went awa', Strickland.
Blue are her eyes, Watts.
The charm of Spring (duet), Salter.

MME. NEVADA VAN DER VEER, CONTRALTO

PROMINENT among American contraltos who have won the appreciation of the musical public and the approval of the critics is Mme. Nevada Van Der Veer (Mrs. Reed Miller). Unusually endowed vocally, she has added to her natural equipment and talent that which comes only from hard work and concentrated study, namely, the ability to use her resources to the best advantage. As a concert artist she has been successful, notably during her tours with the New York Symphony and the Theodore Thomas Orchestras. Her voice is a rich contralto with sweetness as well as power.

Mme. Van Der Veer has found the following songs published by the Oliver Ditson Company very useful in her professional work:

Blue are her eyes, Watts.
The charm of Spring (duet), Salter.

"FORTY SONGS" BY JENSEN AND THE "BERGERETTES" BY WEKERLIN

TRANS. BY FREDERICK C. MARTENS

"They are both valuable and I shall use and recommend them. THE MUSICIANS LIBRARY is so well edited that it is a pleasure to possess any one of the volumes. The *Bergerettes* will be welcomed by those not able to sing in French."—ISIDORE LUCKSTONE, New York City.

"I am pleased to see the *Bergerettes* in such good print."—ADELE L. BALDWIN, New York City.

"I shall use both the Jensen *Forty Songs* and the *Bergerettes* in my studio. To praise the excellent get-up and the practical value and skilful compilation of the Ditson Collections would be to indulge in pleasing repetitions."—MRS. CARL FIQUE, Fique Musical Institute, Brooklyn.

"I am very fond of the Jensen and the Wekerlin songs, and shall use them in the studio and send my students to buy. Your MUSICIANS LIBRARY is simply wonderful in every respect."—MME. ANNA E. ZIEGLER, Ziegler Institute of Normal Singing, New York City.

The Organist's Journal

The Largest, Best, Most Useful and Most Practical Organ Periodical

Each issue of The Organist's Journal contains sixteen large pages of Pipe Organ Music, selected from the latest compositions of the leading English, French, German, and American Organ Composers. There are also many transcriptions from the scores of the world's greatest masters.

The music is edited in the most careful manner, special attention being given to the phrasing, pedal, marking, registration, etc., etc.

It is printed from specially engraved plates in the finest style of engraver's art. The lithographing is exceedingly clear, and the paper of the best quality.

None of the pieces are too difficult for the amateur or the organ student, while the professional organist will find an abundance of choice material exactly suited to his requirements.

There are 196 of the largest size music pages in 12 issues, with an average of about 80 pieces. This music cannot be bought in sheet music form for a dozen times the cost of a year's subscription.

Subscription price $3.00 a year. Sample copy 25c.

The Organist's Journal $4.50 } Both for one year $3.75 { Postage additional on Canadian and Foreign Subscriptions

SCHOOL OF

SCALES and ARPEGGIOS

FOR THE PIANOFORTE

By JOHN W. POMMER, Jr.

A student who can play his scales and arpeggios with correct fingering, perfect touch and musical tone has ample technic and fluency to play well.

The purpose of this work is to present to students a simple and practical course in this phase of piano study, which practically is conceded by all the greater pianists since Liszt, to do more than anything else to build up a thorough musical foundation and a finished technic.

Arranged in a simple and concise manner, with later on interesting variations in graded form to be studied in all the keys.

CARL FISCHER COOPER SQ. NEW YORK

EDWIN ARTHUR KRAFT, ORGANIST

It is only within late years that opportunities for a career as an organist have been opened up in the United States. Previously organ-playing was a subordinate phase of a musician's work, his time was mainly devoted to piano and vocal teaching. But with the building of many new and large organs in churches came a demand for well-equipped artists, a demand that was strengthened when several cities installed organs in their municipal buildings.

The latest addition to the ranks of municipal organists is Edwin Arthur Kraft, who went to Atlanta, Ga., in January of the present year. His success was immediate and brilliant. Fortunately for the interests of organ music his duties at Atlanta are not such as seriously to curtail his activity as a concert player in other cities, where he is in demand.

Mr. Kraft was born in New Haven, Conn., in 1883, and received his early training from his brother, William J. Kraft, now connected with Teachers' College, Columbia University. When Edwin was only fifteen years old he was appointed organist of Grace Methodist Church, New Haven, later going to the Church of the Ascension, where he had his first experience with a

Gordon's Graded Piano Course

In Nine Grades **Price 50c. Each**

Music teachers and students should be acquainted with and use this great work.

Read what an eminent teacher says of it:

I have looked over "Gordon's Graded Piano Course" and am pleased to say that the material it contains is presented in a clear, lucid and easily intelligible manner. The progress of the course is logical, and proceeds with entirely proper graduality. Print and paper deserve also commendation, and the editing is excellent.—**C. Von Sternberg.**

FOR YOUR VACATION READING

Choral Technique and Interpretation

BY

HENRY COWARD

Conductor of the World Famous Sheffield Choir

Cloth, $2.50

DR. COWARD'S book should be read by every conductor, from the greatest to the least; by every choirmaster, no matter what form of choir he directs; by every teacher of singing, whatever his vocal method; and by every earnest choralist, even though singing under a capable conductor. They cannot read it without being touched by the flame which radiates from Sheffield, through the power and personality of Henry Coward.

The numbers contained in the Hinds, Noble & Eldredge New Teaching Catalogue

For Piano

GRIMM'S FAIRY TALES
Ten little second grade teaching pieces, each illustrated with a picture of the story on which it is founded

PIANO SOLOS, by E. R. Kroeger
Nine gems from the pen of this well-known composer, ranging from third to sixth grade of difficulty. The charming melodies and exquisite harmonies will compel the interest of the student, while the instructive features (each number is an excellent study) will appeal to modern teachers.

FOUR TONE PICTURES, by G. Ferrata
A treasure of poetry in tone colors. Styles of touch, melody playing, rhythm and tempo treated in a most original manner.

POLONAISE, by G. Ferrata
A concert number the beauty and depth of which it is difficult to express. We advise you to see this number.

A TRIO OF ORIGINAL DANCES, by G. Ferrata
Brunette Dansante---Minuet---Gavotte
Three models of style, grace and form that will please both performer and hearer. Cheerful and melodious in every measure, and of only moderate difficulty, they well deserve to be called "thankful" numbers.

For Voice

Every one of these songs has character and depth. Vocal teachers and concert singers alike will find them just what they are looking for.

My Heart, and My Soul, and I	Medium Voice
Could I Believe	High Voice
Keeping a Heart	High Voice
Serenade	Medium Voice
Garden Song	Medium Voice
Pierrot	Medium Voice
'Twixt Daylight and Dark	Low Voice
Cradle Song	High Voice
Nevermore	Low Voice
Love's Litany	Medium Voice
Norah, the Pride of Kildare	Medium Voice
Somebody Cares for Me	High Voice
The Prairie Moon	Medium Voice

For Violin and Piano

FIVE CHARACTERISTIC PIECES FOR LITTLE VIOLINISTS, by G. Federlein
Melodious compositions for beginners, so graded as to follow each other in consecutive order. Each has an easy piano accompaniment.

SUITE FOR VIOLIN AND PIANO, by Chev. Giuseppe Ferrata
Awarded first prize in a national competition held under the auspices of the Art Society in Pittsburgh.

VIOLIN AND PIANO INSPIRATIONS, by Alberto Bachmann
Seven numbers---**"Scherzetto," "Mazurka," "Duo," "Serenata," "Valse," "Evening Song"** and **"Gigue"**---that violinists will enjoy playing.

If your music dealer can't show you these numbers let us send you a descriptive thematic catalogue

WILLIAM DICHMONT

WILLIAM DICHMONT

was born in England, in 1882, and began the study of music at an early age as a pupil of the late Gerhard Kuhnel; later he entered the Manchester College of Music, studying piano, violin, and harmony. When he began his professional career he spent five years as a first violin player in the Princess Theatre Orchestra, later becoming chorus director for a number of operatic productions. Sir Frederick H. Cowen became interested in his work and advised him to turn his attention to composition.

In 1902 Mr. Dichmont went to Canada, giving his time to recitals and teaching, and also taking up the study of the organ. During this period he turned serious attention to composition, and since then has written many songs, some of them attracting considerable attention, several song cycles, pieces for piano, for violin, studies, two trios and choral numbers; his largest work is a light opera which has had considerable success. At the present time Mr. Dichmont is organist and choirmaster of Fort Rouge Church, Winnipeg.

SIXTY MUSICAL GAMES and RECREATIONS

By LAURA ROUNTREE SMITH

Price, 75 cents, Postpaid

¶ This stimulating little book is the work of one who understands not only the needs of kindergarten teachers, but the interests of and mode of approach to the child mind.

¶ The Games are very simple at the beginning, and in various forms wherein the children can all take part; and they convey in an agreeable manner much valuable musical instruction.

¶ The Recreations, or "Recitals" as the author calls them, are more elaborate, and consist of well-planned entertainments wherein recitations, piano pieces and songs are happily introduced, all bearing on the central idea of the recital. Costumes and scenery may be employed in many of them, there is an opportunity for pretty dances, and the scheme may often be elaborated or simplified at pleasure.

A Special Price for Introduction will be made to Music Supervisors on request

THE FOUNDATIONS OF PIANO TECHNIC

As Told by Madame Carreño to William Armstrong

FOR fifty years Madame Teresa Carreño has figured in the musical world, seeing with clear eyes the things about her, and with mind concentrated upon her art rather than upon herself. Sincerity, courage, and independence have distinguished her, but never more conclusively than on the occasion of her Berlin début which meant the firm establishment of her career. In the minor matters of life these three traits of vigorous self-assertion are readily exercised; but when a crisis arises there comes a task far more difficult, because far more is at stake. From each such situation mastered the character emerges strengthened to meet future demands, and with a foothold in art proportionately surer. At the moment of action, though, no such pleasing assurance exists, for everything remains yet to be practically proven. And so the episode of this Berlin début holds an interest both as incident and test.

HER FIRST BERLIN CONCERT

Von Bülow, who had heard Madame Carreño play in Paris, commended her on his return to Berlin, to Herman Wolf, the manager, then in the zenith of his influence. A man as seldom given to enthusiasm as was Von Bülow gained the impresario's prompt attention. Correspondence with Madame Carreño was begun, and her appearance in the German capital planned.

"What will you play as chief number?" was his query.

"The Grieg concerto," she replied.

"Never," he wrote back, "for here that concerto is not acceptable to either press or public. And so the choice is an unwise one."

"So much the better," answered the young debutante, "for I should rather fail with an unpopular concerto, than succeed with another because the public liked it."

"Even though I question your wisdom," he wrote in turn, "I admire your courage. So I let it remain the Grieg."

Refusing all letters of introduction, excepting two pressed upon her by her teacher—Georges Mathias, himself a pupil of Chopin, and who feared she might fall ill among total strangers—Madame Carreño entered Berlin ready to test her strength independently of aid, "Berlin," as she now feelingly expresses it, "where they made me what I am through their appreciation and faith." Waiting at that time vainly for some days at her hotel for the expected piano, she sought out Wolf. "Every day I have been at them," he told her. "Go yourself: then you will be sure to get

MADAME CARRENO

it." This was Thursday; her concert was set for the Monday following. Fortunately, for the lateness of the moment, his prediction proved correct. After a personal interview the piano reached her hotel almost as soon as she did.

Friday came Professor Breslaur, one of the two to whom she had accepted an introduction. "But I know nothing about you," he finally confessed, "and I should like to speak of you to my friends. Perhaps you will play me something?"

"Certainly," was her response, and she proceeded to do it. Doubtfully he listened, then as doubtfully he spoke.

"We do not play in Berlin as you do." Sitting down at the piano, he showed her what he meant, and a way quite foreign to her own.

After he had left she tried the Berlin "system," tried it for a day, then said to herself quite cheerfully, "In the twenty-four hours left I cannot learn to play the Berlin way, so I'll keep to my own."

On the following Monday, when the hitherto unacceptable Grieg was ended, she saw people in the hall waving their hats and heard them cheering. She thought then that they must be making fun of her, and kept on thinking the same thing for a month, even though Professor Breslaur came to her after the début frankly saying, "Can a great artist like yourself forgive me for daring to suggest how you should play?" The critics, equally frank, said that she did things in a new way, reaching her effects through an original technic quite her own.

Later, in her married life with d'Albert, he reiterated their conclusions, and verified them to her by having her play certain passages in her way at the piano, and then doing them in his own. But the whole development and upbuilding of Madame Carreño's art were upon an original plan, and for this reason her suggestions following on "The Foundations of Piano Technic" are as enlightening as they are logical; convincing, too, they would surely seem to be in the mind of every earnest student:

A TECHNICAL FOUNDATION

"There is no such word as *method*," was Madame Carreño's opening assertion; "it should be put aside. Great piano playing remains great piano playing no matter in what way it is done or achieved. All foundations are difficult; after that everything is easy. I never see a great building without thinking how hard it was to make foundations that would support it. And that is exactly what the pianist is in search of, a foundation which will worthily support all that he aims to achieve. Such a foundation will help him more than anything else.

"I am a great believer in the purely technical, treated musically and pianistically. Such purely technical work done with artistic and pianistic attention bears great results. And all this does not mean simply running up and down the scale with the idea of seeing how rapidly one can go, or with, perhaps, no thought at all.

"One can very safely say that nothing else in all the study of the piano requires greater or more intense thought than the practice of the purely technical. And exactly in accord with that kind of thought which one gives to it, will be one's proportionate reward in the results. In the study of scales, for instance, all the tone effects that are needed in a MacDowell or Tchaïkovsky concerto may be brought out, and when one comes to scales in those or in any concerto one is prepared to meet them.

"If intelligence and taste are vitally necessary at any point they are most assuredly so in the foundations of music as embodied in purely technical exercises. I am a firm believer in constant repetition of such exercises, very slowly at first, and then with gradually increasing speed, but always with the whole concentrated intelligence at work as well as the fingers. The artistic taste

must be employed; invariably the tone quality and color must be in mind. Arpeggi, trills, scales in double thirds, scales in sixths, each must be taken up singly with every tone effect and combination of tone effects, and then in staccati, which so prepares one for octave playing.

"The placing of great stress upon artistic finish in study of purely technical exercises is only logical. Such figures, one and all of them, occur in the pieces that we play later, and so it becomes not merely a matter of acquiring nimbleness, but of acquiring finish and artistic finish at that, in order that we are properly prepared to meet them. Through such a course in studying technic there is no danger of one's thoughts straying to the fashion of one's next new bonnet, for the work in hand becomes too intensely interesting. The bits that go to make the finished picture are being artistically and pianistically shaped. .

TONE

"There are hundreds, perhaps thousands of ways in which a single technical exercise may be treated, aside from fundamental points of speed and accuracy. But always the first thing to be taken care of is the production of tone; for no matter how fast one plays the first thing to be considered is beauty of tone. Few virtuosi take interest in these things in their pupils. They hear them so constantly in their own studies that they have no patience left to listen to their performance by others. But I can watch a child's development as I watch that of a plant, and if it plays well, follow it with interest; for I love to see anyone take serious interest in my art. It is for that reason that I teach.

"It is not good, as true musicians the world over recognize, to study only the purely technical in gaining the foundations of piano playing; such a course narrows the intellect. A child can be made to follow a purely technical régime without much danger, but that plan with one whose mind is beginning to develop is fatal. Consequently the best way is to combine exercise of mind and musical feeling with the technical as much as possible. Purely technical figures, studied as I have mentioned with every variety of finish, become no longer hard and dry, requiring as they do constant thought, and danger is proportionately lessened.

THE STANDARD REPERTOIRE

"Side by side with the purely technical should go the old standbys, Czerny, Cramer, Clementi, Henselt, and, to crown all, Chopin. Then one can meet anything in a sane, safe manner, technically and musically. Bach is not only technical, but he does away with the dangers of hallucinations and extravagance, for after one knows Bach thoroughly, one cannot accept anything but the purely true and musical. In turn, this general course should be varied by selections from Mozart, Weber, the earlier Beethoven, and always, the central figure of them all, the driver of the horses, Bach as represented by his *Inventions* and *Preludes* and *Fugues*.

"Where Bach comes into his full powers is in beauty of tone. He wrote for the organ, and by trying to produce legato and depth, we get the big, warm tone which he demands. One can use that same tone in singing passages in Chopin, for while, of course, one cannot play Bach as one plays Chopin, the singing quality and legato become common to both. There is a little book which I show to all my pupils and called *Sayings of Beethoven*. It is made up of quotations from the master, and contains among others this: 'I do not understand piano playing without legato.' It is, I know, very hard to get legato, but that is what we are here for. In every different kind of touch four or five make the foundation of them all.

TRAINING THE YOUNG

"In regard to forming musical foundations with the very young, I should like to mention the course pursued in my own case by my father when I was only six and a half years old. His plan seems all the more remarkable when one recalls that he was not a professional musician, but the Minister of Finance of Venezuela. He laid the foundations for piano playing with me in his own way, and the motive principle of it was to arouse my interest. Technic is the stairway which leads to the palace of art, and if a child is not interested in technic it will be found tired out when that stairway is mounted.

"The things that he gave me to do, I was crazy to accomplish; all the time I was at the piano. At first he wrote exercises for me, then little preludes of twenty measures. After dinner, which was early in the South American fashion, he would bring out something new and say, 'Teresita, play this.' Then, I was required to write out the notes to fix them in memory. He would make a chord, write it down, and ask, 'How does that look to you?' Afterward he would explain it, as he did all the chords in all the keys. Then, taking a prelude written, perhaps, originally in C major, he would suggest that I play it in G minor. That would put me on my mettle, and fire me with interest and excitement. In all that he gave me to learn there entered the elements of novelty and interest; my mind was engaged as much and more than my fingers. Music became a living, vital thing that I was in a way called upon to evolve and work out myself, with his ever-patient, untiring aid.

"Alongside constant, all-absorbing study at that early age—and very often now I look at little ones of six and a half years and think how tiny that was to begin—he was most careful of my health. Things held now as naturally essentials, cold baths and fresh air exercise, he insisted upon for me, and at that time they were not so pre-eminently regarded. Today, after this régime, and with sixty years upon my shoulders, I can do just the same things that I always did.

REVERENCE TO THE CLASSICS

"Art is so immense! To me, God and art seem one. My attitude can only be 'I'll try; let me have a fair trial.' But trying does not mean attempt to seek out new effects merely as such, or to read into a classic things which its composer surely never put there or remotely intended; things invented by the 'interpreter' to catch passing attention because they sound bizarre and curious. There is only one way to play a great classic, and that is with reverence and attention to the clearly designated wishes of the composer. In such a performance tricks can have no part. The artistic worth of the composition, artistically presented, is all that is needed to carry its message absolutely. The individual reading of a work by a sincere, conscientious artist is one thing, and the seeking out of new effects for effect's sake is quite another.

"Every true artist has his or her mission in art, and that mission is one of example to uphold its purity. In the early days of my career certain words of Von Bülow came to me as a revelation, and in regard to this very point, the mission of the individual through example. We were dining at Herman Wolf's. The subject of Joachim's divorce came up, and the sum of 12,000 marks, which the violinist had been called upon to pay his wife annually, was mentioned as insufficient. 'If some one would pay me that, I should be content never to play again,' I thoughtlessly asserted, for at that moment I was thinking only of my babies. 'How can you speak that way?' retorted Von Bülow sharply. 'Don't you know that you have a mission, a lesson to the younger generation? Never let me hear you say that again or I shall lose my respect for you.'

"Last year I went to Bucharest to play one concert, and remained to play three. When I appeared before my audience the people did not know me; my hair was white. The great public is the artist's best friend and severest judge. None can make audiences do what they do not feel. I take my audiences and make them feel with me. This is the mission which Von Bülow meant; the mission of a reverent attitude toward art."

SOME ERRORS IN MUSIC TERMINOLOGY

In a recent issue of The Musician reference was made to a new work entitled *Music Notation and Terminology*, by Prof. Karl W. Gehrkens, of Oberlin University. This work, prepared for use as a text book for classes, contains some interesting notes on the subject of misuse of terms occurring in connection with music. For the benefit of our readers we reprint here a few points which are worth keeping in mind.

"The word *time* in musical nomenclature has been greatly abused, having been used to indicate:

"1. Rhythm; as 'the time was wrong.'

"2. Variety of measure-signature; as 'two-four time.'

"3. Rate of speed; as 'the time was too slow.'

"To obviate the confusion naturally resulting from threefold and inexact use of the word, many teachers of music are adopting certain *changes in terminology*, as noted in Sections 105, 106, and 107, [of the book under consideration]. Such changes may cause some confusion at first, but seem to be necessary if our musical terminology is to be at all exact.

"The *first of the changes* mentioned in the above paragraph is to substitute the word *rhythm* for the word *time* when correcting mistakes involving misplaced accent, etc. For example, 'Your *rhythm* in the third measure of the lower brace was wrong,' instead of 'Your *time* was wrong.'

"The second change mentioned would eliminate such blind and misleading expressions as 'two-four time,' 'three-four time,' 'four-four time,' 'six-eight time,' etc., and substitute such self-explanatory designations as 'two-quarter measure,' 'three-quarter measure,' 'four-quarter measure,' 'six-eighth measure,' etc. For example: 'The first movement of the Beethoven sonata, Op. 2, No. 3, is in *four-quarter measure*.'

"The third change referred to above would substitute the word *tempo* (plural, *tempi*) for the word *time* in all allusions to rate of speed. For example: 'The scherzo was played in very rapid *tempo*.'

"Prof. Gehrkens, in the chapter on 'Terminology Reform,' includes a number of definitions adopted by the Music Department of the National Education Association. We give a few here:

"*Tone*: Specific name for a musical sound of definite pitch. Use neither *sound*, a general term, nor *note*, a term of notation.

"*Interval*: The pitch relation between *two* tones. Not properly applicable to a single tone or scale degree. Example: 'Sing the fifth tone of the scale,' not 'sing the fifth interval of the scale.'

"*Step, Half-step*: Terms of interval measurement. Avoid *tone, semi-tone*, or *half-tone*. Major second and minor second are interval names. Example: 'How large are the following intervals: (1) Major second, (2) minor second, (3) augmented prime? Answer: (1) a step, (2) a half-step, (3) a half-step.

"*Measure-sign*: 4-4, 2-4, 6-8 are *measure-signs*. Avoid 'time signatures,' 'meter signatures,' 'the fraction,' 'time marks.'"

CONTEMPORARY PIANISTS --- BUSONI, BAUER, GODOWSKY

BY WALTER SPRY

I HAVE selected these three great pianists as the three most individual among the present day players. There are others equally great, but there are none so original and progressive. Hofmann and Carreño, although they are of the first rank, really belong to a past generation, as they are reflections of the art of Liszt and Rubinstein. They are none the less enjoyable on this account, but as pathfinders and truth seekers, both as technicians and interpreters, I find the three great artists mentioned first as the most interesting. There are several points in common with these three pianists, but being strong individualities, there are also many points of contrast.

In his book, "Sketch of a New Esthetic in Music," Busoni has shown that he is a musical philosopher, a deep thinker, and a man of great originality. Let me quote some of the sentences from this admirable little volume. "It is true," he says, "that admirable works of genius arise in every period, and I have always taken my stand in the front rank of those who joyfully acclaimed the passing standard-bearers; and still it seems to me that of all these beautiful paths leading so far afield—none lead *upward.*"

Further he proclaims the following important dogma: "The spirit of an art work, the measure of emotion, of humanity that is in it—these remain unchanged in value through changing years, the form which these three assumed, the manner of their expression, and the flavor of the epoch which gave them birth are transient and age rapidly."

This explains Busoni's disregard for tradition, and we find his interpretations so far from the conventional. I remember his very original interpretation of Beethoven's *Waldstein* sonata, but I liked it very much. At times we find his performances of certain poetical works, such as Chopin *ballades,* rather unsatisfactory. The reason of this is because they are so far from what we are used to, and we dislike to be jarred so rudely in those things that are precious to our local standards. However, I believe he is sincere; as a man of great talent and information, his interpretations are worthy of our consideration. He sums up this idea by saying: "But all arts, resources and forms ever aim at the one end, namely: the imitation of nature and the interpretation of human feelings."

Those of us who heard him play Weber's *Concertstück,* Op. 79, with the Chicago Orchestra, will remember that he brought out every musical and interpretative phase of this extraordinary work. The same can be said of Beethoven's *Emperor* concerto, not to speak of the great masterpieces of Liszt that Busoni so well understands. Listen to what he says regarding absolute music:

"Absolute music! What the law-givers mean by this is perhaps remotest of all from the absolute in music. 'Absolute music' is a form-play without poetic program, in which the form is intended to have the leading part. But Form, in itself, is the opposite pole of absolute music, on which was bestowed the divine prerogative of buoyancy, of freedom from limitations of matter. The performance of music, its emotional interpretation, derives from those free heights whence descend the Art itself. Where Art is threatened by earthliness it is the part of interpretation to raise it and re-endow it with its primordial essence."

Such is Busoni's theory of interpretation, and those of us who understand will enjoy him. His programs are stupendous, containing the masterpieces of piano literature.

Bauer's art differs from Busoni's art in that it is more intimate, and appeals to the gentler nature of man. For this reason Bauer is more sympathetic as an interpreter of Schumann. As a Chopin player he is more romantic. Do not think, however, of Bauer as a weak sentimentalist such as De Pachmann! He is a most healthy, normal man and marked in mentality. He is well informed and a most interesting conversationalist, a rare thing nowadays.

He is like Busoni in that he is a seeker in new paths. As an interpreter of the new French School, of which Debussy is the leader, I find Bauer a master without a rival. He creates just the right atmosphere for this music of exquisite moods. I can only compare it to the delicate tints of a Venetian sunset of Turner. Bauer has also shown great interest in the works of American composers and played some of the important works of MacDowell and other composers.

He is an enthusiast and is most successful as a teacher. He has the power of showing his pupils what to work for, and his ideas of learning the literature are very helpful. He told me that he began the serious study of the piano at

SILHOUETTE OF WAGNER CONDUCTING

eighteen, dropping the violin at that time. He said he began at once to study the piano literature, and did not fuss with any of the many piano methods. Of course, he is a man of immense talent, but nevertheless his manner of getting at the root of things is an example which to some extent at least may be copied by all serious musicians. If Bauer began at the age of eighteen, it is remarkable how much he has accomplished.

It is also remarkable that at the age of eighteen Godowsky was a finished artist. It is said that Godowsky could play anything at this age and that he acquired his great technic even before that time. Truly in some ways Godowsky is the greatest pathfinder of all, because of his analytical powers and his ability to apply the principles to practical use. Godowsky is probably the most remarkable combination of pianistic powers and pedagogic ability in the musical world at present. He plays practically the entire piano literature from memory, and as head of the Master School for Pianists, Vienna, occupies the most exalted position in Europe as an educator. He has worked successfully along the line of muscular control through relaxation, and he has been his own teacher to a very large extent. He studied for a while in Berlin with Professor Rudorff and in Paris with Saint-Saëns. But he has undoubtedly worked out his own salvation, which we must all do.

I am better acquainted with Mr. Godowsky than with most any of the other great artists, and I can attest for his sincerity as an artist and his just decisions in the ordinary walks of life. He is of a most simple nature, full of fun, and is never unjust although a very severe critic. He is the best balanced musically and temperamentally of all the great artists. His fame will rest upon his qualities as a great technician and interpreter as well as a great teacher. In closing I would mention that he always showed an interest in ambitious young pianists. He would listen attentively, making helpful suggestions, encouraging when warranted, but not holding back criticism when deserved. Teachers may well copy his attitude towards pupils, for he was just under all circumstances.

———*———

HOW ORIGINALITY HELPS THE TEACHER

BY CHARLES BANCROFT

SHE always intended her diploma should grace the walls of a city studio—but the unexpected happened! Immediately after graduation she was called home to the country. Being a girl with initiative, she determined to get the best out of her district.

She felt there was something invigorating, walking along the country roads, swinging one's music roll instead of holding it in a cramped position under the arm—a physical culture exercise in itself.

She had not been teaching long before she came to realize that country parents are anxious for their children to have the best in musical education. One must be a regular encyclopedia to answer all questions. She often smiled to herself when she thought of being counted a back number; in fact, she felt, every month, very much like a "new issue."

She resolved to try to educate her pupils to like the best in music. She started an "Inspiration Club," which met once a month. To these meetings her pupils were invited to bring their friends. The lives of various composers were studied; stories of the operas were read; everything was done to make them interesting and inspiring; pupils were allowed to take notes for future reference. The young teacher found these little "Inspiration" meetings developed an "occasional" new pupil.

One day a family about to purchase a piano asked for her opinion in making a selection—they intended their children should be taught music—but as none of the family could play, they desired a musician's help. She gladly gave her opinion, with the result that two more pupils were credited to her. This gave her an idea. At the bottom of her announcements she had the following little notice printed: "I am always at the service of those who desire a musician's help in selecting a piano." Although she was not often called upon to serve in this capacity, people noted her originality in the service she was willing to render.

She had several backward pupils, those who did not grasp the meaning of what she tried to teach them. In the case of one pupil the thought came to her that perhaps if she spoke more slowly the child would have more time to grasp the meaning of what she said. Finding this helpful she applied it to her other pupils, with good results.

One day she received a copy of the conservatory bulletin, in which she was spoken of as a successful country teacher. But she wrote to a friend: "Originality has been one of my most valuable assets in making people 'take notice' of my ability as a teacher of music."

THE QUESTION METHOD OF TEACHING

BY ALEXANDER HENNEMAN

In the dim and hoary past we find a genius who elevated to the highest the dialogue method of question and answer as a form of instruction; we discover a teacher who through this form of instruction developed such minds as Plato, Alcibiades, and Xenophon. Socrates (469-399 B. C.), the Greek philosopher, than whom there could be no greater teacher, was the founder of what is known as the "Socratic method." At this end of history we find another great exponent of the interrogation method for acquiring knowledge, Li Hung Chang, the premier of China (1895-1898), known as the "Bismarck of the Chinese Empire." His conversation was a volley of questions shot forth on all subjects. Nothing was too simple or unimportant—from asking a young lady's age to a diplomatic question involving the welfare of nations. The newspapers dubbed him "the walking question mark."

Every teacher has made the disheartening discovery that his principles are misunderstood and misinterpreted by his pupils. They advance ideas about his work that are the very opposite of what he teaches. They have only a hazy idea of the subject. Instead of asking questions and getting the matter clear, nothing is said, and much confusion results. If the teacher but knew the subject was confused in the mind of the student, how gladly he would go over the matter.

In the Vocal Summer Institute which I have conducted for several seasons, I impress on the students the need of asking questions. They are instructed to interrupt the lectures at any time if anything is not clear to them. A question box is one of the most valuable adjuncts to the course. Answering questions is the first thing we take up. It begins the class, and all the time necessary to a clear understanding is devoted to the answers. Everything else is put aside.

THE METHOD OF ALL GREAT TEACHERS

I remember an incident with Victor Gluth, of Munich, one of the best teachers I ever met. He had eight students in his harmony class, six Germans and two Americans. The German students never asked questions, while my compatriot and I were always on the floor with interrogations. I had not much time at home to devote to my harmony, yet I did not wish to lose anything, so I adopted the question route.

When I could not decide which of two progressions was the correct one, I always wrote the one that seemed most doubtful to me, and placed a question mark over it. When Gluth would pass the exercise as correct, I would ask him why it was correct as written and why it could not be the other way. Thus I got invaluable information. It taught me what was right, what was wrong, and also what other way it could have been written, and the reasons for all. Whatever I did not fully understand I requested to have repeated. I continued plying questions until it was clear to me.

Gluth was always considerate and patient. He would go over the matter again and again and ask me if I now understood. One morning I was especially dense and did not get the point at all. I asked question after question until I felt and intimated that I was intruding on the time of the class and on his patience. Imagine my surprise when Gluth walked up close to the class and said:

"Gentlemen, we have but two students in the class. They are the two Americans. Whenever they do not understand a subject they say so. You others leave me in doubt whether you have understood or not. Then when the subject comes up later, I find you did not grasp it, and we must go back over the old ground. Take example from the two Americans. Do as they do. You will learn more and our class will advance much more rapidly. Remember, gentlemen, the saying: 'He who asks grows wise.'"

The change in the class was marked after that. A new spirit came into the group, and every subject was threshed out from different angles. It was a revelation.

I would recommend this method to every student in every branch of learning. When in doubt write the poorer version and question—mark it for information. Get all there is to know about that doubt. By this marking and the questions that arise you get the following results:

1. You know positively if you are right or wrong.
2. The reasons.
3. Which of the two forms is the better.
4. And, perhaps, will be given other forms equally as good. Many other things will come up that bear only indirectly on your subject, but illuminate it wonderfully for you.

Learn to ask questions freely and frankly. You will get results. Embarrassments should have no place in this method of instruction. Train yourself against them. Remember, "asking questions indicates interest and intelligence, not stupidity."

NERVOUSNESS WHEN PLAYING IN PUBLIC

BY LEONORA SILL ASHTON

Probably more has been written, spoken, and thought of, in relation to this subject than of any other connected with the musical profession. And yet the stern, sorrowful facts remain the same: the facts of the blood frozen in the wrists, the fingers cold, stiff and unresponsive; the brain afire; and the sickening knowledge of absolute lack of self-control.

This is the bane of even skilled performers, to say little of amateurs; and no practice, however arduous, no long, tedious study of the rules of harmony, theory and counterpoint are so calculated to fill both classes with discouragement as this overwhelming difficulty.

Rheumatism holds a parallel position in the world of disease with nervousness when playing in public in the musical one; while many remedies have been suggested, no positive cure has yet been found. Whether this ever will be discovered or not, we may not say; but let us make the most of the remedies within our power.

A well-known teacher and artist was once talking to a painstaking pupil who was afflicted with this special weakness.

"I cannot play this well enough to play it in public," said she.

"Then play it as well as you can," came the answer. Herein lies the seed of a great helpfulness: Do not magnify your mistakes and shortcomings.

While it is not meant to advise imposing upon the technical ignorance of a majority of a room full of listeners, it can do you no harm to remember that probably they do not even hear some of the mistakes which are most glaring in your ears.

Ignorance is a kind of bliss in a case like this, and if you can go through a piece bravely, overlooking mistakes yourself, you will find that they have not even been noticed by others.

Another suggestion of great importance is:

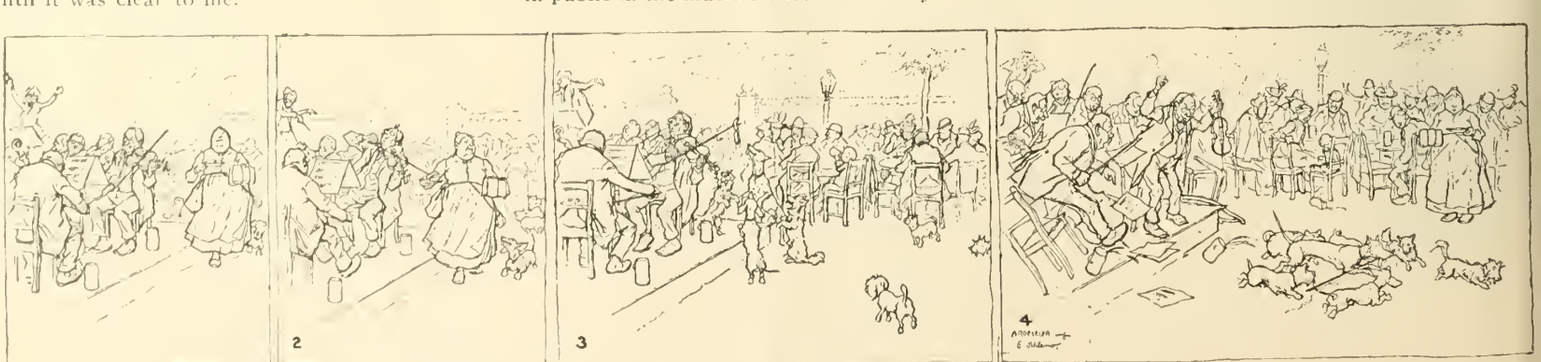
Never come to a complete stop, that is, a breakdown, in the middle of a piece. Cling to one note if necessary; strike a chord in the bass; do anything but take your hands off the keys, and look failure. De Pachmann once stopped in the middle of Chopin's D♭ major prelude, with the remark: "I do not remember the rest"; but you may not do likewise, yet.

Knowledge of the simple rules of harmony will be of great assistance at a time like this. Once a little girl was unexpectedly asked to play before a room full of people. She began bravely and kept on, her heart in her mouth. Halfway through the composition, she realized that the next line was forgotten. A few measures on, she would be all right, but there she was on a solitary G. Very slowly she ran the G major arpeggio up and down the piano; then back to the middle again; struck the chord, then added the seventh; and from the dominant went triumphantly into the harmony of C, where memory returned again. At the end of the performance a kind soul remarked, "A very pretty little interlude." And some believed! But the day was saved.

It is not always realized that one gets in the habit of playing certain things before people; and the nervousness naturally increases when a new piece is tried, though it may be played often at home and in the practice hour. Therefore, when a piece is well learned, be sure to place it on this special list for public performance.

The nervous person will have a long, hard struggle, worse than that with stubborn fingers trying to conquer trills, or stiff knuckles running smooth double sixths; but patience and perseverance can conquer all things, and constant efforts will surely reap results.

Do not take yourself or anyone else too seriously. A mistake in your playing is, after all, not of great moment in the world's progress. Do your best with the power that you have, striving always against self-consciousness, and you cannot fail to succeed.



THE TRIBULATIONS OF A RESTAURANT ORCHESTRA

THE ENJOYMENT OF MUSIC

BY HANS SCHNEIDER

[In a recent issue of the Providence *Journal* we noted a very scholarly and illuminating discussion of the above subject, from which we have made a number of quotations for the benefit of our readers.—Editor.]

THE principal and most natural quality of music is rhythm. It originated with it, it lives by it, and the absence of it means death. All music that is immortal is so by the grace of its rhythmic superiority; all dead music died of rhythmic anæmia.

* * *

From the beginning of our life we have been accustomed to our heart and pulse beats, which recur periodically, and divide "time" into equal fragments. But that is what rhythm does with music; and if body and music make use of the same important force, it is not to be wondered that music appeals first to our body (*physis*) and only secondarily and through associated processes to our soul (*psyche*).

When we see, for instance, a primitive specimen of humanity "enjoying" music, we are sure that this is neither a soul-feast nor an esthetic affair, for upon examination the music he "enjoys" will be found to be of an essentially primitive character, which appeals exclusively to his body, whose most movable parts, head, arms and legs, involuntarily move in time with it.

But this accompanying of music with bodily motion is a great deal more than a mere response to rhythm; it is also the unconscious desire to recreate the music, which desire Yrjo Hirn (*The Origin of Arts*) proclaims as one of the strongest features of the enjoyment of any art. This theory also explains most satisfactorily many other peculiarities connected with the enjoyment of music. It also explains why, in art alone, the association of other senses with the principal one does not decrease, but increases the enjoyment through the principal sense.

It is a well-known psychological fact that simultaneous stimulation of several senses enhances enjoyment in general, but diminishes the intensity of response of each individual sense. Yet in music the sense of seeing, for instance, is one of the greatest helps to the majority of concert-goers; in fact many of them would be utterly helpless if they were deprived of its use.

* * *

But rhythm is not the only quality of music. For although there must be rhythm in all music there is plenty in which this quality makes itself very little felt, as, for instance, in "slow" music. So-called slow music is essentially melodic, but the organic source of melody is harmony and the tendency of tones for certain progressions due to the feeling of key, and as we now have in our heart a physical organ closely associated with rhythm, so we have in our ear one that is sympathetically responsive to mere tone combinations.

* * *

Whenever the primitive ear is approached by too complex or unusual harmonies, it will regard them as "queer" or "wrong," because the ear cannot assimilate them quickly, and cannot vibrate in sympathy with them. This is an experience that, for instance, every music teacher has daily with children, when they come across especially dissonant chords in their music.

Therefore folk music, hymns, and popular stuff, constructed according to this simple acoustic scheme of the ear, and swinging pendulum-like between tonic and dominant, is mostly enjoyed by primitive listeners. And there was a time when, according to J. J. Rousseau, music was supposed to be "the art of combining sounds so as to please the ear."

* * *

If a person of strong vitality lacks imagination, he will be fond of ragtime, which is nothing but rhythm and accent. But when imaginative, he might like good classical music of strong rhythmic quality, and Beethoven's seventh symphony, for instance, with its strong and all pervading two-time rhythm in glorious and endless variety, would strongly appeal to him. But even in this case, the principal "enjoyment" will come from the rhythmic element, while the harmonious and melodic beauties of the work may pass through his mind without leaving any perceptible trace in his consciousness.

* * *

The question is often asked: Who enjoys music more, the trained musician or the untrained layman? The answer is always in favor of the latter. The pleasure derived from music is, first, physical, next emotional, and finally intellectual. But as the enjoyment is raised from the first two states to the highest plane, it loses in genuineness and intensity, for the application of the intellect means control, and curbing of feeling.

If we ask who enjoys music more, the man who listens to a symphony or the man who listens to trivial music, the answer is that he enjoys music most who listens to music best fitted to his personality—the word personality, taken in the widest possible sense, the sum total of his physical, mental, and social qualities, and it does not make any difference whether this best-fitted music is a Brahms symphony, a trivial ragtime tune, or a sentimental ditty.

Taste and enjoyment are relative, personal, individual. *Chaqu'un a son temperament,* and the recipe for the greatest enjoyment of music is to live, to work, to suffer, and to enjoy—for a rich, full life is the best resonance board for music.

VICTOR TALKING MACHINE RECORDS FOR MAY

WHEN one pays out money for an article he naturally wishes to get full value in return, and if, as the days go by, he finds the value remaining in the article he is sure to be satisfied with the purchase. This is the experience of the person who buys a Victrola. It is just as good to him after two years as on the day it reached his house, in fact it is often better, for he has had opportunity, during this period, to become familiar with many compositions which would otherwise remain as sealed books to him.

The musician can get more out of a Victrola than the layman for he has his experience to guide him in choosing a library of records. Singers especially, will find unusual value in a collection of records which place before them the interpretation of master songs and great arias by famous artists. In point of fact a good Talking Machine and well-chosen records will admirably supplement a course of lessons in song interpretation.

The new issues for May are attractive by reason of the artists as well as the records. Two favorites on the list for the present month are Emmy Destinn and Lucrezia Bori. We call the attention of our readers to the following records which we note on the list for May:

Enrico Caruso, tenor: *Don Juan's Serenade, by* Tchaïkovsky, a fine bravura song, in French.

Johanna Gadski, soprano, and **Otto Goritz**, baritone: *Papagena, Papageno,* duet from Mozart's opera *Magic Flute;* a charming and joyous number.

Lucrezia Bori, soprano: *Farewell to the bright visions* (Addio del passata) from Verdi's *Traviata. Ye birds without numbers* (Che volo d'angelli) from *Pagliacci,* by Leoncavallo. Two popular arias, exquisitely sung.

Emmy Destinn, soprano: *Knowest thou the land?* (Kennst du das Land?), from Thomas' opera *Mignon;* and *Some day he'll come* (Un bel di vedremo) from *Madama Butterfly,* by Puccini. Two splendid records.

Clarence Whitehill, baritone: *It is enough,* the fine aria from Mendelssohn's *Elijah.* A fine oratorio number.

Frances Alda, soprano: *A perfect day,* by Victor Herbert, from his latest lyric opera *Madeleine.*

Julia Culp, mezzo-soprano: *Silent night! Holy night!* (Stille Nacht, heilige Nacht!) sung in German. A favorite German Christmas song.

Alma Gluck, soprano; *Sylvelin,* by Sinding, and *Little grey home in the west,* by Löhr, with 'cello obbligato, the latter a very popular song of the better class.

Fritz Kreisler, violinist: *Largo,* by Handel. One of the masterpieces of classic melody.

BOOK NOTES

Elementary Theory of Music. A reference book for children. By M. R. and M. B. Black. Chas. W. Homeyer & Co., Boston. Price, 50 cents.

To make the book a thoroughly practical one the authors have adopted the catechetical form, thus making it suitable for class work with children. The essential facts in theory of music are clearly explained. The final chapter consists of short sketches of the great composers which will make the young pupils familiar with these masters and arouse interest in their works.

Catalogue of Opera Librettos Printed Before 1800. Prepared by O. G. Sonneck. Vol. I, Title Catalogue. Vol. II, Author list, Composer list, and Aria index. Government Printing Office, Washington, D. C. Price, $2.00 for the two volumes.

Here is most valuable material for the student of opera, and a revelation as to the treasures in the music section of the Library of Congress. Mr. Sonneck has prefaced the catalogue with an informing and admirable discussion of the opera libretto. The titles of the various librettos are usually followed by historical and other notes in regard to the work. The Aria index in Vol. II should prove very valuable to the student who desires to place it in the work to which it belongs.

NEW MUSIC BOOKS

The Baby Boy's Book. By Louisa H. Scudder. With illustrations. Published by Louisa Scudder, Windsor, Vt. Price, $1.00, net.

A collection of eight little songs for children, with delightful texts and charming music. The illustrations are reproductions of photographs showing characteristic pictures of child life. A very desirable little book for the young folks.

The Bells. By Clarence Lucas. Boosey & Co. Price, 25 cents.

A setting of Edgar Allan Poe's celebrated poem, in madrigal form, for five-part chorus, S. A. T. Bar. B. A choral work of some length. As to its musical value, it is sufficient to say that it is to be used by the famous Mendelssohn Choir, of Toronto, A. S. Vogt, conductor. It is full of striking effects in accordance with the spirit of the text.

Easy Tunes for Two. By Susan Schmitt. No. 56. Boston Music Company Edition. Price, 60 cents, net.

Little tunes in five note progressions so arranged that the beginning pupil may play either *Primo* or *Secondo* part. A number of the pieces have descriptive verses.

TOUCH PLAYING

BY WILLIAM H. DECK

At present, in every progressive school of typewriting in the world, students are taught some system of "touch typewriting," and this system has shown itself far more advantageous and efficient than the sight method. In my piano instruction I use a system of "touch playing," and have been very successful in making its ideals visualize into realities.

In my opinion a good sight reader must not only know the names of the notes, but he must know where to play them on the instrument. In addition to this, his mind must operate with almost lightning speed from the time his eyes fall upon the note until the sound comes from the instrument. This is an accomplishment toward which every student strives. The finished sight reader, if such there be, can play from memory just as well in the dark as he can in daylight. Why? Because he has mastered, probably unconsciously the art of playing by touch and by relative position.

The first step in my instruction along these lines is to teach the pupil to play by touch. Similar to the system of touch typewriting, the hands are placed on certain keys of the piano and from those keys the player reaches to the desired key without moving his hands appreciably. If his hands move from the first position, he can regain it by quickly feeling, so to speak, for the three black keys or the two black keys, whichever are nearest to the note which he wants, and from their position deduce the necessary distance to the key which he wants to sound.

The second step is that of the teaching of playing by relative position. By relative position, I mean the distance of one note or series of notes in form of a chord as related to the following note or chord. This is acquired only by practice in any case, but I believe that by exercises specially designed for the purpose, the pupil can become more proficient in less time than by the regular routine study. I shall outline my method of instructing by touch and by relative position:

Having learned the names of the notes as they appear on the printed page, the pupil sits at the piano naturally, with his arms at right angles to his body. I hold a piece of music over his hands to prevent him from seeing them. Then I direct him to strike C above the staff, giving him such suggestions as he needs. The conversation sometimes includes the following:

"You do not know the place on the piano? Strike the key over which your first finger is now hovering. It is G? Then what is the next key?" and so on. Sometimes he loses his position at the piano. Then I suggest as follows: "You want to play D on the fourth line of the treble staff? Can you find C below the staff? Good! Now can you find F above that C? Now the next three black keys are what? F♯, G♯, and A♯. Then what are the next black keys? C♯ and D♯." If he is quick to discern, he will strike D before you have a chance to ask him a second question.

By this method, my pupils are taught never to look at the keyboard and consequently never lose their place, thereby permitting them to play evenly and without jerking or hesitating. They are taught to play just so slowly that they have time to read the next note in its regular time relation to the one preceding it. I have often walked along the street and heard pupils practising, the sound reminding me of the strenuous energy which a freight engine exerts in pulling a heavy load up a steep grade. If they start in a tempo which they cannot keep up without hesitating, then I compel them to start again at a little slower rate, and so on until they can play the study without hesitation. The speed mania has permeated everything, and this is the only effectual way of curbing it in piano playing.

The art of playing by "relative position" is something which, as I said before, is accomplished by incessant practice; it is also something which every player must learn. There are different methods of learning it, however. I believe that the majority of players learn it by no special means other than by natural consequences of rigid practice. I have, however, used a set of studies which I devised for the purpose of developing that fifth sense of the correlation of one chord or note to another chord or note next to it. These exercises of which I speak are patterned after the modern waltz style. With constant practice, the pupil will be enabled to play such music without hesitation and with that confidence which renders sight reading so delightful. He has learned to know without stopping to think that C in the bass is just so far from B above the bass staff and has learned to measure the distance instantly.

There is one more suggestion which I use in the instruction of piano pupils and it seems to have proven very potent in the accomplishment of sight reading accuracy. For instance, the pupil has played the chord C-F-A-C, counting upward from the third space, treble cleff; and the next chord following is D-G-B-D, counting up from the first space below the staff. He does not know this chord. I suggest to him that it is just so far away from the preceding chord. He measures the distance by guess, so to speak, and at the same time finds out the name of the top note of the chord; in nine cases out of ten, he strikes the chord correctly.

I have found in my experience that by the above method of relative position, a pupil can play chords or octaves correctly and evenly although he may not instantly know the names of the notes which go to make up the chord.

Sight is the first sense brought into play in sight reading. The eye falls upon the note, and if the mind is not ready to name the note the eye then measures the distance of this note from the preceding while the mind is searching for the name of the note. The two procedures are generally finished simultaneously and the chord is played. These operations are done slowly at first, but finally they are done unconsciously by the mind through the medium of the sight.

AMERICAN PIONEERS IN METHODS FOR TEACHING MUSIC TO CHILDREN

The Musician has received a very interesting letter from Mrs. Katharine Burrowes in regard to the publication of an article in *The Delineator*, in which the author credits Mlle. Chassavant, a music teacher of Geneva, Switzerland, with being the originator of special methods of teaching music to children, such as have been extensively introduced in the United States by Mrs. Burrowes, Mrs. Fletcher Copp, Mrs. Dunning, and others.

It seems to us that this assertion is entirely too sweeping and tending to discredit the splendid work which has been done by the teachers mentioned, whose devices are by no means new, as Mrs. Burrowes' material is covered by patents going back as far as 1895, and to the knowledge of the writer, Mrs. Copp has been working in this field an equal period.

We make this statement, believing that a protest is due the pioneer work carried on by earnest, enthusiastic women teachers all over the country. We want our readers to give credit to Americans for their work and not be ready to attribute the origin of pedagogic progress to Europe.

READING AT SIGHT

At a meeting of the Music Teachers' Association in London, Dr. J. Warriner referred to an advertisement which offered to teach one how to read at sight in five minutes. For twenty-five cents he received a small book which, reduced to a few paragraphs, told him that only four things are necessary:

1. Learn to read the notes.
2. Learn to keep correct time
3. Use the correct fingers.
4. Play with correct expression.

One can imagine the sardonic smile of the person who prepared the above and sold it for twenty-five cents.

Dr. Warriner followed the relating of the above incident with an address on the subject of reading at sight. We quote a few paragraphs:

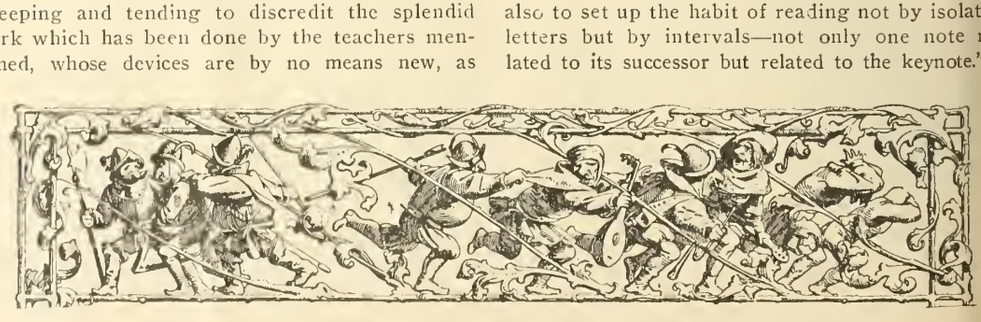
"The old cathedral organists constantly played from figured basses. Now accompaniments are written out in full for everybody. The study of sight-reading, figured basses, etc., forms habits of thought, the value of which cannot be overestimated.

"Upon the cultivation of the sense of locality depends much of one's success. The pianist is well known who in see-saw fashion looks at the keyboard and then at the music. Those who are allowed to use their eyes for the purpose of location are certain to be nervous, halting, stammering executants and slow readers.

"The best way to cultivate sight-reading is by melodious duets—things which bring out various points of study on the keyboard. Some people make a mistake by putting all this work in key C. Again, it is a mistake to use both hands together. The players might employ both similar and contrary motion in the duets, the connection with the key-tone being specially borne in mind in all cases.

"Persons who have considerable technical power are not always good sight-readers, and people who are good readers are not always good executants. The aim should be to bring intellectual work up to the same level as the technical. All the time the student must be determined not to use the eye to find the right note.

"Another important factor is reading from the lowest part upwards, not from the highest part downwards. A number of pupils play fairly correctly with the right hand and indifferently with the left; they read downwards; they build their house from the top. In reading music one has also to set up the habit of reading not by isolated letters but by intervals—not only one note related to its successor but related to the keynote."



THE TRIALS OF MUSICIANS IN MEDIEVAL TIMES. FROM AN OLD TITLE PAGE

SUMMER MUSIC STUDY

BY CLARENCE G. HAMILTON

II

A SYMPOSIUM

THE watchword of modern times is efficiency. A professional or business man, in order to succeed, must do more than plod along a given routine; he must at the same time increase his grasp upon his subject, and fit himself for more signal achievements.

Just along this line the music teacher is given a golden opportunity in the summer months, which are free for self-improvement. During the busy winter season, when the unending details of lessons, recitals and concerts fill every crack of the time, the outlook for individual work is limited. So the teacher retires from the contest in June dilapidated mentally, and thinking of vacation time as one of rest.

But let him not be misled by the attractive word *rest*. After pouring out ideas for nine consecutive months, his mind will not be renewed by lying in a comatose condition for a dozen weeks. Rather does it need the refreshment of a new set of ideas, material and inspiration for new demands.

Towards this end the first step should be the formulation of definite plans. Many a summer has gone for naught because one simply resolves to "do a lot of work," but does not determine just what that work is to be. Then the weeks slip glibly by, and autumn finds the good intentions at the zero mark of accomplishment.

Perhaps your pocketbook has become full enough to justify a trip abroad. Make a list of what this trip is to mean in added musical equipment. You are to study four weeks with Herr Schlamer, the distinguished virtuoso; you are to visit places of musical interest among the Rhine towns and attend the festival at Bayreuth.

Or, not having the funds for Europe, you resolve to study by yourself. Do not, in this case, take up your abode in a miscellaneous summer community, with its unprofitable distractions; but rather stay comfortably at home, or repair to a quiet summer cottage or camp, where a piano and music room are available. Plan a course of musical reading — history, biography, esthetics — embracing a given number of pages each day, which are to be perused not superficially, but with the aid of a notebook in which valuable ideas when found are recorded. Define your practice in time, amount and character; let there be technical work, memorizing, and much sight-reading of possible teaching material.

There is a third opportunity for study offered by the various music schools and communities devoted to summer work. Some of these are connected with colleges, while others are a development of the summer resort. Certainly, their establishment is a laudable attempt to meet a real need of the professional and amateur musician alike, and to furnish an opportunity for the pursuit of music under the most favorable conditions.

Let us consider some of these conditions in the ideal summer school. This will be picturesque in location, and high enough in elevation for the breezes to temper the heat and to drive away the obnoxious mosquito. Simple but comfortable quarters and nutritious food will be provided, so that physical as well as esthetic needs will be satisfied. Again, there must be instructors who have won a name not simply as performers, but also as thoughtful and inspiring guides, and who possess an enthusiasm that will fire the students and create a spirit of sympathy and comradeship.

Finally, there will be the element of play, intermingled with the hours of study—the free outdoor life, the summer sports, such as bathing, boating or mountain-climbing, the community gatherings for song, story or other entertainment, the long rambles in forest or on shore, the general good cheer and the common search for beauty amid beautiful surroundings. Such a school should be successful in creating something of that musical atmosphere which American students often seek in foreign lands.

With all these possibilities abounding, there need be no excuse for a wasted summer. Under the best of circumstances, summer study involves some outlay of money; but this outlay is capital invested in a stock of ideas which are sure to gain compound interest at a high rate, interest, too, which no bank failure or decline in securities can depreciate.

To keep alive as teachers, we must have our eyes open to new and up-to-date methods, to theories and facts in our own and closely allied subjects, and to events and personages identified with musical progress; so let us devote our summer to vitalizing our attitude towards music, to winning a perspective which will show the true relationship between what has happened and will happen in the music art. As a result, we shall attain, with the advent of another September, a consciousness of added efficiency that will make its presence felt in the minds and the work of our students.

———*———

THE VALUE OF SUMMER MUSIC STUDY

BY JOHN J. HATTSTAEDT

IN the language of President Wilson "the utility of the summer session is no longer debatable." "But," some one will say, "what is the use of spending time and money for summer study when you have slaved all through the season and when you are physically and mentally exhausted?" To this I will answer that the average teacher need not fear any ill results. To him a well-conducted summer session is a pleasurable recreation. He is in need of a tonic which he will receive by interchange of opinion, by a change of surroundings, by rubbing elbows with new people, all interested in the same object.

A four or six weeks' session is not supposed to effect radical changes in a pianist's or singer's method or to furnish him with a new prepared repertory. What he needs is to have his own work undergo a critical analysis, to hear new compositions and to receive suggestions for his own improvement. By attending the normal classes he will be enabled to gather much new material for use in his own teaching, he will hear new viewpoints on many vital questions, he will broaden in musical knowledge and will begin his next season's work with renewed vigor and confidence.

Aside from everything stated above, let us not forget the new associations made among musical people hailing from different parts of the country; associations which frequently prove to be lasting ones.

The writer recalls with much pleasure his first attendance at a summer normal session, held at the quaint old town of East Greenwich, R. I., in 1874, under the direction of Eben Tourjée. Aside from the artistic benefits derived through instruction, the daily social intercourse with such men as Dr. Tourjée, the genial, lovable Carl Zerrahn and others, remains unforgettable. Of no minor interest and enjoyment were the associations with many of the student members of the session, many of whom are today prominently identified with the musical development of this country. Of these I now recall such names as Theodore Presser, Jules Jordan, Arthur Weld, and Henry B. Roney.

THE VALUE OF THE SUMMER SCHOOL

BY FANNIE E. HUGHEY

FOR the busy, progressive teacher the days are not long enough to do the daily work and at the same time keep up with the flood of new ideas, new methods, new books and materials constantly offered for the inspiration and help of educators.

When summer provides a respite in the way of a vacation, the opportunity to "catch up" is presented.

Several ways to do this are offered. Some teachers choose to visit state conventions and, through lectures, concerts, round tables, and association with other teachers, "freshen up" for the coming year. Others gain needed refreshment by travel, others still by "taking to the woods" for a restful vacation with nature's soothing voices and inspirational messages.

There is no place, however, quite so sure to give definite value received for time and money expended, as an up-to-date, good summer school. Here one meets the most *"alive"* teachers; and instead of a conglomeration of ideas, secures real working material for his class the following year.

Many teachers, who are obliged to teach early in life, so arrange the summer terms of study that each year adds a half year's work in one or more subjects, which help to round out in time a full educational course.

Not only does the summer school make the efficient teacher more efficient, but the fact that a teacher thus spends his time is about the best advertisement he can have. I once inquired of a mother why she selected the teacher she did for her little girl. She promptly told me it was because the teacher was always advancing her own education in every way possible.

One teacher told me, where I held a summer class on the Pacific Coast, that she gained enough in four weeks to enable her to obtain results the following year which were finer than anything she had ever seen accomplished with the same grade of children. This success made her *more valuable* to her own school, because her increased value was easily recognized by others needing a good teacher.

———*———

SUMMER MUSIC STUDY

BY MARY WOOD CHASE

IN regard to your inquiry as to the value of summer study permit me to say it is indispensable for teachers who are unable to continue their study and practice during their teaching season.

Teachers who are far removed from musical centers can hear little or nothing of good music aside from what they or their pupils can make. Such teachers need mental and musical stimulus. They need to get in touch with teachers who are progressive and who are offering the best of modern thought to their pupils. They need inspiration and recreation combined. They must keep out of a rut if they would retain their enthusiasm. They must have enthusiasm to succeed. Success increases reputation and success brings better opportunities with increased income or salaries. This is recognized by large numbers of teachers who devote summer after summer to increasing their knowledge of the art under the direction of some famous teacher.

Our personal observation teaches us that many of our summer students have had promises of substantial increase in salaries conditional upon their completing certain courses offered by us during the summer sessions. They risk nothing but have everything to gain. Others who prefer to teach privately write that the enthusiasm of their patrons is greatly increased through this new field of acquired knowledge and inspiration.

In every case we have found that the enlarged financial returns fully justified the expense. Renewed inspiration and enthusiasm form no small part of the enduring benefits.

THE EAR IN PIANO PLAYING

BY CONSTANTIN VON STERNBERG

THE great pianists traveling over the world, creating enthusiasm and giving enjoyment everywhere, play many pieces which belong to the repertory of the advanced pupils of every teacher. This is the case not only with classical works in general, but also with a host of modern pieces. Assuming, now, that these pupils play these pieces correctly (I use this word advisedly), free from false notes, with a good touch and tone, observing the dynamic annotations and all that—they would perhaps not be unwilling to admit that, despite all their correctness, there was still a world of difference between their rendition of the piece and that of the concertist. And when asked to explain this difference in detail they would seek shelter behind some commonplace such as: He played it faster than I can (which is very seldom true); he has more strength than I have (which has seldom anything to do with the question) and, when all else fails, he has more "talent"!

Far be it from me to deny that the qualities constituting the difference of which I just spoke are due to certain *functions* of the concertist's talent, but talent is a mystery which needs no explanation for the present discussion. Musical talent is given to all of us, to all normal humans as well as—in a certain degree—to animals. It is the *exercise* of our talent that makes the difference.

To illustrate: Any boy or any girl who can keep step with the music in a march shows rhythmic sense; but when they play the piano they let their left hands strike the keys before their right hands; not to speak of numerous other rhythmical sins. Any boy or any girl who can distinguish one tone from another has a musical ear—how many of them ever listen to their own playing? I could go on in this way through all the phases of musical talent and show that the defects in the playing of most amateurs and students are no more due to a lack of talent than to an insufficient number of fingers, but only and solely to a want of attention in the use of the various organs employed in piano playing, such as the eyes, the fingers, and, especially, the *ear*.

When I speak of an attentive ear I do not refer to such "stunts" as *absolute pitch* or the ability to name a tone the instant it is heard. These things, coming natural to some persons, have very little—if anything—to do with music-making. A single tone is not music any more than a single brick or a stone is architecture. Music arises from the relations between and combinations of tones. Besides, absolute pitch and quickness in naming tones are easily acquired by anyone who is willing to spend his time for this sort of sport. All these and kindred things are not referred to by my speaking of "an attentive ear"; it is the much simpler, natural faculty of

LISTENING

If we express in figures the vital force employed in piano playing, say, as thirty pounds per second, we can understand well enough that a child gives fifteen to the eye in reading the notes and fifteen to the fingers. I say we can understand it, because we can understand almost any wrong; but it remains a wrong, a great wrong, a fundamental wrong just the same! And it is here where I find a saddeningly large number of teachers to be culpably negligent, if I judge them by the many pupils coming to my school after previous tuition elsewhere.

No beginner should be allowed to look at his fingers after they have struck the first key; right or wrong—either in reading the notes or in striking the key—*should be determined by the ear and only by the ear.* The teacher should have something (a piece of paper perhaps) handy to cover the child's hands instantly whenever a wrong tone is played, in order to compel the child to listen to the tone and by the ear find out whether the note was wrongly read or interpreted upon a wrong key. It is at the very beginning that the habit of listening should be formed, for only then it will (and very soon) lead to "fore-hearing" the tones which the notes represent; unless this basis is firmly established we cannot hope that the example set by the great pianists may be of any benefit to the pupils. We must understand that many of the things which distinguish an artist's playing are the result of self-criticism which is primarily exercised by the ear. However much intellectual work their playing may reflect, it could not have been done except on the basis of hearing, that is, acute *listening*.

There are several tonal particulars which amateurs and pupils as a rule treat with outrageous negligence. One of these has to do with the very nature of piano tone and its adaptation to melody. As a generalization with regard to melody is impossible, I shall resort to illustration in explaining my points, but let us understand first that musical tone has only three dimensions, namely:

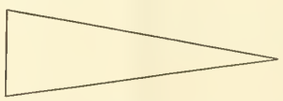
The steady tone

The swelling tone

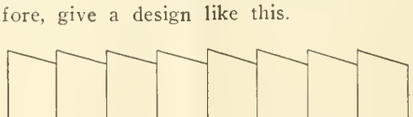
The diminishing tone

Of these three dimensions the piano commands, strictly speaking, only the third, the diminishing tone. While it can artificially produce an imitation of the other two kinds the result comes under the head of artistic illusionizing, for it is not inherent to the piano and can, even by the greatest artists, not be produced upon a single tone.

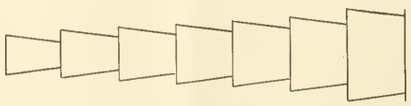
If we thus recognize and acknowledge that a long tone on the piano has this shape



and that a chain of equally strong notes would, therefore, give a design like this.



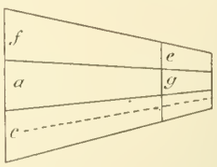
while a crescendo would look like this,



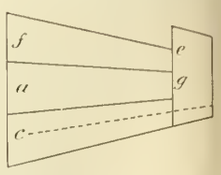
we can only wonder at the lack of care bestowed upon that quality tone which is the only natural one inherent to the piano.

Let us take the second measure of the *Andante* in Beethoven's sonata, Op. 2, No. 1. Aside from

the fact that the first note bears the primary accent, while the second note is, therefore, a weaker or softer one, the decline of force between the two notes depends upon the tempo which determines the length of the first note. The second note should, therefore, be nicely adjusted to that degree of softness to which the first has sunk by dint of its duration. The three notes simultaneously engaged here should, in their progression, represent this picture:



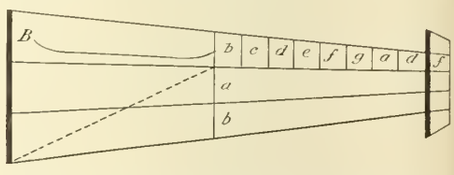
and not this



as it often—I regret to say usually—does.

The same design applies to any anti-climatic tone, such as, for instance, at the end of the *Adagio* of Beethoven's sonata Op. 2, No. 3

where the little run in thirty-second notes should set in at the precise degree of force to which the preceding B has in the course of its duration, fallen off. That Beethoven had a keen appreciation of tone values can be plainly seen in the annotations he made there. It is not enough, however, to strike the first B loud and to play the run and bass note softer; the student should learn to feel that the thirty-second notes are but the outcome of the preceding B, the dynamic sequel of it, and that their tone value or force must stand in a definite relation of proportion to it, like this:



Still worse is the effect of tone negligence in cases where the melody lingers upon a prolonged tone while underneath it a motion of some sort takes place in an accompanying part, as in the *Adagio molto* of the Sonata, Op. 10, No. 1, third measure.

The innocent Ab (marked X) is, with very rare exceptions, played by students with a force as if it were of the most serious import and as if they thought, "The melody? Why, it can go hang!" And yet that little note is nothing but a rhythmic by-play completing the harmony; it should be as soft as, or even a trifle softer than, the upper Db has become by the time the Ab is due.

Not to dwell too exclusively upon Beethoven, we might take the work of any other master and find that to all of them is to be applied what I suggested in regard to dynamic relations based upon the nature of piano tone. In the well-known *Nocturne*, Op. 9, No. 2, by Chopin, the second note in the first measure is usually played without the slightest regard to the first, the prolonged G. If we imagine the melody sung to a text such as "the darkness is falling," the usual rendition would make it like "the dark-*ness* is falling." Absurd, isn't it? Still, it is very seldom that it is not thus played. To avoid such an absurd rendition, it is not sufficient to follow an intellectual precept in playing the F merely softer than the G. The tone value must be *proportioned* and this proportioning cannot be measured except by the sense of hearing, by the closest possible attention of the *ear*.

An artistic pianist will probably smile at my dwelling so lengthily upon a matter which appears to him self-evident, but I am not addressing him.

I speak to students. I know that many of them feel the tonal defects in their playing and are only too willing to correct them, but cannot do so because they are unacquainted with the underlying physical law based upon the nature of the piano tone. The foregoing explanation may help them to render their melodies more songlike, to humanize them.

Dynamic relations bear, however, not exclusively upon tone values; they also have a bearing upon time keeping and its deviations, upon matters of harmony and phraseology. Of these I shall speak some other time. For the present I wish to show that so seemingly simple a matter as the playing of a melody cannot be done intelligibly without the most active participation of the ear.

SLEWED MUSIC

BY LEO RICH LEWIS

Reprinted by permission from Harper's Weekly, Feb. 7, 1914

It has somewhere been said that an element in the enjoyment of smoking is in the sense of continuous triumph over slight nausea. Whether the statement be true or false, it may, by suggestion, serve as an informal and speedy introduction to some comments on the product of up-to-the-minute composers like Debussy and Schönberg.

There is no doubt that the music of these men is, esthetically speaking, nauseating to the average cultivated listener. There is good reason to believe that it is intensely enjoyable to a discriminating—or undiscriminating—few. Let us metaphorically classify the auditors as non-smokers and smokers, and hasten to get nearer our subject.

Music did not begin to be a language until it began to blend dissonating voices. We have had, up to 1900, six centuries of music connected more or less with words, followed by three centuries of music disconnected more or less from words. Such is one kind of a summary of the development of *our* music. But throughout both periods dissonance has been a feature of prime artistic importance. Of course, then, the "average cultivated listener's" nausea is not caused by dissonance. He is quite used to that.

During the three-century period Bach and his contemporaries made harmony organic. That is, they recognized certain associations of chords and keys as desirable, and fixed in practice the principles of such associations. But Richard Wagner revised the world's notions on that subject. What might be called the systematic expectancy of the classic period was wholly annulled. Our listener, then, does not object to music because it is harmonically inorganic. He is quite used to framelessness.

Bach and Company also fixed the scales and modes as we know them, major and minor. Tonality (the quality of being in a key) became cogently and definitely a principle of music. Indeed scales became fewer, and keys more individual. And when, about 1890, composers showed unmistakable tendencies to blur scales and keys, serious trouble began for the average cultivated listener. Neither he nor any of his ancestors had ever felt the pangs of chronic musical astigmatism.

It would be possible, in perhaps two hundred pages of text and musical examples, to show that Bach himself suggested "impressionistic" effects, and that all the great composers (including, by the way, Mozart, and perhaps excepting Schubert) occasionally "reached for" them. But we must, as we are dealing in lines and not in pages, waive everything except reference to the fact. Yet we must not fail to observe that a liberal percentage of blur—or shall we call it torsional strain?—of scales and keys is found in Franck, d'Indy, and Richard Strauss, not to mention Wagner. In Debussy and Schönberg, however, we discover a new feature, the slew. Debussy has slewed Melody and Schönberg has slewed Harmony. As Rhythm was already infinitely slewed, there was nothing left to be done in that domain.

CARICATURES OF FAMOUS MUSICIANS

Debussy's cult-fosterers talk of the "whole-tone scale" which he uses. They seem to be in error. At any rate, the nauseating stylistic feature of Debussy's music is quite simple: he persistently slews his melody by the employment of perhaps twenty-five per cent of the next tones, above or below the expected tone. That is, about a quarter of the time, when one might reasonably expect the tone G, one hears G♯ or G♭. By unslewing his melodies we get rather agreeable and sometimes even significant music, as might be expected from one who has good things to his credit in "regular" style.

Schönberg's slew is embodied in the harmony but it is also on the next-tone principle, and the percentage of presence approaches 100. If the upper register is in the key of G, the lower will be in the key of G♯ or G♭. Just to clinch the slew, as it were, a few miscellaneous tones appear which "kill" both the keys which are struggling to prevail. Apply the unslewing process to Schönberg, and the resultant is comparatively less interesting than Debussy's.

Now, bi-tonality or multi-tonality may be destined to enter into the music of the future; but one may safely opine that these things must await cleverer—and, especially, more versatile—exponents than Debussy and Schönberg.

The *raison d'être* of the procedure of these composers is easily defined: like their predecessors, little and big, they are striving to produce something novel; a praiseworthy and probably spontaneous effort. We cannot at once know whether these innovations will be durable—or endurable. One may almost take for granted that congenitally distorted creations will be welcomed only in side-shows, where freak meets freak. Of course, in all the arts, the side-show has occasionally put the regular show out of business. But, in facing the future of music, we are still comforted by the occasional appearance of a fresh work which, by its thoroughgoing modernity, its technical mastery, its rich manifestations of melodic and harmonic inventiveness, increases our confidence that the evolution of music is still independent of hectic and inept experimentation.

And, by the way, a really valuable innovation always contains germs of development and elaboration. Shall we dare to attribute exceptional sagacity to the commentator who remarked: "Ah, yes! *Pelléas et Mélisande*. Really, I am immensely interested in—M. Debussy's *next* opera!"

USEFUL VS. USELESS TEACHING

In his latest work, *Musical Interpretation*, Mr. Tobias Matthay presents the following suggestive ideas on the right and wrong kind of teaching:

The *wrong* attitude is to try to make the pupil directly imitate the musical effects, the "points," etc., which your musical sense tells you are required, but without the *why* and *wherefore*. Thus you turn your pupil into a mere responsive automaton, a Trilby to your Svengalism. This is sheer "cramming," and can have no abiding influence educationally.

The *right* attitude is to insist on your pupil trying to see for himself all the time, to the best of his capacity, musically and technically. You must *force* him to use his own judgment and imagination, so that that may prompt him all the time; and you must guide that judgment and imagination all the time, so that right seeing and thinking is learned.

In the first case you teach your pupil to play without thinking, whereas in the second case you teach him to play *because* he is thinking, and is thinking rightly.

BACH AS A TEACHER

BY ORLANDO A. MANSFIELD

WHILE unquestioningly assigning to Johann Sebastian Bach a prominent position—perhaps the most prominent position—amongst composers and executants of premier rank, how very few musicians ever pause to think of Bach as the greatest musical educator of his time, and one of the greatest musical educational forces of subsequent ages. Yet such he undoubtedly was and is; the first proof of this statement being found in the variety and extent of his educational activities, which included,—in addition to organ and harpsichord playing, harmony, counterpoint, and general composition,—violin playing and singing. Bach was also a most successful choir trainer, and at one time he actually taught Latin to the lower forms in the Thomasschule, at Leipzig, he being, according to Spitta, "a sound Latin scholar from his school days." In the general education of his family Bach took an active part, while "the musical education of his sons," says Herr Maczewski, "he made his special and peculiar care."

That Bach was actively engaged in imparting to certain students some portion of his "enormous knowledge" of stringed instruments, and of that executive ability on the violin which gained for him his first appointment as violinist in the court band at Weimar, is proved by the testimonials he gave to his pupils, J. L. Krebs and Altnikol. Of the former he said, "I have brought him to be a musician skilled on the clavier, violin, and lute, and not less in composition." To Altnikol, who afterwards married his daughter, Bach referred as one "exceptionally skilled in composition, in singing, and on the violin." There is, however, no direct proof that Bach ever taught the lute; but his practical acquaintance with that instrument is proved by the fact that about 1740 he invented a "Lauten-clavicymbel," a kind of harpsichord which "sounded like a real lute" without "the gloomy character of the theorbo."

At the Thomasschule Bach taught singing to the four upper classes of boys. He had also the direction of the choirs of the Leipzig churches of St. Thomas and St. Nicholas, in addition to supplying voices for two other choirs in the same city. This sometimes necessitated his acting in the capacity of an examiner. Here are some samples of his thoroughness in this direction, as proved by the reports he drew up of the capabilities of applicants for vacant choristerships: "Johann Christian Schmied has a fine tenor voice and reads well at sight"; "Herr Magister Irmler has a fine method of singing, but he is somewhat wanting in accuracy of ear." This style of examination would probably be a little too thorough for some modern choristers. Its plain speaking might also be abused by some modern adjudicators we could mention.

A THOROUGH TECHNICIAN

That Bach's method of imparting technic was as thorough as his technic itself may be inferred from Spitta's description of the former. "In the first instance," says the great biographer, "he only gave exercises in touch, in fingering, and in the equal and independent action of every finger of both hands. To this he kept the pupil for at least a month, but would sweeten the bitter dose by giving him graceful little pieces, in each of which some special technical difficulty was dealt with . . . Embellishments had to be practised persistently in both hands from the very first."

In the days of Bach textbooks were practically non-existent; and in setting himself to remedy this deficiency, by writing his own educational treatises, Bach has only provided us with another proof of the thoroughness and originality of his educational methods. For his eldest son, Wilhelm Friedemann, he wrote, in 1720, when the child was only ten years of age, a *Little Clavier Book,* containing scales, ornaments, lessons, preludes, chorals, dances, inventions, fugues, etc., all arranged in progressive order; while for the same fortunate youth he wrote at a later period, a *Little Organ Book,* containing 45 choral arrangements, "planned for beginners in organ playing." For the completion of the organ studies of the same son Bach afterwards wrote his six organ sonatas. Further educational works were the two clavier books he wrote for the instruction of his second wife, Anna Magdalena. These contain not only preludes, suite movements, and chorals, but, in the second book, "a few true arias written for Anna Magdalena's voice," also rules for figured bass playing, and explanatory remarks concerning scales, triads, etc.,

Bach's *Inventions,* when finally revised, and published in one volume in 1723, were entitled "An honest guide by which the lovers of the clavier, but particularly those who desire to learn, are shewn in a plain way, not only to learn to play neatly in two parts, but also, in further progress, to play correctly and well in three obbligato parts." "Here," says Spitta, "we have the whole confession of faith of the musical instructor." Further, the celebrated *Wohltemperirte Clavier* was intended "for the use and practice of young musicians who desire to learn, as well as for those who are already skilled in this study." Concerning this, Spitta remarks, "the instructional aim stands first in all its simplicity." —a statement confirmed by the fact that several of the preludes of the first book were contained in W. F. Bach's *Little Clavier Book* which was begun in 1720, two years before the publication of the first part of the immortal "48."

Indeed, Bach never wrote a clavier piece which did not serve as a healthy gymnastic for the fingers. The advancement and culture (of student musicians) in the comprehension of art were to him objects of the warmest interest and inspired him to creative effort. Heinrich Nikolaus Gerber relates that, at the first lesson, Bach set before him his *Inventions,* after these a series of *Suites,* and then the *Wohltemperirte Clavier.* With this agrees the testimony of Phillip Emanuel Bach, who says, "My late father had a happy way of putting his pupils to the proof. With him his scholars had to go at once to his by no means easy pieces."

AS A TEACHER OF THEORY

As a teacher of harmony, counterpoint, and composition generally, Bach was as conscientious and as original as on the more technical side. In addition to the brief notes on thorough bass in his wife's *Clavier Book,* Bach has left us a treatise on this subject, dated 1738, preserved in Kellner's collection, and entitled, "Principles of thorough-bass and directions for performing it in four parts in accompanying for his scholars in music." In the course of the book Bach says "The ultimate end and aim of thorough bass should only be the glory of God and the recreation of the mind. When these are not kept in view there can be no real music, only an infernal jingling and bellowing."

To the practice of figured bass Bach attached much importance, considering that anyone who had mastered it had "already grasped a great part of the whole art." From Kirnberger we learn that Bach regarded consecutive fifth and octaves as "the greatest errors in composition," unless occurring between passing notes or in ornaments; that he was extremely particular as to hidden fifths and octaves between the inner parts; and that in the matter of the doubling of discords, the leading note, and the major third his views were in substantial agreement with those laid down in most modern textbooks. His system of teaching counterpoint seems to have been to commence in four parts, discarding the old *Canto Fermo* in favor of a choral melody. To what he intended his system to lead may be gathered from a study of his *Art of Fugue,* his last complete work, consisting of "fifteen fugues and four canons on one and the same theme." "Here," says Spitta, "the practical and educational purpose and the free artistic ideal are inseparable The mere idea of imparting instruction awoke Bach's artistic inspiration. Never had he done more excellent work than when he undertook to aid, by his example, in the advancement of the disciples of art."

HIS ADAPTABILITY

Passing from the method to the manner of Bach's teaching, we have abundant evidence of its extreme adaptability,—the hall-mark of skilful education. Says Marpurg, "I believe that this great man (Bach) had more than one method of instruction, and that he always adapted his style to the capacity of each pupil, according as he was more or less gifted by nature, or as he turned out to be pliable or stupid, clever or a mere blockhead." Says Spitta, "It both commands our reverence and quickens our heart to see this man, whose Titanic imagination could at one moment lift its hand to grasp a sublime ideal, sitting down, the next hour, among his scholars, the sons of organists and cantors of the most modest pretensions, explaining patiently the mechanical use of the fingers, generously helping a blunderer by writing out a special exercise, and urging them on to higher aims with all the earnestness of a teacher, by performing the examples he had set them."

That adaptability was accompanied by kindness is proved by the respectful affection all his pupils retained for him. As Sir Hubert Parry puts it, they "naturally felt him to be the greatest musician they had ever come across." One of his earliest, perhaps his first pupil, Johann Martin Schubart, a pupil of his Mühlhausen period, "lived in close intimacy with him for full ten years." Most of his pupils resided in his house, and each of these was regarded as a member of the family.

The number of these pupils forms a remarkable proof of Bach's popularity as a teacher. Apart from his own sons, all of whom, says Sir Hubert Parry, "profited technically by what their father taught them," and other family connections, there are the names of such excellent musicians as Krebs, the father and three sons, the eldest of whom, Johann Ludwig was Bach's best organ pupil.—"the only crab (Krebs) in my brook (Bach)" as his master once said of him,—Schneider, Gerber, Agricola, Altnikol (his son-in-law), Kirnberger, and Kittel, the teacher of Rinck. This list only represents a tithe of the pupils associated with Bach during the latter years of his life. During his Weimar period his popularity as a teacher was largely due to his skill as a performer. Afterwards it was more largely due to the general recognition of his all-round musicianship.

Nor did Bach's interest in his pupils cease when they left his care. He was always interested in their progress and ever ready to aid it by his influence. The testimonials he gave his pupils were, in many instances, "the foundations of their fortunes." Of Krebs he said, "I am persuaded that I have brought him up to be a musician . . . that need not be ashamed to be heard." Altnikol he recommended as "my former beloved scholar, exceptionally gifted." With other pupils he maintained correspondence and received friendly visits up to the time of his death.

REPUTATION AND INFLUENCE

That Bach's reputation as a teacher was not due to a passing craze or a pleasant manner, but to his

production of artistic results, is proven by the fact that the names of his pupils are still remembered, and that their remembrance is due to the training they received at his hands or under his roof. The municipal and court organ appointments obtained by them were as numerous as they were important, while in open competitions they outdistanced all their rivals. Thus Kirnberger became court musician at Berlin; Krebs court organist at Altenburg; Kittel organist at Erfurt; Gerber court organist at Sondershausen; Schneider organist at St. Nicholas, Leipzig; Agricola court composer and capellmeister to the King of Prussia, etc.

What Bach's influence and exertions did for his own sons may be judged by the fact that Bernhard, his third son, obtained his father's old appointment as organist to the Marienkirche, Mühlhausen; while in 1733, at the age of 23, W. F. Bach was appointed organist to the Sophienkirche, Dresden, and afterwards became organist of the Marienkirche, Halle. In 1740 P. E. Bach was appointed capellmeister and accompanist to Frederick the Great, and it was probably through his son's influence that the father's historical visit to Frederick was made.

Lastly, in regard to the results brought about by Bach's artistic influence rather than by his personal contact or control, no man has exerted and few, if any, will ever exert a greater influence upon the technic and art of music than J. S. Bach. Mozart declared his music to be "something from which a man may learn," and never were Bach's works more diligently studied or more ably performed than at the present moment, and never were they more reverenced or more readily recognized as models of musical composition.

And herein lies the greatest evidence of Bach's educational powers. He has proved himself to be a teacher, not only for an age but for all time. No man can call himself a true artist who has not studied in Bach's school. Nor can any man call himself a composer who has failed to derive inspiration from a study of Bach's writings. The man to whom we owe the establishment of modern tonality and chromatic harmony, the foundation of keyboard technic, the development of the fugue, and the adoption of equal temperament, is a man whose influence can never be forgotten or ignored. Of him, more than of almost any other musician, it can be said that, both technically and artistically, "he being dead yet speaketh."

SUPERVISOR AND TEACHERS OF MUSIC --- MUTUAL HELPFULNESS

BY LILY ALTHAUS SMITH

It must be apparent to anyone interested in the progress of music in America that the public schools are taking a surprisingly prominent part in the musical life of communities both urban and rural. While this article is intended chiefly for the latter, yet it is true that even the largest city is subdivided into communities centered about some church or school, and many a worker who could perhaps not achieve city-wide fame may become quite a personality locally.

To establish a cordial relation between supervisor and teacher it will be necessary in the first place for the teacher of piano, or violin, or voice, and the skilled performer, to lay aside the old prejudice against work done in the public schools, and investigate with open eyes what actually is being done.

He will find that now the grade teacher is supposed to be able to accomplish what was formally the work of the supervisor. The modern supervisor will be found to be equipped to a degree which will make the average conservatory graduate gasp. Not only does he understand the care of the human voice and its treatment from childhood to maturity, but is familiar also with orchestra and band intruments, can operate many or all of them to a certain degree, and arrange parts for them. He is, above all, an inspiring conductor, able to carry chorus and orchestra to noble heights. He keeps himself acquainted, not only with the latest teaching method and new music for one instrument, but with chorus, orchestra, band, violin, voice and piano music, books on music appreciation and all other departments of music study. He often gives instrumental and vocal lessons as a part of the school routine, and has brought it about that schools give credit for work in music done by pupils both in school and outside.

Now here is where the music teacher sees his chance. If he is wise and up-to-date he (or she) will call on the supervisor. He will give the supervisor a list of pupils who may be able to do concert or orchestra work. He will inquire what concert plans the supervisor has, and whether he would like certain composers represented and offer to prepare, if possible, a number or two.

In no other way can so much be done in duets, quartets, orchestra, and band practice as through the public schools; and no private teacher can offer his pupils so much concert opportunity, for the schools have all the advantage of free halls, are always sure of a good attendance, and often even are able to do the necessary printing on the premises.

To accomplish best results, outside teachers of music must lay aside all professional jealousy and band together for the common good. If skilled performers, the supervisor, who is usually not proficient on any one instrument, will be glad to have them appear in faculty or artist concerts. Through united efforts, and by interesting parents and school authorities, it may be brought about that in particular cases instrumental practice may be pursued during school hours and be credited as a regular study, and that all serious work done outside of school will receive due consideration. In this way, too, the music teacher will be enabled to demand more of his pupils, both in regularity of attendance and amount of work accomplished.

No so-called "popular music" should ever be tolerated on a school program, and a performer who stumbles through a piece will not be considered at all On the other hand, a bright school march (not a two-step), will always be found useful, and ability to read at sight is often an invaluable asset. Certain scales, études, Bach's two-part inventions, and many, often despised but necessary foundation works will become fixed requirements, for where the private teacher could only urge, the public school will be able to demand.

The private teacher, on the other hand, can aid the supervisor by requiring a certain fundamental knowledge from his pupils: "How is it you do not know the pitch names of these notes? I know they are taught in your school," thus proving to the pupil that it is to his advantage to give attention to the music lesson at school. Co-operation cannot fail to be productive of the best results.

SCALE FINGERING SIMPLIFIED

BY ADELIA M. RANDALL

Scale fingering, which so puzzles the beginner and is often pronounced impossible to reduce to rule, becomes simpler if we consider the indisputable fact that there is but one fingering for diatonic scales,—that is, but one succession of fingers used in them all, namely 1, 2, 3, 1, 2, 3, 4 and its reverse, the little finger being used only at the outer extremities, where it—and sometimes the fourth—replaces the thumb. The only problem therefore, is to find at just what point in each scale this succession commences.

For convenience then let us divide all scales into two classes: Those fingered like C major, in which this succession begins at the keynote; and those not fingered like C major, in which it begins at some other point.

To find whether a scale is of the C major class, begin with the thumb on the tonic—a white key, of course, or C-fingering would be impossible—and play toward the little finger, using the fingers 1, 2, 3, 1. If 1 falls the second time on a white key, the scale is of the C major class. This test often places the fingering of one hand in the C major class and that of the other hand in the other class, in the same key; as, for instance, in F major and B major.

Whatever cannot be fingered according to the C major class can be fingered by one infallible rule. But two things must be borne in mind in applying it. The first is, that as our only finger succession is 1, 2, 3, 1, 2, 3, 4, the thumb is never used after 2. The other is that the fingering for the first key and often for the first two, can sometimes not be ascertained until we reach the second octave. Therefore in applying the rule play two octaves making the second the standard.

The rule is this: Play toward the little finger and use the thumb on the white key immediately following a black one. We must, of course, except the cases where the thumb so used would follow the second finger. In such cases the third finger follows the second, the thumb coming next if a white key follows.

You will not know from the rule with which finger to begin, but use the thumb if the first key is white, the second finger if it is black, and the second octave will show the correct fingering for these first notes.

Apply the rule, for instance, to F minor harmonic. Playing the left hand toward the little finger we find it is of the C major class. Beginning the right with the thumb we play until a white key, C, follows a black key and so has the thumb. As this has given us the fingering 1, 2, 3, 4, 1, our series is fixed, and we know that in this scale the regular succession 1, 2, 3, 1, 2, 3, 4 begins on C. At the upper extremity 4 is used instead of 1.

In the left hand of Bb and Eb, harmonic minors, we seem at first glance to have struck exceptions. But we find that the qualified rule holds. In Bb minor, left hand, use the thumb tentatively after each of the first two black keys, remembering that the second octave determines the fingering. Proceeding downward according to the rule, we find that the keynote has the second finger; consequently 3 follows it on the A instead of the thumb. In Eb, harmonic minor, left hand descending using the thumb tentatively after the first black key. We do not have fingers enough to play through the next black keys without using 5. Assuming, therefore, by way of hypothesis, that our keynote had the second finger, we follow it with 3 according to the qualified rule and find, after passing below Gb that our hypothesis is correct, and the qualified rule holds.

In Ab major right hand, and others beginning with two black keys, begin tentatively on 2 and the second octave will show whether 2 and 3 or whether 3 and 4 are the fingers for the first two notes.

Whether the harmonic, melodic or normal minor scales be used the fingerings must be ascertained by playing toward the little finger and applying the rule, then reversing the fingering for the descending right hand or the ascending left.

It is interesting to note that, in any case, to find where the fourth finger comes, or to find where 1, 2, 3, 1 comes, solves the problem for that key.

A MUSICAL SOCIAL

BY HELEN LOVEJOY M'CARTHY

It was an innovation and it was a success. Try it, and see what a good musical tonic it proves to be for both teacher and pupils.

The meeting place was a Boston studio, centrally located, and large enough to accommodate the students and a few invited friends and parents. The first part of the entertainment was a rather short program of songs and instrumental music, the song numbers predominating, as the work with the pupils had been voice culture. This was received with perhaps more than the usual perfunctory attention, for the songs were not without appeal, and had been carefully assigned with special reference to each singer's quality of voice and skill in rendition; but it was not until a gay drum was placed on the grand piano that eyes began to kindle and a newly awakened interest became manifest.

One head of the drum had been removed and mysterious tissue paper parcels, tied with tinsel string, were almost tumbling over the brim. The mute challenge was not long disregarded. A typewritten definition of some musical term was on the outside of each package.

Pupils and guests approached the drum in turn, made a selection, read the definition, and tried to answer it. Then they opened the parcels to see if they had guessed correctly. Each bore away his or her souvenir in triumph or defeat; but, in either event, with a look of pleased interest which the rest of the company shared.

By way of suggestion to any hostesses who may be moved to try a Musical Social, a few of the definitions and favors are given:

Definition	*Favor*
The compass of a voice or instrument.	A tiny cash register.
A curved line placed over two or more notes in the same position on the staff.	A pretty tie.
The speed of the rhythm. The rapidity with which the natural accents follow each other.	A toy watch.
The method or clearness of beginning a phrase.	A paper of tacks.
A certain number of syllables constituting a distinct metrical element in a verse.	A postcard likeness of A. Foote, or a 12-inch rule.
A sign, which, occurring either before a note or in the signature, raises the pitch of a tone one chromatic semitone.	A penknife or embroidery scissors.
The succession of tones, upon which any music is built.	A measuring scale.

Other and even more interesting illustrations are at command, but these will serve to show how the originality and intiative of the hostess or teacher are brought into play. Those who take part in the entertainment are so engrossed in its fun-producing aspects that they do not realize how much useful information they really are gaining.

After the mysteries of the drum had been brought to light, each one of the company was passed a copy of the following, and invited to supply the missing musical terms:

I was pursuing the even —— of my way when I first saw him. He was leaning heavily on his —— only a few —— away. He seemed about to —— forward. With a quick —— I started to —— to his assistance, but missed my footing and fell ——, striking my head on a —— stone. For a moment I saw ——, and it was only —— that I should long to give —— to my feelings, but my concern for the old gentleman made me —— my temper, and —— up to go to his aid. He proved to be simply tired, not faint, so I induced him to sit down and ——. He was a musician of —— and as his ideas were much in —— with my own, a warm —— of friendship was soon established between us, my own obscure position proving no —— to his liking for me.

KEY TO MISSING MUSICAL TERMS

I was pursuing the even TENOR of my way when I first saw him. He was leaning heavily on his STAFF only a few STEPS away. He seemed about to PITCH forward. With a quick TURN I started to RUN to his assistance, but missed my footing and fell FLAT, striking my head on a SHARP stone. For a moment I saw STARS, and it was only NATURAL that I should long to give EXPRESSION to my feelings, but my concern for the old gentleman made me HOLD my temper and BRACE up to go to his aid. He proved to be simply tired, not faint, so I induced him to sit down and REST. He was a musician of NOTE, and as his ideas were much in HARMONY with my own, a warm TIE of friendship was soon established between us, my own obscure position proving no BAR to his liking for me.

Inexpensive prizes were given to the persons who supplied the largest number of correct words in a given time. Refreshments were next in order and, after a short interchange of social pleasantries, the party dispersed.

"When may we have another Musical Social?" was the parting inquiry of the young people. "When your present enthusiasm bears fruit," was the smiling response. But what happened at the second Musical Social is another story.

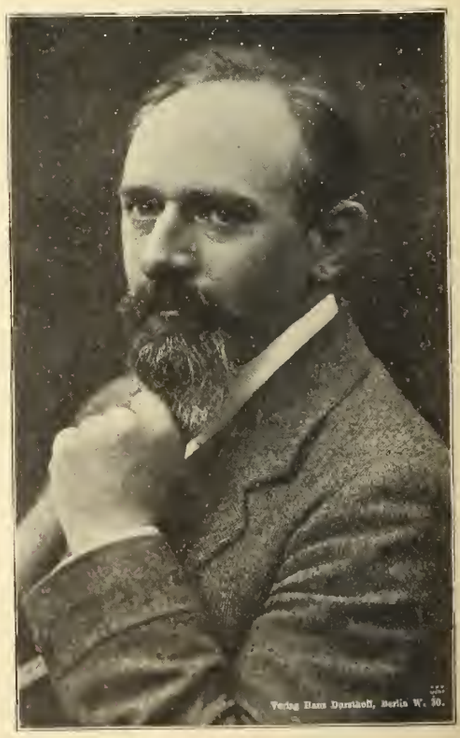
MUSICAL MEMORY AND THE POWER TO REPRODUCE

BY FREDERICK G. SHINN

The value of any form of memory depends entirely upon our ability not only to recall, but to reproduce and to employ in some form or other what we have stored upon previous occasions. In the very large majority of facts about our life and experience, the powers of speech and written language are the media by which we convey our knowledge to others, and as a great portion of our early education is devoted to gaining proficiency in these, the possibility of dissociating the power of memory from the power of reproducing what is retained, may never occur to us, much less the possibility of our being able to convey to others what we can remember, simply because we are unacquainted with any method or language by means of which we can interpret it to them. This, however, is no impossible situation to be in with regard to impressions of musical sounds which we may have stored. Many persons who can remember, with a fair amount of accuracy, the melody or a portion of the melody of a simple song, are quite unable to write down, with any degree of correctness, what they remember, either because they do not understand the signs of musical notation, or, if they do understand them, are unable to associate them with what they hear or with what they have retained from hearing in the past. In other words, they are unable to associate the sounds with the corresponding signs.

It will be seen, therefore, that the value of musical memory depends very largely upon our ability to classify what we retain upon some intelligible and generally recognized plan, and to record it in a language both definite and well understood; and this will imply the possession of the complementary power of reading (that is, hearing in our minds) music written in this same language. How this object may be obtained, seems to us to consist in the adoption in music education of a complete and comprehensive system of ear-training, educating the ear to discriminate different rhythms, intervals, and chords, the memory to retain the sound of such, and the intellect to classify them and associate such classification with the signs of some form of music notation. Scales, intervals, and chords represent the raw material of music, and he who can retain all the varieties of such possesses the material of musical composition. Whether he can fashion them into intelligible musical thought depends upon his knowledge of what may be called the technic of composition in its widest sense.

Many persons who are quite ignorant of musical notation, and who have never attempted seriously to study music, are able by means of a quick and retentive ear and a certain facility of finger, to reproduce upon some musical instrument (generally the piano) passages which have attracted their attention. Such efforts are commonly described as "playing by ear." Without attempting to despise such a power, for it reveals the possession of natural gifts of a fairly high order, we cannot but regret that the lack of any serious purpose which such performances frequently display, bears witness to the absence of other powers which are necessary, before natural abilities may become of true and lasting value.—From *Musical Memory*.



PAUL JUON

Paul Juon, was born at Moscow, Russia, March 8, 1872. He was educated at the Moscow Conservatory, and later studied at the Hochschule, Berlin. In 1897 he located in Berlin, where he still resides. He has written a number of piano pieces of individual character and attractive content. In addition to his work as a composer, he has published a *Hormonielehre* (textbook on harmony), and a German translation of Tchaikovski's life by the latter's brother.

LETTERS TO THE BEGINNING TEACHER

BY HELENA MAGUIRE

ON EURHYTHMICS

"It is through the physical body that Eurhythmy (right rhythm)—the expression of the symmetry hidden within the soul—is awakened into being, and it is by the dance-gymnastic that reactive harmony of soul and body is attained." —Plato.

MANY are the teachers of music who have realized what a dead thing much of the music teaching of the past has been, who have struggled bravely to put life into their own teaching, and it was one of these struggling, dissatisfied teachers, a professor of theory at the Geneva Conservatory, Mr. Jaques-Dalcroze, who, in his efforts to put life into the work of his classes, began what has grown to be one of the most progressive schools of our day—the Jaques-Dalcroze College at Hellerau, near Dresden.

He began very simply—just as all great things are begun—began by introducing little vocal exercises into the harmony lessons that he gave his pupils. The pupils liked it, they learned to sing every chord that they made, every progression. This was good but not enough—rhythm was to be thought of too, and for this motion must be introduced. So the professor wrote a little action-play, and found, through this, how much more quickly and easily young people learn music *if it is accompanied by movements of the body.*

Then he worked out a set of movements to accompany the vocal exercises he had prepared for the harmony class. The results were so good that he next went to the authorities at the Conservatoire and asked for recognition and permission to instal his system as a definite method of teaching in the school. This was refused. His experience was that of many other teachers who find that they may put all the extra time, thought and even money that they will into making the work of their classes successful, but they must not ask for personal recognition.

Mr. Jaques-Dalcroze then hired a room, called for volunteer pupils, and formed an experimental class, and this was the beginning of his college. You remember, perhaps, from the letter on the choreographic-music-drama* that the opera people in our country claimed the greatest obstacle to this combining of the arts in America was that we have no masters of the ballet. But the present trend of music teaching gives reason to believe that the new music teacher is going to prove more capable of teaching the expression of a musical composition in harmonious and symmetrical postures and movements than are the masters of the ballet of the old world.

Dr. Montessori, perhaps, more than any other, has given us the courage to protest against the old method of teaching in which the pupil remains in a state of passivity while we thrust knowledge upon him. There are many of us in America who have realized the need of a method of teaching that will obtain from the pupil "an attention which is at once active and dynamic, insuring an intelligent response to what has been sensed." This is the kind of attention which the Jaques-Dalcroze teaching succeeds in obtaining, and there is no doubt that we will soon have as many teachers of this method in this country as we now have of the Montessori method.

"Rhythmic gymnastics" does not sound as though it had much of personal interest to the music teacher, but a study of the College prospectus proves that it really is music teaching. To quote:

"The studies undertaken in the Institute comprise the several branches of solfège, sight-singing, and ear-training; harmony, theoretical and practical; the important physiological function of respiration and the foundational scheme of gymnastics in association with the development of the rhythmic sense, the basis of musical sensibility in the individual."

You see, we are realizing that we can no longer limit musical expression to lips and finger tips; the new teaching is going to make the whole body the medium for the expression of harmony and rhythm. This sounds strange to the teacher who has sat for many years at the corner of a piano explaining scales and exercises, but to the Beginning Teacher whatever is new is delightful, and nothing is impossible. The work of the Beginning Teacher is following the development of the choreographic-music-drama, and what we have heretofore called music study has really been but a preparation for something much bigger and better.

Mr. Jaques-Dalcroze is a pioneer in this new and larger development; undoubtedly there are others, perhaps right here in our midst, who are working out equally good plans for allying music with its kindred arts, but it will pay everyone who is interested to read the prospectus of this college at Hellerau. It is certainly enlightening to see the way he has worked out his principles.

The exercises are, in their simplest form, based upon two ideas:

First, time is indicated by movements of the arms and sometimes of the head.

Second, the actual notes, their length, grouping, etc., are shown by the movements of the lower limbs and trunk. In other words the movements of the arms, directed in precise consonance with the beats of the music, represent its metrical structure, while the movements of the trunk and lower limbs follow the course of the rhythmical structure itself. Each note is shown by a step forward; a quarter note by a simple step, a half note by a step and a knee bend, a dotted half note by a step with one foot and two movements with the other foot. These two sets of movements provide material for an infinity of exercises. "They cannot be done mechanically, for the pupil who lets his mind wander from the work in hand is reminded of the fact immediately by finding that he has 'lost his place' in the music played."

To give some idea of the process of the work:

1. A rhythm is played; the pupils realize it, marching and beating time; when this is fully grasped a further one is played, which the pupils again realize. In its most developed form this exercise results in a two-part canon between piano and pupils.

2. Times are beaten in canon, one arm being one or more beats behind the other. Such exercises lead to thorough mental and physical control, owing to the necessity of strongly enervating one arm when accenting, while the other performs a gentle movement.

3. Different times are beaten by each of the arms, the head, and the feet; that is, four different times are beaten simultaneously. The successful performance of such an exercise postulates a high degree of control.

4. Part-music is taken, for example, a Bach fugue or a three-part invention. Each part is realized by a group of pupils, first as in paragraph 1, then when the music is known, in unison with the piano.

5. In the more advanced stages the exercises take the form of "Plastic Expression"; that is, the attempt to use the whole body as a means of expressing the emotion conveyed by the music played, which brings us round again to the pantomime and interpretative ballet.

Jaques-Dalcroze's own words are: "My system teaches how to estimate the duration of movements of the body, how to graduate such movements according to the degree of tension and relaxation and, by interplay and counterplay of the muscles, to make feeling for rhythm a physical experience. Hereby balance and harmony of movement are obtained. Moreover, by developing our sense of rhythm we develop all our faculties, give them free play and thus bring our whole being to the highest state of efficiency." No one but a musician could have done what this man has done, and I hope that the Beginning Teachers of our country will take up the study of "plastic expression" and prepare to teach it. It will not only prove a means of putting life into teaching, but it will be also a way of helping on this coalition of music with the allied arts.

*See article on page 237, April MUSICIAN.

A FEW TESTS FOR THE STUDENT

TEACHERS are generally aware that pupils do too little written work in connection with their music lessons. The following test will incite them to more accurate work:

1. Write the scale with various tonics, for example, C, F. A, etc. Use different rhythms, 2-4, 3-4, 4-4, 6-8, 9-12, etc. It is also suggested to begin on an unaccented beat occasionally.

2. The teacher or a pupil can dictate to a class some melody, without giving the divisions into measures. The pupils should try to put the bar lines where they should go.

3. Write the signatures of the keys in sharps, according to the circle of fifths.

4. Take any four or five keys. Write the major scales, then the tonic minor, and the relative minors.

5. Write a series of major thirds on the chromatic scale beginning with C.

6. Write a series of minor thirds and minor sixths on the chromatic scales beginning with C. This exercise may be extended by writing other intervals, such as fifths, fourths, seconds, of various kinds.

7. Take a tune, *America,* for example, and change it from F major into F minor by writing the necessary chromatic signs.

8. Take any simple tune that you can recall and try to write it out on paper.

UNDISTURBED PRACTICE

THE PROFESSOR TALKS ON VIRTUOSITY

THE PROFESSOR SAYS

"Well, how are we today, my highly esteemed Editor? In excellent health, but frightfully busy? Now, for my part, I would consider that to be the very beau-ideal of bliss: to be perfectly well and delightfully busy. No; not 'frightfully'—delightfully. Because I know full well that your occupation is music, and the very best form of music: not the kind that consists in sitting down and playing and singing your own compositions for your own delectation—very pleasant too, no doubt, but having nothing of the 'beau-ideal' about it. *Your* delightfully busy occupation is that of acting as musical mentor to the musically inclined masses; setting high standards before them; mixing the grave with the gay, gilding the pill and seeking always the most palatable form of good musical food for them and endeavoring ever to keep them abreast of the times in the general advance of musical progress. Don't I just wish that I were an Editor, that's all! Yes, an Editor with a great, big 'E.' Wouldn't I have the time of my life! And wouldn't your subscribers be pleased with all the good things with which I would fill the paper 'chock-full'? And I would know the bliss of congenial work!

"What is that you say? That you are *not so sure of it,* because your letter asking me to call today was prompted by the fact that I made an onslaught on superficiality last month which has evoked vigorous protests from a few who thought I surely meant *them!* Good; that's very good; a sure proof that my remarks were striking, for they have hit the mark! Oh! so some of the pro-testants are waiting in the next room to interview me? Delighted, I'm sure! Now shall I be able to scotch the greatest enemy of good musicianship: superficiality. Though experience tells me that, like Shakespeare's snake, it will be 'scotched, not killed.'"

THE PROFESSOR IS ASKED TO EXPLAIN

Without further parley the Professor, evidently eager for the encounter, was ushered by the Editor into the adjoining room and introduced to the protesting elements: a young fellow of about twenty years, another of some twenty-seven years, a stern —not to say surly—looking man who was at least fifty-five, and a sweet little lady, who "might very well pass for forty-three, in the dusk, with a light behind her," but whose appearance and regard seemed to shed about her a sympathetic geniality and good-nature that affected all those about her—even the surly one became momentarily less crabbed.

Mr. Crabbe (most appropriately named) set the ball rolling by asking aggressively: "So, Mr. Professor, you find fault with music teachers for being too superficial, for not knowing enough, for not keeping in step with the progress of the Art, and for being unable to understand the present-day music!!! Why ——, what do you mean by superficiality? What do you mean by———?"

"Excuse me, sir," interrupted the Professor, "one question at a time, *if you please.* Now, my dear sir,"—here beamed an encouraging glance from Miss Sympathy—"my *very* dear sir, a whole treatise could be written on the detestable quality, 'superficiality.' Briefly, superficiality means 'all surface,' not deep, shallow,—'getting-by,' mere show. Applied to our art it signifies the virtuoso: a word that is most frequently wrongly used and misapplied. Virtuoso *does not* mean a player of genius, or of remarkable talent, or of talent of any kind; it does *not* mean the possession of soul or emotion, or of intellect or intelligence; it does *not* even mean mind! Virtuosity in music is the quintessence of superficiality, for it means superlative showiness of technic. The greatest virtuoso of today is the player-piano. It is great in technic, but it cannot think or feel."

EMPTINESS OF VIRTUOSITY

"Then," said the youngest of the party, who had been a well-known pianistic child-prodigy and who is now in the virtuoso class, hard, dry, brilliant but soulless, "I take it that you consider polished, perfect technic unnecessary for a performer or a teacher?"

"You may take nothing without permission, young man," replied the Professor. "A polished, perfect technic is just as necessary as a perfectly polished piano. You cannot play without the instrument, and you cannot play on the instrument without technic. The possession of an instrument does not make you a player, and the possession of technic will make you neither an artist nor a musician. Technic is chiefly mechanism and is, therefore, the opposite of esthetics; although it must be allowed that beauty of touch (which may be inborn, like a beautiful voice) is the first connecting link between the mechanics of the virtuoso and the esthetics of the artist."

Miss Sympathy, who avowed that the subject of her visit, far from being antagonistic—for her desire was to "be in love and charity with all men" (here the Professor bowed most amiably, with a humorous twinkle in his eye)—was an endeavor to learn what really are the attributes of an artist or of a teacher who is not superficial. "Just so," acquiesced the older of the two young men; "I have called to beg the Professor to tell me the same thing and to indicate what I should do in order to become more thorough and progressive."

DIFFERENTIATION OF MUSICAL ENDOWMENTS

"Although the answer is easily given," replied the Professor, "it is somewhat complex, because a difference must be drawn between the musician, the artist, and the teacher. The special endowments for a musician are *talent, creative power, soul or emotion, intellect,* and *technic.* When all of these attributes are present in a high degree, the result is a musical genius, a composer of the first rank who is able to interpret his own works.

"If the creative power be wanting, while the other four endowments exist pre-eminently, the result is an interpretative artist of the highest order, as well as a perfect pedagogue. Leave out both creative power and technic and we shall have an excellent teacher, who needs only facility of technic to become an artist. Omit intellect and creative power and we shall find a natural-born artist. If soul be missing as well as creative power, the result will be a good, but dry and uninteresting, musician. If only talent and technic exist, we shall have a virtuoso, and if technic alone is present we shall have a virtuoso of a lower degree; but neither of these virtuosos may be classed as artists or musicians, for they are wanting both in intellect and soul. One who possesses technic and intellect only may be a correct performer, but dry and cold, because without emotion, like the late Charles Hallé and thousands of those we hear during our musical lives. Another class, which is quite as numerous, consists of those who have only emotion and technic; they delight in an exaggerated *tempo rubato,* either languishingly *lento* or too brilliantly rapid. The most disappointing case of all is, probably, the one who has technic, soul, and intellect, but neither creative power nor talent; in spite of all his striving, he will rarely attain the goal of his desires, for want of talent. There is one class which should not be omitted: those who have only *one* of these five endowments, namely, intellect. Unable to perform on any instrument or to exercise any creative power, but having employed their intellects in the assimilation of many textbooks, it is they who form the large contingent of those who teach theory, harmony, and composition by *correspondence only.*

"Other categories could be made by inter-combinations of these endowments but enough has been said for the practical purposes of testing our capabilities, of correcting our imperfections, of complementing our deficiencies when possible, of further improving our best gifts and, *principally, of deciding which musical path is the one to be followed with the greatest probabilities of success.*"

SAD CASE OF MR. CRABBE

"Your words are more precious than gold," said Mr. Crabbe, still sourly but much less crabbedly. "I began life as a pianistic prodigy; I worked hard and unremittingly at my technic, and I became a remarkably brilliant virtuoso, able to play anything demanding digital dexterity and much quicker than the metronome time. But, at the age of twenty-seven I hurt the fourth finger of my right hand, not much, but sufficient to destroy my wonderful execution and to place me in the class of very ordinary performers. Again and again have I tried doctor-specialists and teacher-specialists, during a period of many years, only to find that my lost finger facility will never return. I teach; that is to say, I try to teach; but I never possessed any gift of emotion, and if I ever had any special musical intellect it was not trained—everything was sacrificed to technic. I am a virtuoso without the power of execution! What is that?"

"Very much like a musical box without a handle," answered the Professor, "with all due deference to you. Recognizing your deficiencies you may be able (somewhat late, 'tis true) to remedy some of them by reading and study and by frequent intercourse with your colleagues in the State Association of Teachers and elsewhere. But there is one great service that you can render passively to the tribe of virtuosos, to the budding instrumentalists—yes, and to vocalists also, with but very little difference—and to the whole of the teaching body; your example can serve for a lighthouse to warn musical wayfarers away from the rocks of Superficiality which wrecked your bark.

TO AVOID THE VIRTUOSO DANGER

"Creative power is inborn; it cannot be acquired. But intellect may be aroused and fostered; emotion may some day be excited in us; some talent must be latent in us, or we would not 'have a taste' for music; technic we may all cultivate to a greater or less degree. Virtuosity is a lure; it alone does not make for musicianship. Therefore let us *cultivate all that is in us* in order to become musicians in the highest and fullest sense of the name; so that, when age or accident diminishes our powers as a performer, our broad musicianship, based upon a solid foundation of intellectual training and cultivated taste, we may still exercise our much-loved profession of music, no longer as artists, but as artist-teachers of artists and teachers."

Genial Miss Sympathy sprang from her chair, ran to the Professor, grasped both his hands in hers and said with a voice much shaken with emotion: "My *dear* Professor! I am so deeply grateful to you for telling us all these wonderful things. You, probably, do not entirely realize how very useful they are to us much harassed teachers. Often the day's close brings with it naught but discouragement, caused by the superficiality of the pupil, whose chief

object seems to be to get a smattering of music, enough to make a showing and to 'get by' with the average audience, or with family and friends. It is very rare to find a real desire for true knowledge, or an endeavor to penetrate the musical maze and snatch the secrets of the Muse from her own self."

TRUE SUCCESS IN MUSIC

"In that, my dear lady," replied the Professor, "the pupils and the teachers have one common goal in view: Success. But 'success' to pupils means getting engagements as quickly as possible, whereby they may earn money, lots of money—and still more; it is all one to them, provided they can 'get by' and 'get the money.' Money means success to them; they do not realize that success based upon so shallow a surface cannot last and that their downfall will be rapid and sure. Only those artists endure who have devoted years and years to careful, thorough preparation; the others start up like a skyrocket only to fall as dismally and as irretrievably.

"The teacher who measures his success by the amount of his bank balance is in a similar plight, as far as music is concerned. By taking all comers for pupils; by giving twenty-minute lessons irrespective of the pupil's educational needs; by making money the ultimate goal instead of music, the teacher loses musical success for he does but debase music and, at the same time, give to the pupil a false idea of success in music. It is true that the teacher must live by his profession; but let him do it legitimately, not in the pursuit of money but in the pursuit of perfection in music, and he will surely achieve success in his works and by his pupils—who are also his works. The true musician will get his greatest satisfaction from his music and look upon all else as beside the great occupation of his life. When discouraged let us consider the lives of Mozart and Schubert and Beethoven and remember that, if money passed them by, their success and fame are immortal.

"Good-bye, my young friends; and you, my dear Mr. Crabbe, come and see me often that we may help each other and be helped by the kindly fellow-feeling of Miss Sympathy."

SILHOUETTES

NOTES ON THE MUSIC IN THIS ISSUE

MAY is a fine teaching month in many sections of the country, particularly those not affected by high temperatures. Educationally considered, it is a month in which teachers are looking forward to their closing recitals and are therefore interested in teaching pieces of a specially attractive character for use in the programs to be rendered by the pupils. The fifteen pieces included in the present issue are all worthy of a place on a program, and we hope that our readers will give them a thorough and interested examination. There are pieces for the lower grades as well as for pupils who have been studying for three or four years.

Album leaf, in C (Feuille d'album), by Alexander Kopyloff, a Russian composer, is a short piece in the lyric style that is especially suitable for teaching use with pupils who are a little weak in delivering a melody with a singing tone. Use a firm pressure touch with legato connection, with careful observance of the phrasing. In measures in which there are supporting harmonies the latter must be somewhat subordinated to the melody.

Hungarian dance (Ungarischer Tanz), No. 3 in F, by J. Brahms, is one of the composer's most attractive small compositions. It belongs to the standard repertoire and should be used with all pupils who have reached Grade IV. Mr. John Orth, of Boston, has made a most admirable teaching edition; the pupil who follows this will be able to present a satisfactory interpretation. The *ossia* near the end simplifies the passage for the left hand.

A dream of the dance, Op. 202, No. 1, by Homer N. Bartlett, is the work of a well-known American composer. The rhythm is that of the slow waltz, the leading themes very melodious and flowing in style, the total effect being that of a dainty, charming waltz. Be sure to observe the staccato marking on the accompanying chords. This makes the melody stand out with great clearness. In the B♭ major section the arpeggio passing from the right to the left hand must be played very smoothly, reaching the bass note at the same time that the right hand strikes the melody note.

Valsette in G, by Felix Borowski, is by a composer who has been a resident of Chicago for a number of years. It is a light, graceful composition in waltz rhythm, very attractive from the musical point of view, and with several interesting and useful technical features, such as piquant phrasing, some syncopation, quick pedal changes, and considerable rubato. Taken as a whole we are certain that teachers will find this a stimulating number for program use as well as teaching. Try it with a pupil who is inclined to be a little logy in style.

Lupita (Mazurka de salon), Op. 44, No. 2, by John M. Steinfeldt, is the work of an American composer who has the happy faculty of producing pieces which unite educational value with genuine musical character, and are useful for teaching and social purposes. The first two themes, in A♭ and E♭, are rather bold in style, and can be delivered with a broad, semi-military effect, contrasting most acceptably with the middle section in D♭, which begins somewhat quietly, working up to some brilliant effects in the passages in sixteenth notes, which are quite bravura in style. This should prove a very acceptable recital number.

Canzone-serenata (Chanson-sérénade), by Giacomo Setacciolo, has a light, graceful, rather catchy spirit, which should please both player and hearer. It has certain characteristics which suggest a composition conceived for the orchestra, and, as far as the interpretation is concerned, we are of the opinion that the player can well afford to keep in mind the different effects of the instruments, such as the strings and wood-wind, and seek to parallel them at certain measures. In the section marked *Minore* note that the left hand adds a second voice part to the melody; this must be made reasonably prominent. The cadenza-like passage is to be played with a light, facile touch.

Tarantella, in D minor, by J. P. Ludebuehl, is included for young players, or those who have had but a short period of instruction. The two hands must work smoothly together in playing the triplets which pass from one hand to the other; the phrase begins with the first note in the first measure and closes with the D, dotted half note. Bear this in mind in playing this and similar measures. The two-note chords are to be given with a light, staccato touch.

The flower girl, Op. 5, No. 4, by Wilmot Lemont, is one of a group of six easy pieces published under the general title of *The Merrymakers.* Each piece is in a strongly marked rhythm, the one under present consideration being in the waltz rhythm. There are no special points in the composition, although we call attention to the melody for the left hand in the middle section in B♭, the effect being that of a dialogue between a bass or baritone and a soprano voice. Make these phrases sing, as if they were played by a 'cello and a violin in alternation.

Punchinello (Humoreske), Op. 273, No. 2, by Carl Wilhelm Kern, is one of a set of little pieces of a humorous character, and a very useful study for promoting light, crisp attack, the phrases being short, alternating with staccato effects. The piece requires a free arm, hands, and fingers.

Mignon, Op. 3, No. 1, by Vladimir Rebikoff, is a short, light concert waltz by a successful Russian composer, full of technical value as well as striking musical interest. The motion is largely in eighths at rapid tempo, giving good finger drill; then we find phrases divided between the two hands to be played in perfect legato, a section in which the left hand has the eighth note passages, a theme in octaves for the right hand, and a close built on a two-note group, the second of which should be made quite staccato.

Nocturne, by R. Spaulding Stoughton, for the church organ, can be used either in connection with the regular service or in recitals. The themes are interesting, melodious, and well registrated.

Call me "sweetheart," song by Marie Rich, has a compass that makes it available for a soprano, a mezzo-soprano, or a tenor. Be careful not to sing this too fast, just with a little swing, such as is necessary in a piece in 3-4 measure; but do not violate the natural emphasis of the words to do so.

Still, still with Thee, a sacred song, by Arthur F. M. Constance, should prove useful to choir singers, for it is interesting from the point of view of melody, as well as fine vocal effects. In this song the executant should pay close attention to giving a clear, intelligible reading of the text; if a word would naturally receive emphasis in a speech, give it stress in singing, which is a very good rule. The climax at the close is especially strong and effective; note the pressure accents over the words "But sweeter far to wake," etc., and "Shall rise the glorious thought," etc. Here the natural reading of the text must be joined to the singing delivery.

I know a little rose, song by Frank Howard Warner, is a dainty little lyric that should prove useful to singers; the melody is marked by simplicity and singableness.

For you, song by Laurence H. Montague, belongs to the high class ballad style; it is melodious and the vocal effects are such as lend themselves to broad treatment, and a sonorous tone quality; plenty of tone, rich and mellow, but not mere loudness, should be striven for.

A MONTHLY PUBLICATION
W. J. BALTZELL, Editor
PUBLISHED BY
OLIVER DITSON COMPANY
Boston, Mass., U. S. A.

THE MUSICIAN aims to supply the members of the musical profession with practical aid on all subjects connected with music, to stimulate students to earnest work and artistic ideals, and to raise the standard of musical taste and appreciation throughout the United States.

EDITORIAL NOTES

BOYS AND MUSIC

DURING a short visit made to several cities in the Middle West the Editor of THE MUSICIAN came in touch with a very significant fact, namely, that more boys are studying music than was the case five or ten years ago.

Private teachers, those who have children in their care, report an increase in the number of boys in their classes; this applies to pupils studying the piano as well as the violin, popular as the latter has always been.

That the number of children music students would be much larger were it not for the pressure of school duties is well established; it is the fervent hope of all who are interested in the cause of music education that school officers may devise methods whereby music study may count in school work. Although something has been done in this line there is still room for much more. The director of a school of music attached to a university with an enrolment of more than 1,000 students, men and women, reports that the number of college men who are taking musical work is more than double what it was three or four years ago. It is significant in this connection that the work in question is in "culture" courses, so called, rather than in practical music, although the number of men who take up singing has increased.

To the present writer the value of this observation lies in the promise for the future which this offers. When a boy learns to play the violin or piano, possibly also the organ, it is not essential or inevitable that he enter the music profession. In fact only those who show unusual talent and inclination for music should be encouraged to look toward it as a means of livelihood. We need in our cities and towns, men who love music and have executive skill in some branch, who will furnish active support toward community effort in music.

The women of the United States have done much to advance the cause of music, but their work will be greatly extended if they can have the help of business and professional men who have a knowledge of music.

It is to increase the number of men of this class that we look to the men in our colleges and universities who are taking music work, even if they are "culture" or "appreciation" courses, to the men who are studying singing in our large cities to use their skill in church choirs, choral societies, etc., and especially to the boys of today who learn to play the piano, the violin, or some orchestral instrument, and thereby prepare themselves to contribute to organized musical work in their home towns.

Teachers everywhere may do some quiet, effective work by trying to add a few boys to their classes. It will prove worth while to make the effort. Will *you* try?

BEAUTY IN MUSIC

THIS is the time of the year when teachers should make an effort to place before their pupils only music of pure, simple beauty to accord with the beauty which is seen all around us as Nature unfolds again all her rich stores of loveliness. Pupils are sensitive to outside influences at this season, and the wise teacher will try to be in unison with the prevailing mood.

Bright, cheerful pieces, those with pure melodic charm, are the best to use, pieces which suggest the open air, trees, flowers, brooks, the mountains, the sea with its ever restless tides, and all the other beauties which the season offers. Knit your music into the life which is about you, and thus add a new element of esthetic growth to your pupils.

COMPOSING BY THE GRACE OF GOD

AMONG the letters which have come to the Editor of THE MUSICIAN during the past month is one from a correspondent who signs his name without giving his address, making it impossible to write to him as he requests. He asks for information on three points which we repeat here.

1. How is he to know in what key to write on paper the music he improvises on the piano?

2. How is he to determine the time signature?

3. Can he learn harmony with any degree of success without a teacher?

Having in mind the possibility that others may be puzzling over these questions, a few comments are made in this column, not so much with the idea of clearing up the subjects as to indicate the proper course for the inquirer to pursue.

Musical composition is more than sitting at an instrument and playing tunes, reminiscences of things previously heard and played, and various crude melodic, harmonic and rhythmic progressions which, in the nature of things, cannot be thought out carefully. The true composer works by knowledge, not by a doubtful inspiration without knowledge, leaving the production formless and superficial. If some one has the ability to sit down before the piano and to play by "ear," as the saying is, not knowing anything about notation or the technic of the instrument, it is a fair supposition that the person in question prides himself on this ability, and thinks himself above the necessity of regular music study. Such is the observation of the writer of this note.

On the contrary, the person thus "gifted" has a very evident obligation to study music seriously and thus learn to express himself in music to the very best advantage. Talent calls for special training, no less in music than in mechanical matters. Amateur engineers, road builders, architects, druggists, physicians, etc., are not patted upon the back and encouraged; no more should amateur "composers" who "never took a lesson in music, and don't know one note from another."

The writer of the letter in question should go to the best teacher of music within his reach and take a course of study in harmony, elementary and advanced, counterpoint, musical forms, and form as applied in composition, and at the same time try to improve his technical skill in piano playing.

It is possible to learn harmony from a textbook alone, although the plan is not usually successful. The best substitute for a teacher is a course of study by correspondence, which has proven successful in a number of cases.

SUMMER MUSIC STUDY FOR CHILDREN

TEACHERS, especially those who live in smaller towns, are scarcely justified in allowing their work in the summer season to fall off as much as it often does. There is no sound pedagogic reason why children should not have at least one lesson a week all through the summer, if the teacher is prepared to give that amount of time to the work.

The customary long vacation is a great detriment to the work of children; when they take up their studies in the Fall at least a month is required again to get into their stride. Another strong argument in favor of summer study for children is that at this time of the year they are not burdened with school work to such an extent as to make music work difficult to carry on. A teacher who lives in one of the smaller New York cities tells us that she is able to do the best work of the year during the six weeks of July and August which she gives up to teaching; and in addition she has as large a class at this time as at any other time of the year.

We make this suggestion that teachers may have an opportunity to think it over before the summer is here. It may prove worth while to advertise that you will keep your studio open for part of the summer, especially for children whose school work limits their music study during the winter season.

The SINGER and HIS ART

SINGING TEACHERS' QUALIFICATIONS

BY ARTHUR DE GUICHARD

STANDARDIZATION AND EXAMINATION NECESSARY

It was my privilege, as long ago as the month of September, 1910, in the columns of THE MUSICIAN, to urge very strongly upon my confrères, as well as upon the general musical public, the necessity of reform in musical instruction, throughout the length and breadth of the Union.

Attention was called to the fact that a similar movement had been started, under the best auspices, in France, with the same objects in view: raising the standards of musical instruction, in its various branches; certifying as to the aptitude of teachers to teach, in three different grades, by examinations to which they would voluntarily present themselves, and which would be conducted by musicians of recognized ability and reputation.

It might, at first, have been thought altogether superfluous for any society to initiate such a movement, having in view the fact that the Paris Conservatory and the affiliated conservatories which exist in all the chief cities of France, under the direction of the Minister of Fine Arts, supply the country and the world at large with sound musicians. But the majority of these have not received any special instruction to fit them as teachers. Like many of our own citizens, the first object in the mind of a pupil is to become a solo artist, vocal or instrumental. It is generally long after they have quitted the pupilary ranks that, for one reason or another, the disappointed quasi-artists direct their activities to teaching, *without having any special teaching qualification.*

ENDORSED BY LEADING MUSICIANS

Far from meeting with any opposition from the recognized musical authorities, the movement was assured of a popular and certain success by the adhesion and active support of M. Gabriel Fauré, director of the Paris Conservatory, Camille Saint-Saëns, Théodore Dubois, Massenet, and many of the leading musicians. The society adopted the title of "Society of Musicians of France." It is not the object of this paper to enter into the history of this society in detail. It is sufficient to state that the sphere of its activities has become much larger, that its examinations are held frequently, and that candidates for teachers' certificates flock to the examinations from every part of the country.

Thus, the need for such a movement has been recognized by every one, by the musical public, and by the highest musicians, in a country having so renowned an institution as the Paris Conservatory, and possessing many similar affiliated conservatories, where the musical education is entirely gratis. Personal merit and endowment alone can procure admission to these schools; if the regular term examinations are not passed the pupil is dismissed; it is not a question of paying so much and being kept as long as the bills are paid—merit obtains admission and progressive merit alone secures the continuation of pupilage.

If a searching inquiry into a teacher's ability by an independent body is requisite in a country which has the advantages enumerated, how much more urgent is the need here?

IMPORTANCE OF PRIMARY TEACHING

Gabriel Fauré said, when recommending the formation of the society: "The reform of musical instruction should first of all be directed to elementary instruction." "In order to form musicians the primary professor must be a musician himself, and he cannot be that if he has not completed his classical studies." *"Do not, therefore, be afraid to ask too much in the examinations for the first degree. It is only by the observance of this condition that the reform will be useful and beneficial."* "Parents are wrong in believing that to commence a child's musical studies anyone will do, provided he does not charge too much. The guarantees offered to families by the serious examinations proposed will be of the greatest use."

ONE MUST KNOW MUCH IN ORDER TO TEACH LITTLE

Unfortunately, the reverse seems to be the rule—one may know little to teach much—and the true rule the exception. Here, as in France, there are to be found good music schools and excellent private teachers, but they certainly form a very small minority contrasted with the vast number of men and women, engaged in teaching singing, who have had no training whatever as teachers, and whose only qualifications consist of a few seasons' lessons taken from some equally competent (?) teacher, or the possession of a so-called certificate or diploma from a private individual or self-constituted authority. They are not entirely to blame. Knowing no better, they believe in the instruction and the certificates they have received; but this can be only to a certain extent and for a brief period, for they must inevitably discover eventually that they know but very little where much is required. They must then abandon the professorate and recommence their studies, or abandon their teaching career with the knowledge of their incompetence, and so pass into a very doubtful category.

STATE MUSIC TEACHERS' ASSOCIATIONS

During the past year a great deal has been written and said about the standardization of teaching methods and requirements, also, in a rather fearsome fashion, about the standardization *of teachers themselves!* But happier times are coming, more enlightened days are dawning, and it seems more than probable that the different state music teachers' associations will, before very long, take up the matter with no uncertain hand and a strong determination to see their music and their teachers and their teaching placed upon a firmer footing—one of high repute, because of the sound and superior musical attainments and the proved ability to impart them of every associated teacher in each state.

THE BEGINNING IN FRANCE

The French society began the movement by directing its energies to piano instruction. Then violin teachers were taken in hand and their capabilities tested. It is now the turn of singing teachers; not a light matter. When the approbation and support of the chief musicians in France were sought, Camille Saint-Saëns, the renowned composer-pianist, wrote.

"Paris, April 29, 1910.

"You are quite right, my dear Mangeot. *Teachers of music ought to undergo examination and be certified the same as others.* But it is chiefly for teachers of singing that it is necessary. Bad instrumental lessons make pupils lose only their time; bad lessons in singing destroy their voices.

"Cordially yours,

"C. Saint-Saëns."

These are precious words which should not be passed by lightly.

AFTER FOUR YEARS

This was four years ago. Saint-Saëns has had to wait four years for his advice to be followed about teachers of singing; because, of all the branches of music teaching, singing is the one that engenders the most smallness of views, the most jealousy of each other, the most positive assertion of incapability and the most charlatanry. We must not shut our eyes to these facts, because their undoubted truth makes the present movement necessary.

SUGGESTION FOR STATE ASSOCIATIONS

What is now needed—and urgently needed—at the present time is that each state shall inquire into its singing teachers' fitness to teach singing. As a suggestion: Could not the state associations have two categories of members? Those who are merely joining members, such as they now are, and those who satisfy duly appointed examiners as to their ability to teach the subject they profess—something similar to the distinctions that exist in the American Guild of Organists? *Apropos,* is it not strange that organists are always ready to do the right thing and prove their abilities, while teachers of piano and of singing decidedly fight shy of it?

It goes without saying that the forms and questions for establishing examinations are going to be somewhat difficult to formulate. But the difficulty is by no means insuperable. If approached in the right spirit the *modus quærendi,* that will be a fair and sufficient test for all postulants, should be quickly found.

For my part, there is one thing I would insist on, because it is the very essence of the whole matter; each candidate shall be required to give in the presence of the examiners a practical voice trial and lesson to two or more unknown pupils. There should be no partisanship and no discussion of this, that, or the other method; the right method is the one that produces the perfectly right result.

Everything else in the examination should be questions probing the knowledge that leads to that practical right result.

AN INTERNATIONAL CONGRESS

I notice in my Paris exchanges that, while the opinions of musicians are being asked about the subjects and questions to be proposed to candidates

for examination, the following very pregnant and far-reaching remark is made: (*Monde Musical*, Paris.) "We are aware that certain questions will necessitate very full answers, which may even need practical demonstrations, but there is no reason why they should not take place *in an International Singing Congress*, for which our present vast inquiry would serve as a preparation."

It is much to be hoped that such a Congress may take place, and may I be there to see. While it may be asking too much to request my readers to express their views on the subject, I shall consider it a very pleasurable duty to keep them posted on the progress of the movement, both in Europe and here, for the Standardization and Examination of Teachers of Singing and of their Qualifications.

———*———

MAGGIE TEYTE'S VIEWS ON AMERICAN SONGS

SOME time ago the New York *Sun* published an article on American songs by Miss Teyte, which contained remarks of unusually interesting character. She expresses herself very strongly upon the promising character and fine quality of the work of American song writers, and of her intention to make use of their work in her recitals. We quote a few paragraphs:

I have put American songs on my program in close proximity to the songs of such composers as Debussy and Strauss. I cannot say that they suffered by comparison. All that was needed was a serious interpretation and a sincere respect for the American music. I shall continue to present it in this way. I shall even challenge comparisons by alternating American and foreign songs on my programs.

One reason why American songs often fail to make a good impression is that they are often badly sung. The best artists seldom put them on their programs at all and those who do condescend to sing them never take the trouble to study them with care, but interpret them on the spur of the moment as it were. This has led to the very general belief that English is, *per se*, not a singable language.

No greater fallacy exists. English is not only a pleasanter but an easier language for the singer than German, for instance. But it must be studied, as French, Italian, and German are studied by all singers, no matter what their nationality. It is a well-known fact that no one ever has a naturally correct enunciation of his own language. What actor would attempt to deliver his lines without making a special study of the language in which they are written? Yet most American singers, while willing enough to study the enunciation of French, German, and Italian, take it for granted that they know everything about their own language and refuse to spend any time upon the preparation of songs written in English.

Another reason for the unpopularity of English as a medium for song is the very common mistake of presenting foreign songs in English translations. Naturally such a proceeding is ruinous to the spirit of a composition, for the English words cannot possibly fit the music as did the original. But this does not by any means prove the unfitness of English words in general to be set to music.

———*———

WORK AND PLAY

"You musicians ought to lead a very happy life."

"I don't see why."

"Don't you? Why even your work is play"—Horace Zimmerman.

SHOULD A WOMAN SINGER WEAR A CORSET?

A SYMPOSIUM

I

SOME time ago THE MUSICIAN received the following letter from one of its readers which put up to the Eidtor a question which he did not feel himself competent to discuss. It occurred to him to submit the matter to certain teachers and singers whose experience would be worth placing before the readers of THE MUSICIAN. Some of the replies to a letter requesting a discussion of the subject follow this introductory note. We expect to print others in the next issue of THE MUSICIAN, and hope that our fair readers may find the material helpful and practical to their needs.

A LETTER OF INQUIRY

To the Editor of THE MUSICIAN:

Dear Sir:—As a student of music and a singer who desires to do her best, yet has found difficulty in sustaining tones because of restriction due to the corset, I am asking THE MUSICIAN to advise me in the matter.

Shall I discard the corset? My teacher claims that it hinders my breathing. My mother says that a well-dressed woman must wear a corset. Can you not get the experience and advice of singers and thus suggest the most practical way of solving the problem?

One of my friends is studying with a teacher who says that a front-lace model is the only proper kind for a singer and that Tetrazzini wears that style.

Very sincerely,

J. L. L.

The reader will note that the various writers art not in accord as to the advantages or disadvantages to a woman singer from wearing a corset. Yet a careful examination of the replies indicates that the greatest objections to the use of the corset seem to apply to the *older* models, and that the singer can provide herself, today, with a corset which will not be a hindrance to her breathing and breath control.

———*———

THE CORSET AND THE SINGER'S BREATHING AND BREATH CONTROL

BY J. C. WILCOX, BARITONE AND TEACHER

RESPONDING to your request for an opinion as to the relation of the corset to a singer's breathing and breath control, I must confess that I cannot, as you suggest, "indicate under what conditions the corset may be a help and not a hindrance to a singer."

It is conceivable that there may be some weak sisters whose muscles are so atrophied through long constraint and disuse that they now require artificial support, and that they find such support from that invention of the devil, the corset. But how any normal human being can find assistance to breathing, or to control of breath, through wearing corsets I cannot imagine.

This I know: As a teacher of singing who has been called upon to direct the vocal studies of hundreds of young women—and some not so young—I have been constantly handicapped in my efforts to assist them to acquire adequate breath control by their miserable muscle-killing corsets. Incidentally, I cannot remember having secured the admission from any one of these hundreds that she wore her corsets too tight for ample breathing.

Every voice teacher knows that corsets are a handicap to vigorous breathing. To be sure, the few women who wear their corsets loose enough to permit full expansion of the intercostal and dorsal muscles, *and who have always worn them so*, may be good breathers; but who will say that they would not have developed even greater muscle strength had they never worn them? A muscle that has for years had an external prop to lean upon will hardly have the resiliency of one that has been obliged to develop its own strength.

I do not advocate an attempt to have women who have worn corsets from girlhood to adult maturity take them off. For such it is probably wiser to advise the wearing of the most flexible corset obtainable, loose enough to afford adequate expansion of the air chest walls. But I *do* advocate an attempt to make mothers realize the hideous results of corset wearing, that they may prevent their daughters from ever adopting them. A flexible corset waist, without steels, is sufficient support for any young woman who is not abnormally stout. There is one redeeming feature, at least, in current styles for women's dress: The bloused bodice does not require the tight lacing that was formerly necessary to secure "tailored" lines.

I believe that the time required to develop the average girl into a singer of power is very materially lengthened through weakness of the breathing muscles due to the wearing of corsets. I have no good word to say for the things!

———*———

THE CORSET AS AN AID TO BREATHING

BY EVA EMMETT WYCOFF, SOPRANO AND TEACHER

I SHOULD say that, when worn properly, the corset is a benefit, decidedly so, to all women. Again repeating this statement, when the corset is worn properly, when it is pulled down, and the flesh of the body pulled up. Certainly the corset that is worn by many women of this day, where their hips are bound to the extent that the flesh of the thigh sticks out to the point of malformation, cannot be otherwise than injurious. But when the corset is put on so that the waist line is low, leaving the upper part of the body and ribs free for expansion, this cannot be injurious to the body for it is a helpful support, and the singer feels this support and freedom, in the breathing apparatus, as a natural result.

———*———

THE CORSET AND THE SINGER

BY F. W. WODELL, TEACHER

WHAT the singer really needs is a well-developed body, with nerves and muscles in a normal, healthy condition, able to respond effectively and quickly to the mental impulse.

The chief prerequisite to good tone production, after natural gift, is bodily poise: the weight of the body balanced on the ball of either foot; upper chest well up, but without strain; chin a little down rather than up, if any variation from the level is to be permitted; no rigidity anywhere. With this position the lowest part of the abdomen will be found to be very slightly retracted, which is desirable.

If now the clothing be such as not to hinder in the least the freedom of expansion of the body, waist front, sides and back, on her thinking of singing the breath will take possession of the singer. The

if the singer, on beginning to sing, will slowly, gently, yet firmly, without any effort that brings in the slightest rigidity, carry the trunk upward out of the hips, she will have at her waist at the front, just under the breast-bone; at the back, up under the shoulder-blades; and at her chest a feeling of expansion, of moving outward, one as of an outward pressure from within; at the same time the lower abdomen will move slightly inward. This latter movement, which also involves the lower sides and back, will spread gradually upward toward the breast-bone, as the tone is sustained, reaching, finally the upper waist center; the chest at the same time raising slowly and slightly.

It is evident that to obtain the proper poise and movement for singing no corset or other apparatus which trammels the action of the muscles of inhalation and exhalation can be worn.

To get the necessary strength of muscle for any action one must use the muscle (not abuse it), then rest it; then use it again, and so on. Weak, flabby trunk muscles mean sunken chest and sides and protruding abdomen—an exact contrary condition to that of the "poise" mentioned above. Corsets can be made and worn which will not embarrass the muscles involved in the correct use of the body for singing.

The "singer's poise," referred to is nothing more than the normal, natural carriage of the healthy, vigorous young boy or girl, who need no apparatus to assist them in maintaining it. It is conceivable that a woman singer might be of a build which would make the assistance of a special corset apparently necessary if she is to take and retain singer's position."

But after all, is not such apparatus more properly considered as the "crutch" of sick or lazy people?

SINGERS AND CORSETS

BY HERBERT WILBER GREENE, TEACHER

WHAT can be more noticeable to intelligent observers than the change that has taken place in the attitude of women to the question of corsets. Modistes have cut them off at the top and lengthened them at the bottom with the result that, as now worn, they are of no inconvenience to the singer.

Corsets are a necessity of woman's dress. Those who do not wear them are not well-dressed and that comprehends the entire question. Most women aim to make an attractive appearance, and the corset is necessary to that end. The average woman would as soon think of appearing without her shoes as without her corset.

There are a few silly women who squeeze their feet into shoes a size or two too small for them, and they suffer accordingly. They are the kind who lace their waists to gratify their vanity and with the same result.

It is many months since I have had a pupil in my studio so tightly laced as to interfere with her proper diaphragmatic respiration.

It seems to me that the problem no longer exists. It has solved itself. It certainly has with intelligent singers and students of singing. Those who are not intelligent will not change their custom in this respect, not even if "teachers, doctors and anyone" write symposiums against it.

THE SINGER'S CORSET

BY MME. ANNA E. ZIEGLER, SOPRANO AND TEACHER

You ask, under what conditions the corset may be a help and not a hindrance to a singer? My answer is: Under no circumstances should a grown person be made to wear a corset, as the latter weakens all the muscles which the corset supports, so that for a time these muscles are unable to support themselves; and, in fact, if the corset is worn in early years, the supporting muscles never develop, consequently girls suffer from backache at various times, and their health is materially impaired, besides ruining the shape of the body forever. No painter or sculptor could consider a corseted girl for a model.

On the other hand, the body being misshaped and unable to support itself, the singers of today not swing themselves up to a high knowledge of normal shape, there seems to be nothing left but to allow them to wear corsets.

The only advice I can give to the latter, is to wear the corsets loose, and to use elastic corset laces; also to insert pieces of elastic in different places, so that when the lower ribs expand, as they should during singing, they will find the corset expanding with breathing, and may perhaps help to support the flabby, undeveloped muscles.

(Part II in THE MUSICIAN for June)

BENEFIT FROM PROPER VOCAL STUDY

BY JOSEPH BAERNSTEIN-REGNEAS

WHAT the young people of today, and more especially the young women and girls, need more than anything else to benefit their health and appearance is a course of study which will awaken them to a pride of carriage; not for the beauty of it alone, but for the great physical benefits to be derived from it and from correct deep breathing.

For some unaccountable reason it has become the style for young people to have stooped shoulders and to throw the hip bones forward, thus causing the entire body to be out of plumb. The results are sunken chests and inadequate lung capacity.

It behooves parents to see to it that their children have the requisite expansion of the thorax, so that the heart and lungs may have sufficient space. There is no better way of attaining this than through correct singing. The thorax is more elastic in a youth than in a man; hence it is in the early years that one should study, but young people should enjoy only good instruction. If they are early offered the opportunity of singing correctly, their lungs and chests will be strengthened, and hence the entire constitution. A healthy body is the foundation stone upon which is built an active mind and a happy heart. Gymnastics are beneficial, but are apt to be fatiguing, whereas singing is stimulating.—*Musical Courier.*

The Brookfield Summer School of Singing

is charming in its atmosphere, unique in its methods, and satisfying in its results.

The work is adjusted so as to be valuable both to beginners in singing and to experienced artists.

The session begins June 1st and ends October 1st. Come for the full term if possible.

Teachers can easily give two months to the school; and those who have only a short vacation can combine relaxation with some valuable practical work in singing.

If you are interested in any phase of vocal music, you will enjoy reading our illustrated prospectus.

HERBERT WILBER GREENE, Director

Address until June 1:
701 Carnegie Hall, N. Y. City

Address after June 1:
Brookfield Center, Conn.

GEO. CHADWICK STOCK, TEACHER OF SINGING

OFFERS A

Six Weeks' Summer Course of Vocal Study

BEGINNING JUNE 15th

THIS Course is intended particularly for soprano and contralto voices; for those who sing as well as for those who teach.

I believe that every possible facility should be accorded prospective students of singing for investigating the merits of any teacher.

By all means ask any questions that may come to your mind

Full information regarding my views and way of training voices will be mailed on request.

My purpose in advertising this studio through **The Musician** is to spread widely information that is continually proving of practical help to singers

All instruction is individual, and is given by Mr. Stock personally.

The number of students that can be accepted is necessarily limited—no applications can be received after June 10th.

Instruction is based on clear, logical lines, that do not leave the student in doubt as to what to do. *The student, therefore, who is willing to do straightforward, enthusiastic work, cannot fail to make progress.*

Address all communications to

CHILDREN'S WORK IN MUSIC

CONDUCTED BY HELENA MAGUIRE

MY NEIGHBOR

BY HELENE VANDER POEL SINNOTT

I'm just a little girl of nine
Who loves to run and play—
But yet I always stay at home
And practise every day.
The little girl who lives next door
Is learning music too;
But she doesn't have to work at scales
And dull things—as I do!

Her mother lets her play ragtime
In any old kind of way;
That's why teacher says that Ann
Will never learn to play.
So although the children laugh at me
For only knowing scales, . . .
When lesson day comes 'round again
Ann—most always fails!

It's true my fingers ache, sometimes.
Oh, well—I just don't care!
A great musician I'll be—perhaps—
And Annie won't. So there!

MUSIC CLUB DIVERSIONS

BY JESSICA MOORE

1. A BOUQUET OF COMPOSERS

LUCRETIA LAWRENCE compiled the following game for her Music Study Club. They found it so entertaining that she has sent it on for the use of other clubs.

Each player is given a card with the list of flowers written on it, and the players must find in each flower the name of a composer.

Hydrangea	Haydn
Bachelor button	Bach
Lady slipper	Plaidy
Trailing arbutus	Tausig
Ragged robin	Grieg
Snowdrop	Dorn
Star of Bethlehem	Bohm
Sweetbrier	Weber
Butter and eggs	Bauer
Spider plant	Spindler
Eglantine	Engel
Moon vine	Nevin
Dutchman's breeches	Brahms
Heather bell	Heller
Scotch thistle	Tosti
Crimson rambler	Cramer
Jack-in-the-pulpit	Lack
Bleeding heart	Handel, Bendel, Behr

INVERTED MUSICIANS

THE following will prove to be a very novel and enjoyable half hour diversion for any gathering of children who are musically inclined:

An ordinary chair is placed in the center of the room, care being taken not to obstruct the view of those watching the performance. The host or master of ceremonies invites one of the audience to this seat; then he places and holds to the forehead of this participating player a piece of heavy white paper. Next he hands to the player a soft lead pencil and requests him (or her) to write upon the paper the name of one of the world's master musicians. The player will do this, but it will be a noticeable fact that after several unsuccessful attempts, he will finally accomplish the task by starting from the *left* temple; the result of this writing will be intelligible only when held in front of a looking glass.

The paper is now handed to the guests, one after another, with the request that they decipher the inscription on it and make a memorandum of their solution.

This routine is continued until all have taken part.

The looking glass is then brought into service and the person making the greatest number of correct guesses wins.

To avoid confusion and misunderstanding, the host should number each paper and write the name of the player on the back of his contribution, likewise request the guessers to put a corresponding number on their solutions.

CARLOTTA'S COMPANY

BY MARY COLES CARRINGTON

(A MUSICAL FAIRY TALE)

CARLOTTA was very tired of practising; the hands of the big clock crept slowly, slowly; the hour dragged wearily on, and her leaden fingers seemed to find their task almost impossible to fulfil.

"It isn't that I don't love music," she whispered, while the dreary one-two-three-four continued; "I *want* to learn, I *want* to be a great musician, and I love to hear Miss Smith play! But these old exercises are so ***hideous!***" —and she sobbed softly, while a big tear rolled down and sat winking at her from Middle C.

"Oo-oo-oo!" growled a very tiny bass voice; "Ee-ee-ee!" shrilled a wee, sharp tone.

"What was that?" cried Carlotta, whirling around on the music stool.

"'Twas I!" the deep voice replied.

"Me too!" squeaked the high one.

And there, sitting on the keys of the piano, Carlotta saw the two queerest little figures you can imagine.

Big, black heads they had; thin, spindling legs and long, straight feet.

"Why," said Carlotta in surprise, "you're *notes!* Where on earth did you come from?"

Before they could answer, and while Carlotta still blinked with astonishment, more and more funny-looking figures appeared until one was seated on each key of the piano. Some had white heads, some had black, but all sat and pointed at her, and made odd little noises.

"So you don't like us!" they chorused; "and yet you say you love music. Aren't *we* music? What good would ivory keys and metal wires do if we did not sit back there and sing? Silly child!"

"Oh!" faltered poor Carlotta, "I don't understand. I do love music, but I just said I hated exercises—they're not real music!"

"*Not music?* How do you suppose all the great musicians compose their pieces? Come, come, child, listen! Do you like fairy stories? Yes, of course you do. Do you like spelling lessons? Do you like to say the alphabet over and over? Don't you see that all words are made up of letters, and all stories are made up of words and phrases, and —"

"Why, I think I see what you mean!" interrupted Carlotta, drying her tears, "but I never thought about it before. You mean that notes are like the alphabet, chords are like words and pieces are like stories?"

"Yes, yes, my dear," answered her visitor rather less fiercely. "And you will soon find if you look at them in the right way, that learning exercises is like learning to read and spell—but, of course, people must understand easy stories before they try hard ones; like your little sister with her primer."

"But I don't see yet what *you* have to do with it," objected the little girl, "You said you sang —"

"Of course we sing!" a note near the middle of the piano broke in rather indignantly, "but though we have power to speak without human assistance, we can sing only when you help us.

"Here!" it commanded, "E, G♯, B! Position!"

Three little figures disappeared from the keys.

"Now," went on the note that had issued he order, and who seemed to be the proprie- or of Middle C, "will Carlotta be good nough to strike those three notes?"

She did so, but she felt very shy and em- barrassed and, striking rather faintly and in- distinctly, only a muffled chord was heard.

"Too bad!" grumbled the three notes, re- ppearing. "You didn't half try, and we an't sing alone. How would *you* like to be reated so?"

"Try again!" commanded Middle C.

They vanished the second time, and Car- otta, summoning her courage, struck this me a full, rich chord that echoed beautifully hrough the room.

"Aha!" all the notes agreed; "that was a ifferent thing."

"Now, my child," Middle C spoke again, "won't you try to remember how disappointed we will be if you ever sit down to play and give us only half a chance to do our part and sing our notes clearly and sweetly? We don't care to sing *loudly* all the time, but we want a chance to give out a full, round, musical tone that will please every ear and be distinctly heard, even if it is only a whisper. Every note, even the notes in the exercises you dislike, can be made a beautiful tone, and by learning to play these well you will be preparing your fingers to help us sing sweetly in your pieces.

"Though every performer cannot be great, everyone, even a very little girl, can give pleasure each time she lays her fingers on the keys. Now, won't you try?"

"Oh, I will, I will!" cried Carlotta joyfully; "I'm so glad you came. I'm so glad—" she clapped her hands and in so doing knocked over a fat book of exercises, which fell to the floor with a bang.

"Why, Carlotta," exclaimed her teacher, entering with a merry laugh, "have you been dreaming over your practising?"

Carlotta rubbed her eyes and looked around in vain for her funny little friends. Not a sign of them was to be seen.

"Well, Miss Smith," she answered, smiling too, "maybe I have; it didn't seem like a dream. But, if I have, it was the nicest dream I ever had, and I'm sorry it is over."

And when she told her teacher all about it, Miss Smith not only wished she could have been there too, but wished that all of her little scholars, and every little girl who was learning to play, could have shared Carlotta's company and have heard the wise advice given her by Middle C.

THE MAY-POLE

A MAY FESTIVAL

BY LAURA ROUNTREE SMITH

HE May Festival may be given out of doors on a large porch, the piano being by an n window. If given indoors the stage may set with flowering plants, and green nches in pots. Pink and green paper ins hang from the ceiling.

COSTUMES

he Shepherdess costume consists of a te dress, with pink tissue paper bodice, d up in front with white ribbon, a full rskirt of pink tissue paper, hat covered n pink paper, pink strings, white shoes and kings.

he crooks are wooden poles with a piece in at the end, covered with pink and white ie paper, long streamers of paper at the They are made by a carpenter.

pring wears a white dress covered with icial or real daisies, daisies in her hair.

he May Queen wears white dress, shoes and stockings, and carries a basket of flowers.

If there are boys in the class they may dress in old fashioned shepherds' costume and play or sing the following selections.

The Shepherd's Pipe, Gregh.
Tyrolean Shepherd's Song, De Janon.
Shepherd's Horn, Jungmann.
Shepherd's Song, Williams.
Song. *When I was a shepherd,* from *Folk-songs for Children.*

More difficult selections may be used in the program where the class is advanced. (The music is published by the Oliver Ditson Co.)

The invitations contain a sketch of a shepherdess in one corner and the following verse.

Come to our musical today,
For we will crown the Queen of May.
We all delight to sing and play,
For 'tis the merry month of May!

The shepherdesses pass at the back of the stage or grounds while the first selection is played, they march right and left, are seated, and take part in the following program:

1. Piano. *Little Sheep-bells,* Beaumont.
2. Song. *The Shepherd maiden,* from *Thirty Songs for Children.*
3. Piano. *The Carol of the Shepherdess,* Leston.
4. Recitation. *Spring Greeting.*

Merry Spring comes in with laughter,
Summer days will follow after;
So it is we love to sing
Melodies to greet sweet Spring!

Heigho, for the flowers of May;
Heigho, for the buttercups gay;
Heighho, for the Springtime again;
Daffodils come in her train!

Robin's singing in the rain,
Merry Spring has come again;
Merrily Sir Robin sings
Sweetest songs to welcome Spring!

SHEPHERDESSES

In the woodland there's a sound
Of little fairy feet;
Flowers spring up all around
Merry May to greet.

In the woodland there's a call
Of robin, thrush, and wren;
All the world is full of joy
For Spring has come again!

5. Piano. *In Springtime,* Manney.

6. Piano. *The Dainty Shepherdess,* Beaumaire.

7. Recitation. *Lady Spring.*

Lady Spring, Lady Spring,
We are calling you;
Lady Spring, Lady Spring,
Skies are bright and blue,
So we'll sing a merry tune,
For we know you're coming soon.
Underneath the silver moon
We are calling you.

Lady Spring, Lady Spring,
Coming as of old;
Lady Spring, Lady Spring,
You've a heart of gold,
See the gold-winged butterfly
And daffodils delight the eye,
You'll be coming by and by,
Coming as of old.

8. Piano. *Spring's Return,* Klein (Student's Classics).

(Enter Spring)

9. Song. *Spring's Arrival,* from *Thirty Songs for Children.*

10. Recitation (by Spring) *Over the Meadow.*

Over the meadow with fancy free,
I come a-tripping in as you see;
For who is so merry, so glad and free
As Little Lady Spring?

Over the meadow with scarce a sound
Flowers are springing up from the ground,
Oriole's singing, shade she has found
For Little Lady Spring!

Over the meadow 'mid sun and rain
All of the birds are flying again,
Little white butterflies in their train,
To welcome Lady Spring!

11. Piano.
Meadow Song, Bachmann, or
Over the Meadow, Williams.

12. Piano.
Birds in the Orchard, Cadman.
Springtide, Esipoff.
Flying Birds, Lichner.
The Running Brook, Fink.

13. Recitation. *The May Queen.*

Spring.
Pretty little shepherdess
In your dainty new spring dress,
Tell me, truly, can you guess
Who'll be Queen of May?

Shepherdess.
In the spring, the merry spring,
Who would not delight to sing?
Sweet the woodland echoes ring;
Who'll be Queen of May?

Spring.
Bird and bee and butterfly,
Merry breezes passing by,
Will you pause to make reply?
Who'll be Queen of May?

14. Song.
The Butterfly, or *The Birdies' Ball,* from *Thirty Songs for Children.*

15. Piano. *Flowers of May,* Smallwood. (Group of 12 pieces) or, *The Swallow,* Bachmann.
Butterflies, Williams.
The Busy Bee, Williams.

16. Recitation. *Choosing the Queen.*

Who will we choose for Queen of May?
Who but a lassie so glad and gay?
Come, then, and crown her without delay,
Our laughing, rollicking Queen of May!

MAY QUEEN

We will go search for the May Queen,
Search for the prettiest lass seen,
News of her in the meadow we'll glean,
Our rollicking, laughing May Queen!

(The Shepherdesses go out, re-enter with May Queen.)

17. Recitation. (By May Queen) *May is like a Lassie.*

May is like a little lassie,
Very, very shy;
And she nods her head in greeting
To the passer by.

May is like a little lassie,
And I've heard her say,
"Hang up baskets now in greeting
For the first of May!"

(Spring crowns her and she retires to raised platform.)

18. Piano. *May Bells Ringing,* Siewert. (*Young People's Classics,* Vol. 2.)

19. Piano.
Dream of the Shepherdess, Labitzky, or
The Pretty Shepherdess, Kern.

20. Shepherdess Drill and May-pole Dance.

The Shepherdesses line up, separate in th center of their line, march right and left, marc forward, and meet in twos, fours, and sixe march right and left, face each other, sid to the audience, march in lines forward an back, hook their crooks, sing *A Trip to Poppy land.* (*Thirty Songs for Children*).

They return to places, march forward an back, pass between, repeat. Form a circl march to center of circle and back, hold crook touching. Recite:

Who is so happy, glad and gay,
As a shepherdess in the merry May?
Who is so happy, can you say,
As a shepherdess in the merry May?

Return to places in the circle. Every oth one kneels, every other one circles rou those kneeling until she returns to her pla repeat, those who were kneeling circle rou this time. Skip around in twos and out. T drill may be lengthened by supplying a familiar movements.

The musical ends with the May-pole Dan Music suggested is *May-pole Dance,* Turn or, *May-pole Dance,* Oehmler.

THE VIOLIN

CONDUCTED BY RAY G. EDWARDS

VIOLIN TEACHING

BY FRANZ C. BORNSCHEIN

III

PHYSIOLOGICAL ADJUSTMENTS

With these precautions as to suppleness of the entire arm well impressed, the teacher can now start to mold the pupil's hand around the bow, endeavoring to attain ease and naturalness, placing the thumb under the stick so that it will eventually support the same without any impediment of its functions. To do this molding correctly, stand in front of the pupil or at the side and adjust the stick to his hand, pressing here or elevating there, but *always* having the bow under your control until there seems to be some response to the directions and some assurance that the proper idea of balance has been grasped.

Rest the pupil frequently during this experimenting. While doing so explain how it is necessary to follow certain natural laws of balance for the perfect control of the bow. State how in consequence the position assumed by each finger or the thumb will govern or mar this perfect balance. It will be well to explain that the pearl dot, which is usually found in the center of the frog or nut, is not placed there merely for ornamentation. Instead, it is to show the lower pivot-point above which on a direct line the end finger should be placed in order to help control the stick. Usually the little finger is placed at this point, but, if this member is extremely short, the ring finger must serve the purpose. The lower pivot-point being indicated, the upper pivot-point will, of course, depend upon the space covered by the four fingers (or three, when the little finger is short), the forefinger covering this upper pivot-point. As the thumb represents the under balance-point, it is necessary to place it at an equal distance between the two pivot-points, this practically being the basis of the physiological adjustment needed to govern the proper tilt of the bow in the hand, as to conform with the arch of the bridge which effects the elevation of the strings.

Further analysis will show that the forefinger is used to lower the elevation of the bow by depressing towards the left, that the middle finger serves principally as a balance above the thumb, and that the third aids the little finger, sometimes even taking its place in the task of changing the elevation of the bow to a higher string by slightly depressing towards the right. Thus illustrate that by the actions of the *fingers alone* it will be possible to play at the required angles and on any string; a vital point worthy of the fullest consideration later when the elevation of the right elbow needs explanation. Indeed, it is this clever manipulation and tilting of the bow through the balancing actions of the fingers and the thumb alone which form the basic substance (considered purely physically) of the many seemingly intricate styles of bowing. Indirectly, too, these tilting motions form an important adjunct in gaining continuity of strokes, for only through the utmost flexibility can the change from one stroke to another be overcome, or at least become less abrupt. Therefore be certain that the beginner does not start in the wrong way by clumsily grasping the bow, as locked joints, tight muscles, and other signs of mental tenseness will prevent the proper ideas from being instilled.

To make this plain to the child mind give a playful description of the functions of the thumb, forefinger, and the end finger in tilting or controlling the bowing angles by stating that the thumb is the stump of the tree upon which a board (the bow) has been placed as a "see-saw." This see-saw holds John, Mary, Susan and little Joe (representing the fingers in their respective order from pointer downward) and the children tilt it according to their wishes down and up as they desire. Such explanation will be comprehended more readily by the young beginner than a tiresome talk. In fact, the teacher should reduce these verbal illustrations to their most concise form, endeavoring rather to give the pupil correct impressions by actually molding his hand into what appears to be a pliable position.

DRAWING THE BOW, FORMING STROKES

Having again assumed the correct playing attitude, with the violin properly adjusted, the beginner should now attempt the first strokes, but with the assistance of the teacher who lightly guides the bow, holding it at the screw so as not to interfere with the pupil's hand position. If during the course of a stroke any inaccuracies or stiffness occur, the teacher's guiding hand will detect the fault and be prepared to quickly correct the error. Such physical assistance should be given throughout the first lessons, until some idea of free movement and well directed muscular activity is gained. Such directions will lead to the correct habits being quickly formed, for through this more or less subconscious process the pupil is enabled to direct thought into the proper channels.

Begin with the open A string, forming a downward stroke, during the course of which the arm is to assume the three fundamental positions: 1. Closed position. 2. Open position. 3. Extended position.

1. Beginning with the bow at the nut, the fore and upper arm being comfortably closed, resembling the capital letter V in shape, the elbow is brought fairly close to the body, the wrist is slightly arched, and but little hair is spread upon the string.

2. As the bow is drawn downward toward the middle the arm advances to open position, the wrist and the hand are almost level (parallel with the violin when it is properly balanced), the fore and upper arm now resembling a capital L, the elbow, having changed to a higher elevation, is not quite so close to the body, the shoulder is relaxed and should never be raised. More hair is spread upon the string.

3. In approaching towards the point of the bow the arm is extended, bearing some resemblance to the capital I, the wrist is depressed from its level position and the elbow is again brought close to the body, but slightly more forward than when the arm was in a closed position. A greater hair surface is now spread upon the string.

Having taken the pupil through these prescribed motions in a downward direction, rest a moment and patiently repeat the entire process, guiding the stick correctly, gently changing the arching of the wrist, always suggesting the dipping of the forearm, and giving advice as to the free movement of the elbow and shoulder with the greatest care, but without any apparent exertion. Relax, lift bow from the string, return the arm to closed position, and begin a new down stroke. Do this until some purity of tone is noticed. Next go through these same motions on the D string, then upon the E, and finally upon the G string. Considerable practice in forming the down stroke, always relaxing the arm and carrying it back to the original starting position at the nut, should be insisted upon before attempting the opposite stroke upward, during which the arm is made to pass from the extended position to the closed position.

Strange as it may seem the beginner can more easily open his arm than close it. Perhaps one of the reasons for this is that the law of gravitation may have some effect upon the downward course of the bow, the weight of the arm being sufficient to start the stroke in its downward direction. But in order to accomplish the stroke in an upward direction *will power* must be employed, and there will be no natural phenomena to aid the beginner in the closing actions of the arm. Therefore it is sometimes a troublesome task to teach the command of the upstroke.

Begin on the A string with the arm in extended position, the bow placed at the point with a good amount of hair spread upon the string. See that the depressed wrist is gradually raised, that the elbow is slightly lowered and brought toward the body, that the shoulder is kept quiet but loose while the arm is brought into closed position. Meanwhile the hair is spread as when starting the stroke downward at the nut. Now have the pupil relax, carrying the arm back to extended position, and begin another upstroke. Repeat this process until some control is gained on the open A, D, E, and G strings.

Throughout these actions, downward or upward, the bow should not noticeably have changed its right angles with the violin. Insist upon the fingers, wrist, and elbow describing certain flexible curves to prevent the bow from changing its proper course during the strokes.

After some progress is noted in the forming of single strokes—downward, upward—an attempt can be made to connect the two strokes without interruption. The arm must now pass freely from its closed to its extended position and return to the original closed position without awkwardness or any break in the actions. Use this exercise on the open strings in the order as above mentioned. 1. With the two-stroke group, thus: down and up, relax; up and down, relax. 2. Form groups of four, six, and finally eight full

strokes, relaxing between each group. In fact, have the interim of relaxation between each group equal the period of playing; this will inculcate the first principles of rhythm.

After a brief rest impart the manner of crossing without restraint from one string to another. Caution the beginner that there is but little change in the elbow elevation needed during these actions. Have him remember that the passing from one string-angle to another, higher or lower (as has been stated earlier in this article), easily can be accomplished through the directing motions of the fingers and the thumb alone, and in no case need there be any stiffening of the elbow or the shoulder. First use exercises with single strokes—down and up—then with the connected stroke groups (as before on one string), beginning with the open A crossing to the open E; then reverse the order, the open E crossing to the open A. next the open A to the D, then the reverse; finally the open D to the G, and the reverse. Repeat many times, always with short periods of rest or relaxation frequently interspersed so that fatigue may not be felt, until the pupil is rewarded by having gained a certain amount of control, a clear, sustained tone resulting through this preliminary drill. Up to this point the teacher is still supposed to be directing the arm movements of the pupil. Occasionally, however, it will be necessary for the pupil to do these actions entirely unaided, so that the instructor may ascertain whether the true impressions have really been gained. Some apt pupils will require but little guiding assistance of the teacher as herein suggested; with others it may be necessary to continue this governing for several lessons. Hence no time limit can be set for its continuation. It will be through occasional unaided attempts at stroke formation that the beginner will disclose how well the ideas have been conveyed, and such tests will also show to what extent he can be expected to amplify this given instruction by correct home practice.

THE ADJUSTMENT OF THE VIOLIN

BY FRANK WALDO, PH.D.

SIMPLE ADJUSTMENT

THE importance of the proper adjustment of a violin should be recognized when I state, in all seriousness, that probably not one violin player in a hundred has ever heard his own violin at its best.

The complete adjustment, or rather readjustment, of a violin may be subdivided into three processes: In *simple adjustment,* which takes the violin just as it is and without opening it or making radical changes in the instrument as it stands, the movable parts are shifted until the best tone is obtained.

In repair adjustment, the violin is opened, cracks are glued up, a new bass bar is inserted, perhaps a new neck is put on, and bridge, fingerboard and sound post are fitted. Such varnishing as the repairs and new neck necessitate is done. The simple adjustment becomes part of this work. In *reconstruction adjustment* the thicknesses of the back and top are properly graduated by taking out wood where the parts are too thick or by adding patches where the parts are too thin. In many cases, also, a re-varnishing is considered necessary. Both the repair adjustment and the simple adjustment become part of this work.

In the present article the simple adjustment, which does not necessarily require the assistance of the violin repairer, will be discussed. We shall take it for granted that the violin has been purchased of a dealer or violin maker who delivers it in playing order. That is, a bridge cut down to the standard height and thickness has been fitted so that the feet of the bridge fit snugly on the top of the violin. A sound post of average diameter and of a length that will permit it to be easily shifted, by means of a sound post setter in its upright position in the interior of the violin, has been made from a thin rod of wood such as may be bought for this purpose. The tailpiece has been attached to the tail pin by the shortest loop of gut string that will permit the tailpiece to assume its normal position.

FIRST STEPS

The violin should first be provided with a bridge of average or normal height, and a sound post of average size which will stand up in the violin when perpendicular and which can be moved quite easily when the strings are relaxed. The strings should be of medium size, No. 2 in the ordinary gauge. The sound post should be about three sixteenths of an inch behind the foot of the bridge.

The violin should now be tuned to the pitch at which it is to be used in playing.

If the tone is shrill and hard, the sound post is too tight and the end resting against the back should be pushed in towards the center of the violin; but if the tone is too soft and lacks power and backbone, the sound post is too loose and the end resting against the back should be drawn outwards towards the edge of the violin to tighten the sound post.

If the tone is still found a little too hard in quality the feet of the bridge may be slipped forward (towards the end of the fingerboard) a trifle; but if the tone is still too weak and diffuse then the feet of the bridge should be slipped backwards a little towards the sound post.

THE STRINGS

When, by means of these adjustments, the general tone of the violin has become such that it is not improved by the slight shifting backwards and forwards of the bridge and the tightening and loosening of the sound post, it is next in order to examine the bridge adjustments.

When the strings have been drawn up to pitch press the end of one finger downward on each string in succession at a point on the strings just above the end of the fingerboard. The force required to press the strings down about an eighth of an inch should be about the same for each string; in other words, the tension force should be practically the same for each string.

It takes considerable experience to know the amount of resistance that the strings should have to produce a good quality of tone. If the resistance is too much and the strings do not yield sufficiently to the pressure of the finger, the violin tone will be hard and stiff. If the resistance is not enough and the strings feel too flabby, then the tone will lack power and solidity.

It frequently happens that some of the strings show the right tension under the finger pressure; but other strings do not. The strings that do not feel right and sound right must be made right either by changing the size of the strings or by altering the bridge.

Increasing the thickness of the strings will increase the tension under the finger pressure; and decreasing the size of the strings will decrease the string tension. It is not wise, however, to make any one string abnormally relatively thicker or thinner than the other strings.

THE BRIDGE

Increasing the height of the bridge at the place where the string rests will increase the tension of the string under pressure of the finger. The bridge can readily be lowered under any string and the tension of the string lessened by taking off a little of the wood from the bridge just below the string. But if the bridge must be raised to increase the tension of a string, then the simplest way is to prepare a new bridge of the proper height.

The tone of the violin should be tested with the bow at very frequent intervals during these tests with the fingers, so that the tone change corresponding to any alterations in the bridge or string may be noted.

A slight thinning or thickening of the upper edge of the bridge or of the whole bridge will make a great change in the violin tone, and the tone varies with the quality and age of the wood in the bridge.

A well fitted, properly proportioned bridge of the right kind of old wood is a most valuable adjunct to a violin, and should be carefully treasured. A suitable bridge cannot be obtained without the expenditure of a considerable amount of time, skill and patience. It is not merely a question of the payment of half a dollar or a dollar to a violin repairer to fit a new bridge, when a suitable bridge is lost or broken so that care should be taken to keep the bridge nearly perpendicular on the violin to prevent its warping. And when the strings cut in too far on the edge of the bridge, the old bridge should be patched rather than have a new bridge made.

THE BASS BAR

In the proper adjustment of a violin bridge in its best position on the violin, the bridge should be moved slightly sidewise (that is, towards the bass bar side and the sound post side) and the

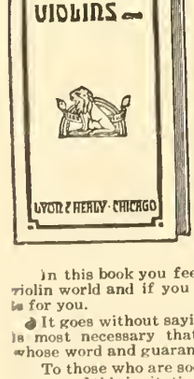
If You are in the Market for a
RARE Old VIOLIN



This Book Will be Sent You Without Cost

If you appreciate the time, money, travel, experience and work necessary to produce such a book; if you realize that we have bought and sold more precious violins than any other house in America, then we know this book will be treasured by you.

Within white and gold covers, in the highest form of the printer's and graver's art are faithful color-type plates of rare old violins we own. Many of them are world renowned masterpieces.

From Stradivarius and Guarnerius violins at $10,000, down to genuine old violins at $50 and $100, we show and describe rare old instruments which have responded to the bows of masters of greater or lesser fame.

In this book you feel and breathe the atmosphere of the violin world and if you wish to buy a good old violin this book is for you.

It goes without saying when you buy a valuable violin it is most necessary that you deal with a responsible house whose word and guarantee will protect you.

To those who are soon to be in the market for a fine violin we extend this invitation to write us for a complimentary copy.

LYON & HEALY, 19-31 E. Adams St., Chicago
The world's largest music house. Owners of the famous Hawley collection.

When you write to advertisers, mention The Musician

tone carefully tried with the bridge apparently off center. It sometimes greatly improves the tone to bring the left foot of the bridge in some special position relative to the bass bar, which can be determined only by trial. Few violin repairers will take the trouble to put in a second bass bar when the first bar does not give the expected good results as regards tone; they just let the first bar go, and the violin is more or less of a disappointment. The shortcomings of the bass bar in the violin can be greatly mitigated by the experimental placing of the left foot of the bridge in the most advantageous position. The effect of various placements of the bridge as regards the bass bar is particularly noticeable on the G and D strings.

It must be taken into consideration, also, that sliding the bridge towards the left (G string side) increases the tension on the G and D strings and decreases the tension on the A and E strings.

Tilting the bridge a trifle backward from the perpendicular has a marked influence on the tone of the violin, making it more brilliant.

THE SOUND POST

The adjustment of the sound post necessitates the use of a sound post setter, which may be purchased for twenty-five cents from a violin supply house.

In general, it is good advice for the violinist to avoid tampering with the sound post; but if he can persuade a friendly violin maker or repairer to explain the adjustment of the post and how to use the sound post setter without doing damage to the violin, there is no reason why the violinist cannot himself make the final adjustment of the sound post to meet the varying conditions of climate and use.

The greatest care must be exercised in moving the sound post when it has once been set up in position. The end of the post resting on the back of the violin may be moved slightly when the instrument is tuned up; but when the other end of the post resting against the top is to be moved, then the strings must be relaxed, otherwise moving the end of the sound post against the tender top of the violin would cut away the wood and cause damage.

The sound post should never be too tightly fixed between the top and back of the violin; and should be nearly perpendicularly placed. Drawing the lower end of the post outward towards the edge of the violin tightens the post and makes the tone more brilliant and hard. If the tone is too hard, especially on the E string, the end of the sound post touching the back must be pushed in towards the center, very slightly. But if the tone is too hard on all strings the remedy is to move the sound post back a little from the bridge; which will necessitate relaxing the strings and moving the top of the sound post as well as the foot.

Some violins require a tightly placed sound post and other instruments require it looser. Likewise some violins require little readjustment of the sound post once it has been correctly placed, while in others the sound post must be readjusted with each change of season. The tone of the violin shows when such a readjustment of the sound post is necessary. The trouble with violins, which some players designate as "played out" or "tired out," will generally be found to be remedied by adjusting the sound post. An invariable rule regarding the sound post is that it must be placed sufficiently tight in the instrument that it cannot be jarred so as to fall over when all the strings are relaxed.

The thickness of the sound post exerts a marked effect on the tone of a violin; and if a violin does not produce a satisfactory tone when all adjustments have been made, a thicker or thinner sound post should be tried.

THE TAILPIECE

One final simple adjustment must be noticed, which usually receives no consideration, and that is, the length of the tailpiece and the loop of gut string that fastens it to the end pin. The lengthening of this gut tailpiece string will soften the tone of the violin, and shortening this string will harden the tone.

I recall an instance in which a particularly sympathetic tone was lost while the violin was in the hands of a repairer for a minor repair. It seemed impossible to locate the trouble, and new sound posts and bridges were tried without avail. At last I noticed that the tailpiece seemed nearer the end of the violin than formerly, and upon inquiry I found that the repairer had shortened the gut because it seemed too long. A longer piece of gut was put in and the violin gave out its old tone.

When a violin is in satisfactory adjustment it should not be meddled with; but plenty of time should be devoted to the first adjustment in order to make sure that the tone is at its best.

———*———

POINTS FOR YOUNG VIOLINISTS

When the different movements of the stroke have been mastered, an excellent plan is to execute whole bows without allowing the hair to rest upon the strings, that is, through the air. To accomplish this slowly, so that the bow always remains at the same height above the strings (about a quarter of an inch) and does not wobble unnecessarily at the point, needs perfect control. Now the control which is imperative when the bow is not supported by the strings is just as necessary when the two are actually in contact with one another. At no time should the stick be allowed to rest on the strings with its own weight; but until the above exercise is attempted, few players have any idea of the tense control which is really necessary.

When playing a number of notes on different strings, exactly the same arm movement is employed as in ordinary long bows, making the wrist execute the crossing and recrossing. The arm being in position for drawing the bow along the A string, the alternate notes occurring on the E string can be played by a downward turn of the wrist without altering the position of the arm.

In playing *piano* passages the bow should move away from the bridge — almost over the end of the fingerboard; while to obtain a *forte* it should be near to the bridge. For *mezzo-forte* passages the bow remains at a point almost exactly between the bridge and the end of the fingerboard. The rate at which the bow is moving also controls gradations of sound—a free movement of the bow always producing a fuller and rounder tone than a cramped movement. A flowing bow gives a floating tone; a stiff movement a sticky, scratchy tone, etc.

The Choir & Choral Department

CONDUCTED BY H. C. MACDOUGALL

CHORAL TECHNIC AND INTERPRETATION

UNDER the above title Dr. Henry Coward, conductor of the famous Sheffield (Eng.) Choir, recently published, through Novello & Co. of London, a very valuable work for chorus and choir conductors, and, incidentally, one which has much interest for choir and chorus singers. We have previously referred to the work, but for the information of those who overlooked the earlier notice we give the price of the book as $2.50.

We make some quotations from the book, covering a variety of topics.

QUALITIES OF VOICE

"The members of a choral society should possess:

"1. A fair amount of power.

"2. The voices should be properly produced.

"3. They should have some agility and flexibility.

"4. They should be under control.

"5. When used collectively they should be homogeneous; that is, each part should sound like one full, glorified voice, and not as an assortment of voices. It is the possibility of getting this unity of voice—with well-directed effort and a little trouble—that is the bright spot and salvation of choral equipment.

THREE AXIOMS

"In my scheme of choral voice-building, I start with the three axioms:

"1. The exercises and the time spent in voice exercises must be short.

"2. The exercises must be very easy, so that they can be memorized and sung automatically and thus prevent the mind from being diverted from the object to be attained.

"3. The exercises must unfailingly lead to the desired result."

We much regret that lack of space will not admit of a presentation of the practical way in which Dr. Coward works out the three points enumerated.

WORKING UP A CLIMAX

"When a professional music critic, I was often struck with the effect produced upon the hearer by a few notes, or a phrase, drawn white-hot, as it were, from a violin by a brilliant player. The mental disturbance was quite disproportionate to the quantity or volume of sound produced, for the sum total of the sound could be drowned by a single strong-lunged chorister. On analyzing the cause of the thrill, I found that it was due to the *intensity* of the sound produced by the player's firm attack and nervous energy."

The author tells us that in his talk to the members of the chorus he includes the following: "At every concert the audience should experience at least six thrills. A concert without thrills is like a cloud without water at drought time, or bread without salt—unsatisfactory and unsatisfying. Thrills can be produced by charming pianissimos and well-graded crescendoes and diminuendos, but most of all by stirring fortissimo climaxes. It is evident that to get a rousing climax we shall have to sing louder and with more brilliance. Seeing that you seem to be singing with all your power, you may think it impossible to sing louder. In that you are mistaken. Though you had the impression it was your loudest, you can sing twice as loudly and, which is of greater importance, with greater *intensity*. The question arises, 'How is it to be done,'"

Then follows an explanation of the author's method of producing a sonorous, intense singing tone.

SINGING PIANISSIMO

"To sing pianissimo with firmness and at the same time to maintain the pitch postulates a vocal technic which comparatively few possess; and yet with proper instruction a choir can be trained to meet the severe demands imposed by the dual task. Of course an indifferent choir can sing pianissimo and, at times, come successfully through the ordeal of keeping the pitch, more by good luck or elation of spirit than by mastery of voice. . . . Soft, firm singing demands great skill, and, as every artistic attainment necessarily involves a long preparation, I will go to the root of the matter and note the evolution of the necessary equipment and control of breath."

Among the elements involved Dr. Coward places nasal resonance. In discussing the practical side of the subject he says:

"To get the choir to apprehend nasal resonance, first pattern Ex. 1 (a scale phrase) to the long *e* or long *a*, softly with pure non-nasal quality and get the choir to imitate it. Then sing the exercise rather loudly, very nasally — indeed with nasal twang. Tell the choir how to imitate it, imparting a derisive, mocking character if possible. This excess of nasality will help them to realize nasal tone, and predispose the muscles of the mouth for the next step.

"Pattern once more Ex. 1, but this time with proper amount of resonance, and ask the choir to imitate. Of course success will be limited. This partial failure will enable you to introduce the device of humming on the letter *m*, which, later on, will be used frequently in the developing of *pp* and *ppp*.

"The choir having got an idea of nasal resonance, ask them to sing towards the pianissimo phrase in the work under rehearsal. Afterwards ask them to hum the passage very softly, with the sound on the lips, at the same time calling their attention to the attenuated, nebulous, almost despicable sound, which should be such that one could hardly call it singing. If this is done correctly they will have realized one of the most spirit-reaching effects in all music, the mysterious ethereal quality which I call 'floating tone,' which seems to belong to the seventh heaven."

THE VOLUNTEER CHURCH CHOIR: ITS POSSIBILITIES

BY ARTHUR SCHUCKAI

AT a time when it is not unusual to hear the volunteer church choir spoken of as a failure, it might seem risky to say something of its possibilities. But there are some who do not admit it is a failure, and some who do see possibilities.

Given an organist who is at all awake, who does not write an itemized bill for every effort, who is interested in his work, and given a reasonably large territory to work in, peopled with a reasonably numerous population, there is no reason why the volunteer choir should be a failure or lack possibilities. Many choirs, however, are failures because they do not measure up to their possibilities.

A choir should be a *generator* of musical interest. It should keep the community stirred up in the interest of music. A choir must have personality. Its services must make such an impression and repeatedly make such an impression that the word *music* will come to mean more to the congregation. It can attract attention to itself and to music, by giving special services on Sunday and miscellaneous concerts on week nights (of course not every night or every week); but its main striving must be to make the service a success—to sing as though that were the last Sunday on earth. There is no organization, no person, and no publication that has half the chance of the volunteer choir to make the community musical.

The choir rehearsal can be made an occasion where things are to be learned. The training in rhythm alone is enough to justify vocal teachers sending their pupils to the choir. The mistake teachers make of thinking that chorus work necessarily injures the voice is so bad that it glitters. If the singer ruins her voice in a chorus, it is a matter between her intelligence and herself. It is a wise vocal teacher who aids and works with the choirmaster. It is admitted that the desirable students are the enthusiastic ones. The choir can be a regular power house, a place where enthusiasm is generated.

For the singer, chorus work offers much of value in addition to the pleasure (for the pleasure has also its value). There is the constant effort to read at sight—and the gradual acquirement of the ability to do so without effort. Singers should know something about the different styles of writing and the different schools of music. It never hurts a singer, no matter how well trained, to know the choruses of an oratorio in addition to the solos. If the choir is spoken of in respect-lacking tones, it is usually because singers themselves do not sufficiently respect their work.

The possibilities that lie in the volunteer chorus for the organist are too many to be counted. Most important is the fact that he is given a means of self-expression no other way obtainable. Through his choir he can speak to the whole community. In his search for new members, in his many efforts in behalf of his choir, he becomes intimately known in the community. That this is desirable most organists will admit. The best way to advertise is to express yourself, and the best way to express yourself,—but that is another matter.

While this is written from a musical point of view, the organist need not be ashamed over the fact that he incidentally may be deserving credit for other reasons. If he is able to bring to the services on Sunday a body of young people

with reasonable regularity, the minister as well as the official board may have good reason to thank him. Churches are using music more and more as a drawing card. I myself am not wholly in sympathy (either as a musician or a man) with this attitude; but if the church surrenders to music, music should make good.

Music never asked to do more than assist at the service—but if the church gives up its own functions to music, the art should rise to the occasion, step to the front and give the message of religion, the power and love of God, the goodness of life and the joy of living with carnestness and conviction.

———*———

RETIREMENT OF SIR GEORGE C. MARTIN

Late advices from London would seem to indicate that Sir George C. Martin, organist of St. Paul's Cathedral, will retire during the present year. Although he has been organist and choirmaster of the Cathedral since 1888, he has been connected with it since 1874, when he became master of the choristers, so that his term of service there has extended over a period of forty years.

Sir George Martin was born in 1844 and was a pupil of Pearson and Stainer. Before coming to London he was organist of Lambourne Parish Church, to the Duke of Buccleuch, and of St. Peter's Church, Edinburgh. He was knighted in 1897.

FRENCH ORGANISTS AND THEIR ORGANS

[We print below a report of an interesting lecture by Mr. Wallace Goodrich, dean of the New England Conservatory of Music, before the New England Chapter of the Guild of Organists, March 18, 1914.]

A right interpretation of César Franck, Widor, Saint-Saëns, Vierne, Guilmant, and other French composers on American organs is greatly facilitated if one understands the extent to which the art of organ playing is always greatly affected by organ construction. Knowledge of the differences between French and American organs is necessary if, in executing a work by one of the French masters, one expects to reproduce the effects intended by the composer.

One difference grows out of the strictly limited uses for which the French organ is preserved. Organs in France are employed almost solely for purposes of worship, and mainly in Roman Catholic churches. The concert organ exists, but is less familiar than in this country. There has been almost no development of special construction of organs for homes and municipal auditoria. Still less have the French been influenced by the movement taking form in the United States to instal organs of radical construction in theaters and motion picture houses. As the specifications of concert organs are practically identical with those used for religious services, only the church organ is considered in classic French organ music.

French church organs, furthermore, differ in character from instruments in American churches, for ecclesiastical and architectural reasons. The large parishes usual under the polity of the Roman Church encourage the building of great edifices in which big organs are prerequisite for sonority. The chief instrument in such a church is a solo organ, presided over by an eminent musician who often assumes no responsibility for the choir and its music. His instrument is placed at the west end of the church where it is acoustically most effective. The chancel organ, which is small and merely subsidiary, is in charge of a second organist whose sole duty is with the singers.

[To illustrate these points the speaker threw on the screen pictures of Notre Dame, St. Sulpice, the Madeleine, and other Paris churches. He went on to give actual specifications of organs by Cavaillé-Coll and other famous builders, showing these instruments present radical differences in nomenclature and in construction from those made in the United States since the introduction of electric action.]

The ideal organ, from the viewpoint of the French builders, must be "ideal for Bach." Whatever its other qualifications it must be perfectly adapted to registration of Sebastian Bach's music. It should, furthermore, contain in all the manuals a generous representation of foundation stops and reeds in all pitches and a profusion of well-voiced mixture ranks, permitting a proper blending of practically every stop with every other stop. Each manual, in brief, should be a complete organ, and the pedal should be complete, real and adequate for the entire instrument, with absolutely no borrowing of stops.

[Short excerpts for French compositions were thrown on the screen, with the registration prescribed by the composers. At the same time the illustration of the specifications of the organs played by these composers threw light upon the effects actually achieved by use of the given registers on the instruments in question.]

Many radical departures of American manufacturers from the French methods of construction and arrangement of pipes, couplers, and keyboards lead to mistakes the American organist may make if he translates and follows too literally the instructions on the composer's score. To the differences in construction must be added many differences in nomenclature that often mislead the Anglo-Saxon. The French in this respect are simpler than their contemporaries. Their terms are usually descriptive in a sense proper to the organ.

Organ playing owes much to Alexandre Guilmant, whose programs of organ music, ancient and modern, while always conforming to a high standard of musicianship, have done much to popularize organ composition not only in France but throughout the civilized world.

FASHIONS IN ORGAN EXTERNALS

BY N. H. ALLEN

[As a sort of preliminary to the symposium on the concave-radiating pedal board, which we present next month, we ask the attention of our readers to two articles in the present issue—to the article immediately following, by N. H. Allen, and to the one entitled "French Organists and Their Organs." They suggest certain conservative points of view in organ construction and in playing.—The Editor.]

The *English Illustrated Magazine* of January 1905, contained an article by C. van Noorden describing a considerable number of pianos that had been brought to public notice as departing from the common standard, among them a grand piano with a curved keyboard that lessened greatly the stretch of the arms. The title of the

ANTHEMS: MIXED VOICES

HYATT, N. IRVING
No. 12,567. Bow down Thine ear $0.16
Of more than average musical interest, and strong on the choral side; good for festival use.
No. 12,572. Sing unto God ..... .16
A very interesting piece of choral writing, strong, broad in style and essentially melodious.

NEVIN, GEORGE, B.
No. 12,590. If ye love Me, keep My commandments ..... .10
A short, easy anthem, with solos for soprano and bass.
No. 12,584. O Lamb of God, I come..... .10
A setting of the text "Just as I am," etc., easy and tuneful.
No. 12,591. Thou art my hiding place ..... .10
An easy, short anthem with solo for soprano or baritone

REED, WILLIAM
No. 12,528. My soul truly waiteth..... .16
In addition to very attractive passages for the chorus, this anthem contains solos for tenor and soprano, with a duet for the same two voices.

WARD, FRANK E.
No. 12,488. Lift up your eyes..... .10
A quiet, easy anthem; can be sung without accompaniment.

ANTHEMS: MEN'S VOICES

NEVIN, GEORGE B.
No. 12,619. O be joyful in the Lord..... .12
A bright setting of this canticle, with solo for the second tenor or baritone.

PARKER, HENRY
No. 12,618. The prodigal son..... .12
An arrangement for men's voices, of this favorite song; includes a solo for tenor.

PART SONGS: MIXED VOICES

BARTLETT, J. C.
No. 12,569. A dream..... .10
A four-part arrangement of the popular song; has some fine humming accompaniment effects.

PART SONGS: WOMEN'S VOICES

GRIEG, EDVARD
No. 12,573. A Swan ..... .10
A six-part arrangement of one of Grieg's finest songs; the air is divided between several of the parts, the others supplying a humming accompaniment.

VINCENT, CHARLES
No. 12,542. Merry June (Vocal Polka) ..... .12
A part-song for two sopranos and alto, with brilliant piano accompaniment; makes a fine concert.

NEW ORGAN MUSIC

The Organ Students Bach

Edited by JAMES H. ROGERS
Ditson Edition, No. 193
Price, 63 cents net

The purpose of the editor has been to make a selection from the organ works of J. S. Bach, of such pieces as will serve as an adequate introduction to the study of the greater works of the master.

Thirty Offertories for the Organ

Edited by JAMES H. ROGERS
Price, $2.00, postpaid

A new volume uniform with the popular **30 Preludes** and **30 Postludes.** The editor has drawn upon the best works by European composers, and has made a number of admirable transcriptions especially for this work. It is bound in cloth and is in every way a distinct addition to the organists' collection.

Thirty Organ Pieces for Use in Christian Science Churches

Edited by WALTER E. YOUNG
Price, $2.00, postpaid

This is the first collection of organ music published expressly to meet the needs of organists in Christian Science churches. The author, who is organist of the Mother Church in Boston, has a full knowledge of what is suitable. The book contains ten preludes, ten offertories, and ten postludes. It is bound in cloth. It is just as desirable for use in other churches.

article was "Freak Pianos"; but most of the instruments described were more freakish than the one mentioned above.

It is quite likely that a large number of the readers of THE MUSICIAN remember the Janko keyboard that was exploited by the inventor and his trained representatives a few years ago. The demonstration was so remarkable and seemingly convincing, that many believed the old keyboard doomed; but who ever sees, or hears of, a Janko keyboard in these days? The case is not quite the same with the concave and radiating pedal boards on organs, in that they are much more generally accepted; but are they to hold on for many years?

Fifty or more years ago there were radiating and concave pedal boards in New England, attached to organs built by the brothers Hook in Boston. The sharp notes were of varying length, the longest about eight inches, and shaped with a marked incline, so that the foot could slide upon them easily from the naturals. The use of these pedals did not become general, which argues nothing, as in those days pedal playing was chiefly an affair of the left foot, which shuffled about over the pedal keys in a slipshod fashion.

More than thirty years ago Mr. J. W. Steere, of Springfield, Mass., procured drawings of the Willis pedal board from England, and built many organs with concave pedals, some parallel and some radiating. He at length found that stipulations for flat pedal scales outnumbered what he would have made if left to himself, and so nearly discontinued the practice.

No one doubts that the German pedals, that made their first appearance on the Boston Music Hall organ in 1863, gave an enormous impulse to artistic and virtuoso pedal playing in this country, and in all essentials this type of pedals has held sway for fifty years.

Whether our most expert pedal players would have arrived at the same degree of excellence had they been brought up on concave pedals is hardly debatable, for we know that among the finest English organists there are many superb pedalists. It is worth noting that the Continental organ builders have not been sufficiently impressed with the comforts and conveniences of the concave board to depart from the old type of pedals, and yet many of them must certainly be called progressive.

Mr. Hilborne Roosevelt, who commenced business about 1875, was iconoclast enough to upset about all the old notions of organ building, and was recognized in Europe almost before he was in his own country. He did not adopt the concave pedal board, although perfectly familiar with it. His pedals were not perfectly level. The naturals were slightly higher in the center than at the ends. Mr. Roosevelt's friend and great adviser, Mr. Geo. Ashdown Audsley, did not let his admiration extend to the pedals, and alluded to them in his great work on the organ as the "maximum of inconvenience." It is known, however, that another Englishman, Mr. Frederic Archer, who, at his best, was one of the most remarkable concert organists we have had in this country, liked these pedals, and was not heard clamoring for the concave and radiating sort.

The indorsement of the concave type of pedals by the founders of the American Guild of Organists, whose opinions carry weight, and whose influence is far-reaching, has made it almost imperative that all builders adopt this form; and has had the effect, moreover, of standardizing. This in itself is valuable, for what else in organs is completely standardized?

The adoption of these pedals has made it possible to lengthen the scale to 32 notes, and we wait for composers who shall make liberal use of these added notes. Here the old order of things seems reversed, for we had the high G provided for us before any music had been written asking for it; whereas there is no doubt that Bach was anticipating when he wrote the high F in his famous toccata in that key, and we who have not been favored with so liberal a pedal scale as has now been provided, have always had to make an adjustment of our own when coming upon the high F♯ in Lemmens' *Pontifical March.* To play high G's on parallel pedals would indeed be the "maximum of inconvenience," much more so than as though piano scales were carried up to D. Leaving out of consideration the conveniences provided for reaching these high pedal notes without undue straddling, it may be conservatively questioned whether these added pipes are worth the money they cost, as an increased musical effect.

Finally, it may be said, or conceded, that fashion rules very much in organ construction, though in longer cycles, as it does in the designs of wearing apparel. Thirty years ago the non-movable stop system was taken up very generally, and although it had to rely a good deal on what one might call canned combinations, it has held on until it is now declared out of date and insufficient. A dozen years ago or thereabouts, mixtures were declared a barbarism, and with the exception of one little one retained in the Swell, mixtures had to go. Now we rub our eyes on reading the specification of the great organ in the new St. Thomas's Church, in New York, as designed by Dr. Tertius Noble, to find Mixtures most liberally introduced, there being even two in the Swell organ. So what was despised and old-fashioned as a hoopskirt, may be coming to its own again. Does this signify that other discarded things will be drifting along back by and by?

—*—

THE ECHO ORGAN

I HOPE to print some helpful service lists in this department and will thank organists and choirmasters of liturgical and non-liturgical churches to send me two copies of their lists, if printed. A correspondent writes: "When my wife gives a luncheon she gets out menu books and consults them for fresh ideas, although she has been cooking for a

number of years. In my turn I am always glad to get pointers, although for fifteen years I have been selecting music.

* * *

ANOTHER correspondent, Mr. W. R. Voris, recalls an article some time ago in THE MUSICIAN on a hymn-recital service. He goes on— "I happened to remember some of the things and added others, working them up into a service given last Sunday night. A large congregation entered into the occasion with proper spirit and I think the effort did not fail of good effect. One conclusion I reached is that while it is not an easy matter to construct a homogeneous recital-service, a hymn-service is easily done. We now use the idea three or four times a year centering the service about subject, composers, authors or nationality." It seems best to reproduce the service list entire.

FIRST PRESBYTERIAN CHURCH,
FRANKLIN, INDIANA

EVENING-HYMN RECITAL SERVICE

This service differs from the ordinary hymn-service in that the organ has a more prominent part and also some of the familiar hymns are arranged in anthem or solo form.

Organ Prelude: Vesper Hymn
Arr. S. B. Whitney

Processional Hymn: No. 78 Wm. Croft

Arranged with elaborate organ accompaniment by Arthur Sullivan; to be sung in unison by choir and congregation. Croft (1678-1727) was organist of Westminster Abbey. *St. Ann*, a stately old choral tune, deserves to be as well known in America as it is in Scotland and England.

Invocation: The Lord's Prayer

Hymn: No. 292—Beecher
J. Zundel 1870

This arrangement is by Wenham Smith, organist of Plymouth Church, is dedicated to the memory of the great pastor of the church, Henry Ward Beecher, and was played at the memorial services in his church.

Responsive Reading—"Praise" Section 22, page 17.

Congregational Hymn—No. 67 Arr. Beethoven

The Scripture Lesson

Anthem—"Lead Kindly Light" H. Pugh-Evans

The General Prayer

Hymn—No. 38—Solo Mendelssohn

An arrangement of the *Song Without Words* known as *Consolation*.

Offertory—Hymn—No. 420 A. Ewing, 1853.

Variations by Dr. Wm. Sparks, the eminent English organist. The words are part of a long poem by Bernard of Cluny, 12th century, tr. J. M. Neale, 1851.

Congregational Hymn—No. 357 Messiter, 1883

Short Address on Hymns Dr. Tyler

Hymn-Anthem—"Faith" Bird-Batiste

Arranged for quartet from a beautiful offertory by Edouard Batiste, a noted French organist.

Recessional Hymn—No. 51 E. J. Hopkins

With a beautiful varied organ accompaniment by the composer, one of England's great church musicians. First stanza to be sung in 4-part harmony, the others in unison.

Benediction

Dresden Amen

Organ Postlude—Onward, Christian Soldiers
Arr. George Whiting

* * *

IN visiting churches where a good choir and organist do their parts in the worship I sometimes find that on the service list the pastor, assistant pastor, deacons and committees are all named, but no allusion made to those whose music has added so much to the dignity and enjoyableness of the service. The musically inclined attendant at church has a rightful curiosity to know what are the names of the organist and singers. Who has not felt a debt of gratitude for some exquisite bit of solo or concerted singing or for some fine organ piece? To fail to print the names of the choir and organist on the service list along with those of the pastors and their helpers is not only to withhold useful and legitimate information but also to fail in Christian courtesy.

* * *

As one travels about hearing church music, one cannot but be struck with the variety, or perhaps one would better say, the absence of standards. Although our Roman Catholic and Episcopalian friends try to make us believe that they have authoritative pronouncements on the subject of church music, in practice their services show that the taste of the particular congregation is in some measure deferred to. Each of these churches uses a noble liturgy, and that tends to the standardization of the service, although Plain Song, sixteenth century music, the masses of Mozart and Haydn, the anthems of Wesley, Smart, Barnby, Stainer, Tours, Stanford, Martin, Dudley Buck, Shelley, Parker, Foote, and Chadwick indicate that it has not been achieved.

In the non-liturgical churches there is certainly not the vestige of a standard; each congregation, each musical director is a law with itself or himself. This applies not only to the words of music and to the style of music, but also to the performance of it. Hymns didactic, hymns sentimental, verses from the Bible, *quasi* secular poems, "sacred" ballads—all find their way into the catalogue of "church" music. The trouble lies far deeper than in an absence of musical standards, we have lost the art of behaving with dignity in public. There is room for a work on liturgical propriety.

EDWIN ARTHUR KRAFT, ORGANIST

(*Continued from page 292*)

boy choir. A scholarship in the Department of Music, Yale University, gave him three years' study under Horatio Parker and Harry Jepson.

In 1901 Mr. Kraft became organist at St. Thomas' Church, Brooklyn, where he remained two years, at the expiration of which he spent some time in Berlin and Paris, in the latter city being under the instruction of Guilmant and Widor.

EDWIN ARTHUR KRAFT

When he returned to the United States in 1905 he accepted the position of organist and choirmaster at St. Matthew's Church, Wheeling, W. Va., but did not stay there very long, as he was called to Trinity Cathedral, Cleveland, where he remained until he accepted the post of municipal organist at Atlanta.

Mr. Kraft is a Fellow of the A. G. O. He has won an enviable reputation as a concert player, and has given recitals in over half of the States of the Union, and in a number of Canadian cities.

Among the pieces which appear on his programs we note the following, issued by the Olive Ditson Company, publisher of The Musician:

Nocturne, by R. Spaulding Stoughton (used in the present issue).

Minuet, by Beethoven.

SPRING HARMONIES

SHOULD BE BROUGHT OUT IN

YOUR GOWN

THE **NATURAL LINE CORSET** SECURES THEM

Here are some reasons:

1. It is FRONT-LACED for health.
2. It brings out the normal proportions.
3. It **supports the abdomen.**
4. It gives perfect freedom to the diaphragm, and makes **deep breathing easy.**
5. It sustains the back muscles and gives poise to the body.
6. It secures the fashionable non-corseted appearance. No line shows above or below the waist, making it unequaled for public appearance.
7. It stays down, no matter how one bends. Garters are put on to hold **up** stockings, not to hold **down** corsets.

Read the Symposium on Corsets as an aid to Women Singers on page 338 of the present issue, and note how the Natural Line Corset meets the conditions demanded by Singers and Teachers.

TEACHERS' FORUM

CONDUCTED BY BLANCHE DINGLEY MATHEWS

Address all questions relating to the work of this department to Mrs. Blanche Dingley Mathews, 25 E. 18th Avenue, Denver, Colorado.

"I AM a young German piano teacher, pupil from the conservatories of Leipzig and Vienna, recently arrived from Europe. I find that there is in this city a dislike for European methods of teaching. Really why I do not know. I have given several recitals to show what I can do, and I have given a few étude recitals illustrating the European method of teaching, which consists in giving along with the études a piece or a sonata. Yet the pupils always ask me if I teach the American methods. I do not see how the American methods can change so much! Could you suggest anything to make people here see that I do not teach differently than all good teachers?"—T. W. H., Canada.

I was much interested in your letter, as in the States we are always meeting with the demand for the "European" teacher. Here everything must come with an O. K. from Europe before we can come into our own, and your experience is, to say the least, gratifying and soothing to us Americans who have worked so patiently for some recognition as original thinkers.

The American teaching, especially the elementary work, differs in many ways from the European methods. The life and attitude of our so-called middle class are so very different toward an art like music from the attitude of the European of the same class, that it has become necessary for teachers to deal with the beginnings of music from quite another point of view than that offered in the conservatories abroad.

The successful American teacher sugar-coats her pupils and makes the work as easy as possible for the student. She assigns material in the elementary grades that can be understood and enjoyed by the child, trying to develop the child from the rhythmical side as well as from the melodic and harmonic. The endless stream of études which are poured out in conservatories the American teacher tries to do without. She condenses the technic to certain principles, such as scale fingerings, difficult crossings, extended hand positions, pedal exercises, and all conventional chord cadences, to save time for the giving of more material to bring out the individuality of the student. The ear is given much attention and all sorts of productive exercises are introduced by the ambitious American teacher to produce music thinking on the part of the pupil. The American child won't stand the grind which plays so important a part in the music education of the European. Our children have very little time for music work, and the mothers are so busy with their own social life that it is exceedingly difficult to secure any sort of "home backing" for regular practice periods. So it is up to the teacher to make the lesson hours interesting and inspiring, and the giving of tuneful material is one of the most necessary adjuncts for our work.

If you are a good player that should be an immense help to you in any community, as the teacher of the future must be able to play and play well.

It might perhaps be worth while for you to try the American way of giving the technic orally and condensing it as I outlined above, and supplementing that work by pieces well chosen for the taste and talent of the pupil. First bring out that which is strong in the talent you are working with, and then bring up the weak side of the student to the same level as the strong.

A generous slice of technic at each lesson, given orally, and an attractive and stimulating piece or two seem to us much more productive than to play book after book of études without really learning any of them.

We give about one étude to your twelve, but that one will be well memorized, transposed into several keys, and kept in practice possibly four weeks before passing on to another.

* * *

"How would you explain, to a child, that A must be the relative minor of C?"—M. E. A.

I use the term "relative minor" for keys having the same signature, and "tonic minor" for those having the same key-tone.

Each signature stands for two keys, a major and a minor, and I try to have my pupils learn both keys instead of thinking of a signature as belonging to the major key only.

In advanced music there is much more minor than major music, presumably because the mode is so much richer within itself, and still how few students, seeing two sharps in the signature, ever stop to think that the composition might possibly be written in B minor rather than in D major?

To return to your question, present A minor as the "relative" minor of C major, because it has the same *signature*. A minor is the "tonic" minor of A major, because it has the same *key-tone*.

* * *

"Will you kindly explain the use of the metronome, and if it is advisable for violin students to use same?

"Is it detrimental to violin students (not very far advanced) to practise by ear between lessons?"—J. G. C.

1. The metronome is an excellent "monitor" for every music student, regardless of his instrument. Many teachers like to have a certain amount of practice each day, with metronome, but I only use it occasionally to practise by. It is advisable to use it to secure the rate of speed for any composition, but not to rely on the tick for keeping time. The feeling for time and rhythm must be built up, little by little, by various kinds of exercises in which the metronome does not play any part. Counting out loud and the tapping of different sections of a piece, I consider more useful than working by the metronome. If you feel that you are taking too many liberties with the time then the metronome is most useful to bring you up to some saneness in the rhythmic handling of the composition; but don't continue it too long or it will make you mechanical, which means that you will become unrhythmical.

2. If "by ear" you mean practising without doing any reading from notes, I should say it is detrimental; for one cannot learn to read music *without reading*. But there is no instrument where the ear is needed with every practice period as with the violin. You must listen every instant and the better your ear the more effective your work.

* * *

"How can I get a pupil to notice details of time, fingering, etc.? She is in Grade III, but does not wish to study a piece for longer than one week, and is anxious 'to get into the next grade.'"—E. S.

Why don't you suggest to her that the best and quickest way to get into Grade III is by doing Grade II well?

I have been most successful in getting the details of time and fingering worked out by having the music scanned away from the piano. If the fingering is tapped on a table, calling off the fingers as you use them, it is most helpful. Another way is by making an exercise out of the place where the fingering is inaccurate. When

the pupil arrives at the point where she misses the finger, have her call aloud the number of the finger she is about to use, stopping at that point to emphasize the finger still more. As for the different note and rest values that go to make up the rhythm nothing has been of so much help to my teachers as tapping out the different rhythmic elements occurring in the melody and accompaniment. First, have the melody tapped, tapping just what the notes say, counting the measure out loud. Then have the accompaniment tapped the same way.

Students do not look at their music half enough. If they would take their music to a table away from the piano and work out some of these things, their progress would be much faster.

If the method of study is right and the teacher uses plenty of "sapolio," such inaccuracies as you suggest will gradually disappear.

If your pupil wants to study a piece only one week, you must endeavor to bring out in the lesson period unsuspected beauties in the composition that will make further study more interesting. It is our business to give them something new, interpretatively, each lesson, some inspiring and helpful suggestions which will make the week-old piece seem something fresh and beautiful, worth working over and keeping in memory.

* * *

"Will you kindly tell me if you believe in a high finger action? Some teachers seem against it."—C. W.

Yes, I do. It's a sort of an "outward sign of an inward work," for we may be sure when we see a finger raised before making a tone, that the student has thought that much of the tone about to be sounded. I believe also that it makes better fingers in the advanced grades, and at least a part of the practice should be with the high finger action, whatever the type of hand. I endeavor to have the student secure the tone by permitting the finger to fall on the key rather than to either push or pull the tone out.

GENERAL NEWS ITEMS

A "Musician's Pilgrimage" will be conducted this summer by the Sinfonia Fraternity, an organization of men music students in music schools and colleges. The "Pilgrims" will sail from Boston June 30. on the Carmania. The Boston headquarters of the Sinfonia are at 31 Gainsborough Street.

The Louisiana State Music Teachers' Association met at Shreveport, April 16-18. Mr. Leon Maxwell is president and Miss Louise Favrot secretary-treasurer. Some important educational questions were discussed in specially prepared papers.

Beethoven's *Missa Solemnis* was sung by the New York Oratorio Society, Louis Koemmenich, conductor, March 28. The soloists were Helen Stanley, soprano; Ottilie Metzger, contralto; Reed Miller, tenor; and Herbert Witherspoon, bass.

All the solo parts in Bach's *Mass* in B minor will be sung by the chorus parts, an experiment that few conductors will be ready to imitate, at the next Bach Festival by the Bach Chorus, under the direction of Dr. J. Fred Wolle. The Festival will be given at Lehigh University, South Bethlehem, May 29 and 30.

The Minnesota State Music Teachers' Association is publishing a bright little sheet called "Minnesota Music." From the last issue we learn that an examination for the licentiate and associate degrees was held by the Association at Minneapolis, St. Paul, Duluth and Winona, April 27 and 28. This Association is going right ahead in its efforts to improve the standards of music teaching in the state. Mr. Leopold Bruenner, of St. Paul, is president of the Association.

Mr. Louis Lombard will continue his series of orchestral concerts at his residence, Chateau Trevano, near Lugano, Switzerland. The concerts will begin August 16 and continue weekly until October 18. Each program will be devoted to compositions by one nation. The American program will close the series. The Musician has a letter from Mr. Lombard which says that admittance is gratis and only by personal invitation. American travelers desiring to attend the concerts should write to the Intendant of the Castle of Trevano, stating the date of the concert they wish to attend and the name and address of each person in the party.

Members of the S. I. M., the French branch of the International Musical Society, held a meeting at Nice and Monte Carlo, March 16-22. The music season on the Riviera is at its height at that time of the year.

Mr. Walter L. Bogert, musical director of the People's Institute, Cooper Union, presented the following soloists at the concerts during February, March, and April: Florence Anderson Otis, Helen Rensch, Joanna Kristoffy, and Helene Pastori, sopranos; Ellison Van Hoose, John Finnegan, and Alfred D. Shaw, tenors; Francis Rogers and Albert G. Janpolski, baritones; Franz Kaltenborn and Jacques Kasner, violinists, and the Von Ende Violin Choir; Sara Gurowitsch, 'cellist; Ada Sassoli, harpist; Rebecca Davidson and Carolyn Beebe, pianists; B. C. Tuthill, clarinetist. The concerts were given on Sunday evenings, and were free to the public.

Music will be a prominent feature in the exercises in commemoration of the 150th anniversary of Brown University, Providence, R. I., next Fall. There will be a daily organ recital, and the Mendelssohn Club, of New York, will give a concert.

Mr. Edgar Stillman Kelley, the well-known American composer, has been invited to conduct his *New England* symphony at the Lizst Festival, to be held at Altenburg, Germany, late in April. Mr. Kelley sailed for Europe April 9.

The 20th annual South Atlantic States music festival is to be held at Spartanburg, S. C., May 6-8. The festival forces are: The Converse College Choral Society, 200 voices, Edmon Morris, conductor, a chorus of 250 children, soloists, and 50 men from the Metropolitan Opera House Orchestra.

Pittsburgh musicians have organized a Musicians' Club, and have engaged club quarters. Mr. Charles N. Boyd, a frequent contributor to the The Musician, was elected president. The club starts with about 56 members. On invitation from this organization the next meeting of the Music Teachers' National Association will be held in Pittsburgh, next December.

Archaeologists at work in the ancient Temple of Sais, in Egypt, report the discovery of musical instruments, which indicate that the Egyptians had an orchestra of far larger scope than has been thought. Some of the instruments resemble our harps, violins, flutes and trumpets, but there are others which are more or less a mystery.

The Mozart Club, of Pittsburgh, J. P. McCollum, conductor, assisted by the Russian Symphony Orches-

PIANISTS' CLUB

EVERYBODY interested in piano music should join this club. All that is necessary to become a member is to request that you be sent a notice of the MONTHLY ISSUES AT 5 CENTS PER COPY. The editions will be FIRST CLASS in every respect.

THE MUSICIAN, Boston, Mass.

tra, of New York, Modest Altschuler, conductor, gave a concert April 17, presenting the principal parts of Mendelssohn's *Elijah*. The orchestra played a program of works by Russian and Finnish composers.

MACDOWELL'S *Norse* sonata was recently played in Berlin by Augusta Cottlow, the American pianist, and very well received.

MARK TWAIN'S daughter, the wife of Gabrilowitsch, the pianist, made her debut as a singer in Berlin in March, and made a very good impression.

PADEREWSKI is quoted as saying that he would rather give three recitals than play one piece for the talking-machine.

GRANVILLE BANTOCK, the English composer, advocates varying the lighting of an auditorium in conformity with the character of the music that is being played. Scriabine, the Russian composer, goes farther in his ideas as to the relation of light to music. He has devised a *tastiera per luce* (a keyboard of light), for which a definite "part" is provided in the score of those works in which it is employed.

THE newly-organized Detroit Symphony Orchestra, Weston Gales, conductor, gave its first concert Feb. 26, to a well-filled house. Plans are under way to insure permanency to the organization.

TORONTO city authorities have voted $10,000 in aid of the proposed visit of the famous Mendelssohn Choir to Europe in 1915. The choir will give concerts in England, France, and Germany.

SPRINGFIELD, Mass., music lovers are making an effort to secure funds to give permanency to the Municipal Orchestra of that city. It is evident that the sentiment as to the great value to a community of an organization to present to the people the masterpieces of music, is growing in all parts of the country.

COMPOSITIONS by negro writers were sung at the concert given at the Schola Cantorum, New York, April 1.

ARTHUR HARTMANN, the violinist, who is now living in Paris, gave a concert in that city, in which he was assisted by Debussy. Mr. Hartmann played, among other numbers, three transcriptions of songs by Debussy, which the violinist made especially for this concert.

MRS. CARL BUSCH was the subject of a lengthy article in a late issue of the Kansas City *Star*. Mrs. Busch has not only been a leader in the musical work of the city, but has also been prominent in the work of the Woman's Club.

THE eighth Festival Mandolin Concert, under the direction of G. L. Lansing and H. F. Odell, was held at Boston, March 24 and 27. The orchestra numbered 225 performers.

ERNEST R. KROEGER'S suite for orchestra, *Lalla Rookh*, was on the program of the "Pop" concert of the St. Louis Symphony Orchestra, the last week in February. It was well received by the audience.

THE University Chorus, Syracuse University, Mr. Howard Lyman, conductor, sang Gaul's oratorio, Feb. 26, with the following soloists: Agnes Clark Purington, soprano, Daisy C. Danicls, contralto, Harry Wisehoon, tenor, and Ralph Stillwell, baritone. *Saint Paul* is now under rehearsal, and will be given later the present season. Mr. Lyman has built up a strong choral organization in the two years he has been in charge.

———*———

WITH THE SCHOOLS AND TEACHERS

THE Orchestra of Dana's Musical Institute, Warren, O., with soloists, gave a concert, March 18, presenting a program of works by Richard Wagner. Mr. Lynn B. Dana conducted.

PUPILS of the piano, vocal, and violin departments of the Cincinnati Conservatory gave a recital at the school, March 12. On March 30, pupils from the composition class of Mr. Edgar Stillman Kelley gave a recital of original compositions.

THE Alumni Orchestra of Pottstown, Pa., Eugene Z. Weidner, conductor, gave a concert, March 24, assisted by Herman Sandby, 'cellist, of the Philadelphia Orchestra.

MR. GORDON BALCH NEVIN, a contributor to THE MUSICIAN, whose writings have been enjoyed by our readers, has removed from Easton, Pa., to Johnstown, Pa. where he has accepted the position of organist at the First Presbyterian Church.

KNOX COLLEGE CONSERVATORY OF MUSIC, Galesburg, Ill., will hold its 28th annual commencement, June 9. The graduating class numbers five. Mr. Wm. F. Bentley is director of the Conservatory.

MAXINE BUCK was the soloist at the first April concert of the Faelten Pianoforte School, Boston; Martha E. Gifford at the concert April 23. Other concerts for the month were on the 9th, 16th and 30th.

MENDELSSOHN'S *Hymn of Praise* was sung March 10th, by the Charleston (W. Va.), Choral Club, J. Henry Francis, conductor. This organization is doing active work for music in its community.

THE California School of Artistic Whistling gave a recital at Los Angeles, March 5th, the chorus consisting of fifty-three whistlers. Miss Agnes Woodward is director of the school.

MR. ERNEST R. KROEGER'S fourth "Lenten Recital" was devoted to works by Adolf Henselt; the fifth consisted of music in old and new dance forms.

THE Chicago Madrigal Club, D. A. Clippinger, conductor, gave a concert at the Chicago Theological Seminary, March 17th. The program consisted of part-songs by classic and modern composers.

MR. LOUIS P. MCKAY, organist of the First Church of Christ, Scientist, Grand Rapids, Mich., sends us a copy of the program of his recital on the new Hillgreen, Lane & Co. organ, recently installed. It is a four manual instrument.

THE next May Festival of the Central State Normal School, Mt. Pleasant, Mich., will be given May 7-8, under the direction of Wm. E. Rauch, of the School of Music.

WILBUR FOLLETT UNGER, of Montclair, N. J., arranged a recital by a number of his piano pupils at his studio, March 21. Twenty pupils assisted.

THREE very interesting programs have been received from the Universal Brotherhood and The

osophical Society, Point Loma, Cal., given March 15, 22, and 29, by the string quartet and chorus of women attached to the school.

Mr. Edwin Arthur Kraft, municipal organist of Atlanta, Ga., gave a recital at the Eliot Church, Newton, Mass., March 18.

The chorus of the Columbia School of Music, Chicago, gave its seventh annual concert, March 15, nder the direction of Louise St. John Westervelt. The chorus has a membership of 62.

A program made up of compositions by Louis Vic- or Saar, of the College of Music, Cincinnati, was given at Norwood, O., March 11. Mr. and Mrs. Saar were present and assisted in presenting the rogram.

The Wilkinsburg, Pa., Choral Society, Mr. Charles N. Boyd, conductor, gave a program of olk-songs of various countries, March 10. The ociety has 60 members. May 5 a program of ora- orio selections will be sung.

Mr. Sumner Salter, organist and choirmaster, Williams College, gives recitals every week. March 1 he played his 111th recital.

The 353d concert given by the New York School f Music and Arts was held at the Waldorf-As- oria, March 14.

At his organ recital at Atlanta, Ga., March 10, Mr. Edwin Arthur Kraft, municipal organist, played Mr. James H. Rogers' *Toccata*, recently issued by e publisher of The Musician.

A students' recital was given at Wilson College, hambersburg, Pa., March 9, under the direction Dr. Orlando F. Mansfield, of the School of Music. arch 14 Dr. Mansfield gave his sixth organ re- al for the present season.

The Summer Term of the Cosmopolitan School Music and Dramatic Art, Chicago, begins June 29 d closes August 1.

NEW YORK NOTES

Isabelle Hauser, pianist, and the Saslavsky String Quartet, gave the last concert of their winter series the Belasco Theatre, March 1st.

The Von Ende School of Music had many con- rts and receptions throughout the month of March, luding violin recitals by Julius Friedman, March h, and Harold Michlin, March 13th; a concert by junior students, March 7th, a piano recital by bert Ross Parsons; one by the students of the vari- s departments March 31st, and a large reception in nor of Frieda Hempel, March 29th.

Mme. Esperanza Garrigue presented two of her st pupils at a concert in the Waldorf-Astoria, rch 12th, Roberta Beatty, contralto, and Graham Namee, baritone. Besides scenes from the operas *La Favorita* and *Don Giovanni* both singers were rd in solos.

An "Evening of Composition by Frank Howard rner," was given at the Musicians' Club, March 7th, the assisting artists being Viola Waterhouse, prano; Flora Hardie, contralto; John Barneswell, nor, and Lucien de Vannoz, baritone. The com- er and those who interpreted his songs were en- iastically received by a large audience.

Marie Narelle, soprano, and Eva Mylott, con- lto, gave a joint recital in Aeolian Hall, March 2d. Both artists received much applause for their ks.

Pietro A. Yon, organist of St. Francis Xavier's, ve his initial organ recital on the great organ in olian Hall, March 24th.

Signor Guglielmo Caruson presented his artist il, Neida Humphrey, at the Metropolitan Opera use, Sunday evening, April 5th. Miss Hum-

Dancing is delightful to the music of the Victrola

Every one enjoys dancing to music of such splendid volume, such clearness and perfect rhythm—and the Victrola plays as long as any one wants to dance.

The Victrola brings to you all kinds of music and entertainment, superbly rendered by the world's greatest artists who make records exclusively for the Victor.

Any Victor dealer will gladly play the latest dance music or any other music you wish to hear. There are Victors and Victrolas in great variety of styles from $10 to $500.

New Songs by MARY TURNER SALTER

AN APRIL MESSAGE. For High or Medium Voice	$0.50
A ROSE AND A DREAM. For Medium or High Voice	.50
TONIGHT. (With 'Cello obligato ad lib.) For Low Voice	.50

Reorders received for these songs prove that they are receiving immediate and most favorable recognition. An April Message is a jovial, animated song. A Rose and a Dream possesses the warmth and charm so attractive to singers, while Tonight lends itself to strong dramatic expression. This song is being successfully featured by the noted Baritone, Royal Dadman.

GRADED STUDIES, Book VII

Compiled by Mrs. CROSBY ADAMS. Price, $1.00

With Book VII is rounded out a series and sequence of studies for the piano which for choice, variety and wealth of material could be fully appreciated only by those who undertook a similar task.

In compiling these books of studies Mrs. Adams had in view a definite purpose regarding the ground to be covered. While technical difficulties had to be carefully considered, both as to their degrees and succession, that, in itself, was the simplest phase of the work in hand. The selection of material best suited to the various other and more important phases, and the relationship of the material in its teaching value, was much the greater problem. How well Mrs. Adams has succeeded is best attested by the very general and widespread demand for these studies from teachers (upwards of 15,000 of the earlier books having already been sold). The series comprises seven books for two hands and two books for four hands. In difficulty, Books I to VII ---two hands---grade from I to advanced IV, on a scale of one to seven. Books I and II---four hands---are in grades I and II.

CLAYTON F. SUMMY CO., Publishers

DEALERS IN MUSIC OF THE BETTER CLASS

When you write to advertisers, mention The Musician

MUSICAL NOTICE

THE BOO-BOK Library Company, of Boston have just put on the market a "music card" for filing written music in a card index form. The card is 6 3-4 by 4 3-8 with a title line at the top, the staffs running the length of the card. The cards are ruled on both sides. These cards are to be filed in the Vertifile No. 30, which is an attractive filing cabinet, having all the outward appearance of a bound book. The capacity of the Vertifile is about 1,200 of the cards, and the prices of both are very reasonable.

The idea of filing music in card index form is entirely original with the BOO-BOK Library Company and should appeal to every musician. We all know only too well, the time wasted in rummaging through a stack of music for some one desired piece. By means of the BOO-BOK music cards, any selection may be copied on to the cards. The composer and the music teacher should gladly welcome the music file for keeping music ideas and jottings in easily get-at-able arrangement.

A SPECIAL TERM IN

PUBLIC SCHOOL MUSIC

THE UNIVERSITY OF PITTSBURGH

Offers in connection with its summer term, a five weeks' term in Music for supervisors and teachers. The courses will include methods for all grades, rote singing, the development of technic, the observation method, elementary and advanced harmony, musical history and appreciation, chorus and conducting, orchestral technic, etc.

The work is under the personal direction of Mr. Will Earhart, assisted by competent instructors. University credit is given for satisfactory work, and a special certificate may be earned by attending successive summer terms.

Courses are also available in such other special departments as fine and industrial arts, household economy, nature study and gardening, play and physical education, boy scouting, clinical psychology and in all aspects of education.

Daily Lectures and Conferences by Eminent Scientists and Educators

For bulletin, address
WILL GRANT CHAMBERS,
Dean of the School of Education

GUSTAV L. BECKER:

(Chairman, Standard of Teaching, N.Y.S.M.T.A.)

Begs to announce a Special Summer Course for progressive piano teachers. An attractive feature will be Mr. Becker's lately perfected system of technic based upon music-thinking; saving much time and producing much more satisfying results. Those securing time before May 1st will be given special advantages.

Apply, care STEINWAY HALL, NEW YORK CITY.

SECULAR SONGS

HIGH VOICE

DICHMONT, WILLIAM

A wish. [A] E-E♭ $0.40
A simple little song for use in the home or social circle, one that can be used with pupils, as it is easy and effective in the ballad style.

Could I forget? [A♭] [E♭-F] ..... .50
In the simple ballad style, suitable for use with young pupils, easy.

KROEGER, ERNEST R.

O violet, sweet violet [A♭] [E♭-g] ..... .50
Not a love song, and therefore suited to use with young pupils; it is comparatively easy.

LISZT, FRANZ

"O how," murmured he (*Comment, disaient-ils*). [G♭ min.] [c-a♭] ..... .50
A song from the classic repertoire, in the serenade style. It requires considerable change in vocal color.

SAAR, LOUIS VICTOR

To one I love. [E♭] [E♭-a♭] ..... .40
